We must admit that the majority of the American Negro intelligentsia, together wih much of the West Indian and West African leadership, shows symptoms of following in the footsteps of western acquisitive society, with its exploitation of labor, monopoly of land and its resources, and with private profit for the smart and unscrupulous in a world of poverty, disease, and ignorance, as the natural end of human culture. I have long noted and fought this all too evident tendency, and built my faith in its ultimate change on an inner Negro cultural ideal. I thought this ideal would be built on ancient African communism, supported and developed by memory of slavery and experience of caste, which would drive the Negro group into a spiritual unity precluding the development of economic classes and inner class struggle. This was once possible, but it is now improbable. I strove hard to accomplish this while I was yet editor of The Crisis, and afterward in my teaching at Atlanta University.

The Supreme Court decision on segregation in schools called for a distinct modification of my attitude toward segregation which I expressed

49-6-342

in 1934. I assumed that legal discrimination along the color line would last much longer than it may. It is to the credit of Spingarn and Marshall that they fought so valiantly and intelligently in the courts at a time when I had little faith in substantial victory. Nevertheless the battle is not won. Unfortunately in the United States there is a long habit of ignoring and breaking the law. Especially in the South, lawlessness is common and has been for a century. The movement toward the abolition of the color line has begun and will continue, strengthened as it is by the mighty uprising of the colored peoples backed by the Soviet Union. But meantime what will happen to us? During the twenty-five or fifty years while the southern South refuses to obey the law, what will happen to Negro children? Widespread effort for their protection and education should be undertaken by the Negroes themselves in inner cooperative effort. We must not make the error of the German Jews. They assumed that if the German nation received some of them as intellectual and social equals, the whole group would be safe. It only took a psychopathic criminal like Hitler to show six million of them their tragic mistake. American Negroes may yet face a similar tragedy. They should prepare for such an eventuality.

49-6-373

If once this line of thought and action had become established, my guidance of the young Negro intelligentsia might have been increased and implemented, and the science of sociology might have immeasurably benefited by a laboratory test of extraordinary breadth and opportunity. This as I fondly hoped, might have revived my Atlanta University studies of the late nineteenth century, which white "philanthropy" starved to untimely death. All this, petty envy killed, just as it was reborn.

The very loosening of outer racial discriminatory pressures had not, as I had once believed, left Negroes free to become a group cemented into a new cultural unity, capable of absorbing socialism, tolerance, and

democracy, and helping to lead America into a new heaven and new earth. But rather, partial emancipation is freeing some of them to ape the worst of American and Anglo-Saxon chauvinism, luxury, showing-off, and "social climbing."

I find, curiously enough then, that my experience in this fantastic accusation and criminal process is tending to free me from that racial provincialism which I always recognized but which I was sure would eventually land me in an upper realm of cultural unity, led by "My People." I have discovered that a large and powerful portion of the educated and well-to-do Negroes are refusing to forge forward in social leadership of anyone, even their own people but are eager to fight social medicine for sick whites or sicker Negroes; are opposing trade unionism not only for white labor but for the far more helpless black worker; are willing to get "rich quick" not simply by shady business enterprise, but even by organized gambling and the "dope" racket.

The American Negro must realize that the attack on me for socialism is but the cloaked effort of Southern whites to deprive Negroes of leadership in my and other cases. I was just as much hated by the white South before the Russian Revolution as now; and feared too by those of the educated and progressive elements who were and are determined to keep the dark world in submission. They have seized on the charge of "Communism" to silence me just as they once charged "Abolition" to shut the mouths of Northerners. And just as today the thrifty are cowed by the threat of revolution.

As I have related, there came the indictment and trial and after long struggle the acquittal. But that was not the end. The publication of my story of this persecution in my book "In Battle for Peace"; the collaboration of Shirley Graham; my open thanks for the Communists of the world for their help in my defense; and my clear stand in favor of

49-9-374

the Soviet Union. My defense of the Rosenbergs in speech and writing and my denunciation of the hounding and imprisonment of the Communists as unjust and barbarous. I defended and supported Communists and taught at the socialist Jefferson School.

All this made my enemies and the Federal Government take a determined stand to insure my destruction. The secret police swarmed in my neighborhood asking about my visitors; whether I entertained and whom. When we entertained Vishinsky, his wife and daughter, and Paul Robeson, the whole borough of Brooklyn was declared "out of bounds" for Soviet diplomats. My manuscripts and those of Shirley Graham were refused publication by reputable publishers. My mail was tampered with or withheld. Negro newspapers were warned not to carry my writings nor mention prominently my name. Colleges ceased to invite my lectures and Negro colleges no longer asked for my lectures or my presence at Commencement exercises. From being a person whom every Negro in the nation knew by name at least and hastened always to entertain or praise, churches and Negro conferences refused to mention my past or present existence. The white world which had never liked me but was forced in the past to respect me, now ignored me or deliberately distorted my work. A whispering campaign continually intimated that some hidden treason or bribery could be laid at my door if the Government had not been lenient. The central office of the NAACP refused to let local branches invite me or sponsor any lectures. I was refused the right to speak on the University of California campus, because of NAACP protest. In fine I was rejected of men, refused the right to travel abroad and classed as "Controversial figure" even after being acquitted of guilt by a federal court of law.

It was a bitter experience and I bowed before the storm. But I did not break. I continued to speak and write when and where I could.

49-9-375

376

I faced my lowered income and lived within it. I found new friends and lived in a wider world than ever before — a world with no color line. I lost my leadership of my race. It was a dilemma for the mass of Negroes; either they joined the current beliefs and actions of most whites or they could not make a living or hope for preferment. Preferment was possible. The color line was beginning to break. Negroes were getting recognition as never before. Was not the sacrifice of one man, small payment for this? Even those who disagreed with this judgement at least kept quiet. The colored children ceased to hear my name.

49-9-376

CHAPTER XXIII

MY TENTH DECADE

My ninetieth birthday was a surprising occasion. Friends wanted to celebrate it, but I recoiled. Who would sponsor such an event? There had I admitted been some pleasant occurrences. I had a successful television interview over the Dumont Broadcasting system; my bust by Zorach had been accepted by the New York Public Library and installed in the Schomburg Collection at the 135th street branch. At the dedication Franklin Frazier, Judge Jane Bolin and Van Wyck Brooks took part. Tablet, the official organ of the Brooklyn diocese of the Roman Catholic church, naturally added one sour note, writing the library "This corporation writes to enquire whether you would accept a bust of Benedict Arnold, which we would be happy to present to you."

49-9-377

I spoke at Paul Robeson's sixtieth birthday:

"The persecution of Paul Robeson by the government and people of the United States during the last nine years has been one of the most contemptible happenings in modern history. Robeson has done nothing to hurt or defame this nation. He is, as all know, one of the most charming, charitable and loving of men. There is no person on earth who ever heard Robeson slander or even attack the land of his birth. Yet he had reason to despise America. He was a black man; the son of black folk whom Americans had stolen and enslaved. Even after his people's hard won and justly earned freedom, America made their lot as near a hell on earth as was possible. They discouraged, starved and insulted them. They sneered at helpless black children. Someone once said that the best punishment for Hitler would be to paint him black and send him to the United States. This was no joke. To struggle up as a black boy in America; to meet jeers and blows; to meet insult with silence and discrimination with a smile; to sit with fellow students who hated you and work and play for the honor of a college that disowned you -- all this was America for Paul Robeson. Yet he fought the good fight; he was despised and rejected of men; a

man of sorrows and acquainted with grief and we hid as it were our faces from Him; He was despised and we esteemed Him not.

"Why? Why? Not because he attacked this country. Search Britain and France, the Soviet Union and Scandinavia for a word of his against America. What then was his crime? It was that while he did not rail at America he did praise the Soviet Union; and he did that because it treated him like a man and not like a dog; because he and his family for the first time in life were welcomed like human beings and he was honored as a great man. The children of Russia clung to him, the women kissed him; the workers greeted him; the state named mountains after him. He loved their homage. His eyes were filled with tears and his heart with thanks. Never before had he received such treatment. In America he was a "nigger"; in Britain he was tolerated; in France he was cheered; in the Soviet Union he was loved for the great artist that he is. He loved the Soviet Union in turn. He believed that every black man with blood in his veins would with him love the nation which first outlawed the color line.

"I saw him when he voiced this. It was in Paris in 1949 at the greatest rally for world peace this world ever witnessed. ~~Two~~ Thousands of persons from all the world filled the Salle Playel from floor to rafters. Robeson hurried in, magnificient in height and breadth, weary from circling Europe with song. The audience rose to a man and the walls thundered. Robeson said that his people wanted Peace and "would never fight the Soviet Union". I joined with the thousands in wild acclaim.

"This, for America, was his crime. He might hate anybody. He might join in murder around the world. But for him to declare that he loved the Soviet Union and would not join in war against it -- that was the highest crime that the United States recognized. For that, they slandered Robeson; they tried to kill him at Peekskill; they prevented him from hiring halls in which

49-9-378

to sing; they prevented him from travel and refused him a passport. His college, Rutgers, lied about him and dishonored him. And above all, his own people, American Negroes, joined in hounding one of their greatest artists -- not all, but men like Langston Hughes, who wrote of Negro Musicians and deliberately omitted Robeson's name -- Robeson who more than any living man has spread the pure Negro folk song over the civilized world. Yet has Paul Robeson kept his soul and stood his ground. Still he loves and honors the Soviet Union. Still he has hope for America. Still he asserts his faith in God. But we -- what can we say or do; nothing but hang our heads in endless shame."

HQ-9-379

On my ninetieth birthday, my friends invited my well-wishers to a party at the Roosevelt Hotel. No body of sponsors could be found, but Angus Cameron acted as chairman, and Eslanda Robeson as treasurer. Two thousand persons were present including my own great grandson, who behaved with exemplary decorum. I addressed my remarks to him. I quote from the National Guardian.

"The most distinguished guest of this festive occasion is none other than my great-grandson, Arthur Edward Mc Farlane ll, who was born this last Christmas Day. He has kindly consented to permit me to read to you a bit of advice which, as he remarked with a sigh of resignation, great-grandparents are supposed usually to inflict on the helpless young. This then is my word of advice.

"As men go, I have had a reasonably happy and successful life, I have had enough to eat and drink, have been suitably clothed and, as you see, have had many friends. But the thing which has been the secret of whatever I have done is the fact that I have been able to earn a living by doing the work which I wanted to do and work that was what the world needed done.

"I want to stress this. You will soon learn, my dear young man, that most human beings spend their lives doing work which they hate and work which the world does not need. It is therefore of prime importance that you early learn what you want to do; how you are fit to do it and whether or not the world needs this service. Here, in the next 20 years, your parents can be of use to you. You will soon begin to wonder just what parents are for besides interfering with your natural wishes. Let me therefore tell you: parents and their parents are inflicted upon you in order to show what kind of person you are; what sort of world you live in and what the persons who dwell here need for their happiness and well-being.

"Right here, my esteemed great-grandson, may I ask you to stick a pin. You will find it the fashion in the America where eventually you will live and work to judge that life's work by the amount of money it brings you. This is a grave mistake. The return from your work must be the satisfaction which that work brings you and the world's need of that work. With this, life is heaven, or as near heaven as you can get. Without this -- with work which you despise, which bores you and which the world does not need -- this life is hell. And believe me, many a $25,000-a-year executive is living in just such a hell today.

"Income is not greenbacks, it is satisfaction; it is creation; it is beauty. It is the supreme sense of a world of men going forward, lurch and stagger though it may, but slowly, inevitably going forward, and you, you yourself with your hand on the wheels. Make this choice, then, my son. Never hesitate, never falter.

"And now comes the word of warning: the satisfaction with your work even at best will never be complete, since nothing on earth can be perfect.

The forward pace of the world which you are pushing will be painfully slow. But what of that: the difference between a hundred and a thousand years is less than you now think. But doing what must be done, that is eternal even when it walks with poverty.

And I care not to garner while others
Know only to harvest and reap
For mine is the reaping of sowing
Till the spirit of rest gives me sleep."

A purse of seven thousand five hundred dollars was given me. Later in Chicago, Truman Gibson and Margaret Burroughs arranged another birthday celebration and gave me seventeen hundred dollars more. After talks in California, I was able to take a trip to the West Indies and see the beginnings of the new British West Indian Federation.

I was invited to attend the All African conference at Accra. At the Fifth Pan-African Congress at Manchester, England in 1945, a Sixth Congress on the continent of Africa had been projected. When Ghana gained her independence it was planned. I was not allowed to attend the inauguration. If I had been present undoubtedly the matter would have been further discussed. Meantime George Padmore, secretary of the Pan-African Congress, was called to Ghana as chief adviser to the Prime Minister, and he published a book called "Pan-Africanism or Communism" in which he said:

"In our struggle for national freedom, human dignity and social redemption Pan-Africanism offers an ideological alternative to Communism on one side and Tribalism on the other. It rejects both white racialism and black chauvinism. It stands for racial co-existence on the basis of absolute equality and respect for human personality."

I ventured to advise Nkrumah. "I have your kind invitation of January 22, 1957. In behalf of myself and of my wife, Shirley Graham, I thank you for it and want to say how great was our desire to accept it. But since the United States government refused to issue us passports, we must

183-6-44

with deep regret inform you of our inability to accept. I have recently also, and for the same reason, been compelled to my sorrow to decline a trip to China for lectures and participation in the celebration of the 250th anniversary of the birth of Benjamin Franklin. However, because of the fact that I am now entering the 90th year of my life and because of my acquaintanceship with you during the last 12 years, which cover the years of your imprisonment, vindication, and political triumph, I trust you will allow me a few words of advice for the future of Ghana and Africa.

"Today, when Ghana arises from the dead and faces this modern world, it must no longer be merely a part of the British Commonwealth or a representative of the world of West Europe, Canada, and the United States. Ghana must on the contrary be the representative of Africa.

"The consequent Pan-Africa, working together through its independent units, should seek to develop a new African economy and cultural center standing between Europe and Asia, taking from and contributing to both. It should stress peace and join no military alliance and refuse to fight for settling European quarrels. It should avoid subjection to and ownership by foreign capitalists who seek to get rich on African labor and raw material, and should try to build a socialism founded on olf African communal life; rejecting the exaggerated private initiative of the West, and seeking to ally itself with the social program of the Progressive nations; with British and Scandinavian Socialism, with the progress toward the Welfare State in India, Germany, France and the United States; and with the Communist States like the Soviet Union and China, in peaceful cooperation and without presuming to dictate as to how Socialism must or can be attained at particular times and places.

"Pan-African Socialism seeks the Welfare State in Africa. It will refuse to be exploited by people of other continents for their own benefit

49-9-382

and not for the benefit of the peoples of Africa. It will no longer consent to permitting the African majority of any African country to be governed against its will by a minority of invaders who claim racial superiority or the right to get rich at African expense. It will seek not only to raise but to process the Raw material and to trade it freely with all the world on just and equal terms and prices.

"Pan-Africa will seek to preserve its own past history, and write the present account, erasing from literature the lies and distortions about black folks which have disgraced the last centuries of European and American literature; above all, the new Pan-Africa will seek the education of all its youth on the broadest possible basis without religious dogma and in all hospitable lands as well as in Africa for the end of making Africans not simply profitable workers for industry nor stoolpigeons for propaganda, but for making them modern, intelligent, responsible men of vision and character.

"I pray you, my dear Mr. Nkrumah, to use all your power to put a Pan-Africa along these lines into working order at the earliest possible date. Seek to save the great cultural past of the Ashanti and Fanti peoples, not by inner division but by outer cultural and economic expansion toward the outmost bounds of the great African peoples, so that they may be free to live, grow, and expand; and to teach mankind what Non-Violence and Courtesy, Literature and Art, Music and Dancing can do for this greedy, selfish, and war-stricken world."

Meantime Big Business in America, surprised by the success of the Ghana revolution set itself to influence Nkrumah. Nkrumah was invited to the United States in 1958, and treated as never a Negro had been treated by the government. Hershey, a great manufacturer of chocolate sent a special

49-9-383

plane to take him to his factories; and the New York Cocoa Board of Trade dined him at the Waldorf-Astoria. I saw Mr. Nkrumah briefly. He was most cordial and I expected soon to be invited to the Sixth Pan-African Congress in Accra. No invitation came, but I received my passport and sailed for Europe. While I was in Tashkent an invitation arrived but not from Nkrumah nor for a Pan-African Congress. It was from a new "All-African" body for an African conference in December and it said nothing about my expenses. I sensed immediately that opposition had arisen in Africa over American Negro leadership of the African peoples. This had happened in 1920, when the West African Congress acknowledged no tie with the First Pan-African Congress in Paris which sparked it. American Negroes had too often assumed that their leadership in Africa was natural. With the rise of an educated group of Africans, this was increasingly unlikely. I realized how natural this was and knew that neither Nkrumah nor Padmore were calling a Sixth "Pan-African Congress" but that this "All-Africa Conference" was taking its place. However later Padmore sent me a cordial note emphasizing the invitation and offering to pay expenses.

By this time, however, my long travel was beginning to tell on me and I was in a Soviet Sanitarium at Barvieka near Moscow. I prepared to leave for Africa, but the council of physicians advised against the trip as too taxing. I had prepared three messages for Africa. One I delivered at Tashkent, one I sent by my wife Shirley, who attended the conference at Accra, and the last I broadcast later from Peking on my ninety-first birthday.

At Tashkent, before my invitation to Accra had come I warned Africa about borrowing capital from the West.

"Boycott the export of big capital from the exploiting world, led by America. Refuse to buy machines, skills and comforts with cocoa, coffee, palm oil and fruit sold at ridiculously low prices in exchange for imported

48-9-384

385

food, liquor, refrigerators and automobiles sold at exhorbitant prices. Live simply. Refuse to buy big capital from nations that cheat and overcharge. Buy of the Soviet Union and China as they grow able to sell at low prices. Save thus your own capital and drive the imperialists into bankruptcy or into Socialism."

Shirley, my wife, took my speech to Accra. She was shown rare courtesy and was the only non-African allowed to address the Assembly. She read my words:

49-9-385

"My only role in this meeting is one of advice from one who has lived long, who has studied Africa and has seen the modern world. I had hoped to deliver this word in person, but this was not possible. I have therefore asked my wife, Shirley Graham, to read it to you. It is simple and direct. In this great crisis of the world's history, when standing on the highest peaks of human accomplishment we look forward to Peace and backward to War; when we look up to Heaven and down to Hell, let us mince no words. We face triumph or tragedy without alternative. Africa, ancient Africa has been called by the world and has lifted up her hands! Which way shall Africa go? First, I would emphasize the fact that today Africa has no choice between private Capitalism and Socialism. The whole world, including Capitalist countries, is moving toward Socialism, inevitably inextricably. You can choose between blocs of military alliance, you can choose between groups of political union, you cannot choose between Socialism and Private Capitalism, because Private ownership of capital is doomed.

"But what is Socialism? It is disciplined economy and political organization in which the first duty of a citizen is to serve the state; and the state is not a selected aristocracy, or a group of self-seeking oligarchs who have seised wealth and power. No! The mass of workers

food, liquor, refrigerators and automobiles sold at exhorbitant prices. Live simply. Refuse to buy big capital from nations that cheat and overcharge. Buy of the Soviet Union and China as they grow able to sell at low prices. Save thus your own capital and drive the imperialists into bankruptcy or into Socialism."

Shirley, my wife, took my speech to Accra. She was shown rare courtesy and was the only non-African allowed to address the Assembly. She read my words:

49-9-385

"My only role in this meeting is one of advice from one who has lived long, who has studied Africa and has seen the modern world. I had hoped to deliver this word in person, but this was not possible. I have therefore asked my wife, Shirley Graham, to read it to you. It is simple and direct. In this great crisis of the world's history, when standing on the highest peaks of human accomplishment we look forward to Peace and backward to War; when we look up to Heaven and down to Hell, let us mince no words. We face triumph or tragedy without alternative. Africa, ancient Africa has been called by the world and has lifted up her hands! Which way shall Africa go? First, I would emphasize the fact that today Africa has no choice between private Capitalism and Socialism. The whole world, including Capitalist countries, is moving toward Socialism, inevitably inextricably. You can choose between blocs of military alliance, you can choose between groups of political union, you cannot choose between Socialism and Private Capitalism, because Private ownership of capital is doomed.

"But what is Socialism? It is disciplined economy and political organization in which the first duty of a citizen is to serve the state; and the state is not a selected aristocracy, or a group of self-seeking oligarchs who have seized wealth and power. No! The mass of workers

with hand and brain are the ones whose collective destiny is the chief object of all effort. Gradually, every state is coming to this concept of its aim. The great Communist states like the Soviet Union and China have surrendered completely to this idea. The Scandinavian states have yielded partially; Britain has yielded in some respects, France in part and even the United States adopted the New Deal which was largely socialistic, even though today further American socialism is held at bay by sixty great groups of corporations who control individual capitalists and the Trade Union leaders.

"On the other hand, the African tribe, whence all of you sprung, was communistic in its very beginnings. No tribesman was free. All were servants of the tribe of whom the chief was father and voice. Read of the West Coast trade as described by Caseley-Hayford: There is small trace of private enterprise of individual initiative. It was the tribe which carried on trade through individuals, and the chief was mouthpiece of the common will.

"Here then, my Brothers, you face your great decision: Will you for temporary advantage - for automobiles, refrigerators and Paris gowns, spend your income in paying interest of borrowed funds, or will you sacrifice present comfort and the chance to shine before your neighbors in order to educate your children, develop such industry as best serves the great mass of people and makes your country strong in ability, self-support and self-defense? Such union of effort for strength calls for sacrifice and self-denial, while the capital offered you at high price by the colonial powers like France, Britain, Holland, Belgium and the United States, will prolong fatal colonial imperialism, from which you have suffered slavery, serfdom and colonialism. You are

49-9-386

not helpless. You are the buyers of capital goods, and to continue existence as sellers of capital, the great nations, former owners of the world, must sell or face bankruptcy. You are not compelled to buy all they offer now. You can wait. You can starve a while longer rather than sell your great heritage for a mass of western capitalistic pottage. You can not only beat down the price of capital as offered by the united and monopolized western private capitalists, but at last today you can compare their offers with those of socialist countries like the Soviet Union and China, which with infinite sacrifice and pouring out of blood and tears, are at last able to offer weak nations needed capital on better terms than the West. The supply which socialist nations can at present spare is small as compared with that of the bloated monopolies of the West, but it is large and rapidly growing. Its acceptance involves no bonds which a free Africa may not safely assume. It certainly does not involve slavery and colonial control which is the price which the West has demanded, and still demands. Today she offers a compromise, but one of which you must beware: She offers to let some of your smarter and less scrupulous leaders become fellow capitalists with the white exploiters, if in turn they induce the nation's masses to pay the awful cost. This has happened in the West Indies and in South America. This may yet happen in the Middle East and Eastern Asia. Strive against it with every fibre of your bodies and souls. A body of local private capitalists, even if they are black, can never free Africa; they will simply soil it into new slavery to old masters overseas.

"As I have said, this is a call for sacrifice. Great Goethe sang, "Entbehran sollst du, sollst entbehren" - "Thou shalt forego, Shalt do without." If Africa unites it will be because each part, each nation, each tribe gives up a part of its heritage for the good of the whole. That

49-9-387

is what union means; that is what Pan-Africa means: When the child is born into the tribe the price of his growing up is to give over a part of his freedom to the tribe. This he soon learns or dies. When the tribe becomes a union of tribes, the individual tribe surrenders some part of its freedom to the paramount tribe.

"When the nation arises, the constituent tribes, clans and groups must each yield power and much freedom to the demands of the nation or the nation dies before it is born. Your local tribal, much-loved languages must yield to the few world tongues which serve the largest numbers of people and promote understanding and world literature.

"This is the great dilemma which faces Africa today; faces one and all: Give up individual rights for the needs of the nation; give up tribal independence for the needs of Mother Africa. Forget nothing but set everything in its rightful place: the Glory of the six Ashanti Wars against Britain; the wisdom of the Fanti Confederation; the unity of Nigeria; the song of the Songhay and Hausa; the rebellion of the Mahdi and the hands of Ethiopia; the greatness of the Basuto and the fighting of Chaka; the revenge of Mutassa, and many other happenings and men; but above all - Africa, Mother of Men. Your nearest friends and neighbors are the colored people of China and India, the rest of Asia, the Middle East and the sea isles, once close bound to the heart of Africa and now long severed by the greed of Europe. Your bond is no more color of skin but the deeper experience of wage slavery and contempt.

"So too, your bond with the white world is closest to those like the Union of Soviet Socialist Republics, who support and defend China and help the slaves of Tibet and India, and not those who exploit the Middle East, the West Indies, and South America.

49-6-64

"Awake, awake, put on they strength, O Zion; reject the meekness of missionaries who teach neither love nor brotherhood, but emphasise the virtues of private profit from capital, stolen from your land and labor. Africa awake, put on the beautiful robes of Pan-African Socialism.

"You have nothing to lose but your Chains!

"You have a continent to regain!

"You have freedrom and human dignity to attain!!"

The address was greeted with applause. Later Shirley and Mrs. Robeson with the help of Tom M'Boya, the chairman, secured the removal of Chiang kai Chek's Formosa flag from the assembly hall.

49-9-389

When in Peking, my ninety-first birthday was given national celebration. I pled for unity of China and Africa and my speech was broadcast to the world:

"By courtesy of the government of the 600 million people of the Chinese Republic, I am permitted on my ninety-first birthday to speak to the people of China and Africa and through them to the world. Hail, then, and farewell, dwelling places of the yellow and black races. Hail human kind!

"I speak with no authority; no assumption of age nor rank; I hold no position, I have no wealth. One thing alone I own and that is my own soul. Ownership of that I have even while in my own country for near a a century I have been nothing but a "Nigger". On this basis and this alone I dare speak, I dare advise.

"China after long centuries has arisen to her feet and lempt forward. Africa arise, and stand straight, speak and think! Act! Turn from the West and your slavery and humiliation for the last 500 years and face the rising sun.

"Behold a people the most populous nation on this ancient earth which has burst its shackles, not by boasting and strutting, not by lying about its history and its conquests, but by patience and long suffering, by blind struggle, moved up and on toward the crimson sky. She aims to "make men holy; to make men free."

"But what men? Not simply the mandarins but including mandarins; not simply the rich, but not excluding the rich. Not simply the learned, but led by knowledge to the end that no man shall be poor, nor sick, nor ignormant; but that the humblest worker as well as the sons of emperors shall be fed and taught and healed and that there emerge on earth a single unified people, free, well and educated.

"You have been told, My Africa: My Africa in Africa and all your children's children overseas; you have been told and the telling so beaten into you by rods and whips, that you believe it yourselves, that this is impossible; that mankind can rise only by walking on men; by cheating them and killing them; that only on a doormat of the despised and dying, the dead and rotten, can a British aristocracy, a French cultural élite or an American millionaire be nurtured and grown.

"This is a lie. It is an ancient lie spread by church and state, spread by priest and historian, and believed in by fools and cowards, as well as by the downtrodden and the children of despair.

"Speak, China, and tell your truth to Africa and the world. What people have been despised as you have? Who more than you have been rejected of men? Recall when lordly Britishers threw the rickshaw money on the ground to avoid touching a filthy hand. Forget not, the time when in Shanghai no Chinese man dare set foot in a park which he paid for. Tell this to Africa, for today Africa stands on new feet, with new eyesight, with

49-9-390

new brains and asks: Where am I and why?

"The Western sirens answer: Britain wheedles; France cajoles; while America, my America, where my ancestors and descendants for eight generations have lived and toiled; America loudest of all, yells and promises freedom. If only Africa allows American investment.

"Beware Africa, America bargains for your soul. America would have you believe that they freed your grandchildren; that Afro-Americans are full American citizens, treated like equals, paid fair wages as workers, promoted for desert and free to learn and travel across the world.

"This is not true. Some are near freedom; some approach equality with whites; some have achieved education; but the price for this has too often been slavery of mind, distortion of truth and oppression of our own people.

"Of 18 million Afro-Americans, 12 million are still second-class citizens of the United States, serfs in farming, low-paid laborers in industry, and repressed members of union labor. Most American Negroes do not vote. Even the rising six million are liable to insult and discrimination at any time.

"But this, Africa, relates to your descendants, not to you. Once I thought of you Africans as children, whom we educated Afro-Americans would lead to liberty. I was wrong. We could not even lead ourselves, much less you. Today I see you rising under your own leadership, guided by your own brains.

"Africa does not ask alms from China nor from the Soviet Union nor from France, Britain, nor the United States. It asks friendship and sympathy and no nation better than China can offer this to the Dark Continent. Let it be freely given and generously. Let Chinese visit Africa, send their scientists there and their artists and writers. Let

419-9-391

Africa send its students to China and its seekers after knowledge. It will not find on earth a richer goal, a more promising mine of information.

"On the other hand, watch the West. The new British West Indian Federation is not a form of democratic progress but a cunning attempt to reduce these islands to the control of British and American investors. Haiti is dying under sich Haitian investors who with American money are enslaving the peasantry. Cuba is showing what the West Indies, Central and South America are suffering under American Big Business.

"The American worker himself does not always realize this. He has high wages and many comforts. Rather than lose these, he keeps in office by his vote the servants of industrial exploitation so long as they maintain his wage. His labor leaders represent exploitation and not the fight against the exploitation of labor by private capital. These two sets of exploiters fall out only when one demands too large a share of the loot.

"This China knows. This Africa must learn. This the American Negro has failed so far to learn. I am frightened by the so-called friends who are flocking to Africa. Negro Americans trying to make money from your toil, white Americans who seek by investment and high interest to bind you in serfdom to business as the Near East is bound and as South America is struggling with. For this America is tempting your leaders, bribing your young scholars, and arming your soldiers. What shall you do?

"First, understand! Realize that the great mass of mankind is freeing itself from wage slavery, while private capital in Britain, France, and now in America, is still trying to maintain civilization and comfort for a few on the toil, disease and ignorance of the mass of men. Understand this, and understanding comes from direct knowledge. You know America and France, and Britain to your sorrow. Now know the Soviet

419-9-392

Union, but particularly know China.

"China is flesh of your flesh, and blood of your blood. China is colored and knows to what a colored skin in this modern world subjects its owner. But China knows more, much more than this: she knows what to do about it. She can take the insults of the United States and still hold her head high. She can make her own machines, when America refuses to sell her American manufactures, even though it hurts American industry, and throws her workers out of jobs. China does not need American nor British missionaries to teach her religion and scare her with tales of hell. China has been in hell too long, not to believe in a heaven of her own making. This she is doing.

"Come to China, Africa, and look around. Invite Africa to come, China, and see what you can teach by just pointing. Yonder old woman is working on the street. But she is happy, She has no fear. Her children are in school and a good school. If she is ill, there is a hospital where she is cared for free of charge. She has a vacation with pay each year. She can die and be buried without taxing her family to make some undertaker rich.

"Africa can answer: but some of this we have done; our tribes undertake public service like this. Very well, let your tribes continue and expand this work. What Africa must realize is what China knows; that it is worse than stupid to allow a people's education to be under the control of those who seek not the progress of the people but their use as means of making themselves rich and powerful. It is wrong for the University of London to control the University of Ghana. It is wrong for the Catholic church to direct the education of the black Congolese. It was wrong for Protestant churches supported by British and American wealth to control higher education in China.

49-9-393

"The Soviet Union is surpassing the world in popular and higher education, because from the beginning it started its own complete educational system. The essence of the revolution in the Soviet Union and China and in all the "iron curtain" nations, is not the violence that accompanied the change; no more than starvation at Valley Forge was the essence of the American revolution against Britain. The real revolution is the acceptance on the part of the nation of the fact that hereafter the main object of the nation is the welfare of the mass of the people and not of the lucky few.

"Government is for the people's progress and not for the comfort of an aristocracy. The object of industry is the welfare of the workers and not the wealth of the owners. The object of civilization is the cultural progress of the mass of workers and not merely of an intellectual elite. And in return for all this communist lands believe that the cultivation of the mass of people will discover more talent and genius to serve the state than any closed aristocracy ever furnished. This belief the current history of the Soviet Union and China is proving true each day. Therefore don't let the West invest when you can avoid it. Don't buy capital from Britain, France and the United States if you can get it on reasonable terms from the Soviet Union and China. This is not politics; it is common sense.

HG-9-394

It is learning from experience. It is trusting your friends and watching your enemies. Refuse to be cajoled or to change your way of life, so as to make a few of your fellows rich at the expense of a mass of workers growing poor and sick and remaining without schools so that a few black men can have automobiles.

"Africa, here is a real danger which you must avoid or return to the slavery from which you are emerging. All I ask from you is the courage to know; to look about you and see what is happening in this old and tired world; to realize the extent and depth of its rebirth and the promise which glows on your hills.

Visit the Soviet Union and visit China. Let your youth learn the Russian and Chinese languages. Stand together in this new world and let the old world perish in its greed or be born again in new hope and promise. Listen to the Hebrew prophet of communism:

"Ho! every one that thirsteth; come ye to the waters; come, buy and eat, without money and price!

"Again, China and Africa, hail and farewell!"

49-9-395

POSTLUDE

Returning to America after my great journey in 1959, I was welcomed home; not simply by my friends but by my government. In Sweden it was feared I might not as a member of the World Peace Council, be allowed to land in England. But Pritt and Belfrage took hold and I received every courtesy. I had tea on the terrace of the House of Lords, with a viscount, an earl, and two ladies; also on the terrace of the House of Commons, I had tea where I had last been entertained by Kier Hardie. I met several members of Parliament, and spent many Sunday afternoons with Donald Ogden Stewart and Ella Winter. There I met James Aldrich and Katherine Hepburn. I saw Paul Robeson and his splendid production of Othello. Lawrence Bradshaw, sculptor of the great head of Karl Marx, did my head.

49-9 - 396

The cabin on the Liberté as we returned was large and airy, and the voyage smooth and pleasant. But how would the United States receive us? We had openly spent ten weeks in China, and spoken widely and broadcast. There was some hasty last minute telephoning from the boat, I am sure, but all went well. Our passports were not seized, and the chief Inspector of Customs passed our bags quickly and welcomed us home. Our relatives and friends swarmed to greet us. I was unable to understand why Scott Nearing and Waldo Frank should be forbidden to do what as yet I have been unrebuked for doing openly and proudly. However, three months later when the Supreme Court agreed to consider the cases of Waldo Frank and William Worthy, the State Department demanded our passports. We asked delay until the Supreme Court made its verdict. This was granted.

I am a little puzzled now about the ordering of my life. Several times in the past I find that I have prepared for death and death has not come. Always on my desk lies a calendar of my own devising with daily and hourly tasks; with plans for the week and next week, the month and months ahead and the sentinel of my main task

for the year. This year-part is now getting uncertain. Even months are no longer absolutely mine, yet I am reasonably content and although my strength warns me not to try to work as many hours as once I did, yet I work and work regularly and with some efficiency, from day to day.

As I recall, I have long faced the inevitability of death and not tried to dodge the thought. In early manhood I wrote:

"I saw a mother, black and scarred and iron-haired, who had watched her boy through college, for men to jeer at and discourage and tempt until he sought women and whiskey and died. She crept on a winter's Sunday into a Cathedral of St. John The Divine and crouched there where a comfortable red and yellow angel sat sunning her ample limbs, 'To Keep the Memory of Obadiah James Green,' -- a stock-gambler. And there she rested while the organ warbled the overture to Der Feischütz, and the choir asserted 'My Jesus! As Thou wilt.' The priest intones: 'Come unto Me all ye that labor and are heavy laden and I will give you rest! For my yoke is easy and my burden light'. And the window-angel moved a fat wing and murmured: "except Niggers!"

"In that dark day when all friends gathered round shall sigh; as he goes to that full dreadful home where earth shall move away and these dim eyes shall strain to scenes all glorious, shall they see on that morning round the wide, white throne a glorified Negro Problem? If so, Father of Mercies, send me to Hell."

At fifty, after a serious operation I wrote:

"Last year I looked death in the face and found its lineaments not unkind. But it was not my time. Yet in nature some time soon and in the fullness of days I shall die, quietly, I trust, with my face turned South and eastward; and, dreaming or dreamless I shall, I am sure, enjoy death as I have enjoyed life."

At sixty years of age I wrote again:

19-9-397

"For long years we of the world gone wild, have looked into the face of death and smiled. Through all our bitter tears we knew how beautiful it was to die for that which our souls called sufficient. Like all true beauty this thing of dying was so simple, so matter-of-fact. The boy clothed in his splendid youth stood before us and laughed in his own jolly way -- went and was gone. Suddenly the world was full of the fragrance of sacrifice. We left our digging and burden-bearing; we turned from our scraping and twisting of things and words; we paused from our hurrying hither and thither and walking up and down, and asked in half whispers 'Death -- is this life? And is its beauty real or false?'

"Here, then is beauty and ugliness, a wide vision of world-sacrifice, a fierce gleam of world-hate. Which is life and what is death and how shall we face so tantalizing a contradiction? Any explanation must necessarily be subtle and involved. No pert and easy word of encouragement, no merely dark despair, can lay hold of the roots of these things. And first and before all, we cannot forget that this world is beautiful. Grant all its ugliness and sin -- the petty, horrible snarl of its putrid threads, which few have seen more near or more often than I -- notwithstanding all this, the beauty of the world is not to be denied.

"And then -- the Veil, the Veil of color. It drops as drops the night on southern seas -- vast, sudden, unanswering. There is Hate behind it, and Cruelty and Tears. As one peers through its intricate, unfathomable pattern of ancient, old, old design, one sees blood and guilt and misunderstanding. And yet it hangs there, this Veil, between then and now, between Pale and Colored and Black and White -- between You and Me. Surely it is but a thought-thing, tenuous, intangible; yet just as surely is it true and terrible and not in our little day may you and I lift it. We may feverishly unravel its edges and even climb slow with giant shears to where its ringed and gilded top nestles close to the throne of Eternity. But as we

49-9-398

4

work and climb we shall see through streaming eyes and hear with aching ears, lynching and murder, cheating and despising, degrading and lying, so flashed and fleshed through this vast hanging darkness that the Doer never sees the Deed and the Victim knows not the Victor and Each hate All in wild and bitter ignorance. Listen, O Isles, to these Voices from within the Veil, for they portray the most human hurt of the Twentieth Cycle of that poor Jesus who was called the Christ!"

"At last to us all comes happiness, there in the Court of Peace, where the dead lie so still and calm and good. If we were not dead we would lie and listen to the flowers grow. We would hear the birds sing and see how the rain rises and blushes and burns and pales and dies in beauty. We would see spring, summer, and the red riot of autumn, and then in winter, beneath the soft white snow, sleep and dream of dreams. But we know that being dead, our Happiness is a fine and finished thing and that ten, a hundred, and a thousand years, we shall lie at rest, unhurt in the Court of Peace."

From then until now the wraith of Death has followed me, slept with me and awakened me and accompanied my day. Only now it is more commonplace and reasonable. It is the end and without ends there can be no beginnings. Its finality we must not falsify. It is our great debt to the Soviet Union that it alone of nations dared stop that lying to children which so long disgraced our schools. We filled little minds with fairy tales of religious dogma which we ourselves never believed. We filled their thoughts with pictures of barbarous revenge called God which contradicted all their inner sense of decency. We repeated folk tales of children without fathers, of death which was life, of sacrifice which was shrewd investment and ridiculous pictures of an endless future. The Soviets have stopped this. They allow a child to grow up without religious lies and with mature mind make his own decision about the world without scaring him into Hell or rewarding him with a

49-9-399

silly Heaven.

We know that Death is the End of Life. Even when we profess to deny this we know that this hope is mere wishful thinking, pretense broidered with abject and cowardly fear. Our endless egotism cannot conceive a world without Us and yet we know that this will happen and the world be happier for it.

I have lived a good and full life. I have finished my course. I do not want to live this life again. I have tasted its delights and pleasures; I have known its pain, suffering and despair. I am tired, I am through. For the souls who follow me; for that little boy born Christmas day before last, my great grandson and his compeers, I bequeath all that waits to be done, and Holy Time what a task, forever!

I have seen miracles in my life. As a boy we did not have the possibility of miracles emphasized in our schools. In the weekly Sunday School, we studied the bible with its tales of the impossible b t I remember distinctly that I questioned the validity of some of them, like that story of Jonah. In other words I was brought up in the shadow of modern science where all that happens had a cause and there were many things unlikely to happen. For instance, then flying by man was not to be thought of and we talked of flying as impossible and joked at man's attempts. Yet I read of the first successful flights; and myself in 1921 flew from Paris to London. I have flown tens of thousands of miles since, over land and sea. I visited the Paris world's fair in 1900, and was astonished to see automobiles on the streets; not many but perhaps a dozen in a day. I lived to see the jokes about the possibility of these motors displacing the horse fade away and automobiles fill the streets and cover the nations.

I remember when first in an American city, seeing the streets lighted by electricity; the lights blinked and sputtered but in a few years electric bulbs supplanted the gas lights of my boyhood. Then came the gas-filled balloons rising

49-9-400

in the sky and men crossed the Atlantic in Zeppelins. Soon came the horror of Hiroshima and I began to feel the vast possibilities of man's brain and his coming conquest of the air. But the most startling miracle of my time before the year 1958, was Sputnik. This went beyond the internal combustion engine; the airplane and balloon; beyond the electric light and the bursting atom. This was beyond mere utility into the realm of Knowledge and the triumph of Reason. It taught the United States the superiority of Communist thought and calculation. It stopped our sneers at Soviet education.

Then this year came the climax; the triumph of thought over power and space that was the greatest miracle of which I ever dreamed. Not yet have I been able to comprehend its meaning, or to realize that it is today actually possible to send a human being to the stars. A Frenchman once said: "I know but two beautiful things on earth: the stars above us and the feeling of duty within us." Now that we have pierced the heavens, we are more sure of making Mankind willing and eager to do right.

I have lived to an age of life which is increasingly distasteful to this nation. Unless by sixty a man has gained possession of enough of money to support himself, he faces the distinct possibility of starvation. He is liable to lose his job and to refusal if he seeks another. At seventy he is frowned upon by the Church and if he is foolish enough to survive until ninety, he is often regarded as a freak. This is because in the face of human experience the United States has discovered that Youth knows more than Age. When a man of 35 becomes president of a great institution of learning or United States Senator or head of a multi-million dollar corporation, a cry of triumph rings in the land. Why? To pretend that fifteen years bring of themselves more wisdom and understanding than fifty is a contradiction in terms. Given a born fool, a hundred years will not make him wise; but given an idiot, he will not be wise at twenty. Youth is more courageous than age because it knows less. Age is wiser than youth because it knows more. This all mankind has

49-9-401

affirmed from Egypt and China five thousand years ago, to Britain and Germany today. Only the United States knows better. I would have been hailed with approval if I had died at fifty. At seventy-six my death was practically requested. If living does not give value, wisdom, and meaning to life, then there is no sense in living at all. If immature and inexperienced men rule the earth, then the earth deserves what it gets: the repetition of age-old mistakes, and wild welcome for what men knew a thousand years ago was disaster.

I do not apologize for living long. High on the ramparts of this blistering hell of life, as it must appear to most men, I sit and see the Truth. I look it full in the face, and I will not lie about it, neither to myself nor to the world. I see my country as what Cedric Belfrage aptly characterizes as a "Frightened Giant" afraid of the Truth, afraid of Peace. I see a land which is degenerating and faces decadence unless it has sense enough to turn about and start back. It is no sin to fail. It is the habit of men. It is disaster to go on when you know you are going wrong. I judge this land not merely by statistics or reading lies agreed upon by historians. I judge by what I have seen, heard, and lived through for near a century.

There was a day when the world rightly called Americans honest even if crude; earning their living by hard work; telling the truth no matter whom it hurt; and going to war only in what they believed a just cause after nothing else seemed possible. Today we are lying, stealing, and killing. We call all this by finer names: Advertising, Free Enterprise, and National Defense. But names in the end deceive no one; today we use science to help us deceive our fellows; we take wealth that we never earned and we are devoting all our energies to kill, maim and drive insane, men, women, and children who dare refuse to do what we want done. No nation threatens us. We threaten the world. Our President says that Foster Dulles was the wisest man he knew. If Dulles was wise, God help our fools -- the fools who rule

49-9-402

us and are today running wild in order to shoot a football into the sky where Sputnik rolls in peace around the earth. And they know why we fail -- these military masters of men -- we haven't taught our children mathematics and physics. No, it is because we have not taught our children to read and write or to behave like human beings and not like hoodlums. Every child on my street is whooping it up with toy guns and big boys with real pistols. When Elvis Presley goes through the motions of copulation on the public stage it takes the city police force to hold back teen-age children from hysteria. The highest ambition of an American boy today is to be a millionaire. The highest ambition of an American girl is to be a movie star. Of the ethical actions which lie back of these ideals, little is said or learned. What are we doing about it? Half the Christian churches of New York are trying to ruin the free public schools in order to install religious dogma in them; and the other half are too interested in Venezuelan oil to prevent the best center in Brooklyn from fighting youthful delinquency, or preventing a bishop from kicking William Howard Melish into the street and closing his church. Which of the hundreds of churches sitting half empty protests about this? They hire Billy Graham to replace the circus in Madison Square Garden.

49-9-403.

Howard Melish is one of the few Christian clergymen, for whom I have the highest respect. Honest and conscientious, believing sincerely in much of the Christian dogma, which I reject, but working honestly and without hypocrisy, for the guidance of the young, for the uplift of the poor and ignorant, and for the betterment of his city and his country, he has been driven from his work and his career ruined by a vindictive Bishop of his church, with no effective protest from most of the Christian ministry, and membership or of the people of the United States. The Melish case is perhaps at once the most typical and frightening illustration of present American religion and my reaction. Here is a young man of ideal character, of

impeccable morals; a hard worker, especially among the poor and unfortunate, with fine family relations. His father had helped build one of the most popular Episcopal churches in the better part of Brooklyn. He himself had married a well-educated woman, and had three sons in school. The community about it was changing from well-to-do people of English and Dutch descent, to white collar and laboring folk of Italian, Negro and Puerto-Rican extraction. Trinity church, under the Mellishes, adapted itself to changing needs, and invited neighborhood membership. It was not a large church, but it was doing the best work among the young and foreign-born of any institution in Brooklyn.

49-9-404

The young rector took one step for which the bishop, most of his fellow clergymen and the well-to-do community, with its business interests pilloried him. He joined and became an official of the National Council of American Soviet Friendship. He was accused immediately of favoring Communism, and to appease criticism he gave up his official position in this organization, but refused to resign his membership. Allegedly for this reason the bishop, most of the clergy and the well-to-do community proceeded to force him out of the church. The real reason behind their fight was anger because a rich, white, "respectable" church was being surrendered to Workers and Negroes. It became a renewed battle between Episcopal authority and democratic rule. That his parish wanted to retain Mellish as rector was unquestionable. Through the use of technicalities in the canon law and in accord with the decision of Catholic judges who believed in Episcopal power, Howard Melish lost his church, had his life work ruined, the church itself closed, and its local influence ended. There was vigorous protest against this by a few devoted colleagues, many of them Jews and liberals. But the great mass of the Episcopal church membership was silent and did nothing.

All this must not be mentioned even if you know it and see it. America must never be criticized even by honest and sincere men. America must always be praised and extravagantly praised, or you lose your job or are ostracized or land in jail.

Criticism is Treason, and treason or the hint of treason testified to by hired liars may be punished by shameful death. I saw Ethel Rosenberg lying beautiful in her coffin beside her mate. I tried to stammer futile words above her grave. But not over graves should we shout this failure of justice, but from the housetops of the world.

Honest men may and must criticize America. Describe how she has ruined her democracy, sold out her jury system, and led her seats of justice astray. The only question that may arise is whether this criticism is based on truth, not whether it has been openly expressed.

What is truth? What can it be when the President of the United States, guiding the nation, stands up in public and says: "The world also thinks of us as a land which has never enslaved anyone." Everyone who heard this knew it was not true. Yet here stands the successor of George Washington who bought, owned, and sold slaves; the successor of Abraham Lincoln who freed four million slaves after they had helped him win victory over the slave-holding South. And so far as I have seen, not a single periodical, not even a Negro weekly, has dared challenge or even criticize that falsehood.

Perhaps the most extraordinary characteristic of current America is the attempt to reduce life to Buying and Selling. Life is not Love unless Love is sex and bought and sold. Life is not Knowledge save knowledge of technique, of science for destruction. Life is not Beauty except beauty for sale. Life is not Art unless it's price is high and it is sold for profit. All Life is production for profit and for what is Profit, but for buying and selling again?

Even today the contradictions of American civilization are tremendous. Freedom of political discussion is difficult; elections are not free and fair. Democracy is for us to a large extent unworkable. In business there is a tremendous amount of cheating and stealing; gambling in card games on television and on the stock exchange

149-9-105

is widely practised. It is common custom for distinguished persons to sign books, articles, and speeches that they did not write; and for men of brains to compose and sell opinions which they do not believe. Ghost writing is a profession. The greatest power in the land is not thought or ethics, but wealth, and the persons who exercise the power of wealth are not necessarily its owners, but those who direct its use, and the truth about this direction is so far as possible kept a secret. We do not know who owns our vast property and resources, so that most of our argument concerning wealth and its use, must be based on guess work. Those responsible for the misuse of wealth escape responsibility, and even the owners of capital often do not know for what it is being used and how. The criterion of industry and trade, is the profit that it accrues, not the good which it does either its owners or the public. Present profit is valued higher than future need. We waste materials. We refuse to make repairs. We cheat and deceive in manufacturing goods. We have succumbed to an increased use of lying and misrepresentation. In the last ten years at least a thousand books have been published to prove that the fight to preserve Negro slavery in America was a great and noble cause, led by worthy men of eminence.

I know the United States. It is my country and the land of my fathers. It is still a land of magnificent possibilities. It is still the home of noble souls and generous people. But it is selling its birthright. It is betraying its mighty destiny. I was born on its soil and educated in its schools. I have served my country to the best of my ability. I have never knowingly broken its laws or unjustly attacked its reputation. At the same time I have pointed out its injustices and crimes and blamed it, rightly as I believe, for its mistakes. It has given me education and some of its honors, for which I am thankful.

Today the United States is the leading nation in the world, which apparently believes that War is the only way to settle present disputes and difficulties. For this reason it is spending fantastic sums of money, and wasting wealth and energy

49-9-406

on the preparation for war, which is nothing less than criminal. Yet the United States dare not stop spending money for war. If she did her whole economy, which is today based on preparation for war, might collapse. Therefore, we prepare for a Third World War; we spread our soldiers and arms over the earth and we bribe every nation we can to become our allies. We are taxing our citizens into poverty, crime and unemployment, and systematically distorting the truth about socialism. We have used the horror of germ warfare. Some of our leaders are ready to use it again.

The use of history for distortion and not for education has led to another of our greatest present evils; and that is to make fear of Socialism and Communism so great that we have withdrawn our efforts toward the education of children, the war on disease, and the raising of the standards of living. We encourage the increase of debt to finance present enjoyment; and above all we use news gathering and opinion, radio and television, magazines and books, to make most Americans believe that the threat of war, especially on the part of the Soviet Union against the United States justifies heavy taxation and tremendous expenditure for war preparation.

This propaganda began when our tremendous profits from the first world war encouraged American business to believe that the United States was about to replace Great Britain as ruler of most of mankind. The rise and spread of Socialism contradicted this ambition, and made the projected American century quail in fright before the century of Communism. We determined therefore to overthrow Communism by brute force. Gradually we discovered the impossibility of this, unless we risked suicide. We saw Communism increasing education, science and productivity. We now face the possibility of co-existence with the Communist world, and competition between the methods of Capitalism and the methods of Socialism. It is at this crisis that I have the opportunity to live seven months in a world of Socialism, which is striving towards Communism as an ideal.

This is what I call decadence. It could not have happened fifty years ago.

49-9-407

In the day of our fiercest controversy we have not dared thus publicly to silence opinion. I have lived through disagreement, vilification, and war and war again. But in all that time, I have never seen the right of human beings to think so challenged and denied today.

The day after I was born, Andrew Johnson was impeached. He deserved punishment as a traitor to the poor Southern whites and poorer freedmen. Yet during his life, no one denied him the right to defend himself. A quarter of a century ago, I tried to state and carry into realisation unpopular ideas against a powerful opposition -- in the white South, in the reactionary North, and even among my own people. I found my thought being misconstrued and I planned an organ of propaganda -- The Crisis -- where I would be free to say what I believed. This was no easy sailing. My magazine reached but a fraction of the nation. It was bitterly attacked and once the government suppressed it. But in the end I maintained a platform of radical thinking on the Negro question which influenced many minds. War and depression ended my independence of thought and forced me to return to teaching, but with the certainty that I had at least started a new line of belief and action. Then they stopped my teaching.

As a result of my work and that of others, the Supreme Court began to restore democracy in the South and finally outlawed discrimination in public services based on color. This caused rebellion in the South which the nation is afraid to meet. The Negro stands bewildered and attempt is made by appointments to unimportant offices and trips abroad to bribe him into silence. His art and literature cease to function. Only the children like those at Little Rock stand and fight.

The Yale sophomore who replaced a periodical of brains by a book of pictures concealed in advertisements, proposed that America rule the world. This failed because we could not rule ourselves. But Texas to the rescue, as Johnson proposes that America take over outer space. Somewhere beyond the Moon there must be sentient creatures rolling in inextinguishable laughter at the antics of our Earth.

49-9-408

409

We tax ourselves into poverty and crime so as to make the rich richer and the poor poorer and more evil. We know the cause of this: it is to permit our rich business interests to stop socialism and to prevent the ideals of Communism from ever triumphing on earth. The aim is impossible. Socialism progresses and will progress. All we can do is to silence and jail its promoters and make world war on Cpmmunism. I believe in socialism. I seek a world where the ideals of Communism will triumph -- to each according to his need; from each according to his ability. For this I will work as long as I live. And I still live.

49-9-409

I just live. I plan my work, but plan less for shorter periods. I live from year to year and day to day. I expect snatches of pain and discomfort to come and go. And then reaching back to my archives, I whisper to the great Majority: To the Almighty Dead, into whose pale approaching faces, I stand and stare; you whose thoughts, deeds and dreams have made men wise with all wisdom and stupid with utter evil. In every name of God, bend out and down, you who are the infinite majority of all mankind and with your thoughts, deeds, dreams and memories, overwhelm, outvote, and coerce this remnant of human life which lingers on, imagining themselves wisest of all who have lived just because they still survive. Whither with wide revelation will they go with their stinking pride and empty boasting, whose ever recurring lies only you the Dead have known all too well. Teach living man to jeer at this last civilization which seeks to build heaven on Want and Ill of most men and vainly builds on color and hair rather than on decency of hand and heart. Let your memories teach these wilful fools all which you have forgotten and ruined and done to death.

You are not and yet you are: your thoughts, your deeds, above all your dreams still live. So too, your deeds and what you forgot -- these lived as your bodies died. With these we also live and die, realize and kill. Our dreams seek Heaven, our deeds plumb Hell. Hell lies about us in our Age: blithely we push into its

stench and flame. Suffer us not, Eternal Dead to stew in this Evil -- the Evil of South Africa, the Evil of Mississippi; the Evil of Evils which is what we hope to hold in Asia and Africa, in the southern Americas and islands of the Seven Seas. Reveal, Ancient of Days, the Present in the Past and prophesy the End in the Beginning. For this is a beautiful world; this is a wonderful America, which the founding fathers dreamed until their sons drowned it in the blood of slavery and devoured it in greed. Our children must rebuild it. Let then the Dreams of the Dead rebuke the Blind who think that what is will be forever and teach them that what was worth living for must live again and that which merited death must stay dead. Teach us, Forever Dead there is no ~~Hope~~ Dream but Deed, there is no ~~Dream~~ Dead but Memory.

A SOLILOQUY ON VIEWING MY LIFE FROM THE LAST DECADE OF ITS FIRST CENTURY (THE AUTOBIOGRAPHY OF W. E. B. DU BOIS)

FRAGMENTS AND NOTES

eye brows. I was to have a scholarship to go South to Fisk University. The South had an unholy name in my village and the family was not at all sure that I ought to go. But, of course, I never hesitated but started out and went into Tennessee at the age of seventeen to be a sophomore at Fisk University. It was to me an extraordinary experience. I was thrilled to be for the first time among so many people of my own color or rather of such various and such extraordinary colors, which I had not seen before, but who seemed bound to me by new and exciting ties. I had never seen such beautiful girls in my life or men who gave themselves such airs." The three years here were years of growth and strength and expanding ambition. I learned new things about the world. I came in contact for the first time with a sort of violence that I had never realized in New England. I remember going down and looking wide eyed at the door of a public building filled with buck shot where the editor of the leading daily paper had been publicly murdered the day before. I was astonished to find many of my fellow students carrying fire arms and to hear their stories of adventure. I suddenly determined that I was going out to teach during the summer vacations. It was not necessary. My scholarship would have supported me but it was adventure. I walked out into east Tennessee ten or more miles a day until at last in a little valley I found a place where they had had a Negro public school only once since the Civil War and there for two successive terms during the summer I taught at $28 and $30 a month; paid immediately in promises ~~to pay and actually paid~~ three or four months later." I began my writing and public speaking at Fisk. I wrote an article which the Century magazine said "We shall be glad to print 'The New Negro' if we may take our time and we are afraid we shall have to take a great deal." It hasn't been printed yet, ~~so far as I know.~~ For three years I was on the editorial staff of the Fisk Herald; as editor-in-chief the last year; contributing essays and one novel. I became a considerable orator and for a long time the older students of Fisk took deep joy in remembering the debate where in the very midst of impassioned periods I forgot my lines. The persistence, however, which I had learned in New England stood me

31-2-30

now in good stead. The interlude at Fisk did not turn me from it. When I heard that Harvard was offering scholarships in various parts of the country I immediately wrote and to the astonishment of teachers and fellow students, not to mention myself, received Price Greenleaf aid of $300. I graduated from Fisk in 1888 and took as my subject Bismarck. It showed my already growing interest in the wider world. I knew of the great jubilee of Queen Victoria, of the aftermath of the Franco-Prussian War and the triumph of the Madhi in Khartoum. I had followed the fortunes of Gladstone and Salisburg and was filled with enthusiasm at the rise of the new German empire under Bismarck. So I talked of Bismarck and then turned back to the North. I was thinking to during these days of political developments and have a speech which I delivered in 18 7 which has a certain present validity,

Third Decade - Education from 1888-1898 - 20-30 years of age:

This decade covering the years of my education at Harvard and at Berlin and the beginning of my teaching career. The members of the Fisk Glee Club went to Lake Minnetonka, a resort in Minnesota, for the summer with the idea of working in the dining room and giving concerts. I was to act as their business manager. During college I had developed rather as the executive and planner, the natural secretary of affairs rather than the president and chairman. The only difficulty about the Minnesota excursion was that I had never worked in a hotel in my life; could not wait on table and therefore became one of the bus boys. It was so unusual a pageant to watch the dining room that I made no tips and for a long time had difficulty in getting enough to eat, not realizing that servants in great hotels are not systematically fed. But after the season I went on ahead and succeeded in making a respectable number of concerts for the students who followed me down all the way to Chicago while I went on to Harvard to enter the junior class in the fall of 1888. The Harvard of 1888 was an extraordinary aggregation of great men, not often if ever since that day have so many distinguished teachers been together in one place and at one time. There was William James the psychologist; Palmer in ethics; Royce and Santanya in philosophy; Schaler in Geology and Hart in history. The president was the cold, precise but exceedingly

31-2-31

efficient Charles William Eliot and there were a dozen lesser lights. ~~Not only was this true but~~ By extraordinary good fortune I was thrown into contact with most of these men. I was repeatedly a guest in the house of William James; I was a member of the philosophical club; I talked often with Royce and Schaler; I sat alone in an upper room and read Kant's Critique with a Santyana; I became one of Hart's favorite pupils and was afterwards guided by him through my graduate course and started on my work in Germany. It was an extraordinary opportunity for a young man and I think I realized it. I ~~found careful~~ evaluated habits of work rather different from those of most of the other students. I burned no midnight oil. I did my studying in the day time and had my day planned out almost to the minute. I spent a great deal of time in the library and did my assignments with persistent thoroughness and with a rather interesting pre-vision of the kind of work I wanted to do later. I have before me a theme which I wrote October 3, 1890 for Barret Wendell, the great pundit of Harvard English. I said: "Spurred by my circumstances I have always been given to systematically planning my future, not indeed without many mistakes and frequent alterations, but always with what I now conceive to have been a strangely early and deep appreciation of the fact that to live is a serious thing. I determined while in the high school to go to college - partly because other men went, partly because I foresaw that such discipline would best fit me for life. ~~I first went to Fisk University in Nashville, Tennessee. My Southern experience has in many ways proved invaluable. I next came to Harvard and am here yet.~~ I believe foolishly perhaps but sincerely that I have something to say to the world, and I have taken English 12 in order to say it well." Barrett Wendell rather liked that last sentence, ~~I read it to the class.~~

I visited, joined clubs, lectured some,

I tried to take culture out into the colored community of Boston and actually gave the Birds of Aristophanes in a colored church on Thanksgiving night, ~~acting the part of Plausible myself.~~ The matter of meeting my college expenses presented some difficulties. I had scholarships for $300 for both years but that was not enough. One year after careful calculation I found that I needed $50 more and noted with interest that exactly was the stipend

31-2-3

In my senior year the Healthy very Good Mother returned = my grandfather left me a fortune of $400.

of the Boylston Prize in oratory. I had to have one of the prizes in order to make ends meet for the year and got it. Then with a classmate, Clement Morgan, who was also a Boylston prize-man I made a tour of the summer resorts of New England. We gave readings in hotels, parlors and churches and did in this way much toward making our expenses. In 1890, I took my bachelor's degree from Harvard and was one of the six commencement speakers taking as my subject Jefferson Davis. On the platform of Sanders Theatre was President Elliott, the govenor of Massachusetts and the Bishop of New York. I am glad that the New York Nation said July 3, 1890 that I handled the them "with absolute good taste, great moderation, and almost contemptuous fairness." I was graduated just at the beginning of the term of President Harrison when the trusts were dominating industry and the McKinley tariff making that domination easier. The understanding between the industrial North and the new South was being perfected and in 1890 a series of disfranchising laws were passed by the southern states destined in the next six years to make voting by southern Negroes practically impossible. Already I had received more education than most young white men having been continuously in school from the age of six to the age of twenty-two. But I did not yet feel prepared. I knew that to cope with the new and extraordinary situation then building in the United States I needed to go further and that as a matter of fact I had just well begun in my training and in my knowledge of social conditions. On the other hand, I was absolutely penniless with no resources in wealth or friends. I applied for a fellowship in the graduate school. If I had not gotten it I should have had to go to work but I was appointed Henry Bromfield Roger's fellow for a year and later the appointment was renewed so that from 1890-1892 I was a fellow in Harvard University studying in history and what would have been social science if Harvard had then recognized such a field. I worked on my thesis "The Suppression of the Slave Trade" taking my master's degree in 1891 and hoping to get my doctor's degree in another two years. Then came one of those tricks of fortune which seemed partly due to chance but in this case undoubtedly due to a good deal of stubborn persistence. In 1882 the Slater Fund for the education of Negroes had been established and

31-2-33

the board was now headed by ex-President Rutherford B. Hayes at. President ~~Hopkins went down to~~ John Hopkins University and talked frankly in 1890 about the plans of the fund. He said among other things that they had wanted to find some young colored men to whom they could give a chance for graduate training but they ~~said that they~~ had only been able to find orators." The statement was brought to my attention at a card party one evening and it not only made me good and ~~angry~~ mad but also ~~inspired me~~ set me thinking to write President Hayes. I received a pleasant reply saying that they did not have any present plans for such scholarships. That really aroused me. I proceeded to get letters from every person I knew in the Harvard Yard and places outside and literally deluged the unfortunate chairman of the Slater Fund. He wrote again ~~in an apologetic mood~~ and said that he was sorry but the plan had been given up; that ~~he recognized that here was a candidate that~~ they might otherwise have given some attention to me." It has been my experience that most of my small successes have been due to steps that I have taken after all hope was lost. I sat down and proceeded to write Mr. Hayes a letter that could be described as nothing less than impudent. President Hayes was undoubtedly aroused and almost apologized to me, and reiterating his good faith and promised to take up the matter the next year with the board. Whereupon, promptly the next year I proceeded to write the board: "At the close of the last academic year at Harvard, I received the degree of master of arts, and was re-appointed to my fellowship for the year 1891-2. I have spent most of the year in the preparation of my doctor's thesis on the suppression of the slave trade in America. I prepared a preliminary paper on this subject and read it before the American Historical Association at its annual meeting at Washington during the Christmas holidays. The paper will shortly be published in their proceedings and a preliminary report of it may be seen in the Independent of January 7, 1892, pp. 10, 11; also in Congregationalist of about the same date. The first draft of the larger thesis was completed 28 March and it will be formally finished May 1, and, I hope, eventually published, besides this I have worked on a number of general studies. To properly finish my education, a careful training in an European university for at least a year is in my mind and the minds of my professors, absolutely indispensable. I therefore desire, re-

9 minutes [illegible] Chas Armsby was sorry

31-2-34

21-2-35

spectfully to lay these sug estions before you: First, that the bo rd grant me aid to study at least a year abroad under the direction of the graduate department of Harvard or other reputable auspices. Second, if this be not practicable, that the board loan a sufficient sum for this purpose." I did not believe that I was goin to get an appointment but I did think that pos ibly through the influence of the people who thus knew about my work I might b rrow ~~or beg~~ enough to et to Europe. ~~but~~ To my surpise I was given a fel owship of $750 to study abroad with the promise that it might be renewed for a second year. I remember going down to New York and talking with President Hayes in the Astor House and then ~~going~~ ~~out~~ walking on air ~~and seeing~~ an especially delectable shirt in ~~the~~ shop window. I went in and bought it. It cost three dollars which was about four times as much as I ever paid for a shirt in my life. I sailed in the summer of 1892 on a Dutch boat landing in Holland I wrote gayly "Holland is an extremely neat and well ordered mud puddle situated in the confluence of the English, French and German languages." My first memory of it is inextricably interw ven with the smell of clover. It was after two weeks' sea voyage, pleasant to be sure, fascinating as a changing changeless sea every is, but two weeks. I lingered in Rotterdam and Amsterdam and made the never to be forgotten journey up the Rhine and then stopped for the summer at Eisnach.

I wrote back there a few months later to Dr. and Mrs. Marbauck "I was delighted to hear from you again and for a moment a great wave of memory swept over me and I re-lived the dear old days at your home, with Frank and the Keims, and "die Dora" and Fraulein Bertha "Ungerogen". Where are they all now - I should like to hear from them."

Then in the fall I went up to Berlin, stet ~~I wrote in my diary~~

31-2-36

"The fact is that after some years spent in American universities, I, God, and other folk have rendered it possible for me to study here. Whereof I am glad. Now it has chanced that to me Europe has ever been surrounded with a certain veil of mystery and fancy; a trimming of history and fiary tales, of culture and crowns, had always made it a bit difficult for me to realize the existence of a hard dry sod underneath it all. I take it that we Americans are very fortunate in having a great sea between us and this other world."

~~Then I went to~~ Register, in the University, ~~and~~ the story which I set down ~~of it~~ at the time is perhaps worth repeating.

"The fact is that after some years spent in American universities, I, God, and other folk have rendered it possible for me to study here. Whereof I am glad. Now it has chanced that to me Europe has ever been surrounded with a certain veil of mystery and fancy; a trimming of history and fiary tales, of culture and crowns, had always made it a bit difficult for me to realize the existence of a hard dry sod underneath it all. I take it that we Americans are very fortunate in having a great sea between us and this other world."

~~Then I went to~~ Registered in the University, ~~and~~ the story which I set down ~~of it~~ at the time is perhaps worth repeating.

In groups of one hundred we went into a room. "It was a large room, with high ceiling, and a row of four windows on one side in the deep recesses of which stood busts of Berlin's famous professors. The centre of the room was occupied by chairs, in which the students seated themselves; at the upper end was a long table about which perhaps a dozen officials were grouped. Near the left end was the present year's rector magnificus, the widely famous Rudolf Virchow, doctor of medicine, laws and philosophy, city councillor and member of the Reichstag. He is a meek and calm looking little man, white haried and white-bearded, with a kindly face and pleasant voice. At smaller tables ranged before the windows, were the deans of the various faculties. The method of procedure was thoroughly, and, I think I may say, painfully, German. First the chief secretary at the side of the magnificent rector was invested with the pile of gymnasium diplomas and passports we had surrendered in the ante-room. Then he slowly read out the names, and as a student heard his name he disentagled himself and approached the table. Recognizing with some difficulty my Germanicized name I presented myself with some trepidation at the bar. The stiff secretary (it's quite the thing to be stiff in new Germany) with my help more clearly deciphered my name, ascertained under which faculty I wished to study, firmly declined to examine any of my sheepskins, and passed me over to the rector; rector Virchow smiled benignantly, make some remark as to my faculty, and after filling out the blanks with some remarkably poor writing, presented me with a large 24 by 18 inch she t of paper: this stated that a certain

31-2-29

31-2-37

stove that used to fall down and the window I proudly called a bay-window. I remember little sorrows of life when I found no companions to play with and buried myself in making great plans for a toy I could play with alone. I remember the gate where I looked into the great town - wonderful world to me then."

5

handicapped because they represented so small a part of the total sum of occurrences; were so far removed in time and space as to lose the hot reality of real life; and because the continuous, kaleidoscopic change of conditions made their story old already before it was analyzed and told.

If, of course, they had had time to grow in breadth and accuracy, this difficulty would have been met, or at least approached. Now in contrast I suddenly saw life, full and face to face; I began to know the problem of Negroes in the United States as a present startling reality; and moreover (and this was most upsetting) I faced situations that called -- shrieked -- for action, even before any detailed, scientific study could possibly be prepared. It was as though, as a bridge-builder, I was compelled to throw a bridge across a stream without waiting for the careful mathematical testing of materials. Such testing was indispensable, but it had to be done so often in the midst of ~~building~~ building or even after construction, and not in the calm and leisure long before. I saw before me a problem that could not and would not await the last word of science, but demanded immediate action to prevent social death. I was continually the surgeon probing blindly, yet with what knowledge and skill I could muster, for unknown ill, bound to be fatal if I hesitated, but possibly effective, if I persisted.

I realized that evidently the social scientist could not sit apart and study <u>in vacuo</u>; neither on the other hand, could he work fast and furiously ~~sic~~ simply by intuition and emotion, without seeking in the midst of action, the ordered knowledge which research and tireless observation might give him. I tried therefore in my new work, not to pause when remedy was needed; on the other hand, I sought to make each incident and item in my program of social uplift, part of a wider and vaster structure of real scientific knowledge of the

race problem in America.

Facts, in social science, I realized, were elusive things: emotions, loves, hates, were facts; and they were facts in the souls and minds of the scientific student, as well as in the persons studied. Their measurement, then, was doubly difficult and intricate. If I could see and feel this in East St. Louis, where I investigated a bloody race riot, I knew all the more definitely, that in the cold, bare facts of history, so much was omitted from the complete picture that it could only be recovered as complete scientific knowledge if we could read back into the past enough to piece out the reality. I knew also that even in the ugly picture which I actually saw, there was so much of decisive truth missing that any story I told would be woefully incomplete.

31-4-12

Then, too, for what Law was I searching? In accord with what unchangeable scientific law of action was the world of interracial discord about me working? I fell back upon my Royce and James and deserted Schmoller and Weber. I saw the action of physical law in the actions of men; but I saw more than that: I saw rhythms and tendencies; coincidences and probabilities; and I saw that, which for want of any other word, I must in accord with the strict tenets of Science, call Chance. I went forward to build a sociology, which I conceived of as the attempt to measure the element of Chance in human conduct. This was all the Jamesian pragmatism, applied not simply to ethics, but to all human action, beyond what seemed to me, increasingly, the distinct limits of physical law.

My work assumed from now on a certain tingling challenge of risk; what the "Captain of Industry" of that day was experiencing in "kick," from money changing, railway consolidation and corporation floating, I was, in what appeared to me on a larger scale, essaying in the relations of men of daily life.

31-4-13

My field of effort began to broaden in concept. In 1911, I attended a Races Congress in London. Had not the First World War so swept the mind of man clear of its pre-war thought, this meeting would have marked an epoch and might easily have made this Second World War unnecessary, and a Third, impossible. It was a great meeting of the diverse peoples of the earth; scarce any considerable group was omitted; and amid a bewildering diversity, a distinct pattern of human unity stood out.

I returned to America with a broad tolerance of race and a determination to work for the Internation, which I saw forming; it was, I conceived, not the ideal of the American Negroes to become simply American; but the ideal of America to build an interracial culture, broader and more catholic than ours. Before I had implemented this program in more than fugitive writing, World War fell on civilization and obliterated all dreams.

The Second Re-adaptation of My Program

I was forthwith engulfed in a mad fight to make Negroes Americans; a program I was already about to discard for something wider. The struggle was bitter: I was fighting to let the Negroes fight; I, who for a generation had been a professional pacifist; I was fighting for a separate training camp for Negro officers; I, who was devoting a career to opposing race segregation; I was seeing the Germany which taught me the human brotherhood of white and black, pitted against America which was for me the essence of Jim Crow; and yet I was "rooting" for America; and I had to, even before my own conscience, so utterly crazy had the whole world become and I with it.

especially the Negroes of three continents, against the future aggressions of the whites. For now there was no doubt in my mind: Western European civilization had nearly caused the death of modern culture in jealous effort to control the wealth and work of colored people.

The Pan-African congresses which I called in 1919, 1921, and 1923, were chiefly memorable for the excitement and opposition which they caused among the colonial imperialists. Scarcely a prominent newspaper in Europe but used them as a text of warning, and persisted in coupling them with the demagogic "Garvey Movement," then in its prime, as a warning for colonial governments to clamp down on colonial unrest. My only important action in this time, was a first trip to Africa, almost by accident, and a vaster conception of the role of black men in the future of civilization.

But here I was going too fast for the National Association for the Advancement of Colored People. The board was not interested in Africa. Following post-war reaction it shrank back to its narrowest program: to make Negroes American citizens, forgetting that if the white European world persisted in upholding and strengthening the color bar, America would follow dumbly in its wake.

From 1910 to 1920, I had followed the path of sociology as an inseparable part of social reform, and social uplift as a method of scientific social investigation; then, in practice, I had conceived an interracial culture as superseding as our goal, a purely American culture; before I had conceived a program for this path, and after throes of bitter racial strife, I had emerged with a program of Pan-Africanism, as organized protection of the Negro world led by American Negroes. But American Negroes were not interested.

38-12-392

As I grew older I found myself becoming more and more sensitive as to the impression which colored people made on my schoolmates. In history and civics no references were made to Negroes; it appeared thatnever in the world had anybody but white folk done anything worthwhile. Not even were the services of Negroes in the abolition fight and in the recent war referred; yet a dead cousin of mine, killed in battle lay in the village cemetery and my father wore his country's uniform. Once I remember that Lottie Strickland my gay and pretty schoolmate recited a poem "Persim mons" at a monthly exercize "Persimmons was a colored lad" and his full name was George Washington Thomas Jefferson Persimmons Henry Clay". This was supposed to be very funny, but it was not a nice thing to do. Noone made any remark.

38-12-391

There was one cousin, daughter of a great uncle whose visits I greatly enjoyed although I think my mother was a little disturbed. Laura was married to a scowling, ill-bred laborer and had a host of big,ugly boys. She herself was merry, ill-dressed and salty in her talk. She would come for tea (we never drank coffee) and retail gossip and stories on the edge of the indecent; she had me and my decorous aunts chuckling

I was ~~[illegible] at this time, [illegible]~~ approached by President Horace Bumstead of Atlanta University in 1896 and asked to come to Atlanta University and take charge of the work in sociology, and of the new conferences which they were inaugurating on the Negro problem. With this program in mind, I eagerly accepted the invitation, although at the last moment there came a curious reminiscence of Wilberforce in a little hitch based on that old matter of extemporaneous public prayer. Dr. Bumstead and I compromised on my promise to use the Episcopal prayer book; later I used to add certain prayers of my own composing. I am not sure that they were orthodox or reached heaven, but they certainly reached my audience. Dr Bumstead writes:

1 2/17/12

2/17/12

My real life work was done at Atlanta for thirteen years, from my twenty-ninth to my forty-second birthday. They were years of great spiritual upturning, of the making and unmaking of ideals, of hard work and hard play. Here I found myself. I lost most of my mannerisms. I grew more broadly human, made my closest and most holy friendships, and studied human beings. I became widely-acquainted with the real condition of my people. I realized the terrific odds which faced them. At Wilberforce I was their captious critic. In Philadelphia I was their cold and scientific investigator, with microscope and probe. It took but a few years of Atlanta to bring me to hot and indignant defense. I saw the race-hatred of the whites as I had never dreamed of it before, -- naked and unashamed! The faint discrimination of my hopes and intangible dislikes paled into nothing before this great, red monster of cruel oppression. I held back with more difficulty each day my mounting indignation against injustice and misrepresentation.

The main significance of my work at Atlanta University, during the years 1897 to 1910 was the development at an American institution of learning, of a program of study on the problems affecting the American Negroes, covering a progressively widening and deepening effort designed to stretch over the span of a century. This program was grafted on an attempt by George Bradford of

of the University? It certainly would, answered Samuel McCune Lindsay of the Department of Sociology. And he put his finger on me for the task.

There must have been some opposition, for the invitation was not particularly cordial. I was offered a salary of $800 for a period limited to one year. I was given no real academic standing, no office at the University, no official recognition of any kind; my name was even eventually omitted from the catalogue; I had no contact with students, and very little with members of the faculty, even in my department. With my bride of three months, I settled in one room over a cafeteria run by a College Settlement, in the worst part of the Seventh Ward. We lived there a year, in the midst of an atmosphere of ~~crime~~ dirt, drunkenness, poverty and crime. Murder sat on our doorsteps, police were our government, and philanthropy dropped in with periodic advice.

33-1-66

~~After that~~ The World seized and whirled me. I hardly know what was important - what negligible; somehow I remember life, curiously enough, chiefly as a succession of homes: the settlement at Philadelphia at Seventh and Lombard in the slums where kids played intriguing games like "Cops and Lady Bums"; and where in the night when pistols popped,

you didn't get up lest you find you couldn't;

I wrote of my first Christmas in Philadelphia

33-3-30a My grandmother was born in New Ha

born in 1825 in Haiti. He had a common school education and
barber and a merchant. Augusta an older sister, Henrietta and
Augusta has living descendants, the others have none.

lfred I. Du Bois married Mary S. Burghardt February 5, 1867.

. My grandfather was married three times, my own grandmother being Sarah Marsh of Connecticut, by whom he had two children. He had a third child by his second wife, and none by his third. He kept a grocery store at 23 Washington Street, New Haven, in 1848 and thereabouts. He owned property there and in New Bedford. The house in New Bedford was sold after his death in 1887 for $2,110. He is buried in Oak Grove Cemetery near the Yale Campus, New Haven, in a lot which he owned, and which is next to that of Jehudi Ashmun of Liberian fame. My grandfather helped to establish St. Luke's P. E. in New Haven after he and his fellows had been invited to leave the white Episcopal Church. He was first Senior Warden of St. Luke's. His eldest daughter married a light mulatto and their children are now passing for white and probably quite unaware of their colored blood. My Aunt Henrietta married a man named Bates, of Cumberland, Alleghany County, Maryland.

In my mother's family, my great great grandfather, Tom Burghardt or Etson, as he was sometimes called, was probably born in Africa and brought as a slave to New York State by the Dutch. He saw service in the Revolutionary War. His son Jack took part in Shay's Rebellion; their descendants fought in the Civil War and in the World War. Jack had everal sons and daughters, four of whom own land near together on Egremont Plain in the township of Great Barrington, Massachusetts.

33-3-89

Tom (who afterwards assumed the surname Burghardt, after the family in which he was previously held to service)

"Appears with the rank of Private on the Muster and Pay-roll of Capt. John Spoor's Co., Col. John Ashley's (Berkshire Co.) regt.

Engaged Oct. 15, 1780. Discharged Oct. 17, 1780.

Time of service, 4 days. Company marched northward by order of Brig. Gen. Fellows on an alarm when Fort Ann and Fort George were taken by the enemy. Reported a Negro".

Record Index to the Military Archives

Vo.. 23, page 2.

By family tradition Tom Burghardt had served previously as a soldier, but being then a slave no record appears. He was born in Africa, and brought when a child to New York; here he was taken into the family of the Etsons, and then into the family of Coonrod Burghardt who settled at Great Barrington, Mass., where Tom Burghardt afterward lived.

One of the daughters, Mary, was my mother. He had two sons, Idelbert and William.

Thomas Etson or Burghardt had one son, Jack Burghardt and possibly a daughter known as Nancy Pratt. Nancy Pratt had one son. Jacob Burghardt had nine children, four daughters and five sons. One of these sons, Othello, was my grand father. He in turn had ten children, seven daughters and three sons.

Othello Burghardt was born November 18, 1791 and his wife Sally was born July 7, 1793.

Othello married Sally Lampman in 1811.

Coonrad Burghardt was a shrewd, pushing Dutchman dwelling ~~early~~ in Kinderhood. He had in his family in 1730 an African Negro named Tom who had formerly belonged to the Etsons or to Etons. This Negro has had between one hundred and fity and two hundred descendants and many now living and reaching to the seventh generation. 33-3-87a

Later Jack Burghardt was said by family tradition to have taken part in Shay's Rebellion.

33-3-87a

33-3-87

When the president of Harvard College journeyed through western Massachusetts and the present site of Great Barrington in 1694 he found a "hideous, howling wilderness." Here land titles were confirmed in 1733 which had been in dispute between English, Dutch and Indians and one of the Dutchmen who received land was Coenraet Borghghardt. This family whose name was afterward spelled Bogoert, Burghardt and Burget had in their family an African Negro named Tom, formerly a slave in the family of Etson. This African had between 1730 and 1930 some two hundred or two hundred and fity descendants, a number of whom are still living and reach to the seventh generation. Tom Burghardt was born about 1741 and was a soldier in the Revolutionary War in 1780. His second child, Jacob or Jack, was born about 1766 and the fourth child of Jacob was Othello Burghardt born in 1791 who was my mother's father.

Of my very great grandmother I know not even many a child to succeed. She was an African slave

We heard of him as a merchant and mariner.

When I came I met his father's my grandfather in New Bedford. I was brought up by the devotion of my dear grandmother, who loved & cherished my father & always kept track of me

A daughter of my great Uncle [redacted] writes "Tom, I heard father say, as far as he knew, was born in Africa and brought to this country when he was a boy. After a time he went into the Revolutionary War. I suppose he was single when he went into the service. Father, Jacob or Jack, was taken by the Burghardts when he was a boy. I believe that his first wife's name was Maria. After her death he married the woman called Mother Betsy or Mom Betty, a rather celebrated figure in western Massachusetts history. Nancy Pratt pretended to be a daughter of Tom and half sister to Jack, but this is not certain."

Tom was born in Africa perhaps between 1720 and 1730 and died before 1790 as he does not appear in that census. My uncle says that his father, Othello, said that he father Jack was a slave to Coonrad Burghardt who set him free. It was Jack's wife Violet who used to sing the African song Do Ban Coba.

Othello Burghardt married Sarah Lampman. He was born in Great Barrington July, 1788 and died in 1872 at the age of eighty-~~three years and ten months~~. He was the son of Jacob Burghardt and his wife Violet.

Sarah Lampman was born in Hillsdale, New York in 1793 and died at the age of eighty-six in 1877. Her mother was named Lampman. There is no record of her father. She was probably a mulatto of Dutch descent.

The three brothers, Othello, Ira and Harlow lived ~~in~~ South Egremont Plain where they owned small adjoining farms. Two of these farms have passed from the ownership of the family. A small part of the other with the house upon it is in my possession.

In the Massachusetts census of 1765 there were twenty-six colored people in Sheffield and nineteen in Great Barrington. In the Massachusetts census of slaves in 1754 no slaves were reported in Bershire County.

In the Massachusetts census of 1790 in Great Barrington Jacob, a Negro, was returned with two free persons in his family, probably a wife and his eldest son Thomas

February 15, 1908 I became a member of the Massachusetts Society of the Sons of the American Revolution.

where he spent much time at Long Key

land in the Bahama Islands. He was unmarried but had as his common-law wife one of his slaves, a small brown-skinned woman. Of this couple two sons, Alexander and John, were born. They were both so white in appearance that the father brought them to the United States and started to give them the education of a gentleman. They were put in a private school at Cheshire, Connecticut. Dr. James Du Bois fell in a fit on his way back from visiting the two boys and died about 1815. He left no will and his estate descended to his cousin Cornelius Du Bois while the boys were bound out as apprentices; my grandfather to a shoemaker. He married three times: first to Sarah Marsh who died in 1823 whose son Alfred was born in 1825 was my father; afterward to Mary Jackalyn of Passaic Emily and then to a widow Annie Green. This last wife I knew and called grandmother. My grandfather travelled in the West Indies, kept a small grocery store in New Haven and was for years steward on the New York-New Haven boat. Naturally he was a rebel, bitter at his lot in life and resentful at being classed as a Negro. He was as I knew him, a short, stern, upstanding man precise in speech and manners and repressing his natural self behind a few words. I remember his ceremonious receiving of a visitor, his stately bow and the serving of wine, and the rather stilted conversation. It was impressive to a boy of twelve who had seen nothing of such social ceremony at his home in western Massachusetts. Grandfather was a member of the Trinity Parish in New Haven but afterward withdrew because of discrimination and became first warden of Saint Luke Episcopal Church, a colored congregation which still exists. He died at the age of eighty-four. His son, Alfred, my father I did not know directly. He was a small handsome man whose Negro descent was only betrayed by his curly hair. He had the gay and carefree disposition of his grandfather and refused to settle down long at any one place or one job. He could read and write but I doubt if he had much more training than that. He was a ladies man. I remember once meeting a beautiful elderly woman who looked at me in astonishment and asked my name again and said "Are you really the son of Alfred Du Bois?" But she added nothing more. I have often thought of her. This Alfred Du Bois

1867 1825 36

33-3-48a

Mary S. Burghardt was born January 14, 1831

Idelbert Burghardt was born September 9, 1861.

W. E. Du Bois was born February 23, 1868.

My paternal great-grandfather, Dr. James Du Bois, was white and descended from Chrétien Du Bois who was a French Hugenot farmer and perhaps artisan and resided at Wicres near Lille in French Flanders. It is doubtful if he had any ancestors among the nobility, although his white American descendants love to think so. He had two, possibly three, sons of whom Louis and Jacques came to America to escape religious persecution. Jacques went from France first to Leiden in the Netherlands, where he was married and had several children, including a second Jacques or James. In 1674 that family came to America and settled at Kingston, New York. James Du Bois appears in the Du Bois family genealogy as a descendant of Jacques in the fifth generation, although the exact line of descent is not clear; but my grandfather's written testimony establishes that James was a physician and a landholder along the Hudson and in the West Indies. He was born in 1750, or later. He may have been a loyalist refugee. One such refugee, Isaac Du Bois, was given a grant of five hundred acres in Eleuthera after the Revolutionary War. The career of Dr. James Du Bois was chiefly as a plantation propietor and slave owner in the Bahama Islands with his headquarters at Long Cay. Cousins of his named Gilbert also had plantations near. He never married, but had one of his slaves as his common-law wife, a small brown-skinned woma born on the island. Of this couple two sons were born, Alexander and John. Alexander, my grandfather, was born in 1803, and about 1810, possibly because of the death of the mother, the father brought both these boys to America and planned to give them the education of gentlemen. They were white enough in appearance to give no inkling of their African descent. They were entered in the private Episcopal school at Cheshire, Connecticut, which still exists there and has trained many famous men. Dr. James Du Bois used often to visit his sons there, but about 1812, on his return from a visit, he had a stroke of apoplexy and died. He left no will and his estate descended to a cousin.

The boys were removed from school and bound out as apprentices, my grandfather to a shoemaker. Their connection with the white Du Bois family ceased suddenly, and was never renewed. Alexander Du Bois thus started with a good common school and perhaps some high school training and with the instincts of a gentleman of his day. Naturally he passed through much inner turmoil. He became a rebel, bitter at his lot in life, resentful at being classed as a Negro and yet implacable in his attitude toward whites. Of his brother, John, I have only a picture. He may have been the John Du Bois who helped Bishop Payne to purchase Wilberforce University.

If Alexander Du Bois, following the footsteps of Alexander Hamilton, had come from the West Indies to the United States, stayed with the white group and married and begotten children among them, anyone in after years who had suggested his Negro descent would have been unable to prove it and quite possibly would have been laughed to scorn, or sued for libel. Indeed the legal advisers of the publishers of my last book could write: "We may assume as a general proposition that it is libelous to state erroneously that a white man or woman has colored blood." Lately in Congress the true story, in a WPA history, of miscegenation affecting a high historic personage raised a howl of protest.

Alexander Du Bois did differently from Hamilton. He married into the colored group and his oldest son allied himself with a Negro clan but four generations removed from Africa. He himself first married Sarah Marsh Lewis in 1823 and then apparently set out to make his way in Haiti. There my father was born in 1825, and his elder sister, Augusta, a year earlier, either there or just as the

49-37-1

family was leaving the United States. Evidently the situation in Haiti did not please my grandfather or perhaps the death of his young wife when she was scarcely thirty turned him back to America. Within a year he married Emily Basset who seems to have been the widow of a man names Jacklyn and lived in New Milford. Leonard Bacon, a well-known Congregational clergyman, performed his second marriage.

The following year, Alexander began his career in the United States. He lived in New Haven, Springfield, Providence, and finally in NewBedford. For some time , he was steward on the New York-New Haven boat and insisted on better treatment for his colored help. Later about 1848 he ran a grocery store at 23 Washington Street, New Haven, and owned property at different times in the various cities where he lived. By his first wife, my grandmother, he had two children, and by his second wife, one daughter, Henrietta. Three of four children died in infancy. Alexander was a communicant of Trinity Parish, New Haven, and was enrolled there as late as 1845; then something happened, because in 1847 he was among that group of Negroes who formed the new colored Episcopal Parish of St. Luke, where he was for years their senior warden. Probably this indicates one of his bitter fights and rebellions, for nothing but intolerable insult would have led him into a segregated church movement. Alexander Crummell was his first rector here.

I received eventually three offers of work. On August 17, the chair of "classics" at Wilberforce University, Ohio, with a salary of $800 was offered, which I immediately accepted with gratitude.

1/19/92

finally, August 25, I received telegram: "Can give mathematics if terms suit. Will you accept. Booker T. Washington." It would be interesting to speculate/just what would have happened, if I had accepted the ~~last~~ offer of Tuskegee instead of that of Wilberforce.

1/19/92

in a bunch. The first was a telegram from Wilberforce: "Our chair of classics $800 is yours. Wire acceptance. Come next week." Later there was Lincoln Institute, a black colored school out in Missouri that offered $1050 for a teacher of classics and mathematics, and then---well I leaned toward immediately to Wilberforce, I had heard of it, it was venerable and well known.

So late in hot August I started for Wilberforce. Life was now begun and I was half happy. Up thru the Berkshire Valley with its quiet beauty, then across New York glided, wrapped in dreams. The light of Buffalo bade me good night, and half asleep I drifted across Ohio.

The depot at Xenia was small and "busy" with a slight admixture of dirt and tobacco juice which was unpleasant. There was I telephoned to Wilberforce. Then I waited an hour and the president entered the waiting room. I shall never forget that man. He is stamped on my heart as the most perfect realization of what the devil might be in these closing years of the 19th century. He had by long odds the prettiest smile of any man I ever saw---so quiet and charming. All I remember now of that first meeting is the vision of that smile softly entering the waiting room and remember too that it was borne on two short and rather disreputable looking bowlegs.

1/19/9

new young Emperor Wilhelm II, who, fresh from his dismissal of Bismarck, led the splendid pageantry; and finally the year I left Germany, Nicholas II became Czar of all the Russias. In all this I had not yet linked the political development of Europe with the race problem in America.

XXIII — Epilogue

(2) ~~Then the unexpected happened. I received a~~ ~~passport and went to Europe. Dr. Du Bois and~~ ~~Shirley Graham~~ PD was invited to attend the All African conference at Accra. At the Fifth Pan-African Congress at Manchester, England in 1945, a Sixth Congress on the continent of Africa had been projected. When Ghana gained her independence it was planned. I was not allowed to attend the inauguration. If I had been present undoubtedly the matter would have been further discussed. Meantime George Padmore, secretary of the Pan-African Congress, was called to Ghana as chief adviser to the Prime Minister and he published a book called "Pan-Africanism or Communism" in which he said

(copy p. 379)

Meantime the Big Business in America, surprised by the sucess of the Ghana revolution set itself to influence Nkrumah. He was invited to the United States over in 1958 and treated as never a Negro had been treated by the government. Hershey, great manufacturer of chocolate sent a special plane to take him to his factories; and the New York Cocoa Board of Trade dined him at the Waldorf-Astoria. I saw Mr. Nkrumah briefly ~~and was careful not to attempt to influence him in any way.~~ He was most cordial and I expected soon to be invited to the Sixth Pan-African Congress in Accra. No invitation came ~~when~~ but I received my passport and sailed for Europe. While I was in Tashkent an invitation arrived but not from Nkrumah nor for a Pan-African Congress. It was from a new All-African body for an African conference in December and it said nothing about my expenses. I sensed immediately that opposition had arisen in Africa over American Negro

9 verkauft & schenkt Nkrumah

the war. I sent out a brochure in 1941

THE PHYLON INSTITUTE

It is planned to hold April 10, 11 and 12, 1941 the FIRST PHYLON INSTITUTE and TWENTY-FIFTH ATLANTA CONFERENCE. This will be an attempt to commemorate the fact that from 1896 to 1919 twenty-four Atlanta University Conferences were held and twenty publications issued. Between 1919 and 1941 there were no conferences or publications but we want to begin again in 1941 and keep in memory the first establishment of the conferences forty-five years ago.

I want to assemble at this time a few persons interested in beginning a complete and definitive study of the economic condition of American Negroes, past and present. I want to collect the facts concerning the past in readily available and understandable form with charts, tables and interpretive texts. I want to discuss with the persons present the trends of change and present conditions especially in each of the Southern states and more generally in the North. I am inviting to be present economic experts particularly from the South; representatives of the land grant colleges and other students and observers. I have in mind a meeting of about twenty-five or thirty persons. The meetings will be for the most part closed conferences for intimate and confidential inquiry. There may also be held one or two public meetings for the general information of persons who may be interested. The general subject will be "The Economic Condition and Trends of American Negroes" and out of the meetings I want to emerge a number of planned studies, researches and compilations to be carried on by designated students during the ensuing year. I want the meetings themselves to be built around a sociological museum. That museum to consist of books and pamphlets, charts and models which will illustrate, pictorially and physically, present and past economic conditions among Negroes. I want to exercise some ingenuity in making these facts intelligible and striking.

I want also to discuss plans for future corrective guidance of the economic development of the Negro; consumers cooperation in schools and communities; adult education and group effort. I should like to explore the possibility of Negroes taking advantage of such Federal projects as the TVA and perhaps the matter of economic and cultural contacts with groups of Negroes outside the United States.

I have been promised by the Carnegie Foundation a small fund to finance these conferences this year and next. So far as possible I should like to use this fund for the compilation of statistics and presentation of facts.

It was not until 1942 that this conference ~~rural past and present~~ which I called at Atlanta University in 1941

The Twenty-Fifth Conference took as its subject "The Economic Condition and Future security of the American Negro." It was designed to be a comparatively small study group bringing together knowledge already available concerning the Negro's economic conditions and beginning in this and succeeding conferences to ask: What can and ought to be done for the betterment of the Negro's economic condition? The organizations invited to send delegates included, first, the powerful group of Negro land-grant colleges; institutions which since 1913 have increased from less than a thousand college students and an annual income of $850,000 to 9/500 students and income of $2,500,000 in 1939. They are in a peculiar way suited to explore the field of the Negro's economic future. These institutions have especially had laid upon them by the Southern states the duty of vocational guidance. By working separately and without concerted plan, the results while excellent in some respects have neither been unified nor strikingly helpful. With these institutions, of course, were the older private institutions which have supplied for decades teachers and leaders for the newer colleges; and numbers of individuals, colored and white, interested in this problem. New and younger students, employed in these institutions and elsewhere were sought to give this group expert advice. Some fifty-one young scholars from thirty-five institutions were present with graphs, finished studies and plans which were used in

The 26th. Atlanta University Conference met at Robert Hall, Morehouse College, Atlanta, April 19 and 20, 1943. It became the first conference of the Negro Land-Grant colleges, for coordinating a programme of cooperative social studies.

Among those present were:

E. Franklin Frazier, Library of Congress

Charles S. Johnson, Fisk University

Howard W. Odum, University of North Carolina

E. B. Reuter, University of Iowa

T. Lynn Smith, Louisana State University

Edgar T. Thompson, Duke University

Donald Young, Social Service Research Council

They testified as follows:

Howard Washington Odum, the leading white Southern sociologist said

"It seems to me that in two or three ways a strong, integrated program for research in the land grant colleges would constitute an important step foward. In the first place, the area in which they work is still virgin and important, and their laboratories are adequate for genuine research and experimentation. They have a fine opportunity to combine the social studies with the physical sciences and to implement them in practical programs."

Edward Byron Reuter, a western leader of high reputation:

The plan for cooperative studies to be carried on by the Negro Land-Grant Colleges seems to me to be a very wise development and one that may lead to increasingly important results. It will make possible a pooling of resources - of time, staff, and funds - to discover and make known information.

Edward Franklin Frazier, the leading Negro sociologist

"To my mind, the Conference was significant because it represented the broadening and deepening of the stream of a great tradition which owes much to you.

Moreover, the Conference was a distinct success in that it brought together and stimulated men and women who have generally been forced to work in isolation. Even if no other conferences were held, I am sure that many of those who attended this ome would return to their work with a feeling that they were engaged in a worthwhile endeavor and that they had the support and appreciation of their fellow workers.

Charles Spurgeon Johnson, head of the Department of Sociology of Fisk University

The fact that so large a number of persons were present without direct financial aid from an outside source pointed to a reserve of interest that might be counted on to carry along a coordinated movement among the colleges. Not to be overlooked, however, is the prestige of an established and admired scholar in this field who has served as an effective catalyzing agent.

Donald Ramsey Young, Secretary of the Social Science Research Council

I have no doubt whatever concerning the value of your objective. There is need for the encouragement and guidance of social and economic research at the Land-Grant Colleges, both in terms of the benefits which should be derived therefrom by the institutions and their faculties and also in terms of the practical social utility of the anticipated results.

Edgar Tristram Thompson, from the Ready while Southern University

I feel that you have a good idea and that you deserve support in your efforts to carry it out. I appreciate your including me among the invited sociologists and I feel that my efforts to contribute to the conference have taught me something.

leadership of the African peoples. This had happened in 1920, when the West Afr African Congress acknowledged no tie with the First Pan-African Congress in Paris which sparked it. American Negroes had too often assumed that their leadership in Africa was natural. With the rise of an educated group of Africans this was increasingly unlikely. I realized how natural this was and knew that neither Nkrumah nor Padmore were calling a "Pan-African Congress" but that this "All-African Conference" was taking its place. However later Padmore sent me a cordial note emphasizing the invitation and offering to pay expenses.

By this time, my long travel was beginning to fell upon me and I was in a Soviet Sanitarium at Sarvieka near Moscow. I prepared to leave for Africa but the council of physicians advised against the trip as too taxing. I had therefor prepared three messages for Africa. One I delivered at Tashkent, one I sent by my wife Shirley who attended the conference at Accra. And the last I broadcast from Peking on my ninety-first birthday.

At Tashkent, before my invitation to Accra, I warned the colored world about borrowing capital from the West. Do not, I said accept all the capital goods which they offer. The West manufactures capital for sale. They must sell it or go bankrupt. You need capital, but not all that they offer or at the price which they charge. Buy as little as possible. Deny yourselves and wait. See whether or not the Communist lands may not offer you better bargains.

"7. BOYCOTT

THE EXPORT OF BIG CAPITAL FROM THE EXPLOITING WORLD, LED BY AMERICA. REFUSE TO BUY MACHINES, SKILLS, COMFORTS WITH COCOA, COFFEE, PALM OIL AND FRUIT SOLD AT REDICULOUSLY LOW PRICE IN EXCHANGE FOR IMPORTED FOODS, LIQUOR, AUTOMOBILES SOLD AT EXORBITANT PRICES. LIVE SIMPLY. ~~AS GOETHE CRIED " ENTBEHREN SOLLST DU, SOLLST ENTBEHREN! THOU SHALT FOREGO, SHALT GO WITHOUT~~. REFUSE TO BUY BIG CAPITAL EVEN FOR ADVANCE FROM NATIONS THAT CHEAT AND OVERCHARGE. BUY OF THE SOVIET UNION AND CHINA AS THEY GROW ABLE TO SELL AT LOW PRICE. SAVE THUS YOUR OWN CAPITAL AND DRIVE THE IMPERIALISTS INTO BANKRUPTCY OR INTO SOCIALISM"

Then at the moment of triumph came catastrophe: without previous notice I was retired from my professorship, and with my retirement went the whole plan which had been so largely built around my personality. This was through no machination of mine. It was simply a fact that large numbers of persons knew my previous work and believed in the possibility of its re-establishment and enlargement. No other person had this prestige. On the other hand the very success of my project had gained me enemies. Miss Reed felt she had lost the presidency of Atlanta University through my opposition and that now I had gained a new thoroughfare for my socialism. The new President feared that my position as curator of the new studies would overshadow his position and no doubt Miss Reed and others encouraged his jealousy. There was no basis for this fear, but I was not politition enough to see to it that there was even no appearance of rivalry.

And the land grant colleges would result under no one else at the time

own institution. Yet No act of mine gave any basis for this assumption. All invitations went out in the name of the president and I consulted him on all my actions. His delays and small objections seemed petty and I told him so. Perhaps I said this too brusquely; perhaps I did not sufficiently take into account his inexperience or lack of understanding of the situation.

* Doubtless he assumed that the removal of one old man would leave the new situation intact)

59
44
15

* Many of the Land Grant Colleges disliked Clement and said so. I should have given this more attention, but the accomplishment seemed petty as with so valuable to me that I could not conceive that Clement did not

The fact that Atlanta University had been chosen as the center of this work seemed to me so great an accomplishment that all else was negligible. PH

consultation.

While in a sense, this was hardly the time for scientific calm and considered planning on social problems, yet, on the other hand, in the midst of war and rumors of war, perhaps it is possible to maintain enough of scientific attitude and careful study to make new beginnings and an interesting synthesis of older and newer thought concerning industrial education, vocational guidance, and higher training, and for an economic leadership which may in time evolve plans parallel to those which the whole world must take into consideration after the present revolution.

The conference avoided dogmatism but explored possibilities. How far, it asked, is it feasible to apply the technique of consumers' cooperation and even of cooperative wholesales and cooperative production, to the present situation of the Negro? How far can the technique of organized buying power force employment and what dangers are there in such procedures? What part can Negroes take in the TVA and similar vast power developments? The conference attempted to make clear the paths of alliance which Negroes can make with forward movements, especially with movements that have in mind fundamental betterment of present methods of production and distribution. It did not attempt to rationalize nor solve the present problem of Negroes in war and national defense, but rather looked forward to the time when civilization, discarding violence as a major means of social change, will revert to slower and more rational methods of advancing human culture; for guidance at that time, we will need the most careful factual knowledge and reasoned theory for the treatment of minority groups.

The solution of this problem, without needless duplication of good work, or for mere pride of institution, came to me from W.R. Banks, principal of the Prairie View State College, Texas. He had been my student at Atlanta University during the days of the conferences. He took the idea with him to Texas, and conducted studies and conferences there for twenty years. He suggested that Atlanta

University unite the seventeen Negro Land-Grant Colleges in the South in a joint co-operative study, to be carried on continuously. I laid before the annual meeting of the presidents of these colleges in October 1941, such a plan. I proposed the strengthening of their departments of the social sciences; that each institution take its own state as its field of study; that an annual conference be held where representatives of the colleges came into consultation with the best sociologists of the land, and decide on methods of work and subjects of study.

To complete this idea, there was need to include a similar study of the vitally important Northern Negro group. The leading Negro universities like howard, Fisk, Wilberforce, Lincoln of Pennsylvania and of Missouri, and others might with Northern universities jointly carry out this part of the scheme.

A volume giving the more important results would be published annually.

This plan was inaugurated in the Spring of 1943, with all seventeen of the Land-Grant colleges represented, and eight leading American sociologists in attendance. The first annual report appeared in the Fall of 1943. Thus, after a quarter of a century, the Atlanta conferences live again.

IT IS IN THE LAST TEN YEARS THAT A NEW DISCOVERY OF AFRICAN HISTORY HAS COME THROUGH THE WORK OF ETHNOLOGISTS, ARCHEOLOGISTS AND CHEMISTS. THE HISTORY OF AFRICA BELOW THE SAHARA AND THE STORY OF THE GREAT CENTRAL PLATEAU IS NOT YET CERTAIN BUT IT IS CLEARER TODAY THAN EVER BEFORE WE KNEW OF THE CITY STATES AND FAST DEVELOPMENT OF THE WEST COAST, WE KNEW OF THE GREAT MARCH OF THE BANTU SOUTHWARD OVER THOUSANDS OF YEARS, AND WE KNEW OF THE CLASH OF BANTU AND EUROPEAN AT LAND'S END IN OUR DAY. BUT THERE WERE THINGS THAT PUZZLED US. THE CIVILIZATION OF THE AFRICAN EAST COAST, THE ADVANCED CULTURE OF GREAT CIVILIZATIONS AS SHOWN BY ZIMBABWE AND THE EMPIRE OF THE MONOMOTAPA AND THE HISTORY OF THE MEROE, KUSH, AND A DOZEN OTHER CENTERS. EUROPE DESPISED THE AFRICANS WHOM IT HAD HALF RUINED BY THE SLAVE TRADE, TRIED TO SEE DOZENS OF EVIDENCES OF CIVILIZATION IN THE CENTER OF AFRICA AS IMPORTATIONS FROM EAST OR WEST. TODAY WE KNOW BETTER. THE EAST COAST WITH ITS GREAT CITIES AND WIDESPREAD TRADE WAS FUNDAMENTALLY AFRICAN IN CONTACT WITH ARAB, CHINESE, AND INDIAN. THE DEVELOPMENTS OF CIVILIZATION IN THE VALLEYS OF THE CONGO AND THE ZAMBEZI WERE DISTINCTLY AFRICAN AND THE CIVILIZATION WHICH WAS BUILT UP THERE WAS NEW AND UNIQUE IN HUMAN HISTORY IN CONTRAST WITH EUROPE AND ASIA. OVER THESE CULTURES ROLLED EUROPEAN SLAVERY AND THE SLAVE TRADE, THE WIDE MIGRATION OF THE LESS CULTIVATED AFRICAN PEOPLES WHO OVERTHREW THE MORE CULTURED AND FINALLY COLONIAL IMPERIALISM AND WORLD WARS OF THE 19TH AND 20TH CENTURIES. THIS IS BUT VAGUE INDICATION OF WHAT WE KNOW OF AFRICAN HISTORY, BUT IT FORETELLS WHAT WE WILL KNOW WHEN CONFERENCES LIKE THAT AT ACCRA LAST YEAR SET THE WORLD TO STUDY THE PAST OF THIS CONTINENT.

We tax ourselves into poverty and crime so as to make the rich richer and the poor poorer and more evil bring more crime and poverty. We know the cause of this: it is to permit our rich business interests to stop socialism and to prevent the ideals of Communism from ever triumphing on earth. The aim is impossible. Socialism progresses and will progress. All we can do is to silence and jail its promoters. I believe in socialism. I seek a world where the ideals of Communism will triumph -- to each according to his need; from each according to his ability. For this I will work as long as I live. And I still live.

Civil Wars Make World War on Communism

I just live. I plan my work, but plan less for shorter periods. I live from year to year and day to day. I expect snatches of pain and discomfort to come and go. And then reaching back to my archives, I whisper to the great Majority:

To the Almighty Dead, into whose pale approaching faces, I stand and stare: you whose thoughts, deeds and dreams have made men wise with all wisdom and stupid with utter evil. In every name of God, bend out and down, you who are the infinite majotiy of all mankind and with your thoughts, deeds, dreams and memories, overwhelm, outvote, and coerce this remnant of human life which lingers on, imagining themselves wisest of all who have lived just because they still survive. Wither with wide revelatiob will they go with their stinking pride and empty boasting , whose ever recurring lies only you the Dead have known all too well. Teach living man to jeer at this last civilization which seeks to build heaven on Want and Ill of most men and vainly builds on color and hair rather than on decendy of hand and heart. Let your memories teach these wilful fools all which you have forgotten and ruined and done to death.

~~Hell lies before us in our age, in our staggering dotage~~ Still Live

You are not and yet you are: your thoughts your deeds, above all your dreams. These lived as your bodies died. With these we also live and die, realize and kill Our dreams seek Heaven, our deeds plumb Hell. Hell lies about us in our Age: blithely we push into its stench and flame. Suffer us not, ~~Dreams of you~~ Eternal

dead to stew in this Evil-- the Evil of South Africa, the Evil of Mississippi; the Evil of Evils which is what we hope to hold in Asia and Africa, in the southern Americas and islands of the Seven Seas

~~and the southern Americas~~. Reveal, Ancient of Days, the Present in the Past and prophesy the End in the Beginning. For this is a beautiful world; this is a wonderful America, which the founding fathers dreamed until their sons drowned it in the blood and greed. Our children must rebuild it. Let then the Dreams of the Dead rebuke the Blind who think that what is will be forever and teach them that that what was must live again. Teach us, Forever Dead there is no Hope but Deed, there is no Dream but Memory.

CHAPTER VI

MY BIRTH AND FAMILY

I was born by a golden river and in the shadow of two great hills, five years after the Emancipation Proclamation, which began the freeing of American Negro slaves. The valley was wreathed in grass and trees and crowned to the eastward by the huge bulk of East Mountain, with crag and cave and dark forests. Westward the hill was gentler, rolling up to gorgeous sunsets and cloud-swept storms. The town of Great Barrington, which lay between these mountains, had a broad Main street, lined with maples and elms, with white picket fences before the homes. The climate was to our thought quite perfect.

In 1868 on the day after the birth of George Washington was celebrated, I was born on Church street, which branched east from Main street in midtown. The year of my birth was the year that the freedmen of the South were enfranchised, and for the first time as a mass took part in government. Conventions with black delegates voted new constitutions all over the South, and two groups of laborers--- freed slaves and poor whites--- dominated the former slave states. It was an extraordinary experiment in democracy. Thaddeus Stevens, the clearest-headed leader of this attempt at industrial democracy, made his last speech, impeaching Andrew Johnson on February 16, and on February 23rd. I was born.

The house of my birth was quaint, with clapboards running up and down, neatly trimmed; there were five rooms, a tiny porch, a rosy front yard, and unbelievably delicious strawberries in the rear. A South Carolinian, lately come to the Berkshire Hills, owned all this--- tall, thin and black, with golden earrings, and given to religious trances. Here my mother, Mary Burghardt, and my father, Alfred Du Bois, came to live temporarily after their marriage ceremony in the village of Housatonic, which adjoined Great Barrington on the north. Then after a few years my father went east into Connecticut to build a life and home for mother and me. We meantime went to live on the lands of my mother's clan on South Egremont plain in the southern part of our town.

POSTLUDE

Returning to America after my great journey in 1959, I was welcomed home; not simply by my friends but by my government. In Sweden it was feared I might not, as a member of the World Peace Council, be allowed to land in England. But Pritt and Belfrage took hold and I received every courtesy. I had tea on the terrace of the House of Lords, with a viscount, an earl, and two ladies; also on the terrace of the House of Commons, I had tea where I had last been entertained by Kier Hardie. I met several members of Parliament, and spent many Sunday afternoons with Donald Ogden Stewart and Ella Winter. There I met James Aldrich and Katherine Hepburn. I saw Paul Robeson and his splendid production of "Othello". Lawrence Bradshaw, sculptor of the great head of Karl Marx, did my head.

The cabin on the Liberte, as we returned, was large and airy, and the voyage smooth and pleasant. But how would the United States receive us? We had openly spent ten weeks in China, and spoken widely and broadcast. There was some hasty last minute telephoning from the boat, I am sure, but all went well. Our passports were not seized and the chief Inspector of Customs passed our bags quickly and welcomed us home. Our relatives and friends swarmed to greet us. I was unable to understand why Scott Nearing and Waldo Frank should be forbidden to do what as yet I hve been unrebuked for doing openly and proudly. However, three months later, when the Supreme Court agreed to consider the cases of Waldo Frank And William Worthy, the State Department demanded our passports. We asked delay until the Supreme Court made its verdict. This was granted.

I am a little puzzled now about the ordering of my life. Several times in the past I find that I have prepared for death and death has not come. Always on my desk lies a calendar of my own devising with daily and hourly tasks; with plans for the week and next week, the month and the months ahead and the sentinel of my main task for the year. This year-part is now getting uncertain. Even months are no longer absolutely mine, yet I am reasonably content and although my strength warns me not to try to work as many hours as once I did, yet I work and work regularly and with some efficiency, from day to day.

As I recall, I have long faced the inevitability of death and not tried to dodge the thought. In early manhood I wrote:

"I saw a mother, black and seared and iron-haired, who had watched her boy through college, for men to jeer at and discourage and tempt until he sought women and and whiskey and died. She crept on a winter's Sunday into a cathedral of St. John the Divine and crouched there where a comfortable red and yellow angel sat sunning her ample limbs, 'To Keep the Memory of Odadiah James' - - - a stock-gambler. And there she rested while the organ warbled the overture to Der Feischutz, and the choir asserted 'My Jesus! As Thou wilt.' The priest intones: 'Come unto Me all ye that labor and are heavy laden and I will give you rest! For my yoke is easy and my burden light'. And the window-angel moved a fat wing and murmured: 'except Niggers!'

"In that dark day when all friends gathered round shall sigh; as he goes to that full dreadful home where earth shall move away and these dim eyes shall strain to scenes all glorious, shall they see on that morning round the wide, white throne a glorified Negro Problem? If so, Father of Mercies, send me to Hell."

At fifty, after a serious operation I wrote:

"Last year I looked death in the face and found its lineaments not unkind. But it was not my time. Yet in nature some time soon and in the fullness of days I shall die, quietly, I trust, with my face turned South and eastward; and, dreaming or dreamless I shall, I am sure, enjoy death as I have enjoyed life".

At sixty years of age I wrote again:

"For long years we of the world gone wild, have looked into the fact of death and smiled. Through all our bitter tears we knew how beautiful it was to die for that which our souls called sufficient. Like all true beauty this thing of dying was so simple, so matter-of-fact. The boy clothed in his splendid youth stood before us and laughed in his own jolly way - and went and was gone. Suddenly the world was full of the fragrance of sacrifice. We left our digging and burden-bearing; we turned from our scraping and twisting of things and words; we paused from our hurrying hither and thither and walking up and down, and asked in half whisper: 'Death - - is this life? And is its beauty real or false?'

"Here, then is beauty and ugliness, a wide vision of world-sacrifice, a fierce gleam of world-hate. Which is life and what is death and how shall we face so tantalizing a contradiction? Any explanation must necessarily be subtle and involved. No pert and easy word of encouragement, no merely dark despair, can lay hold of the roots of these things. And first and before all, we cannot fortet that this world is beautiful. Grant all its ugliness and sin - - the petty, horrible snarl of its putrid

threads, which few have seen more near or more often that I - - notwithstanding all this, the beauty of the world is not to be denied.

"And then - - the Vwil, the Veil of color. It drops as drops the night on southern seas - - vat, sudden, unanswering. There is Hate behind it, and Cruelty and Tears. As one peers through its intricate, unfathomable pattern of ancient, old, old design, one sees blood and guilt and misunderstanding. And yet it hangs there, this Veil, between then and now, between Pale and Colored and Black and White - - between You and Me. Surely it is but a thought-thing, tenuous, intangible; yet just as surely is it true and terrible and not in our little day may you and I lift it. We may feverishly unravel its edges and even climb slow with giant shears to where its ringed and gilded top nestles close to the throne of Eternity. But as we work and climb we shall see through streaming eyes and hear with aching ears, lynching and murder, cheating and despising, degrading and lying, soflashed and fleshed through this vast hanging darkness that the Doer never sees the Deed and the Victim knows not the Victor and each hate all in wild and bitter ignorance. Listen, O Isles, to these Voices from within the Veil, for they portray the most humanhurt of the Twentieth Cycle of that poor Jesus who cas called the Christ!

"At last to us all comes happiness, there in the Court of Peace, where the dead lie so still and calm and good. If we were not dead we would lie and listen to the flowers grow. We would hear the birds sing and see how the rain rises and blushes and burns and pales and dies in beauty. We would see spring, summer, and the red riot of autumn, and then in winter, beneath the soft white snow, sleep and dream of dreams. But we know that being dead, our Happiness is a fine and finished thing and that ten, a hundred, and a thousand yars, we shall lie at rest, unhurt in the Court of Peace."

From then until now the wraith of Death has followed me, slept with me and awakened me and accompanied my day. Only now it is more commonplace and reasonable. It is the end and without ends there can be no beginnings. Its finality we must not falsify. It is our debt to the Soviet Union that it alone of nations dared stop that lying to children which so long disgraced our schools. We filled little minds with fairy tales of religious dogma which we ourselves never believed. We filled their thoughts with pictures of barbarous revenge called God which contradicted all their inner sense of deceny. We repeated folk tales of children without fathers, of death which was life, of sacrifice which was shrewd investment and ridiculous pictures of an endless future. The Soviets have stopped this. They allow a child to grow up without religious lies and with mature mind make his own decision about the

world without scaring him into Hell or rewarding him with a silly Heaven.

We know that Death is the end of Life. Even when we profess to deny this we know that this hope is mere wishful thinking, pretense broidered with abject and cowardly fear. Our endless egotism cannot conceive a world without Us and yet we know that this will happen and the world be happier for it.

I have lived a good and full life. I have finished my course. I do not want to live this life again. I have tasted its delights and pleasures; I have known its pain, suffering and despair. I am tiered, I am through. For the souls who follow me; for that little boy born Christmas day before last, my great grandson and his compeers, I bequeath all that waits to be done, and Holy Time what a task, forever!

I have seen miracles in my life. As a boy we did not have the possibility of miracles emphasized in our schools. In the weekly Sunday School, we studied the bible with its tales of the impossible b but I remember distinctly that I questioned the validity of some of them, like that story of Johah. In other words I was brought up in the shadow of modern science where all that happens had a cause and there were many things unlikely to happen. For instance, then flying by man was not to be thought of and we talked of flying as impossible and joied at man's attempts. Yet I read of the first successful flights; and myself in 1921 flew from Paris to London. I have flown tens of thousands of miles since, over land and sea. I visited the Paris World's Fair in 1900, and was astonished to see automobiles on the streets; not many but perhaps a dozen in a day. I lived to see the jokes about the possibility of these motors displacing the horce fade away nd automobiles fill the streets and cover the nations.

I remember when first in an American city, seeing the streets lighted by electricity; the lights blinked and sputtered but in a few yars electric bulbs supplanted the gas lights of my boyhood. Then came the gas-filled ballons rising in the sky and men crossed the Atlantic in Zeppelins. Soon came the horror of Hiroshima and I began to feel the vast possibilities of man's brain and his coming conquest of the air. But the most atartling miracle of my time before 1958, was Sputnik. This went beyond the internal combustion engine; the airplane and balloon; beyond the electric light and the bursting atom. This was beyond mere utility into the realm of Knowledge and the triumph of Reason. It taught the United States the superiority of Communist thought and calculation. It stopped our sneers at Soviet education.

OVER

Then this year came the climax; the triumph of thought over power and space that was the greatest miracle of which I ever dreamed. Not yet have I been able to comprehend its meanding, or to realize that it is today actually possible to send a human being to the stars. A Frenchman once said: "I know but two beautiful things on earth: the stars above us and the feeling of duty within us." Now that we have pierced the heavens, we are more sure of making Mankind willing and eager to do right.

From back page 399-400

I have lived to an age of life which is increasingly distasteful to this nation. Unless by sixty a man has gained possession of enough money to support himself, he faces the distinct possibility of starvation. He is liable to lose his job and a refusal if he seeks another. At seventy he is frowned upon by the Church and if he is foolish enough to survive until ninety, he is often regarded as a freak. This is because in the face of human experience the United States has discovered that Youth knows more than Age. When a man of 35 becomes president of a great institution of learning or United States Senator or head of a multi-million dollar sorporation, a cry of triumph rings in the land. Why? To pretend that fifteen years fring of themselves more wisdom and understanding than fifty is a contradiction in terms. Given a born fool, a hundred years will not make him wise; but given an idiot, he will not be wise at twenty. Youth is more courageous than age because it knows less. Age is wiser than youth because it knows more. This all mankind has affirmed from Egypt and China five ~~thousand~~ thousand years ago, to Britain and Germany today. Only the United States knows better. I would have been hailed with approval if I had died at fifty. At seventy-six my death was practically requested. If living does not give value, wisdom and meaning to life, then there is no sense in living at all. If immature and inexperienced men rule the earth, then the earth deserves what it gets: the repetition of age-old mistakes, and wild welcome for what men knew a thousand years ago was disaster.

I do not apologize for living long. High on the ramparts of this blistering hell of life, as it must appear to most men, I sit and see the Truth. I look it full in the face, and I will not lie about it, neither to myself nor to the world. I see my country as what Cedric Belfrage aptly characterized as a Frightened Giant", afraid of Truth, afraid of Peace. I see a land which is degenerating and faces decadence unless it has sense enough to turn about and start back. It is no sin to fail. It is the habit of men. It is disaster to go on when you know you are going wrong. I judge this land not merely by statistics or reading lies agreed upon by historians. I judge by what I have seen, and lived through for near a century.

There was a day when the world rightly called Americans honest even if crude; earning their living by hard work; telling the truth no matter whom it hurt; and going to war only in what they believed a just cause after nothing else seemed possible. Today we are lying, stealing, and killing. We call all this by finer names: Advertising, Free Enterprise, and National Defense. But names in the end deceive no one; today we use science to help us deceive our fellows; we take wealth that we never earned and we are devoting all our energies to kill, maim and drive insane, men, women and children who dare refuse to do what we want done. No nation

threatens us. We threaten the world. Our President says that Foster Dulles was the wisest man he knew. If Dulles was wise, God help our fools - - the fools who rule us and are today running wild in order to shoot a football into the sky where Sputnik rolls in peace around the earth. And they know why we fail - - these military masters of men - - we haven't taught our children mathematics and physics. No, it is because we have not taught our children to read and write or to behave like human beings and not like hoodlums. Every child on my street is whooping it up with toy guns and big boys with real pistols. When Elvis Presley goes through the motions of copulation on the public stage it takes the city police force to hold back teen-age children from hysteria. The highest ambition of an American boy today is to be a millionaire. The highest ambition of an American girl is to be a movie star. Of the ethical actions which lie back of these ideals, little is said or learned. What are we doing about it? Half the Christain churches of New York are trying to ruin the free public schools in order to install religious dogma in them; and the other half are too interested in Venezuelan oil to prevent the best center in Brooklyn from fighting youthfyl delinquenc or preventing a bishop fron kicking William Howard Melish into the street and closing his church. Which of the hundreds of churches sitting half empty protests about this? They hire Billy Graham to replace the circus in Madison Square Garden.

Howard Melish is one of the few Christain clergymen, for whom I have the highest respect. Honest and conscientious, believing sincerely in much of the Christain dogma, which I reject, but working honestly and without hypocrisy, for the guidance of the young, for the uplift of the poor and ignorant, and for the betterment of his city and his country, he has been driven from his work and his career ruined by a vindictive bishop of his church, with no effective protest from most of the Christain ministry and membership or of the people of the United States. The Melish case is perhaps at once the most typical and frightening illustration of present American regigion and my reaction. Here is a young man of odea; character, of impeccable morals; a hard worker, especially among the poor and unfortunate, with fine family relations. His father had helped build one of the most poplar Episcopal churches in the better part of Brooklyn; He himself married a well-educated woman, and had three sons in school. The community about it was changing from well-to-do people of English and Dutch descent, to white collar and laboring folk of Italian, Negro and Puerto-Rican extraction. Trinity church, under the Melishes, adapted itself to changing needs, and invited neighborhood membership. It was not a lrge church, but it was doing the best work among the young and foreign-born of any institution in Brooklyn.

The young rector took one step for which the bishop, most of his fellow clergymen and the well-to-do community, with its business interests pillorized him. He joined and became an official of the National Council of American-Soviet Friendship. He was accused immediately of favoring Communism, and to appease

criticism he gave up his official position in this organization, but refused to resign his membership. Allegedly for this reason the bishop, most of the clery and the well-to-do community proceeded to force him out of the church. The real reason behind their fight was anger because a rich, white, "respectable" church was ~~been~~ being surrendered to Workers and Negroes. It became a renewed battle between Episcopal authority and democratic rule. This his parish wanted to retain Melish as rector was unquestionable. Through the use of technicalities in the canon law and in accord with the decision of Catholic judtes who believed in Episcopal power, Howard Melish lost his church, had hi life work ruined, and church itself closed, and its local influence ended. There was vigorous protest against this by devoted colleagues, many of then Jews and liberals. But the great mass of the Episcopal church membership was silent and did nothing.

All this must not be mentioned even if you know it and see it. America must never be criticized even by honest and sincere men. America must always be priased and extravagantly praised, or you lose your job, are ostracized, or land in jail. Criticism is Treason, and treason or the hint of treason testified to by hired liars may be punished by shameful death. I saw Ethel Rosenberg lying beautiful in her coffin beside her mate. I tried to stammer futile words above her grave. But not over graves should we shout this failure of justice, but from the housetops of the world.

Honest men may and must criticize America. Describe how she has ruined her democracy, sold out her jury system, and led her seats of justice astray. The only question that may arise is whether this criticism is based on truth, not whether it has been openly expressed.

What is truth? What can it be when the President of the United States, stands up in public and says: "The world also thinks of us as a land which has never enslaved anyone." Everyone who heard this knew it was not true. Yet, here stands the successor of George Washington who bought, owned, and sold slaves; the successor of Abraham Lincoln who freed four million slaves after they had helped him win victory over the slave-holding South. And so far as I have seen, not a single periodical, not even a Negro weekly, has dared challenge or even criticize that falsehood.

Perhaps the most extraordinary characteristic of current America is the attempt to reduce life to Buying and Selling. Life is not Love unless love is sex and bought and sold. Life is not Knowledge save knowledge of technique, or science for destrction. Life is not Beauty except beauty for sale. Life is not Art unless its price is high and is sold for profit. All Life is production for profit and for what is Profit, but for buying and selling again?

Even today the contradictions of American civilization are tremendous. Freedom of political discussion is difficult; elections are not free and fair. Democracy is for us to a large extent unworkable. In business there is a tremendous amount of cheating and stealing; gambling in card games, on television and on the tock exchange is widely practised. It is common custom for distinguished persons to sign books, articles, and speeches that they did not write; and for men of brains to compose and sell opinions which they do not believe. Ghost writing is a profession. The greatest power in the land is not thought or ethics, but wealth, and the persons who exercise the power of wealth are not necessarily its owners, but those who direct its use, and the truth about this direction is so far as possible kept a secret. We do not know who owns our vast property and resources, so that most of our argument concerning wealth and its use, must be based on guess work. Those responsible for the misuse of wealth escape responsibility, and even the owners of capial often do not know for what it is being used and how. The criterion of industry and trade, is the profit that it accrues, not the good which it does either its owners or the public. Present profit is valued higher than future need. We waste materials. We refuse to make repairs. We cheat and deceive in manufacturing goods. We have succumbed to an increased use of lying and misrepresentation. In the last ten years at least a thousand books have been published to prove that the fight to preserve Negro slavery in America was a great and noble cause, led by worthy men of eminence.

I know the United States. It is my country and the land of my fathers. It is still a land of magnificent possibilities. It is still the home of noble souls and generous people. But it is selling its birthright. It is betraying its mighty destiny. I was born and on its oil and educated in its schools. I have served my country to the best of my ability. I have never knowingly broken its laws or unjustly attacked its reputation. At the same time I have pointed out its injustices and crimes and blamed it, rightly as I believe, for its mistakes. It has given me education and some of its honors, for which I am thankful.

Today the United States is the leading nation in the world, which appartly believes that War is the only way to settle present disputes and difficulties. For this reason it is spending fantastic sums of money, and wasting wealth and energy on the preparation for war, which is nothing less than criminal. Yet the United States dare not stop spending money for war. If she did her whole economy which is today based on preparation for war, might collapse. Therefore, we prepare for a Third World Warl we spread our soldiers and arms over the earth and we bribe every nation we can to become our allies. We are taxing our citizens into poverty, crime and unemployment and systematically distorting the truth about Socialism. We have used the horror of germ warfare. Some of our leaders are ready to use it again.

The use of history for distortion and not for education has led to another of our greatest present evils; and that is to make fear os Socialism and Communism so great that we have withdrawn our efforts towards the education of children, the war on disease, and the raising of the standards of living. We encourage the increase of debt to finance present enjoyment; and above all we use news gathering and opinion, radio and television, magazines and books, to make most Americans believe that the threat of war, especially on the part of the Soviet Union against the United States justifies heavy tazation and tremendous expenditure for war preparation.

This propaganda began when our tremendous profits from the first world war encouraged American business to believe that the United States was about to replace Great Britain as ruler of most of mankind. The rise and spread of Socialism contradicted this ambition, and made the projected American century quail in fright before the century of Communism. We determined, therefore, to overthrown Communism by brute force. Gradually we discovered the impossibility of this, unless we risked suicide. We saw Communism increasing education, science and productivity. We now face the possibility of co-existence with the Communist world, and competition between the methods of Capitalism and the methods of Socialism. It is at this crisis that I have the opportunity to live seven months in a world of Socialism, which is striving towards Communism as an ideal.

This is what I call decadence. It could not have happened fifty yars ago. In the day of our fiercest controversy we have not dared thus puplicly to silence opion. I have lived through disagreement, vilification and war and war again. But in all that time, I have never seen the right of human beings to think so challenged and denied as today.

The day after I was born, Andrew Johnson was impeached. He deserved punishment as a traitor to the poor Southern whites and the poorer freedmen. Yet during his life, no one denied him the right to defend himself. A quarter of a century ago, I tried to state and carry into realization unpopular ideas against a powerful opposition - in the white South, in the reactionary North, and even among my own people. I found my thought be misconstrued and I planned an organ of progaganda - - <u>The Crisis</u> - - where I would be free to say what I believed. This was no easy sailing. My magazine reached but a fraction of the nation. It was bitterly attacked and once the government suppressed it. But in the end I maintained a platform of radical thinking on the Negro question which influenced many minds. War and depression ended my independence of thought and forced me to return to teaching, but with the certainty that I had at least started a new line of belief and action. Then they stopped my teaching.

As a result of my work and that of others, the Supreme

The Yale sophomore who replaced a periodical of brains by a book of pictures concealed in advertisements, proposed that America rule the world. This failed because we could not rule ourselves. But Texas to the rescue, as Johnson proposed that America take over outer space. Somewhere beyond the Moon there must be sentient creatures rolling in inextinguishable laughter at the antics of our Earth!

We taz ourselves into poverty and crime so as to make the richer richer and the poor poorer and more evil. We know the cause or this: it is to permit our rich business interest to stop socialism and to prevent the ideals of Communism from ever triumphing on earth. The aim is impossible! Socialism progresses and will progress. All we can do is to silence and jail its promoters and make world war on Communism. I believe in Socialism. I seek a world where the ideals of Communism will triumph - - to each according to his need; from each according to his ability. For this I will work as long as I live. <u>And I still live!</u>

I just live. I plan my work, but plan less for shorter periods. I live from year to year and day to day. I expect snatches of pain and discomfort to come and go. And then, reaching back to my archives, I whisper to the great Majority:

To the Almighty Dead, into whose pale approaching faces, I stand and stare; you whose thoughts, deeds and dreams have made men wise with all wisdom and stupid with utter evil. In every name of God, bend out and down, you who are the infinite majority of all mankind and with your thoughts, deeds dreams and memories, overwhelm, outvote and coerce this remnant of human life which lingers on, imagining themselves wisest of all who have lived just because they still survive. Whiter with wide revelation will they go with their stinking pride and empty boasting, whose ever recurring lies only you the Dead have known all too well. Teach living man to jeer at this last civilization which seeks to build heaven on Want and Ill of most men and vainly builds on color and hair rather than on decency of hand and heart. Let your memories teach these wilful fools all which you have forgotten and ruined and done to death.

You are not and yet you are: your thoughts, your deeds, above all your dreams still live. So too, your deeds and what you forgot - these lived as your bodies died. With these we also live and die, realize and kill. Our dreams seek Heaven, our deeds plumb Hell. Hell lies about us in our Age; blithely

The Yale sophomore who replaced a periodical of brains by a book of pictures concealed in advertisements, proposed that America rule the world. This failed because we could not rule ourselves. But Texas to the rescue, as Johnson proposed that America take over outer space. Somewhere beyond the Moon there must be sentient creatures rolling in inextinguishable laughter at the antics of our Earth!

We taz ourselves into poverty and crime so as to make the richer richer and the poor poorer and more evil. We know the cause or this: it is to permit our rich business interest to stop socialism and to prevent the ideals of Communism from ever triumphing on earth. The aim is impossible! Socialism progresses and will progress. All we can do is to silence and jail its promoters and make world war on Communism. I believe in Socialism. I seek a world where the ideals of Communism will triumph - - to each according to his need; from each according to his ability. For this I will work as long as I live. <u>And I still live!</u>

I just live. I plan my work, but plan less for shorter periods. I live from year to year and day to day. I expect snatches of pain and discomfort to come and go. And then, reaching back to my archives, I whisper to the great Majority:

To the Almighty Dead, into whose pale approaching faces, I stand and stare; you whose thoughts, deeds and dreams have made men wise with all wisdom and stupid with utter evil. In every name of God, bend out and down, you who are the infinite majority of all mankind and with your thoughts, deeds dreams and memories, overwhelm, outvote and coerce this remnant of human life which lingers on, imagining themselves wisest of all who have lived just because they still survive. Whiter with wide revelation will they go with their stinking pride and empty boasting, whose ever recurring lies only you the Dead have known all too well. Teach living man to jeer at this last civilization which seeks to build heaven on Want and Ill of most men and vainly builds on color and hair rather than on decency of hand and heart. Let your memories teach these wilful fools all which you have forgotten and ruined and done to death.

You are not and yet you are: your thoughts, your deeds, above all your dreams still live. So too, your deeds and what you forgot - these lived as your bodies died. With these we also live and die, realize and kill. Our dreams seek Heaven, our deeds plumb Hell. Hell lies about us in our Age; blithely

Hell lies about us in our Age; blithely we push into its stench and flame. Suffer us not, Eternal Dead to stew in this Evil - - the Evil of South Africa, the Evil of Mississippi; the Evil of Evils which is what we hope to hold in Asia and Africa, in the southern Americas and islands of the Seven Seas. Reveal, Ancient of Days, the Present in the Past and prophesy the End in the Beginning. For this is a beautiful world; this is a wonderful America, which the founding fathers dreamed until their sons drawned it in the blood of slavery and devoured it in greed. Our children must rebuild it. Let then the Dreas of the Dead rebuke the Blind who think that what is will be forever and teach them that what was worth living for must live again and that which merited death must stay dead. Teach us, Forever Dead there is no Dream but Deed, there is no Deed but Memory.

The End

Sample No

THE SOVIET UNION

I have in a sense seen the Union of Soviet Socialist Republics grow, not as a casual visitor, nor hurried tourist. In 1926, I saw a Russia just emerging from war with the world. The people were poor and ill-clothed; food was scarce, and long lines stood hours to get their share. Orphan children, ragged and dirty, crawled in and out of sewers. The nation faced foreign force, and Russian traitors ~~were betrayed~~. Yet, despite this, I saw a land of hope and hard work. Schools were multiplying; books were being printed and widely read; workers were being protected with living wage, nurseries for children, night schools, trade unions and wide discussion. Indeed this wide discussion and criticism intrigued me. Never had I seen such public interest in social matters on the part of men, women and children. Here was a people seeking a new way of life through learning the truth, and cooperating with each other and by willing sacrifice. Not everybody was happy, but most Russians saw a bitter past being succeeded by a great future, not swiftly, but surely. I visited Kronstad, Leningrad, Moscow, Njini Novorod, Kiev, ~~Moscow~~ and Odessa. There were no signs of prostitution or unusual crime. There was some drunkenness, but little gambling. Priests were plentiful, and tarnished gold-domed churches abounded, but dogma was being driven from the schools. Above all, the spirit of the people was high, the officials were working desperately hard, and with efficiency.

I had known that Czarist Russia naturally resisted the revolution. But of the extent of that counter-revolution and of the active help in manpower, material and arms supplied by the civilized world; of the spying and intrigue from all Europe, which had accompanied and inspired this war of reaction, I had but the vaguest information. Indeed I did not learn the whole story until Sayers and Kahn published their "Great Conspiracy" in 1946.

What amazed and uplifted me in 1926, was to see a nation stoutly facing a problem which most other modern nation did not dare even to admit was real, (the abolition of Poverty) Taking inspiration directly out of the mouths and dreams of the world's savants

Ch IV

and prophets, who had inveighed against modern industrial methods; against the co-existance of progress and poverty; this new Russia led by Lenin and inspired by Marx, and Engels, proposed to build a socialist state with production for use and not for private profit; with ownership of land and capital goods by the state, and with state control of public services, including education and health. It was enough for me to see this mighty attempt. It might fail, I knew, but the effort in itself was social progress and neither foolishness nor crime.

Russia was handicapped by 90% illiteracy among her peasants, and nearly as much among her working classes; by a religion led by a largely immoral priesthood, dealing in superstition and deception, and rich with the loot of grovelling followers. Most of her industrial capital was owned by foreigners, whose only interest was the fifty or seventy-five percent profit which they reaped from merciless exploitation. Her government had long been shot through with dishonesty and graft under dissolute nobles and fawning lackeys. Her punishment of crime and independent thought had long affronted the civilized world. Yet the best people of Europe and America seldom raised a finger of protest, but fawned on Russian royalty and aristocracy, receiving them with open arms and expressing loud sympathy when they were repudiated.

There is no question but that governments can carry on business. Every government does. Whether governmental industry compares ~~in efficiency~~ with private industry depends entirely upon what we call efficiency. And here it is and not elsewhere that the Russian experiment is astonishing and new, and of fateful importance to the future of civilization. What we call efficiency in America is judged primarily by the resultant profit to the rich and only secondarily by the results to the workers. The face of industrial Europe and America is set toward increasing private wealth; that is, toward the people who have large income. We recognize the economic value of small incomes mainly as a means of profit for great incomes. Russia seeks another psychology. Russia is trying to make ~~this~~ the workingman the main object of industry. His well-being and his income are deliberately set as the chief ends of organized industry, directed by the State.

It is ~~on~~ by its economic ~~problem~~ Progress that Russia must primarily be judged. Russia had established a socialistic state. The world had long been veering toward Socialism. We had made essays toward Socialism; but when the Socialistic state appeared full-fledged, most of us called it by other names and refused to judge it by its socialism, but rather we insisted on investigating the ethics of the methods ~~underlying~~ accompanying its establishment.

What had Russia done in 1926, to establish a Socialistic State? First, it had nationalized the land. Every inch of land in Russia-- the air above it and the resources beneath , belong to the ~~Russian~~ Soviet State. Persons who wish to till the soil may have as much land as they can successfully till, with the labor of their own family. The mineral and oil rights may be farmed out by the government for a term of years, but the government retains ownership of mines and wells and the terms of the leases are limited.

Ten years later, in 1936 I rode aacross the Soviet Union on the Trans-Siberian railway from Moscow to Otpur, Manchuria. The trip of four thousand miles was slow and took ten days and nights. But it traversed main part of the Soviet Union. It went through cities, ~~crossed~~ climbed the Urals and crossed lakes and rivers. The change in ten years was remarkable. This was no longer a people struggling for survival, it was a nation sure of itself. In Moscow the streets were widening and the city had crossed the river. Old buildings remained, but great new buildings were crowding them. The golden domes of churches had disappeared, and tall office buildings were taking their place. Few priests were visable, and few beggars. The folk were better dressed and food was much more plentiful. There were no unemployed, and all children were in school; factories shops and libraries had multiplied, and there was evidence of law and order everywhere. Industry was moving west and ~~climbing~~ crossing the Urals. Military might was evident and we saw the massing of soldiers toward the East to meet the threat of Japan. Great dams, canals and water works were building. The peasant was in close cooperation with, and not in revolt against the factory worker. Here was a self-confident nation ready to fight for existence.

No ¶

The people of the nation did not have all they wanted or planned to have, but much more than ever before. They did not fear poverty nor old age; They were ~~[illegible]~~ not slaves, not ready for revolt.

Thirteen years later, in 1949, after the Peace Congress in Paris, twenty-five Americans were invited to attend a Peace Congress in the Soviet Union. I was the only one who accepted the invitation. In the Hall of the Nobles, Moscow, where the Russian aristocrats used to gamble, I met a cross-section of the Soviet people- workers, writers, officials, and visitors from neighboring lands. It was an inspiring body and I tried to convince them that most Americans did not desire war with them, but strove for peace. I saw the continued growth of Moscow, and the increased confidence of the Soviet Union in itself, and in Socialism as a path to a Communist state. I was shown where on Lenin Hills a new University would be built.

Ten years passed. I was allowed to visit Europe until 1959, when I again saw the Soviet Union and spent five months in its borders. Its growth in size and building; in industry and trade; in science and education, was marvellous. In November of 1959, as I rode into Moscow I saw above the city the great Sickle and Star which crowns the University and blesses the city. Later this Lomosov State University, "Member of the Order of Lenin and of the Workers' Order of the Red Star," called me to its halls and made me honorary doctor of historical science. ¶ I was on Red Square at the great celebration with a half million spectators. A ~~gaily~~ uniformed major escorted me to the hotel, and on the way we stopped and saluted Khruschev, and Khruschev raised his hat.

¶ Next I went to a Sanitarium, I was weary from travel. It is a great solemn place with tall pines and snow. We have servants for every wish, and all are as kind as can be. I have been here a month, and have had every probe and test possible. My heart has been measured a dozen times; my blood tested, my blood pressure taken, and I have been poked inside and out.

Today I was granted an interview with Prime Minister Khruschev at my request. For about two hours, I and my wife, Shirley Graham, discussed with him the Peace movement in the United States, and the Pan-African movement.

I told him of my indictment and acquital in 1951 of the charge of not registering as a foreign agent, because I secured signers for the Stockholm appeal. We discussed the tenth anniversary of the World Peace Council. I talked about African independence and unity, and of establishing in Moscow an Institute under the Academy of Sciences, to study African history and culture. I said Africa has just taken a decisive step at the conference at Accra toward independence, union and free cultural development. The first effort of Africans will be in political lines and then for industrial progress and economic organization. Education will receive attention, but resources will be limited, and teachers scarce. I believe that here the Soviet Union can be of great assistance to new Africa. The Scientific study of Africans and their continent is nedessary for the guidance of their education and the organization of their culture. This is one of the ways in which the progressive world can help its lagging parts and one in which there are fewest causes for friction and diversity of interest. I suggested therefore, that the Soviet Academy of Sciences establish an Institute for the study of Pan-African history, sociology, ethnography, anthropology and all cognate studies. This Institute of the Academy would aim at promotion of scientific research into all the activities, past and present of the peoples of Africa, together with a study of their physical, and biological environment. This series of studies would be carried on with the central idea of the unity of the whole subject and the conviction that history is not separate from sociology, or culture from biology, but that all research in such related fields seek the one end of unified scientific knowledge. While this enterprise would start and center in the Soviet Union, its object would be the welfare and progress of Africa, and from the first, it should seek cooperation wherever it could be found, and especially among Africans.

The Institute should by offer of scholarships to Africans, and by cooperation with African students and institutions of learning, try eventually to build within Africa, a center of scientific study, which would lead in world study, and the promotion of world peace.

Realizing how in modern history the exploitation and almost universal underestimation of Africans have led to wide denial of the very existence of their history and culture, it would be a first duty of this Institute to make known the history of the African peoples, and to distribute knowledge of this in libraries and museums; in text-books and university studies, and as common knowledge. No greater work for world peace can be conceived, no quicker way to convince mankind that no part of it must exist for the exploitation and comfort of the rest at ~~any~~ the cost of suffering black folk.

The Soviets are making a new people; a disciplined people. This is not a matter of police; few police are in evidence, and there is little giving of orders. Secret dred? I sense none. But let me illustrate: Out from my hotel window I look on two great squares; the furtherest is Red Square with the towers of the Kremlin walls and the brown tomb where Lenin and Stalin sleep their last long sleep. Across these squares yesterday a half million people marched, walked, and danced; they ate and sang, they laughed and cheered. This morning when I arose and looked out, there was not a scrap of paper or sign of dirt. That meant work in the night I'm sure, but it meant much more than this: it meant that this half million people dropped no dirt and threw away no paper, and they did this not under orders, but because they felt these squares were theirs, and they must not soil their own. These people feel a vested interest in this nation such as ~~no~~ few American feels ~~in~~ for the United States.

Why? I do not know, and yet it may be because they are consulted about it. They are asked, continually asked; they sit and sit and talk and talk, and vote and vote; if this is all a mirage, it is a perfect one. They believe it as I used to believe in the Spring Town Meeting in my ~~town~~ village. There is power rivalry and personal jealousy; all things in the Soviet Union are not perfect. Mails miscarry, cables come a day late, styles are often funny; the world problem of ~~mental~~ domestic service has not been settled. The question of life careers and the decision between what one wants to do and what one is fitted to do, and what efforts are needed—these matters have not yet found final answers; but they are being frankly faced , and experiments are making.

The Soviet Union is great and growing greater, and it belongs to this two hundred million folk about me (as ~~they~~ it seem to believe); I am strongly inclined to agree with them.

Nowhere are public questions so throughly and exhaustively discussed. Russians sit and listen long to talks, lectures, expositions; they read books, magazines and newspapaers, not just picture books. Each problem of existance is discussed in ~~each~~ village and factory. Comments, spoken and written, are welcomed, until every aspect, every opinion has been expressed and listened to, and the matter rises to higher echelons, and is discussed again. Gradually agreement is approached, until when the thrashed-out result reaches the All-Soviet height, there is usally but one opinion and decision. This is not unexpected ~~unusual~~. How many right answers to each of our problem are there? This is a sifting of democracy which the West has lost. In America there is little real political discussion. It is discouraged in every way; by stopping meetings, refusing use of hall; closing columns of newspapers, refusing radio time, and even by police interference and jail. In Britain there is freeer discussion, but it is limited by convention ~~custom~~ and prestige; by aristocratic influence and the money and leisure of the dominant class. In France, parlimentary debate is directed by the powerful interests who work the puppets and pull the strings. In Italy, the church stands always in the shadow, keeping watch above its own. The church represents wealth, and wealth rules, ~~the church.~~

In the Soviet Union the overwhelming power of the working class as representing the nation is always decisive. Above this and rising out of it and expressing its thoughts and ideals, rises the real aristocracy of the Soviet Union, the writers and scientists. They get the highest wage, they enjoy such privileges as the law and public opinion allow. How free are they? Science is free from religious dogma and ~~singularly free~~ from vested interests. The writer has a wide leeway and rich applause, but he is limited by the aims of Socialism, to serve all and not a few, and by the fear of ~~outside~~ foreign attack, which

in the past has nearly ruined the Soviet Union. The recalcitrant writer, the idealists and dreamers disagree, ~~and~~ but variety of opinion ~~has~~ is become increasingly common and open. As the Soviet Union becomes stronger and more self-confident, and less sensitive to that western opinion, which has so long ruled the world with a rod of gold, it will become freer. Never, I hope, so free as to betray the ideals of the land as French writers have betrayed France, and as American writers ~~betray submit today to dictation~~ distort Truth today.

For years most American leaders regarded the figures as to Russian progress as exaggerations or lies. The Teachers' Union once begged me not to say in answer to a citation that the schools of Moscow were better than those of New York. Ex-President Conant of Harvard declared that the Communist Party would not allow promotion to higher schools by examination; presumably only by favor. Then came "Sputnik". Then ~~came the~~ followed unasnwerable proof of Soviet superiority in Science. There ~~followed~~ were revealed the startling figures as to education in schools and colleges.

What I saw in the Soviet Union was more than triumph in physics, it was the growth of a nations soul; the confidence of a great people in its plans and future. And beyond that the realization around the world that the Seven year Plan was not boasting, but knowledge shared by two hundred million people. Around these millions were gathered even greater millions in China, Vietnam and Korea, who believed in Socialism, and sought Communism.

Is it possible to conduct a great modern government without autocratic laadership of the rich? The answer is: this is exactly what the Soviet Union is doing today. But can she continue to do this? This is not a question of ethics or economics; it is a question of psychology. Can Russia continue to think of the State in terms of the workers? This can happen only if the Russian people believe and idealize the workingman as the chief citizen. In America we do not. The ideal of every American is the millionaire-- or at least the man of "independent" means of income. We regard the laborers as the unfortunate part of the community, and even liberal thought is directed

toward "emancipating" the workingman by relieving him in part, if not entirely, of the necessity for work. Russia, on the contrary, is seeking to make a nation believe that work, and work that is hard and in some respects even disagreeable, and to a large extent pyhsical, is a necessity of human life at present and likely to be in any conceivable future world; that the people who do this work are the ones who should determine how the national income from their combined efforts should be distributed; in fine, that the workingman is the State; that he makes civilization possible and should determine what civilization is to be.

For this purpose he must be a workingman of skill and intelligence, and to this, Russian education is being organized. This is what the Dictatorship of the Proletariat means. This dictatorship does not stop there. As the workingman is today neither skilled nor intelligent to any such extent as his responsibilities demand, there is within his ranks the Communist Party directing the Proletariat toward their future duties. This is nothing new. In the governments "of the people", we have elaborate and many-sided arrangements for guiding the rulers. The test is, are we and Russia really preparing future rulers? Insofar as I could see in the Soviet Union, in shop and school, in the press and on the radio, in books and lectures, in trade unions and national congressmen, Russia is; we are not.

It is the organized private capital of America, England, France and Germany which is chiefly instrumental in preventing the realization of the Russian workingman's psychology. It has used every modern weapon to crush Russia. It sent against Russia every scoundrel who could lead a mob, and has given him money, guns and praise; and when Russia nearly committed suicide in crushing this civil war, modern industry began the industrial boycott, the refusal of capital and credit, which is being carried on today just as far as international jealousy and greed will allow. And can we wonder? If modern capital is owned by the rich and handled for their power and benefit, can the rich be expected to hand it over to their avowed and actual enemies? On the contrary, if modern industry is really for the benefit of the people, and if there is an

effort to make the people the chief beneficiaries of industry, why is it that this same people is powerless today to help this experiment, or at least give it a clear way? On the other hand, so long as the most powerful nations in the world are determined that the Soviet Union must fall, there can be but a minimum of free discussion and democratic difference of opinion in Russia.

There is world struggle then in and about Russia; but it is not simply an ethical problem, as to whether or not the Russian Revolution was morally right; that is a question, which history will settle. It is not simply the economic question as to whether or not Russia can conduct industry on a national scale. She is doing it today and in so doing she differs only in quantity, not in quality fron every other modern country. It is not a question merely of "dictatorship". We are all subject to this form of government.

There is under Communism a use of women for more than pleasure and physical reproduction; but primarily for their talent in work and thought. This has made possible the increase of medical facilities, since sixty percent of the Soviet women are today physicians. With this goes a socialization of the family group. It is no longer customary to regard babies as playthings or nursery jobs; or as means of prolonging the father's cultural patterns, or to inherit his wealth or privileges. The child is becoming a recognized ward of the state to be raised and educated for the welfare of the people of the state and not merely for the privilege of a family group or of a special class. For this purpose nurseries, kindergartens and schools are provided; cooperative kitchens, and a dining rooms. The masses of Communist women are being released from household drudgery, and the state has a tremendously widened reservoir of ability to serve its needs.

The Soviet Union which I see in 1959 is Power and Faith and not simply Hope. When the seven years Plan was announced, not only Soviet citizens but the world knew that this nation could do what it planned, and barring no unexpected difficulties would reach these enormous goals. It is only a matter of time and a comparatively short time when the Soviet Union will lead the worl in industry.

The Russian question is: Can you make the worker and not the millionaire the center of modern power and culture? If you can, the Russian Revolution will sweep the world. One can stand on the streets of Moscow and Kiev and see clearly that Russia has struck at the citadelsof power that rules modern countries. Not manhood suffrage, women's suffrage, state regulation of industry, social reforms, nor religious and moral teaching in any modern country have shorn organized wealth of its power, as the Bolshevik Revolution has done in Russia. The Soviet Union seems to me the only modern country where people are not more or less taught and encouraged to despise and look down on some class group or race. I know countries where race and color prejudice show only slight manifestations, but no white country where race and color prejudice seems so absolutely absent. In Paris, I attract some attention; in London I meet elaborate blankness; anywhere in America I get anything from complete ignoring to curiosity, and often insult. In Moscow, I pass unheeded; Russians quite naturally ask me information; women sit beside me quite confidentially and unconsciously. Children are uniformly polite.

We had just finished our trip through Western Europe, when a cable came inviting us to a conference of Asiatic and African writers at Tashkent. I had heard nothing of this meeting, but had wanted very much to attend the conference at Bandung in 1955. Again the government had prevented me, and the message which I had sent by an American Negro reporter, reached nobody. Further correspondence made our attendance upon this Congress at Tashkent seem of real importance. It was two thousand miles south east of Moscow, with five hours difference in time. The passage ~~then~~ branched from my trip in 1936, veering toward the south. We heard the blood of Stalingrad far to the West, where Stalin conquered Hitler and saved Europe. After leaving Kazan, we crossed the Kazakh Province, and entered the province of Uzbek.
We were near the storied Samarkand; ~~and~~ where:

"In Xanadu did Kubla Khan,
A stately pleasure dome decree
Where Alph the sacred river ran
Through caverns measureless to man
Down to a sunless sea"

But today there is sunshine over the 150,000 square miles of the Uzbek Soviet Socialist Republic. Over seven million brunette and curly-haired folk of Asiatic descent live here speaking a dialect differing from the Russian language, and inheriting an old culture. Tashkent a city of 600,000, founded in the seventh century on the trade route between Samarkand and Peking, welcomed its guests with banners and applause. They filled the festooned streets. Their fields were growing tall long-staple cotton, which an American Negro from Tuskegee first planted. New housing was replacing the old compounds, and schools were spreading.

The huge square with its fountain, had a new modern hotel on one side, and on the other a great conference hall with facilities for translating into Russian, Arabic, Chinese and English. This choice of languages was significant. The city was festooned, and the square filled with people greeting the visitors, and besieging the stalls, where books were on sale, and not chewing gum and hot dogs. One stall sold in a day ten thousand rubles worth of books in the Tartar language alone. One hundred and forty writers from thirty-six countries, and forty-five writers from the Soviet Republics, were present. We saw and heard of men whose works are read by millions, and yet whose names most of us Westerners had never heard. I was surprised to find my work known to many of the delegates, and the Congress gave me a standing ovation when I entered. I was shown to the platform, where I sat as a member of the directing committee. The discussion and the papers were mainly on cultural matters, although politics, and especially Colonialism continually forced themselves to the front. The inter-relation

of all cultures was stressed, and the contribution of the West, despite its aggression against Asia and Africa. As one poet from the mountains of Daghestan said, "We must not confuse Colonialism with culture, nor Dreiser with Dulles." Efua Sutherland, a black woman from Ghana called the conference " A step toward unification of the disrupted soul of man."

A permanent Afro-Asian writers bureau was set up, with head quarters in Ceylon, to publish books, a journal, and an encyclopedia, and to promote translations.

I leave one subject to the last, as I leave the Soviet Union, religion. I lived two months opposite the inscription on the Second House of the Soviets, written by Lenin:

"Religion is the opium of the people!"

Whatever was true of other lands, this was certainly true in Russia in 1926 and before. Symbols of religion dominated the city, from the vast five domes of the Cathedral of Christ, the 350 other churches of the city dominated the landscape, as they loomed and glowed. There were gems of beautiful bejewelled churches; horders of priests intoning litanies, begging alms, forgiving sins. There were thousands of shrines. Only one who has heard the chant of a Russian service, seen its color and genuflections; only those who know the gorgeous litany and the beauty of Russian churches can realize what Lenin meant when he called the Russian religion "opium".

But it was worse than opium. It was a Russian Priest, Father Petrov, who said in 1908," There is no Christian Czar and no Christian government. Conditions of life are not Christian. The upper classes rule the lower classes. A little group keeps the rest of the population enslaved. This little group has robbed the working people of wealth, power, science, art and even religion, which they have also subjected; they have left them only ignorance and misery. In the place of pleasure they have given the people drunkenness; in the place of religion, gross superstition; and beside, the work of a convict, a work without rest or reward. The ruling clergy with its cold, heartless bony fingers, has stifled the Russian church, killed its creative spirit, chained the Gospel itself, and "sold" the church to the Government.

"There is not an outrage, no crime, no perfidy of the State authorities, which the Monks who rule the church, would not cover with the mantle of the church, would not bless, would not seal with their own hands."

The British Trade Union report of 1925 said: "A very strong propaganda in the Press, the schools, colleges, and Trade Union clubs is, however, carried on against religion generally, and especially as practised by the old Orthodox Church.

"The former Government-controlled licensed houses of prostitution where girls were exposed for hire at recognized fee, have been closed. In Tsarist days these houses were a recognized government institution; the opening ceremony was undertaken by a police officer and the premises blessed by Russian Orthodox Priests."

All this has gone and none regrets that Russian Orthodox religion has been dethroned. But the Russian church remains and other churches still carry on in the Soviet Union. However, the Soviet Union does not allow any church of any kind to interfere with education, and religion is not taught in the public schools. It seem to me that this is the greatest gift of the Russian Revolution to the modern world. Most educated modern men no longer believe in religious dogma. If questioned they will usually resort to double-talk before admitting the fact. But who today actually believes that this world is ruled and directed by a benevolent person of great power, who on humble appeal will change the course of events at our request? ~~Most~~ folk ~~will not~~ follow religious ~~customs~~ ceremonies and services; and ~~above all we~~ allow our children to learn fairy tales and so-called truths which in time they come to recognize as conventional lies told by their parents and teachers. One can hardly exaggerate the moral disaster of this custom. We have to thank the Soviet Union for the courage to stop this custom.

301

USSR

The United States has moved from the hysteria of calling all Russian women prostitutes, all Russian workers slaves and the whole Russian people ready for revolt, of regarding all Russian rulers as criminals conspiring to conquer the United States and rule the world; of breaking every treaty that they make. From this radical and utterly ridiculous position, we have begun to recognize the Soviet Socialist Republic as giving its people the best education of any in the world, of excelling in science, and organizing industry to its highest levels. Our increasing number of visitors to Russia, see a contented people who do not hate the United States, but fear its war-making, and are eager to cooperate with us. From such a nation we can learn. This the courageous trial of Khrushchev, in the face of threat Calumny and insult has taught us

CHAPTER V

CHINA

I saw China first in 1936, on my trip from the Soviet Union to Japan. I was struck by its myriads of people. This amorphous mass of men, with its age-old monuments of human power, beauty, and glory; with its helpless, undefended welter of misery and toil, has an organization of life and impenetrable will to survive that neither imperial tyranny, nor industrial exploitation, nor famine, starvation, and pestilence can kill— it is Eternal life, facing disaster and triumphing imperturbably.

There passed a glory from the earth when Imperial China fell. Built as it was on skulls, it was bravely built and the remains are magnificant. In all essential respects they surpass the Stones of Europe. Where Europe counts its years in hundreds, Asia counts its thousands. There is absent that all too apparent European effort to dramatize and exaggerate the past; to emphasize war and personal glory. China shows a finer effort to let the past stand silent, frank, and unadorned; to tell the truth simply about men and fully; and to record the triumphs of education, family life and literature far more than murder.

I write this standing on the Great Wall of China, with twenty-three centuries beneath my feet. The purple crags of Manchuria lie beyond the valley, while behind are the yellow and brown mountains of China. For seventy cents I have been carried up on the shoulders of four men and down again. And here I stand on what has been called the only work of man, visible from Mars. It is no mud fence or pile of cobbles. It surpasses that mighty bastion of Constantinople, which so many centuries saved Mediterranean civilization from German barbarism. This is a wall of carefully cut stone, fitted and laid with perfect matching and eternal mortar, from twenty to fifty feet high and 2,500 miles long; built by a million men, castellated with perfect brick, and standing mute and immutable for more than two thousand years. Such is China.

Shanghai was an epitome of the racial strife, the economic struggle, the human paradox of modern life. Here is the greatest city of the most populous nation on earth, with the large part of it owned, governed and policed by foreign nations. With Europe largely controlling its capital, commerce, mines, rivers and manufactures; with a vast welter of the greatest working-class in the world, paid less than an average of twenty-five cents a day; with a glittering modern life of skyscrapers, majestic hotels, theatres and night clubs. In this city of nations are 19,000 Japanese, 11,000 British, 10,000 Russians, 4,000 Americans, and 10,000 foreigners of other nationality living in the midst of 3,000,000 Chinese. The city is divided openly by nations; (black-bearded Sikhs under British orders police) its streets, foreign warships sit calmly at her wharfs; foreigners tell this city what it may and may not do. Even at that, matters are not as bad as they once were. In 1936, foreigners acknowledge that Chinesse have some rights in China. Chinese who can afford it may even visit the city race track from which they and dogs were long excluded. It is not common now to kick a coolie or throw a rickshaw's fare on the ground. Yet, yesterday afternoon I saw a little English boy of perhaps four years, order three Chinese children out of his imperial way on the sidewalk of the Bund; and they meekly obeyed and walked into the gutter. It looked quite like Mississippi. And, too, I met a "missionary" from Mississippi, teaching in the Baptist University of Shanghai!

I went by invitation to the American-supported University of Shanghai and I said to the President that I should like to talk to a group of Chinese and discuss frankly racial and social matters. He arranged a luncheon at the Chinese Bankers' Club. There were present one of the editors of the China Press, the Secretary-General of the Bank of China, the General Manager of the China Publishing Company, the Director of the Chinese Schools for Shanghai, and the Executive Secretary of the China Institute of International Relations.

We talked nearly three hours. I plunged in recklessly. I told them of my slave ancestors, of my education and travels. Of the Negro problem.

Then I turned on them and said, " How far do you think Europe can continue to dominate the world, or how far do you envisage a world whose spiritual center is Asia and the colored races? You have escaped from the domination of Europe politically since the World War-- at least in part; but how do you propose to escape from the domination of European capital? How are your working classes progressing? Why is it that you hate Japan more than Europe when you have suffered more from England, France, and Germany than from Japan?"

There ensued a considerable silence, in which I joined. Then we talked. They said," Asia is still under the spell of Europe, although not as completely as a while back. It is not our ideal simply to ape Europe. We know little of India or Africa, or Africa in America. We see the danger of European capital and are slowly extricating ourselves, by seeking to establish control of capital by the political power of taxation and regulation. We have stabilized our currency--no longer do English Hong Kong notes form our chief circulating medium. Our wages are too low but slowly rising; labor legislation is appearing; we have 16,000,000 children in school with short terms and inadequate equipment, but a beginning of the fight against our ninety percent illiteracy."

We talked three hours but it was near a quarter of a century before I realized how much we did not say. The Soviet Union was scarcely mentioned, although I knew how the Soviet Union was teaching the Chinese in 1926. Nothing was said of the Long March which had just ended its 6000 miles from Kiangsi to Yenan, led by Mao tse Tung, and Chu Teh. We mentioned America only for its benefactions and scarcely for its exploitation. Of the Kuo min tang and Chiang kai shek, almost nothing was said, but hatred of Japan and its betrayal of Asia was amply pointed out. In 1959 I came again to China.

I wanted to re-visit China because it is a land of colored people; and again because in 1946 China had officially invited me to visit and lecture, but the United States had refused to permit me. The passport which I received in 1959, stated that it was"not good for travel to China." It was a fair conclusion that if I did not use this passport to secure entrance to China and made no

claim on the United States for protection, the State Department had no legal right to forbid me to visit China. Certainly the United States could give me no less protection in China than it could in Mississippi. On the other hand by legal fiction, the United States was still "at war" with China, since the Korean War had never been legally finished. It was possible then if I went to China, to jail me for "Trading with the Enemy." This risk I thought it my duty to take, since my invitation to visit has been renewed by the cultural minister, Kuo mo jo and Madame Soong Ching Ling.

I left Moscow February ninth and returned April sixth. It was the most facinating six weeks of travel and sight-seeing I have ever experienced.

We remember Pekin; a city of six million; its hard workers, its building and re-building; that great avenue which passes the former forbidden city, and is as wide as central park; the bicycles and pedicycles, the carts and barrows. There was the University where I lectured on Africa, and a college of the fifty or more races of China. We looked out from our hotel window at the workers. They all wore raincoats beneathe the drizzle.

We saw the planning of a nation and a system of work rising over the entrails of dead empire.

I have traveled widely on this earth since my first trip to Europe 67 years ago. Save South America and India, I have seen most of the civilized world and much of its backward regions. Many leading nations I have visited repeatedly. But I have never seen a nation which so amazed and touched me as China in 1959.

I travelled 5,000 miles, by railway, boat, plane and auto. I saw all the great cities: Peking, Shanghai, Hankow and its sisters; Canton, Chungking, Chengtu, Kunming and Nanking. I rode its vast rivers, [illegible] passed through its villages and sat in its communes. I visited its schools and colleges, lectured and broadcast to the world. I visited its minority groups. I was on the borders of Tibet when the revolt occured. I spent four hours with Mao Tse-tung and dined twice with Chou En-lai, the tireless

Prime Minister of this Nation of 680 million souls. ¶ We come to Cheng-Tu. We ride about this farthest Western stopping place, close to the crowds and the workers and the homes, old and new. We visit a commune of 60,000 members. We climb the mountian to see irrigation being widened today, yet started two thousand two hundred years ago. There is a glorious temple on its summit, and below a wide lake between ~~a~~ winding roads. Four rivers roll down fron the Himalayas, out of Tibet into the Yangstze. ¶ Then we fly to Kunmin, the end of the American Burma road. It is warm and quiet, and at the state school, the minorities dance and sing welcome, and among them are ~~the~~ Tibetans. There are more Tibetans in China, than in Tibet. In Tibet while we were on its border in Czechwan, the landholders and slave drivers and the religious fanatics revolted against the Chinese, and failed as they deserved to. Tibet has belonged to China for centuries. The Communists linked the two by roads and began reforms in land holding, schools and trade, which now move quickly. At Kunmin we were at the end of the Burma road and near the great Mekong river. Below lay Vietnam, Laos, Cambodia and Thailand. The nest of grafters, whoremongers and gamblers at Saigon, helped by Americans, have broken the Geneva treaty which closed the French Indo-Chinese War, and are attacking the Communists ~~of Vietnam~~. That is called "Communist Aggression." It is the attempt of American business and the American navy to supplant France as colonial ruler in southeast Asia.

There is at Canton a marble commercial building where the import and export exposition was recently opened. There are five floors of exhibits. I am convinced that America can not make anything which is not today being made by China, or which cannot be made cheaper, and for the most part made quite as well: for out of the things that China makes come no profits for private exploiters. Most nations of the world are beginning to buy China's goods, except the United States. China sells increasingly to Europe, to Asia and South America; to India, Burma, Ceylon, Indonesia, and Malaya; to Africa and the West Indies; to Australia and New Zealand, and such goods; silk and woolen clothing, watches, clocks, radio's and television sets; looms, machinery and lamps, shoes and hats, pottery and dishes. All Chinese seem to be at work, and not afraid of unemployment, and welcoming every suggestion that displaces muscle with machinery.

In every town and city, we went to the opera, and can never forget the assault of the Monkey King on the hosts of Heaven, facing God and the angels. A night sleeping train took us over the thirty hour trip from Pekin to Hankow. There I saw the bridge that had been miraculously thrown across the Yangstze. We rested in a little hotel adorned with flowering cabbages. We visited the great steel mills and shook hands with welcoming workers. The colored American prisoner of war who stayed in China rather than return to America and is happy his wife and baby , came to visit us.

My birthday was given National notice in China, and celebrated as never before; and we whom all our lives have been liable to insult and discrimination on account of our race and color, in China have met universal good will and love, such as we never expected. As we leave may we thank them humbly for all they have done for us, and for teaching us what Communism means.

The people of the land I saw: the workers, the factory hands, the farmers and laborers, scrubwomen and servants. I went to parks and restaurants, sat in the homes of the high and the low; and always I saw a happy people; people with faith that need no Church nor priest, and laughs gaily when the Monkey King ~~fools the host of Heaven and~~ overthrows the angels.

In all my wandering, I never felt the touch or breath of insult or even dislike- I who for 90 years in America scarcely ever saw a day without some expression of hate for "niggers".

What is the secret of China in the second half of the 20th. century? It is that the vast majority of a billion human beings have been convinced that human nature in some of its darkest recesses can be changed, if change is necessary. China knows, as no other people know, to what depths human meanness can go. I used to weep for American Negroes, as I saw what indignities and repressions and cruelties they had passed; but as I read Chinese history in these last months and had it explained to me stripped of Anglo-Saxon lies, I know that no depths of Negro slavery in America have plumbed such abysses as the Chinese have seen for 2,000 years and more. They have seen starvation and murder; rape and prostitution; sale and slavery of children; and religion cloaked in opium and gin, for converting the "heathen". This oppression

and contempt came not only from Tartars, Mongolians, British, French, Germans and Americans, but from the Chinese themselves: Mandarins and warlords, capitalists and murdering thieves like Chiang Kai-shek; Kuomintang socialists and intellectuals educated abroad.

Despite all this, China lives, and has been transformed and marches on. She is not ignored by the United States. She ignores the United States and leaps forward. What did it? What furnished the motive power and how was it applied? First it was the belief in himself and in his people by a man like Sun Yat-sen. He plunged on, blind and unaided, repulsed by Britain and America., but welcomed by Russia. Then efforts toward socialism, which wobbled forward, erred and lost, and at last was bribed by America and Britain and betrayed by Chiang Kai-shek, with its leaders murdered and its aims misunderstood, when not deliberately lied about.

Then came the Long March from feudalism, past capitalism and socialism to communism in our day. Mao Tse-tung, Chou En-lai, Chu Teh and a half dozen others undertook to lead a nation by example, by starving and fighting; by infinite patience and above all by making a nation believe that the people and not merely the elite— that on the contrary the workers in factory, street, and field— composed the real nation. Others have said this often, but no nation has tried it like the Soviet Union and China. And on the staggering and bitter effort of the Soviets, beleagured by all Western civilization, and yet far-seeing enough to help weaker China even before a still weak Russia was safe- on this vast pyramid has arisen the saving nation of this stumbling, murdering, hating world.

In China the people—the laboring people, the people who in most lands are the doormats on which the reigning thieves and murdering rulers walk, leading their painted and jeweled prostitutes— the people walk and boast. These people of the slums and gutters and kitchens are the Chinese nation today. This the Chinese believe and on this belief they toil and sweat and cheer.

They believe this and for the last ten years their belief has been strengthened until today they follow their leaders because these leaders have never deceived them. Their officials are incorruptible, their merchants are honest, their artisans are reliable, their workers who dig and haul and lift do

an honest days work and even work overtime if their state asks it, for they are the State; they are China..

A kindergarten, meeting in the once Forbidden City, was shown the magnificence of this palace and told:" Your fathers built this, but did not enjoy it; but now it is yours; preserve it." And then, pointing across the Ten An Men square to the vast building of the new Halls of Assembly, the speaker added: " Your fathers are building new palaces for you; enjoy them and guard them for yourselves and your children. They belong to you!"

China has no rank nor classes; her universities grant no degrees; her governbent awards no medals. She has no blue book of "society." But she has leaders of learning and genius, scientists of renown, artisans of skill and millions who know and believe this and follow where these men lead. This is the joy of this nation, its high belief and its infaltering hope.

China in no Utopia. Fifth Avenue has better shops where the rich can buy and the whores parade. Detroit has more and better cars. The best American housing outstrips the Chinese, and Chinese women are not nearly as well-dressed as the guests of the Waldorf-Astoria. But the Chinese worker is happy. He has exorcized the Great Fear that haunts the West; the fear of losing his job; the fear of falling sick; the fear of accident; the fear of inability to educate his children; the fear of daring to take a vacation. To guard against such catastrophe Americans skimp and save, cheat and steal, gamble and arm for murder. The Soviet citizen, the Czech, the Pole, the Hungarian have kicked out the stooges of America and the hoodlums set to exploit the peasants. They and the East Germans no longer fear these disasters; and above all the Chinese sit high above these fears and laugh with joy. They will not be rich in old age, but they will eat. They will not enjoy sickness but they will be given care ~~healed~~. They will not starve as thousands of Chinese did only a generation ago. They fear neither flood nor epidenic. They do not even fear war, as Mao Tse-tung told me, War for China is a "Paper Tiger". China can defend itself and back of China stands the unassailable might of the Soviet Union.

Envy and Class Hate are disappearing in China. Does your neighbor have better pay and higher position than you? He has this because of greater ability or better education, and more education is open to you and compulsory for your children. The young married couple do not fear children. The mother has pre-natal care. Her wage and job are safe. Nursery and kindergarten take care of the child and it is welcome, not to pampered luxury but to good food, constant medical care and education for his highest ability.

All this is not yet perfect. Here and there it fails, falls short and falters; but it is so often and so widely true, that China believes, lives on realized hope, follows its leaders and sings:

"O, Mourner, get up offa your knees."

The women of China becoming free. They wear pants so that they can walk, climb and dig; and climb and dig they do. They are not dressed simply for sex indulgence or beauty parades. They occupy positions from ministers of state to locomotive engineers, lawyers, doctors, clerks, and laborers. They are escaping "household drudgery"; they are strong and healthy and beautiful not simply of leg and false bosom, but of brain and brawn. and rich emotion.

In Wuhan I stood in one of the greatest steelworks of the world. A crane which moved a hundred tons loomed above. I said,"My God, Shirley, look up there!" Alone in the engine-room sat a girl with ribboned braids, running the vast machine.

You won't believe this, because you never saw anything like it; and if the State Department has its way, you never will. Let LIFE lie about communes; and the State Department shed crocodile tears over ancestral tombs. Let Hong Kong wire its lies abroad. Let "Divine Slavery" persist in Tibet until China kills it. The truth is there and I saw it. America makes or can make no article that China is not either making or can make, and make better and cheaper. I saw its export exposition in Canton: a whole building of watches, radios, electric apparatus, cloth in silk and wook and cotton; embroidery, pottery, dishes, shoes, telephone sets. There were five floors of goods which the world needs and is buying in increasing quantities, except the ostrich United States, whose

~~ships rot~~.

Fifteen times I have crossed the Atlantic and once the Pacific. I have seen the world. But never so vast and glorious a miracle as China. This monster was a nation with a dark-tinted billion born at the beginning of time, and facing its end, this struggle from starved degradation and murder and suffering to the triumph of that Long March to world leadership. Oh beautiful, patient, self sacrificing China, despised and unforgetable, victorious and forgiving, crucified and risen from the dead.

COMMUNISM

I HAVE STUDIED SOCIALISM AND COMMUNISM LONG AND CAREFULLY IN LANDS WHERE THEY ARE PRACTICED; IN CONVERSATION WITH THEIR ADHERENTS, AND WITH WIDE READING. I NOW STATE MY CONCLUSIONS FRANKLY AND CLEARLY: I BELIEVE IN COMMUNISM. I MEAN BY COMMUNISM, A PLANNED WAY OF LIFE IN THE PRODUCTION OF WEALTH AND ITS DISTRIBUTION, AND IN HUMAN SERVICES. I BELIEVE IN WEALTH AND WORK DESIGNED FOR BUILDING A STATE WHOSE OBJECT IS THE HIGHEST WELFARE OF ITS PEOPLE AND NOT MERELY THE PROFIT OF A PART. I BELIEVE THAT ALL MEN SHOULD BE EMPLOYED ACCORDING TO THEIR ABILITY AND THAT ~~A~~ WEALTH AND SERVICES SHOULD BE DISTRIBUTED ACCORDING TO NEED. ONCE I THOUGHT THAT THESE ENDS COULD BE ATTAINED UNDER CAPITALISM, PRIVATELY OWNED, AND USED IN ACCORD WITH FREE INDIVIDUAL INITIATIVE. AFTER EARNEST OBSERVATION I NOW BELIEVE THAT PRIVATE OWNERSHIP OF CAPITAL AND FREE ENTERPRISE ARE LEADING THE WORLD TO DISASTER. I RESENT THE CHARGE THAT COMMUNISM IS A CONSPIRACY; THAT ALL COMMUNISTS ARE CRIMINALS AND THAT COMMUNISM SPEAKS AND EXISTS mainly BY MEANS OF FORCE AND FRAUD. I SHALL THEREFORE HEREAFTER HELP THE TRIUMPH OF COMMUNISM IN EVERY HONEST WAY THAT I CAN; WITHOUT DECEIT OR HURT; WITHOUT WAR; AND WITH GOODWILL TO ALL MEN OF ALL COLORS, CLASSES, AND CREEDS. IF BECAUSE OF THIS BELIEF AND SUCH ACTION, I BECOME THE VICTIM OF ATTACK AND CALUMNY, I WILL ~~ACT AS~~ react in the way that SEEMS TO ME BEST FOR THE WORLD IN WHICH I LIVE AND WHICH I HAVE TRIED EARNESTLY TO SERVE. I KNOW WELL THAT THE TRIUMPH OF COMMUNISM WILL BE A SLOW AND DIFFICULT TASK, INVOLVING MISTAKES OF EVERY SORT. IT WILL CALL FOR PROGRESSIVE CHANGE IN HUMAN NATURE AND A BETTER TYPE OF MANHOOD THAN IS COMMON TODAY. I BELIEVE THIS POSSIBLE, OR OTHERWISE WE WILL CONTINUE TO LIE, STEAL AND KILL.

WHO NOW AM I WHO HAVE COME TO THESE CONCLUSIONS? AND OF WHAT IF ANY SIGNIFICANCE ARE MY DEDUCTIONS? WHAT HAS BEEN MY LIFE AND WORK AND OF WHAT SIGNIFICANCE TO MANKIND. THE FINAL ANSWER TO THESE QUESTIONS, TIME AND POSTERITY MUST MAKE. BUT PERHAPS IT IS MY DUTY TO CONTRIBUTE WHATEVER ENLIGHTENMENT I CAN. THIS IS THE EXCUSE FOR THIS WRITING, WHICH I CALL A SOLILOQUY ~~P~~ A MAN'S MEMORY AND EXPLANATION OF HIMSELF IS NEVER FINAL AUTHORITY.

AN AUTOBIOGRAPHY IS INEVITABLY BIASSED: MEMORY AS ONE GROWS OLD IS TREACHEROUS: AND LOGIC IS FATALLY LIMITED BY WHAT ONE DOES NOT KNOW OR OFTEN EVEN DREAM ABOUT OTHER PERSONS, WHAT THEY THINK AND FEEL; AND ABOUT EVENTS OF WHICH ONE HAS NOT HEARD OR UNDERSTOOD. AMID SUCH INEVITABLE DIFFICULTIES I WILL ATTEMPT TO REVIEW MY LIFE AS FRANKLY AND FAIRLY AS I CAN.

CHAPTER VII

BOYHOOD IN GREAT BARRINGTON

Great Barrington was a town of middle-class people, mostly native white Americans of English and Dutch descent. There were differences of property and income and yet all the men worked and seemed at least to be earning their living. Naturally the income was not proportioned to the effort; some men worked a few hours a day and earned several thousand dollars a year; carpenters worked 12 hours a day for a dollar and servants toiled day and night for two dollars a week. But we did not dream of a day when a man doing nothing could be a millionaire at 35, while his fellow broke back and heart and starved.

The women were housekeepers, with a few exceptions, like teachers, the postmistress, and a clerk now and then in stores like Fassett's shop for women's apparel. The ownership of property, of homes and stores, of a few mills of various sorts, was fundamental, and the basis of social prestige. Most families owned their homes. There was some inherited wealth but not in very large amounts. There were no idle rich and no outstanding "society". I dimly remember one rich old man who was apparently retired and did no work. He rode about town now and then in a carriage with a liveried coachman. I recall my astonishment when I learned that the splendid gentleman on the high front seat, with beaver hat, shining boots and gold braid, was not the owner. The owner was the little fat man crouched in the rear seat.

This, however, was exceptional. The Russell brothers, middle-aged men whom I knew quite well, went to work every day, superintending the Berkshire Woolen Mills in the upper part of town. The Whitings, and old and well-to-do family, ran a drugstore, and a Burghardt who spelled his name Burgett had the leading grocery store. The Girlings had a clothing store, and the Brewers dealt in hardware and fuel. There were two hotels; the Berkshire catered to summer visitors, chiefly from New York; the Miller House depended on local trade. There was for a time a steam bakery which turned out delicious food until the National Biscuit Company swallowed it up and it disappeared.

There was a bank, the Mahaiwe National.

Of course there was also the usual contradiction: while property and income were the main bases of social status, at the same time the facts concerning them were a carefully guarded secret. No one knew exactly how rich the Russels were or just what was the financial status of the Coffins and Churches. There were, of course, rumors and general estimates which were in all probality not far from the truth, but few knew with any exactitude the economic status of the important persons of the town.

There was no great exhibition of wealth. The homes of the Russells, the Churches and Dr. Collins were comparatively large with perhaps eight or ten rooms and built of wood, or more rarely, of stone. There was an abundance of cheap blue granite in the neighboring mountains. Most of the homes were of wood, four to six rooms, and all of them were furnished according to a common pattern: horse-hair sofas and chairs in the "parlors", with ~~some things~~ old-fashioned wooden furniture and corner "what-nots". They were usually heated by coal stoves, one in each room. Anthracite coal, and wood from the vicinity were used. Bathroons and indoor toilets were rare; each home had its outdoor privy, often nicely arranged.
In general living, the contrast between the well-to-do and the poor was not great. Living was cheap and there was little real poverty. Some food like local fruit was almost common property; vegetables like potatoes, navy beans and cabbage were grown in small home gardens; corned beef and chickens fetched low prices and eggs could often be raised at home; "greens" and rhubard grew in back yards and in the Fall canning and preserving cost only the sugar. There were no flashy carriages and the social life was quite private. When the Berkshire Courier, our local weekly newspaper, made social announcements, it was usually marriages, births, and deaths, visiting relatives from out of town, and trips to New York or the West by local residents.

I grew up in the midst of definite ideas as to wealth and poverty, work and charity. Wealth was the result of work and saving and the rich rightly inherited the earth. The poor, on the whole, were themselves to be blamed. They were unfortunate and if so their fortunes could easily be mended with care.

But chiefly, they were "shiftless" and "shiftlessness" was unforgivable.

The chief criterion of local social standing was property and ancestry; but the ancestors were never magnates like the patroons of the manors along the Hudson to the West; nor were they persons of great prestige and learning with aristocratic connections like the residents of Boston and eastern Massachusetts. They were usually ordinary folk of solid respectability, farm owners, or artisans merging into industry. Standing did not depend on what the ancestor did, or who he was, but rather that he existed, lived decently and thus linked the individual to the community. Physically and socially our community belonged to the Dutch valley of the Hudson rather than to Puritan New England, and travel went south to New York more often and more easily than east to Boston.

The stores dealt chiefly in staples for ordinary living-- food, clothes, medicines, and so forth. Most of them were originally catered to ~~representatives of~~ a large farmer trade between country and town. The surrounding farmers brought in their produce and traded it for manufactured goods and certain luxuries. But this type of trading in my boyhood was being gradually reduced in extent. Western farm produce was underselling local efforts except in the case of milk, butter and fresh vegetables. There were one or two good jewelry and watch repairing stores, a confectionery store and a number of tropical fruit stands.

One of our citizens impressed me greatly: C.C. Taylor was a little white-haired man who was writing a history of the town; he was an official of the bank and what was of closer interest to me, he lived on a beautiful hill on lower Main street. He kept a herd of cattle. They gave so much milk that he told my mother that anytime she wanted skimmed milk, to send me down and get all we wanted.

I remember those morning walks, up to the great elm on our corner; down the vast expanse of Main street; past the Town Hall and the watering trough opposite; then by the Kellog meadow and home and Mike Gibbons' cottage and up to the Taylor home and the delicious fresh milk.

There were one or two liquor saloons, which the town did not like to recognize, but had to. George Briggs, a native American, used to run such a saloon, but got out of the business when I was quite small and went into the more respectable

business of selling meat; but the townspeople never forgot his former calling. The most prosperous saloon in my boyhood was on Railroad street, which led from Main street to the railroad station. It was run by a man of foreign descent named Brazie. ~~At any rate,~~ there was a center of drinking and carousing and perhaps some gambling. My mother laid down here one of her few strict commands; she was not talkative, but listened well. She gave few commands; but she said firmly that I was never to go into a liquor saloon or even near it. I never did, and indeed, so strong was the expression of her wishes here, that never in my life since have I felt at ease ~~a~~ing drink at a bar.

The reason for my mother's attitude was clear. Great Barrington had few places of amusement or means for recreation. Community social life centered in entertainments in Town Hall; the "Bohemian glass blowers," or, as I vividly remember, the Sam Lucas singers; but for the ordinary man, including both hard-working merchant and busy artisan, not to mention laborers and visitors passing through, the liquor saloon was recreation and drunkenness was escapism. Numbers of the most respectable townsfolk were sometimes seen openly the worse for overindulgence in liquor. My own Uncle Jim, a reputable and hardworking barber, came home mow and then walking very straight because of liquor. When the Murphy crusade for total abstinence swept the valley, I as a boy was one of the first to don the blue ribbon. I kept the pledge ~~for twelve years~~ until I went as a student to Germany.

Over against this general basic community of white Americans ~~of English or Dutch descent,~~ were two groups. One was composed of a mass of Irish peasants who began to reach this town in the early fifties after the well-known famine. They were Catholics and came in increasing numbers as house servants and workers in the local woolen mills. The older Irish families became laborers on the railroads and artisans of various sorts. They formed a group of the respectable poor. They were followed by poorer and more ignorant peasants, ill-trained and ragged and given to drink. They became herded in slum areas in the upper part of the town surrounding the mills. They received low wages and were exploited in the usual ways, not as much as in the cities, but more than was necessary in a town like Great Barrington.

As a boy, I was afraid of the Irish and kept away from their part of town as much as possible. Sometimes they called me "nigger" or tried to attack me. On the other hand, the older and better class of them had children in school whom I knew quite well.

The mass of the Irish, however, were separated from the townfolk by their religion and their ~~growing~~ monopoly of house service. The Catholic church was perched across the river beyond the mills, and thither the girl servants trudged faithfully of early mornings to mass. This and other traits of the Irish became the basis of jokes and ridicule in town and throughout New England. Indeed, I was struck in later years when I came back fron the South to New England, to find that the "nigger" jokes of Tennessee were replaced at Harvard by tales of the "two Irishmen" and songs like "mush-mush-mush turaliady".

My own attitude toward this hard-working Irish monority was naturally complicated. They did not belong to my traditional community and consequently I felt no comradeship with them. I think I rather assumed, along with most of the townfolk, that the dirty, stinking Irish slums were something that the Irish themselves preferred and made. Certainly in school and church and on the street, I got no idea that the town was responsible for the slums. My Housatonic River, for instance, was "golden" because of the waste which the paper and woolen mills poured into it and because more and more the river became a public sewer into which town and slum poured their filth.

The other minority in my town were my own colored people, but they were few in number. In Great Barrington there were perhaps twenty-five, certainly not more than fifty, colored folk in a population of five thousand. My family was among the oldest inhabitants of the valley. The family had spread slowly through the county intermarrying among cousins and other black folk, with some, but limited, infiltration of white blood. Other dark families had come in and there was some intermingling with local Indians. In one or two cases there were groups of apparently later black immigrants from Africa, near Sheffield for instance. There survived there an isolated group of black folk whose origin was obscure.

We knew little of them but felt above them because of our education and economic status.

The colored population of the town had been increased a little by "contrabands," freed Negroes from the South who on the whole were well received by the colored group; although the older group held some of its social distinctions and the newcomers astonished us by forming a little Negro Methodist Zion Church, which we sometimes attended. There were the Masons, a family of six, a little uncouth and very religious; but good-hearted, hard workers and so jolly. I came to like them very much. There were visitors from neighboring towns, I remember a lovely little plump and brown girl who appeared out of nowhere, and smiled at me demurely; and there were always strange cousins.

The colored folk were not set aside in the sense that the Irish were, but were a part of the community of long standing; and in my case as a child I felt no sense of difference or separation from the main mass of townspeople.

~~As a child~~ after I entered High School, I began to feel the pressure of the of Color "veil"; in little matters at first and then in larger. There were always certain compensations. For instance, George Beebe was a handsome classmate in high school, two or three years older than I, and extravagantly dressed. My own clothes were never ragged, but seldom new and certainly not in current style. Yet George and I were excellent friends because with all his clothes he was rather dumb in class and knew it, while I was bright and just this side of shabby, so that we balanced each other. The Sabins, Clarence and Ralph, lived near me on the opposite street. Clarence was serious and studious, and Ralph a little devil. We were friends and playmates. Art Benham, whose father was a railroad engineer, was a pixie, red-haired, ugly and gifted. He and I were joint editors of the only school paper that was ever published during my day. It was the High School Howler, gotten out by hand, and lasting only for two or three issues.

The boy who lived nearest me was Jim Parker, son of a watch-maker. He and Fred Sanford used to go hunting with firearms in the forest. This repelled me a little, as I did not like killing things, but they were all good pals whom I could easily outdistance in class.

Other boys of my group were Boardman Tobey, son of a jeweler, who came to school once with shoes said to have cost four dollars. We did not believe such a price possible. George Phelps, the tinner's son, lived next door and we met daily. Ned Hollister's father had his large grocery store near the watering-trough for horses; his stock of tropical fruit introduced me to dozens of oranges which Ned forced on me when accidently his stone hit me instead of the "duck on the rock" at which he was aiming. He attained fame by bringing the first high-wheeled bicycle to town. One girl, Mary Dewey, eldest daughter of our most distinguished lawyer, surpassed me in arithmetic. She could add up columns of figures with astonishing rapidity, but my grasp of history and ability to write were better than hers.
The other girls in my classes were not to me notable. Edith Pixley and Lottie Doolittle were pretty but did not know much. Sabra Taylor and Minnie Crissy were sober country girls and good students whom I liked. Agnes O'Neil was a newcomer to town whose ancestors nobody knew. She dressed quite gorgeously and George Beebe escorted her about. But otherwise she was negligible.

Indeed, even in high school it was not regarded as good form for the boys to pair about with the girls. They did not walk together on the streets. They did not talk with each other too often on the grounds. I suppose that this fact explains much that bothers us today. Today, high schools with their higher age level, and retarded pupils, have become social centers and even matrimonial agencies, particularly in the South. It is this concept of the high school which partially explains Little Rock.

In our day and school, because we were younger, and less sophisticated, our chief business was studying or playing. I can remember when the new school principal, Frank Hosmer of Amherst, tried to introduce a uniform cap with gilt lettering, G.B.H.S. on the front, to indicate the "Great Barrington High School". We were almost unanimously against it, and called it "The Great Big Hosmer Speculation". As a matter of fact, we students for the most part and particularly myself, did not have the money to pay for this unnecessary expense. On the other hand, we did have some interesting group activities. Hosmer and young Frank Wright, who was reading

law in Judge Dewey's office, put on a play at Town Hall-- Scott's "Lady of the Lake", and most high school students took some part. There was a folk play, "Old John Brown Had a Little Indian", in which I was one of the participants. For recreation we played games: "marbles", "hi-spy", "duck on a rock", and "Indians". We went mountain climbing and explored caves; we swam, and coasted the long hill from far up Castle street, across the railroad tracks down to Main street. (over)

Our chief holidays were fourth of July, Cattle-show and Christmas. Fourth of July was a romp for children with a few but not many casualties. Once in a while we had fire works as a treat from some philanthropist. Usually we only set off our individual packs of small crackers. Christmas was a festival of Church and home, and there was no public illumination, and no frantic buying of presents. We played base-ball but it had not yet become a national game and consisted of "one old cat" or at most two chosen sides. We tried football sometimes. I was not particularly good at these games but joined gaily in the fun.

Of other school mates, there were two Irish boys whom I liked. Mike Gibbons had marvelous facility at playing "marbles", and Ned Kelly who was fat and jolly. Later he became town clerk and an older fellow student of long English ancestry, Walter Sanford, became local judge. Will Beckwith lived on a farm near town, where sometimes my mother went as temporary "help". I always came out over week-ends, played with Will, and ate with the family. Mother always had a rich cake ready for me. Later, Will was one of the few Great Barrington boys who went to college. Three other boys I knew quite well, but they did not go to the public school. Charles and John Church went to Edward Van Lennep's private school, where numbers of rich young people from out of town were taught. Our own opinion in the high school was that these students did not have brains enough to go to public school. We were probably prejudiced. Mr. Van Lennep tried to have good relations between the town boys and his pupils. The Church family had considerable inherited wealth from their ancestors, the Coffins. The Coffins had taken advantage of the war tariffs and manufactured paper. The young Churdhes were educated to become a part of the idle rich, but Charles did not take to this role kindly. He and I were quite good friends.

Most of the children used to skate; but
not I for two reasons: skates cost too much,
and mother was afraid of water

(over)

The younger, John, on the other hand, was a little exclusive, ~~although we never quarreled~~. I remember him especially because he married May Loop, an orphaned hoyden of an old but poor family. She lived next door to me, and was one of the group with which I played on Church street, where I lived. Later, when I had left town and gone South to school, she had married John. She wrote me and asked if I could find her a colored servant. I couldn't.

There was one little boy to whom I was closely drawn. He was Louis Russell, the son of Parley Russell, the mill-owner, who had married a second wife. This Mrs. Russell, whom I knew and who was well acquainted with my family, was a lovely lady who tried to rear young Louis. He was frail, good-hearted, but slow-witted, and did not go to public school. Mostly he was kept at home, and Mrs. Russell made special effort to find companions for him and she especially chose me. So that quite often I went across the railroad tracks and up the wide and flowered meadow which led to the Russell home. It was one of the most imposing in the village, isolated, and surrounded with grass, flower, and fruit. There were stables in the rear, and outhouses for farming.

I always had a good time when I went to play with Louis. We were welcomed in the house; we ate bread and milk together in the big kitchen; and the Irish servants were kind. Once or twice Mrs. Russell insisted on my taking home certain of Louis's toys. The one which gave me most pleasure was an old wooden bicycle. It was to Mrs. Russell to whom my high school principal turned when he wanted me to take up Greek and I and my mother hesitated because of the cost of the books. She bought all my Greek books.

Of the other town folk outside my schoolmates, I remember especially Johnny Morgan. He was a small man, I think of Welsh descent, and ran a bookstore in the front part of the little shop where the village post office occupied the rear. I went to the post office daily, not because I was expecting mail or often got any, but because of the intriguing exhibition of periodicals and books in Johnny Morgan's store. He became interested in me and very sympathetic. He did not repel me by asking me too many questions or trying to find out my plans and ideas.

But he made little suggestions and did not object to my looking at the illustrations in Puck and Judge. I looked them over each week.

I remember one momentous transaction. From early days I had been intrigued by books as books. In our living room I took possession of an old secretary which had come down in the family and gathered together a number of stray volumes which I found about the house. One I distinctly remember, "Opie on Lying." There were a few others. I did not read them, but they formed my library. Then one Fall-- it was in 1882-- I was in my second year in high school. I saw in Johnny Morgan's window a gorgeous edition of Macauley's "History of England," in five volumes and I wanted it fiercely. Its price was, of course, far beyond by ability to pay, but Johnny Morgan suggested that I buy it on installments. This was not a usual method at that time in Great Barrington. It was our rule to "pay as you go". But I seized on Morgan's suggestion and for several months paid in installments of, I think, twenty-five cents a week. At Christmas time I took my precious purchase home and it still stands in my library.

Johnny Morgan made other suggestions to me. He arranged, while I was in high school, so that I became the local Great Barrington correspondent of the Springfield Republican, which was the most influential and widely circulated paper in western Massachusetts. I sent it from time to time some items of interest, but not many, as I was soon graduated from the high school.

Outside my school, my chief communication with the people of the town was through the church. In Great Barrington there were three leading Protestant churches, and later a fourth. The most important church was the Congregational. It had the largest attendance of all the churches, including merchants and farmers, and professional men of the town. My own family on both sides had been Episcopalians, but because we lived near the Congregational church, and because my mother had many acquaintances there, and because the minister, Scudder, was especially friendly and interested, my mother early joined this church. I think we were the only colored communicants. But I grew up in this church and its Sunday School, and it was there that one of the lady members, looking down on a chubby little brown child walking beside his mother, saw me take off my hat.

My long, rather stiff curls were revealed, and with considerate kindness she replaced my hat and said sweetly: "Little girls keep their hats on in church." This of course precipitated at home a wild fight on my part to have my curls cut off, and of course in time and to my mother's grief, off they came.

In the festivities of the whole year, when strawberries became ripe, when harvest brought in fruit and vegatables, and at Christmas time, there were celebrations in Sunday School, and I was always there. I felt absolutely no discrimination, and I do not think there was any, or any thought of it. When the great church was burned down, I was a sensitive mourner and oversaw at every period its pretentious rebuilding. I remember the altar, whose Greek inscription I was proudly able to read: " He alethia eleutherosi humas". (The truth shall make you free.) I heard the dedicatory sermon: "For thus said the High and Mighty One, who inhabiteth eternity, Whose Name is Holy. I dwell in the high and lofty place. With him also that is of a contrite and humble spirit to revive the spirit of the humble, to revive the sport of the contrite ones."

~~But of course~~ the new Sunday School building was my chief pride and joy. It had climbed out of the basement and had broad and beautiful rooms with sunlit windows looking out on lawn and flowers. The carpet, the chairs, the tables, were all new, and the teachers were inspired to new efforts with their growing classes. I was quite in my element and led in discussions, with embarrasing questions, and long disquisitions. I learned much of the Hebrew scriptures. I think I must have been both popular and a little dreaded, but I was very happy.

The other leading church was the Episcopalian, a little more heavy in architecture and aristocratic in concept. The older families and the more well-to-do attended. I remember one incident which characterized the religious situation in town. Our leading lawyer had been made a county judge. Judge Dewey lived on the corner of my street, and in a house with which I was very familiar. As a little boy there lived in one of the upper chambers there, overlooking both Main and Church streets, a young lady who was sick. My mother used to take me there once in a while and I would spend an hour or so in this chamber talking to the lady.

Of what we talked, I have not now the faintest idea, but apparently we both were much interested. My mother explained that the lady had cancer, which was the first I had heard of this dread disease. Then visits ceased.

In this house, Judge Dewey and his family lived, his eldest daughter Mary, who had the phenomenal mathematical ability which I have mentioned, a second daughter Sarah, and little Margaret. In the Congregational Church, of which Judge Dewey was a high official, the governing board decided to use at communions individual wine-cups instead of the one great silver beaker. Judge Dewey was outraged. He declared that the decision was against the Bible, and he led his flock from Church Street down to the Episcopal Church, where thereafter he became a communicant. It was a town sensation.

In the upper part of the town, toward the mill, was a small white wooden Methodist Church. It had a small congregation of the less well-known inhabitants of the town. They met quietly and regularly. Then of course across the river, and uncounted by the mass of townfolk, was the Catholic Church, with a large attendance of Irish working people and a cemetary near by. Later, and while I was in high school, the colored folk of the town, mostly newcomers, and not old families like the Burghardts, organized a small branch of the A.M.E. Zion Church, which had been formed in New York late in the eighteenth century. The colored people had long owned a small plot of land in the lower part of the town on Main street. They were induced to sell this for a small plot on a side street, and there they built a little chapel. The older Negroes were not at all happy about this segregated institution, but now and then we used to attend the services, which became an inconspicuous part of the religious organization of the community.

There was little crime or middemeanor in our town. We had a single policeman, a little old man named Abe who wore a badge and carried a club. We boys used to make sly fun of him. But there was a little stone one-roomed "lock-up" and once in a while it had an occupant for a night. In school there were the usual youthful disputes and arguments; but seldom were there fights and never gangs or feuds. I remember being principal of one fight when I was in grammar school.

apparition but we boys often ventured to visit him. Particularly was there Baretown Bebe, who came from forest fastnesses which I never penetrated. He was a particularly dirty, ragged, fat old man, who used regularly to come down from his rocks and woods and denounce high school education and expense.

I was thirteen or fourteen years of age and a student in the small High School with two teachers and perhaps 25 pupils. The High School was not too popular in this rural part of New England and received from the town a much too small appropriation. But the thing that exasperated me, was that every Spring at Town Meeting, which I religiously attended, this huge, ragged old man came down from the hills and for an hour or more reviled the High School and demanded its discontinuance.

I remember distinctly how furious I used to get at the stolid town folk, who sat and listened to him. He was nothing and nobody. Yet the town heard him gravely because he was a citizen and property-holder on a small scale and when he was through, they calmly voted the usual funds for the High School. Gradually as I grew up, I began to see that this was the essence of democracy; listening to the other man's opinion and then voting your own, honestly and intelligently.

While without conscious socialist tendencies the Town owned it own water supply which poured into the homes from a dark and secret lake hidden in the hills; our charity looked after the few paupers who were "on the Town" and we cared for our streets and sewers. On the other hand our fire department was volunteer and we had no public park save the square around the Town Hall. Indeed what with our meadows and mountains, we needed none.

We made no social arrangements for sickness. That was mainly a matter of friendly charity among relatives and neighbors. There was but one Hospital in the county and that was at Pittsfield and called the "House of Mercy". We had a few physicians in town and they in attending my family were very considerate in their charges. I was seldom sick: whooping cough and measles I remember, but little else. Fortunately I have never broken a bone.

It was with a strong country boy, but what it was about I have quite forgotten; it had no racial cause I am sure. We left school at noon and instead of going home to lunch, we went up back of the railway station. There before cheering schoolmates we slugged it out manfully. I was pretty throughly trounced, but we were both able to report to class at one o'clock looking fairly presentable with our "honor" vindicated. It was as I learned in after life, a quite usual human culture pattern.

Once while I was in high school, a number of us students stole some grapes from a tempting arbor. Now, taking fruit have never been regarded by us as more than the right of town boys and we knew all the best orchards. But in this case we filched some choice and carefully tended grapes from a prominent citizen. There was considerable indignation and Judge Dewey suggested that I and the others might be better off in Reform School. We had a very good one in the eastern part of the State which the Judge was connected with. The victim of the theft, however, refused to press any charge and nothing more was heard of Judge Dewey's proposal. But I was considerably disturbed. During my ten years of boyhood life there was in the county one murder; once the bank was robbed of a small sum; there were minor cases of stealing and trespass and some drunkenness which called for arrest.

In government, Great Barrington was in theory and largely in practice, a democracy of the New England type. In general politics we were nearly all Republicans. Indeed, it was not respectable to be anything else ; one of our prominent lawyers, Joyner, a thin, tall swarthy man, was a Democrat and we suspected him of low origin and questionable designs.

From early years, I attended the town meeting every spring and in the upper room in that little red brick town hall, fronted by a Roman "victory" commemorating the Civil War, I listened to the citizens discuss things about which I knew and had opinions: streets and bridges and schools, and particularly the high school, an institution comparatively new. We had in the town, several picturesque hermits, usually retrograde Americans of old families. There was Crosby, the gunsmith, who lived in a lovely dale with brook, waterfall and water wheel. He was a frightful

I have written elsewhere of the case of our exchanging visiting cards when one girl, a newcomer, did not seem to want mine, to my vast surprise.

I presume I was saved evidences of a good deal of actual discrimination by my own keen sensitiveness. My companions did not have a chance to refuse me invitations; they must seek me out and urge me to come as indeed they often did. When my presence was not wanted they had only to refrain from asking. But in the ordinary social affairs of the village-- the Sunday school with its picnics and festivals; the temporary skating rink in the town hall; the coasting in crowds on all the hills-- in all of these, I took part with no thought of discrimination on the part of my fellows, for that I would have been the first to notice.

Later, I was protected in part by the fact that there was little social activity in the high school; there were no fraternities; there were no school dances; there were no honor societies. Whatever of racial feeling gradually crept into my life, its effect upon me in these earlier days was rather one of exaltation and high disdain. They were the losers who did not ardently court me and not I, which seemed to be proven by the fact that I had no difficulty in outdoing them in nearly all competition, especially intellectual. In athletics I was not outstanding. I was only moderately good at baseball and football; but at running, exploring, story-telling and planning of intricate games, I was often if not always the leader.

After I entered the high school, economic problems and questions of the future began to loom. They were partly settled by my own activities. My mother's limited resources of income were helped through boarding the barber, my uncle; supplememted infrequently by her own day's work, and by some kindly but unobtrusive charity. But I was keen and eager to eke out this income by various jobs; splitting kindling, mowing lawns, doing chores. I early came to understand that to be "on the town," the recipient of public charity, was the depth not only of misfortune but of a certain guilt. I presume some of my folk sank to that but not to my knowledge. We earned our way. I have a little post card dating ~~from~~ 1883 in which Miss Smith on September 19 writes " We would like to have you come certainly next Saturday as you did last week to do some splitting for us."

In general thought and conduct I became quite throughly New England. It was not good form in Great Barrington to express one's thought volubly, or to give way to excessive emotion. We were even sparing in our daily greetings. There was on the street only a curt "good morning" to those whom you knew well and no greetings at all from others. I am quite sure that in a less restrained and conventional atmosphere I should have easily learned to express my emotions with far greater and more unrestrained intensity; but as it was I had the social heritage not only of a New England clan but Dutch taciturnity. This was later reinforced and strengthened by inner withdrawals in the face of real and imagined discriminations. The result was that I was early thrown in upon myself. I found it difficult and even unnecessary to approach other people and by that same token my own inner life perhaps grew the richer; but the habit of repression often returned to plague me in after years, for so early a habit could not easily be unlearned. The Negroes in the South, when I came to know them, could never understand why I did not naturally greet everyone I passed on the street or slap my friends on the back.

Of course our democracy was not full and free. Certain well-known and well-to-do citizens were always elected to office-- not the richest nor most noted but just as surely not the poorest nor the Irish Catholics.

The town and its surroundings were a boy's paradise: there were mountains to climb and rivers to wade and swim; lakes to freeze and hills for coasting. There were orchards and caves and wide green fields; and all of it was apparently property of the children of the town. My earlier contacts with playmates and other human beings were norman and pleasant. Sometimes there was a dearth of available playmates but that was peculiar to the conventions of the town where families were small and children must go to bed early and not loaf on the streets or congregate in miscellaneous crowds. Later, in the high school, there came some rather puzzling distinctions which I can see now were social and racial; but the racial angle was more clearly defined against the Irish than against me. It was a matter of income and ancestry more than color.

This was a matter of splitting up kindling for two maiden ladies and this was one of the first of my economic enterprises.

My first regular wage began as I entered the high school: I went early of mornings and filled with coal one or two of the new so-called "base burning" stoves in the millinery shop of Madame L'Hommedieu. From then on, all through my high school course, I worked after school and on Saturdays.

For some time too I sent weekly letters to a colored weekly "New York Age" and sold copies, and before the A and P stores dealt in groceries and simply were selling tea, I was one of their local agents. Thus in all sorts of little ways I managed to earn some money and never asked nor thought of gifts.

The first glimpse in the outer and wider world was through John Morgan's ~~news shop which occupied the front end of the post office~~. There ~~newspapers and books were on display and~~ I remember very early seeing pictures of U.S. Grant and Tweed who was beginning his extraordinary career in New York state; and later of Hayes and the smooth and rather cruel face of Tilden. Of the great things happening in the United States at that time we were touched only by the Panic of 1873, when my uncle in 1876 came home from the little town east of us where he was a leading barber, he brought me, I remember, a silver dollar which was an extraordinary thing. Up to that time I had seen nothing but paper money.

The United States in the decades 1870-1890 was an extraordinary country. Grant, Hayes, Garfield, Arthur and Grover Cleveland were presidents. James G. Blaine was an aspirant who barely missed the highest office and the country was reckless and prosperous; squandering its seemingly endless resources; tying east and west with railways; exploiting iron and coal and oil and making fortunes for a new and ruthless caste of business men who were cashing in on the cost of Civil War. Many results of this I could see in my town.

On the other hand, the inner social group of my own relatives and colored friends always had furnished me as a boy most interesting and satisfying company. The number of colored people in the town and county was small. They were all, save directly after the war, old families, well-known to the old settlers among the whites.

The color line was manifest and yet not absolutely drawn. I remember a cousin of mine who brought home a white wife. The chief objection was that he was not able to support her and nobody knew her family; and knowledge of family history was counted as highly important. Many of the colored people had some white blood from unions several generations past. That colored folk congregated together in their own social life was natural because that was the rule in the town. There were little social knots of people, but not much that today would be called social life, save that which centered about the churches; and there the colored folk often took part.

The fate of my various relatives among the Black Burghardts I do not know very well. One cousin, Jimmie Burghardt, lived near Williams college and always wanted to enter. But he never did. He lacked both money and Greek and worked as college janitor. But his granddaughter is stenographer in a large New York corporation. Others have prospered as western farmers, one became a singer and teacher of music and another was head of the home economics department in the colored school system of a large Border state city. Of course it is probably true that there are hundreds of Black Burghardt descendants working as ordinary citizens- teachers and a few others in the professions, civil servants, artisans and skilled laborers; and plain hard workers on street and in home. I greet them all.

Now and then I made little trips to neighboring towns: to my cousins, the Pipers in Sheffield, five miles south, to play with John and his sisters; to Pittsfield, two long miles north, where my cousins Mary and Lizzie Potter lived and where I saw the lovely Rita Tredwell. Once I stayed with my uncle in Amherst who lived with a niece and owned a barber shop. He bought me a new suit of beautiful "navy-blue" cloth.

But my greatest boyhood trip came in 1883, when I was 15 and in third year high school.

In 1874 my Grandfather having lost his third wife was proposing to marry a widow, Mrs. Green, and assured her of a home in New Bedford whither he had moved from Springfield. He writes:

" I have bought of the Petomska Mills Corporation the house and lot southwest corner of Landby and Third Streets. The lot is the whole width of what the corporation owns on Landby and runs south far enough to comprise 20 roods for $2,000 -- one half to be paid in cash-- and the rest either over a year or with 7% interest and secured by mortgage on the premises."

Grandfather then adds: " Entreat me not to leave thee or to return from following after thee, for whither thous goest, I will go, where thou lodgest will I lodge, thy people shall be my people, and thy God my God. Where thou diest will I die, and there will I be buried."

" I like you better as our acquaintance extends, my dear Anna. Come to my house as soon as it shall please you so to do, there shall be but one home, one purse, one affection, one God."

They were eventually married, and in 1883 my grandfather's last wife wrote my mother. She had known and liked my father and understood his difficulties with his father. When he had left us and was presumably dead, she heard of me and wanted me to come and let my grandfather see and know me. My mother was excited and determined that I should make the trip. How she managed to raise the money, I do not know. But always, Mother, in her resourceful way always got for me whatever she thought I needed. She got together money for my trip, hoping that grandfather might eventually help in my education. So off I went to my first great excursion into the world.

I went down the Housatonic railroad to Bridgeport and missed my train to New Haven because of the contradiction of clocks with the new Standard time. I traded my ticket for another route by way of Hartford. There I saw the capitol building and wrote about signing the register for "distinguished guests!"-- was late in reaching Providence and a bit put out because my grandmother's friend was not promptly on hand to meet me.

One incident during my stay was unforgettable. One afternoon the center table in the parlor was decorated with a festive cloth, a cut-glass decanter of wine and two wine-glasses. Grandfather expected a visitor, and so I hovered in the background.

The visitor proved to be a large black man, with pleasant countenance and well-dressed. My grandfather in long black coat, received Mr. Freedom with grave courtesy. They sat down and talked seriously; finally my grandfather arose filled the wine glasses and raising his glass and touched the glass of his friend, murmuring a toast. I had never before seen such ceremony: I had read about it in books, but in Great Barrington both white and black avoided ceremony. To them it smacked of pretense. We went to the other extreme of casual greeting, sprawling posture and curt rejoinder; the black Burghardts indulged in jokes and back-slapping. I suddenly sensed in my grandfather's parlor what manners meant and how people of breeding behaved and were able to express what we in Great Barrington were loath to give act to, or unable. I never forgot that toast.

The house in New Bedford was sold after grandfather's death in 1887 for $2,110. He is buried in Oak Grove Cemetary near the Yale Campus, New Haven, in a lot which he owned, and which is next to that of Jehudi Ashmun of Liberian fame. His eldest daughter married a light mulatto and their ~~children~~ descendants are now passing for white and probably quite unaware of their colored blood. My Aunt Henrietta married a man named Bates, of Cumberland, Alleghany County, Maryland.

On my return from New Bedford I had another ~~shook-making~~ stirring experience. I stopped again with grandmother's friend in Providence and he took me to the annual picnic at Rocky Point on Narragansett Bay where the colored people of three states were wont to assemble. I viewed with astonishment 10,000 Negroes of every hue and bearing; saw in open-mouthed astonishment the whole gorgeous color gamut of the American Negro world; the swaggering men, the beautiful girls, the laughter and gaiety, the unhampered self-expression. I was astonished and inspired. I apparently noted nothing of poverty or degradation, but only extraordinary beauty of skin-color and utter equality of mien, with absense so far as I could see of even the shadow of the line of race. I came home by way of Springfield and Albany where I was a guest of my elder half-brother and saw my first electric street light blink and sputter.

I was graduated from high school in 1884 and was of course the only colored student. Once during my course another dark ~~man~~ boy had attended the school for a short time, but I was very much ashamed of him because he did not excel the whites as I was quite used to doing. All thirteen of us graduates had orations, and mine was on "Wendell Phillips." The great anti-slavery agitator had just died in February and I presume that some of my teachers must have suggested the subject, although it is quite possible that I chose it myself. But I was facinated by his life and his work and took a long step toward a wider conception of what I was going to do.

Most of the short speeches were fairly conventional essays; but I thought the talk of Minnie Crissey on reading was especially good and I envied her knowledge of books. My own essay brought loud applause from the audience because of my race and subject. I was born in a community which conceived itself as having helped put down a wicked rebellion for the purpose of freeing four million slaves. They deeply admired Phillips despite the fact that recently he had adopted Socialism. My mother was in the audience and was filled with pride.

Meanwhile elsewhere in the world there were stirring and change which were to mean so much in my life: In Japan the Meiji Emperors rose to power the year I was born; in China the intrepid Empress Dowager was fighting strangulation by England and France; Prussia had fought with Austria and France, and the German Empire arose in 1871. In England, Victoria opened her eighth parliament and the duel of Disraeli and Gladstone began; while in Africa came the Abyssinian expedition and opening of the Suez Canal, so fatefull for all my people.

CHAPTER IX

HARVARD IN THE LAST DECADES OF THE NINETEENTH CENTURY

Harvard University in 1888 was a great institution of learning. It was 238 yeas old and on its governing board were Alexander Agassiz, Phillips Brooks. Henry Cabot Lodge amd Charles Francis Adams; and a John Quincy Adams, but not the ex-President. Charles William Eliot, a gentleman by training and a scholar by broad study and travel, was president. Among its teachers emeriti were Oliver Wendell Holmes and James Russell Lowell. Among the active teachers were Francis Child, Charles Eliot Norton, Charles Dunbar, Justin Winsor and John Trowbridge; William Goodwin, Frank Taussig, Nathaniel Shaler, George Palmer, William James, Francis Peabody, Josiah Royce, Barrett Wendell, Edward Channing, and Albert Bushnell Hart. A young instructor who arrived in 1890 was George Santayana. Seldom, if ever, has any American University had such a galaxy of great men and fine teachers as Harvard in the decade between 1885 and 1895.

To make my own attitude towards the Harvard of that day clear, it must be remembered that I went to Harvard as a Negro, not simply by birth, but as a recognizing myself deliberate member of a segregated caste whose situation I accepted and working but was determined to work from within that caste was determined to find my way upward. out

The Harvard of which most white students conceived I knew little. Of fraternities I had not even heard of Phi Beta Kappa, and of such important social organizations as the Hasty Pudding Club, I knew nothing. I was not in Harvard for high marks, except as marks would insure my staying. I did not pick out "snap" courses. I was there to enlarge my grasp of the meaning of the universe. We had for instance no chemical laboratory at Fisk. Our mathematical course was very limited; but above all I wanted to study philosophy. I wanted to get hold of the basis of knowledge, and explore foundations and beginnings. I chose therefore, Palmer's course in ethics, but he being on Sabbatical for the year, William James replaced him, and I became a devoted follower of James at the time he was

developing his pragmatic philosophy.

Fortunately I did not fall into the mistake of regarding Harvard as the beginning rather than the continuing of my college training. I did not find better teachers at Harvard, but teachers better known, ~~with~~ who had had wider facilities for grasping and in broader atmosphere for approaching truth. ~~Up to this time, I had been absorbing a general view of human knowledge: in ancient and modern literatures; in mathematics, physics and chemistry and history.~~ knowledge

I ~~chose~~ elected to pursue ~~science, especially what was called~~ philosophy as my life career, with teaching for support. With this program I studied at Harvard from the Fall of 1888 to 1890, as undergraduate. I took a varied course in Chemistry, Geology, Social Science and Philosophy. My salvation here was the type of teacher I met rather than the content of the courses. William James guided me out of the sterilities of scholastic philosophy to realist pragmatism; from social reform with a religious tinge, I turned to Albert Bushnell Hart to study his tory with documentary research; and from Taussig with his reactionary British economics of the Ricardo school, I approached what was later to become Sociology. Meantime Karl Marx was mentioned but only incidentally and as one whose doubtful theories had long since been refuted. Socialism as dream of philanthropy or as will-o-wisp of hotheads was dismissed as unimportant.

When I arrived at Harvard, the question of board and lodging was of first importance. Naturally, I could not afford a room in the college yard in the old and venerable buildings which housed most of the well-to-do students under the magnificent elms. Neither did I think of looking for lodgings among white families, where numbers of the ordinary students lived. I tried to find a colored home, and finally at 20 Flagg street, I came upon the neat home of a colored woman from Nova Scotia, a descendant of those black Jamaican Maroons whom Britain deported after solemnly promising them peace if they would surrender. For a very reasonable sum, I rented the second story front room and for two years this was my home. I wrote of this abode at the time:

"My room is, for a college man's abode, very ordinary indeed. It is quite pleasantly situated-- second floor, front, with a bay window and one other window. The door is on the south west corner. As you enter you will perceive the bed in the opposite corner, small and decorated with floral designs calculated to puzzle a botanist. It is a good comfortable bed however, and my landlady keeps it neat. On the left hand is a bureau with a mirror of doubtful accuracy. In front of the bay window is a stand with three shelves of books, and on the left of the bureau is an improvised bookcase made of unpainted boards and uprights, containing most of my library of which I am growing quite proud. Over the heat register, near the door, is a mantle with a plaster of Paris pug-dog and a calendar, and the usual array of odds and ends. A sofa, commode, trunk, table and chairs complete the floor furniture. On the wall are a few quite ordinary pictures. In this commonplace den I am quite content."

Later I became a boarder at Memorial Hall, which was the great dining hall of the university, and after that a member of the Foxcroft Club, where many students of moderate means boarded.

Following the attitudes which I had adopted in the South, I sought no friendships among my fellow students nor even acquaintanceships. My class was large; ~~in the Junior year when I became a member, there were~~ with some 300 students. I doubt if I knew a dozen of them. I did not seek them, and naturally they did not seek me. I made no attempt to contribute to the college periodicals. Only one organization did I ~~seek~~ try to enter and I ought to have known better than to make this attempt. But I did have a good singing voice and loved music, so I entered the competition for the Glee Club. I ought to have known that Harvard could not afford to have a Negro on its Glee Club travelling about the country. Quite naturally I was rejected.

I was happy at Harvard, but for unusual reasons. One of these circumstances was my acceptance of racial segregation. Had I gone from Great Barrington high school directly to Harvard I would have sought companionship with my white fellows and been disappointed and embittered by a discovery of social

limitations to which I had not been used. But I came by way of Fisk and the South and there I had accepted (Cabin Caste) and embraced eagerly the companionship of those of my own color. This, was of course, no final solution. Eventually with them and in mass assault, led by culture, we Negroes were going to break down the boundaries of race; but at present we were banded together in a great crusade and happily so. Indeed, I suspect that the prospect of ultimate full human intercourse without reservations and annoying distinctions, made me all ~~too~~ too willing to consort now with mine own and to disdain and forget as far as was possible that outer, whiter world.

In general, I asked nothing of Harvard but the tutelage of teachers and the freedom of the laboratory and library. I was quite voluntarily and willingly outside its social life. I found friends and most interesting and inspiring friends among the colored folk of Boston and surrounding places. Naturally social intercourse with whites could not be entirely forgotten, so that now and then I joined its currents and rose or fell with them. I escorted colored girls to various gatherings, and as pretty ones as I could find to the vesper excercises and the class day and commencement social functions. (there to) Naturally we attracted attention and the Crimson noted my girl friends; on the other part came sometimes the shadow of insult as when at one reception a white woman seemed determined to mistake me for a waiter.

In general, I ~~tried to~~ (was) encase ~~myself~~ (of) in a completely colored world, self-sufficient and provincial, and ignoring just as far as possible the white world which conditioned it. This was self-protective coloration, with perhaps an inferiority complex, but ~~more of increasing~~ (with) belief in the ability and future of black folk. I sought ~~at Harvard no acquaintanceship with white students and~~ only such contacts with white teachers as lay directly in the line of my work. I joined certain clubs like the Philosophical Club; I was a member of the Foxcroft dining club because it was cheap. James and one or two other teachers had me at their homes at meal and reception.

~~Nevertheless~~ My friends and companions were taken (mainly) from the colored students

of Harvard and neighboring institutions, and the colored folk of Boston and ~~other cities~~. With them I led a happy and inspiring life. There were among them many educated and well-to-do folk; many young people studying or planning to study; many charming young women. We met and ate, danced and argued and planned a new world.

I was not arrogant; I was simply not obsequious, and to a white Harvard student of my day, a Negro student who did not ~~ask~~ recognition was trying to be more than a Negro. The same Harvard man had much the same attitude toward Jews and Irishmen.

I was, however exceptional ~~even~~ among ~~them~~, in my ideas on voluntary race segregation; they for the most part saw salvation only in integration at the earliest moment and on almost any terms in white culture: I was firm in my criticism of white folk and in my dream of a Negro self-sufficient culture even in America.

This cutting of myself off from my fellows did not mean unhappiness nor resentment. I was in my early manhood, unusually full of high spirits and humor. I throughly enjoyed life. I was conscious of understanding and power, and conceited enough still to think, as in high school, that they who did not know me were the losers, not I. On the other hand, I do not think that my classmates found me personally objectionable. I was clean, not well-dressed but decently clothed. Manners I regarded as more or less superflous and deliberately cultivated a certain brusquerie. Personal adornment I regarded as pleasant but not important. I was in Harvard but not of it and realized all the irony of my singing "Fair Harvard." I sang it because I liked the music, and not from any pride in the Pilgrims.

With my colored friends I carried on lively social intercourse, but necessarily one which involved little expenditure of money. I called at their homes and ate at their tables. We danced at private parties. We went on excursions down the Bay. Once, with a group of colored students gathered from

surrounding institutions, we gave Aristophanes' "The Birds" in a Boston colored church. The rendition was good, but not outstanding; not quite appreciated by the colored audience; but well-worth doing, & even though it worked me near to death, I was proud of it.

Thus this group of professional men, students, white-collar workers and upper servants, whose common bond was color of skin in themselves or in their fathers; together with a common history and current experience of discrimination, formed a unit which like many tens of thousands of like units across the nation had or were getting, a common culture pattern which made them an interlocking mass, so that increasingly a colored person in Boston was more neighbor to a colored person in Chicago that to the white person across the street.

Mrs. Ruffin of Charles Street, Boston, and her daughter Birdie were often hostesses to ~~parts of~~ this colored group: she was widow of the first colored judge appointed in Massachusetts; ~~she was~~ an aristocratic lady, with olive skin and high piled masses of white hair. Once a Boston lady said to Mrs Ruffin, "I have always been interested in your race." Mrs. Ruffin ~~answered~~ blared: "Which race"? She began a national organization of colored women and ~~in Boston~~ published the "Courant" ~~the~~ a small type of colored weekly paper which was spreading over the nation. In this I published many of my Harvard daily themes.

Naturally in this close group there grew up among the young people friendship ~~and love~~, ending in marriages. I myself outgrowing the ~~immature~~ youthful attractions of Fisk, began serious dreams of love and marriage. There however, were still my study plans to hold me back and there were curious other reasons. For instance it happened that two of the girls whom I particularly liked had what was to me then ~~an~~ the insuperable handicap of looking like white, really they had ~~little Negro blood although~~ black enough to make them "Negroes" in America. I could not let the world even imagine that I had married a white wife. Yet these girls were intelligent and companionable. One went to Vassar College which then refused entrance to Negroes. Years later when I went there to lecture I remember

disagreeing violently with ~~one~~ a teacher who thought the girl ought not to have "deceived" the college by graduating before it knew her Negro descent. Another favorite of mine was Deenie Pindell. She was a fine forthright woman, blonde, blue-eyed and fragile. In the end I had no chance to choose here, for she married Monroe Trotter.

Trotter was the son of a well-to-do colored father and entered Harvard in my first year in the Graduate School. He was thick-set, yellow with close cut dark hair. He was stubborn and straight-laced and an influential member of his class. He organized the first Total Abstinence club in the Yard. I came to know him and when he and other colored students ~~joined~~ took in a trip to Amherst to see Forbes and Lewis graduate in the class with Calvin Coolidge.

Lewis afterward entered the Harvard Law School and became the celebrated center rush of th Harvard football team. He married the beautiful Bessie Baker who had been with us on that Amherst trip. Forbes, a brilliant, cyncical dark man, later joined with Trotter in publishing the Guardian, the first Negro paper to attack Booker T. Washington with open bitter opposition. Washington's friends retorted by sending Trotter to jail when he dared to heckle Washington on his political views in a public Boston meeting. I was not present nor privy to this ~~indictment~~ occurrence, but the unfairness of the jail sentence led me eventually to form the Niagara Movement, which later became the N.A.A.C.P.

Thus I lived near to life, love and tragedy; and when I met Maud Cuney, I became doubly interested. She was ~~an~~ a tall imperious brunette, with gold-bronze skin, ~~black~~ brilliant coily black eyes and hair; daughter of the Collector of Customs at Galveston, Texas. She came to study music and was a skilled performer, when the New England Conservatory of Music tried to "jim-crow" her in ~~some activities~~ the dormitory with her students. We rushed to her defense and we won. ~~Also~~ I fell deeply in love and we were ~~secretly~~ engaged.

Thus it is clear how in the general social intercourse on the campus I consciously missed nothing. Some white students made themselves known to me and a few, a very few, became life-long friends. Most of my classmates, I knew

neither by sight nor name. Among my ~~Harvard classmates~~ them many made their mark in life: Norman Hapgood, Robert Herrick, Herbert Croly, George Dorsey, Homer Folks, Augustus Hand, James Brown Scott and others. I knew none of these intimately. For the most part I do not doubt that I was voted a somewhat selfish and self-centered "grind" with a chip on my shoulder and a sharp tongue.

Something of a certain inferiority complex was possible a cause of this. I was desperately afraid of not ~~being~~ wanted; ~~intruding~~ appearing without invitation; of ~~appearing to~~ showing a desire for the company of those who had no desire for me. I should have been pleased if most of my fellow students had ~~desired~~ wanted to associate with me; if I had been popular and envied. But the absence of this made me neither unhappy nor morose. I had my "island within" and it was a fair country.

Only once or twice did I come to the surface of college life. First, by careful calculation, I found that I needed the cash of one of the Boylston prizes in oratory to piece out my years expenses. I got it through winning a second oratorical prize. The occasion was noteworthy by the fact that another black student, Clement Morgan, got first prize at the same contest.

With the new increase at Harvard of students who grew up outside of New England, there arose at this time a certain resentment at the way New ~~York~~ England students were dominating and conducting college affairs. The class marshall on commencement day was always a Saltonstall, a Cabot, a Lowell, or some such New England family. The crew and ~~some~~ most of the other athletic teams were selected from similarly limited social group. The class poet, class orator, and other commencement officials invariably ~~came from this same clique~~ were selected because of family & not for merit. It so happened that when the officials of the class of 1890 were being selected in early spring, a plot ripened. Personally, I knew nothing of it, and was not greatly interested ~~in this kind of shenanigans~~. But in Boston and in the Harvard Yard the result of the elections was of tremendous significance, ~~and when~~ for this conspiratorial clique selected Clement Morgan as class orator. New England and indeed the whole country reverberated.

Morgan was a black man. He was working in a barber shop in St. Louis at the time when he ought to have been in school. ~~Finally,~~ With the encouragement and help of a

colored teacher whom he later married, he came to Boston and entered the Latin school. This meant that when he finally entered Harvard, he entered as freshman in the orthodox way and was well acquainted with his classmates, a large number and fairly well received, considering his color. He was a pleasant unassuming person and one of the best clearly unmarked English speakers on the campus. In his Junior year, he had earned the first Boylston prize for oratory, in the same contest where I won second prize. It was, then logical for him to become class orator and yet this was against all the traditions of America. There were editorials in the leading newspapers, and the South especially raged and sneered at the audience of "black washerwomen" who would replace Boston society at the next Harvard commencement.

At the same time, the action was contagious and that year and the next in several leading Northern colleges, colored students became the class orators. While, as I have said, I had nothing to do with this plot, and was not even present at the election which chose Morgan, I was greatly pleased at this breaking of the color line. Morgan and I became fast friends and spent a summer giving readings along the North Shore to help our college costs.

Harvard of this day was a great opportunity for a young mand and a young American Negro and I realized it. I formed habits of work rather different from those of most of the other students. I burned no midnight oil. I did my studying in the daytime and had my day parceled out almost to the minute. I spent a great deal of time in the library and did my assignments with thoroughness and with prevision of the kind of work I wanted to do later. From the beginning my relations with most of the teachers at Harvard were pleasant. They were on the whole glad to receive a serious student, to whom extra-curricular activities were not of paramount importance and one who in a general way knew what he wanted.

Ex-President Taft, as I shall relate later, invited me to lunch.

 117A

with Latin and Greek, philosophy and some history. At Harvard I started in with philosophy and then turned toward United States history and social problems. But there the way was difficult. Harvard had in the social sciences no such leadership of thought and breadth of learning as in philosophy, literature and physical science. She was then groping and is still groping toward a scientific treatment of human action. She was facing at the end of the century a tremendous economic era. In the United States, finance was succeeding in monopolizing transportation, and raw materials like sugar, coal and oil. The power of the trust and combine was so great that the Sherman Act was passed in 1890. On the other hand, the tariff at the demand of manufacturers continued to rise in height from the McKinley to the indefensible Wilson tariff of 1894. I was graduated just at the beginning of the term of President Harrison, when the trusts were dominating industry and the McKinley tariff making that domination easier. The understanding between the Industrial North and the New South was being perfected and in 1890 the series of disfranchising laws began to be enacted by the Southern states destined in the next sixteen years to make voting by Southern Negroes practically impossible. A financial crisis shook the land in 1893 and popular discontent showed itself in the Populist movement and Coxey's Army. The whole question of the burden of taxation began to be discussed.

These things we discussed with some clearness and factual understanding at Harvard. The tendency was toward English free trade and against the American tariff policy. We reverenced Ricardo and wasted long hours on the "Wages-fund." I remember Taussig's course supporting dying Ricardean economics. Wages came from what employers had left for labor after they had subtracted their own reward. Suppose that this profit was too small to attract the employer, what would the poor worker do but starve! The trusts and monopolies were viewed frankly as dangerous enemies of democracies, but at the same time as inevitable methods of industry. We were strong for the gold standard and fearful of silver. On the other hand, the attitude of Harvard toward labor was on the whole contemptuous and condemnatory. Strikes like that of the

anarchists in Chicago, the railway strikes of 1886; the terrible Homstead strike of 1892 and Coxey's Army of 1894 were pictured as ignorant lawlessness, lurching against conditions largely inevitable.

Karl Marx was mentioned, only to point out how thoroughly his theses had been disproven; of that theory itself almost nothing was said. Henry George was given but tolerant notice. The anarchists of Spain, the Nihilists of Russia, the British miners -- all these were viewed not as part of the political development and the tremendous economic organization but as sporadic evil. This was natural. Harvard was the child of its era. The intellectual freedom and flowering of the late eighteenth and early nineteenth centuries were yielding to the deadening economic pressure which would make Harvard rich but reactionary. This defender of wealth and capital, already half ashamed of Sumner and Phillips, was willing finally to replace an Eliot with manufacturers and a nervous warmonger. The social community that mobbed Garrison, easily electrocuted Sacco and Vanzetti.

It was not until I was long out of college and had finished the first phase of my teaching career that I began to see clearly the connection of economics and politics; the fundamental influence of man's efforts to earn a living upon all his other efforts. The politics which we studied in college were conventional, especially when it came to describing and elucidating the current scene in Europe. The Queen's Jubilee in June, 1887, while I was still at Fisk, set the pattern of our thinking. The little old woman at Windsor became a magnificent symbol of Empire. Here was England with her flag draped around the world, ruling more black folk than white and leading the colored peoples of the earth to Christian baptism, and as we assumed, to civilization and eventual self-rule.

In 1885, Stanley, the traveling American reporter, became a hero and symbol of white world leadership in Africa. The wild, fierce fight of the Mahdi and the driving of the English out of the Sudan for sixteen years did not reveal its inner truth to me. I heard only of the martyrdom of the drunken Bible-reader and freebooter, Chinese Gordon.

The Congo Free State was established and the Berlin Conference of 1885 was reported to be an act of civilization against the slave trade and liquor. French, English and Germans pushed on in Africa, but I did not question the interpretation which pictured this as the advance of civilization and the benevolent tutelage of barbarians. I read of the confirmation of the Triple Alliance in 1891. Later I saw the celebration of the renewed Triple Alliance on the Tempelhofer Feld, with the new young Emperor Wilhelm II, who, fresh from his dismissal of Bismarck, led the splendid pageantry; and finally the year I left Germany, Nicholas II became Czar of all the Russias. In all this I had not yet linked the political development of Europe with the race problem in America.

I was repeatedly a guest in the home of William James; he was my friend and guide to clear thinking; I was a member of the Philosophical Club and talked with Royce and Palmer; I remember vividly once standing beside Mrs. Royce at a small reception. We ceased conversation for a moment and both glanced across the room. Professor Royce was opposite talking excitedly. He was an extraordinary sight:

a little body; indifferently clothed; a big red-thatched head and blazing blue eyes. Mrs. Royce put my thought into words:"Funny-looking man, isn't he?" I nearly fainted! Yet I knew how she worshipped him.

I sat in an upper room and read Kant's Critique with Santayana; Shaler invited a Southerner, who objected to sitting beside me, out of his class; he said he wasn't doing very well, anyway. I became one of Hart's favorite pupils and was afterwards guided by him through my graduate course and started on my work in Germany. Most of my courses of study went well. It was in English that I came nearest my Waterloo at Harvard. I had unwittingly arrived at Harvard in the midst of a violent controversy about poor English among students. A number of fastidious Englishmen like Barrett Wendell had come to Harvard about this time; moreover New England itself was getting sensitive over western slang and Southern drawls and general ignorance of grammar. Freshmen then at this time could nearly elect all their courses except English; that was compulsory, with theses, daily themes and tough examinations.

On the other hand I was at the point in my intellectual development when the content rather than the form of my writing was to me of prime importance. Words and ideas surged in my mind and spilled out with disregard of exact accuracy in grammar, taste in word or restraint in style. I knew the Negro problem and this was more important to me than literary ~~style~~ form. I knew grammar and I had a pretty wide vocabulary; but I was bitter, angry and intemperate in my first theses. Naturally my English instructors had no ideas of nor interest in the way in which Southern attacks on the Negro ~~was~~ were scratching me on the raw flesh. Tillman was raging in the Senate like a beast and literary clubs engaged his services eagerly and listened avidly. Senator Morgan of Alabama had just published a scathing attack on "niggers" in a leading magazine, when my first Harvard thesis was due. I let go at him with no holds barred. My long and blazing effort came back marked "E" -- not passed! It was the first time in my scholastic career that I had encountered such a failure. I was aghast, but I was not a fool. I did not doubt but that my instructors were fair in judging my English

technically even if they did not understand the Negro Problem. I went to work at my English and raised it to a "C" by the end of that term. I realized that while style is subordinate to content, and that no real literature can be composed of meticulous and fastidious phrases, nevertheless, literary style carries a message further than bad grammar and muddled syntax. I elected the best course on the campus for English composition--English 12.

I have before me a theme which I wrote October 3, 1890, for Barrett Wendell, then the great pundit of Harvard English. I wrote: "Spurred by my circumstances, I have always been given to systematically planning my future, not indeed without many mistakes and frequent alterations, but always with what I now conceive to have been a strangely early and deep appreciation of the fact that to live is a serious thing. I determined while in the high school to go to college-- partly because other men did, partly because I foresaw that such discipline would best fit me for life ... I believe, foolishly perhaps, but sincerely, that I have something to say to the world, and I have taken Englihs 12 in order to say it well."

Barrett Wendell liked that last sentence. Out of fifty essays, he picked this out to read to the class.

Commencement was approaching, when, one day I found myself at midnight on one of the swaggering streetcars that used to roll out from Boston on its way to Cambridge. It was in the spring of 1890, and quite accidentally I was sitting by a classmate who would graduate with me in June. As I dimly remember, he was a nice-looking young man, almost dapper; well-dressed, charming in manner. Probably he was rich or at least well-to-do, and doubtless belonged to an exclusive fraternity, although that did not interest me. Indeed I have even forgotten his name. But one thing I shall never forget and that was his rather regretful admission (which slipped out as we gossiped) that he had no idea as to what his life work would be, because, as he added, "There's nothing in which I am particularly interested!"

I was more than astonished-- I was almost outraged to meet any human being of the mature age of twenty-two who did not have his life all planned before him, at least in general outline; and who was not supremely, if not desperately, interested in what he planned to do.

Since then, my wonder has left my classmate, and been turned in and backward upon myself: how long had I been so sure of my life-work and how had I come so confidently to survey and plan it? I now realize that most college seniors are by no means certain of what they want to do or can do with life; but stand rather upon a hesitating threshold, awaiting will, chance or opportunity. Because I had not mingled intimately or understandingly with my white Harvard classmates, I did not at the time realize this, but thought my ~~rather~~ unusual attitude was general. ~~How had this attitude come to seem normal to me?~~

In June 1890, I received my bachelor's degree from Harvard cum laude in philosophy. I was one of the five graduating students selected to speak at commencement. My subject was "Jefferson Davis." I chose it with deliberate intent of facing Harvard and the nation with a discussion of slavery as illustrated in the person of the president of the Confederate States of America. Naturally, my effort made a ~~considerable~~ sensation. I said, among other things:

"I wish to consider not the man, but the type of civilization which his life represented: its foundation is the idea of the strong man-- Individualism coupled with the rule of might-- and it is this idea that has made the logic of even modern history, the cool logic of the Club. It made a naturally brave and generous man Jefferson Davis-- now advancing civilization by murdering Indians, now hero of a national disgrace, called by courtesy the Mexican War; and finally as the crowning absurdity, the peculiar champion of a people fighting to be free in order that another people should not be free. Whenever this idea has for a moment escaped from the individual realm, it has found an even more secure foot-hold in the policy and philosophy of the State. The strong man and his mighty Right Arm has become the Strong Nation with its armies. Under

whatever guise, however a Jefferson Davis may appear as man, as race, or as a nation, his life can only logically mean this: the advance of a part of the world at the expense of the whole; the overwhelming sense of the I, and the consequent forgetting of the Thou. It has thus happened that advance in civilization has always been handicapped by shortsighted nationsl selfishness. The vital principal of division of labor has been stifled not only in industry, but also in civilization; so as to render it well nigh impossible for a new race to introduce a new idea into the world except by means of the cudgel. To say that a nation is in the way of civilization is a contradiction in terms, and a system of human culture whose principle is the rise of one race on the ruins of another is a farce and a lie. Yet this is the type of civilization which Jefferson Davis represented: it represents a field for stalwart manhood and heroic character, and at the same time for moral obtuseness and refined brutality. These striking contradictions of character always arise when a people seemingly become convinced that the object of the world is not civilizat on, but Teutonic civilization."

A Harvard professor wrote to Kate Field's Washington then a leading periodical: "Du Bois, the colored orator of the commencement stage, made a ten-strike. It is agreed upon by all the people I have seen that he was the star of the occasion. His paper was on 'Jefferson Davis,' and you would have been surprised to hear a colored man deal with him so generously. Such phrases as a 'great man,' a 'keen thinker,' a 'strong leader,' and others akin occurred in the address. One of the trustees of the University told me yesterday that the paper was considered masterly in every way. Du Bois is from Great Barrington, Massachusetts, and doubtless has some white blood in his veins. He, too, has been in my classes the past year. If he did not head the class, he came pretty near the head, for he is an excellent scholar in every way, and altogether the best black man that has come to Cambridge."[11]

Bishop Henry Potter of New York wrote in the Boston Herald: "But when at the last commencement of Harvard University, I saw a young colored man

appear . . . . and heard his brilliant and eloquent address, I said to myself: 'Here is what an historic race can do if they have a clear field, a high purpose, and a resolute will.'"

The New York Nation commented editorially:

"When the name of William Edward Burghardt Du Bois was called and a slender, intellectual-looking mulatto ascended the platform and made his bow to the President of the University, the Governor of Massachusetts, the Bishop of New York, and a hundred other notables, the applause burst out heartily as if in recognition of the strange significance of his appearance there. His theme ... heightened this significance. Du Bois handled his difficult and hazardous subject with absolute good taste, great moderation, and almost contemptuous fairness."

Already I had now received more education than most young white men, having been almost continously in school from the age of six to the age of twenty-two. But I did not yet feel prepared. I felt that to cope with the new and extraordinary situations then developing in the United States and the world, I needed to go further and that as a matter of fact I had just well begun my training in knowledge of social conditions.

I revelled in the keen analysis of William James, Josiah Royce and young George Santayana. But it was James with his pragmatism and Albert Bushnell Hart with his research method, that turned me back from the lovely but sterile land of philosophic speculation, to the social sciences as the field for gathering and interpreting that body of fact which would apply to my program for the Negro. I had talked frankly with William James about teaching philosophy, my major subject, as undergraduate. He discouraged me, not by any means because of my record in his classes. He used to give me A's and even A-plus, but as he said candidly, there is "not much chance for anyone earning a living as a philosopher." He was repeating just what Chase of Fisk had said a few years previously.

I knew by this time that practically my sole chance of earning a living combined with study was to teach, and after my work with Albert Bushnell Hart in United States history, I conceived the idea of applying philosophy to an historical interpretation of race relations.

In other words, I was trying to take my first steps towards sociology as the science of human action. It goes without saying that no such field of study was then recognized at Harvard or came to be recognized for twenty years after. But I began with some research in Negro history and finally at the suggestion of Hart I chose the suppression of the African slave trade to America as my doctor's thesis. Then came the question as to whether I could continue study in the graduate school. I had no resources in wealth or friends. I applied for a fellowship in the graduate school of Harvard and was appointed Henry Bromfield Rogers fellow for a year and later the appointment was renewed; so that from 1890 to 1892 I was a fellow in Harvard University, studying in history and political science and what would have been sociology if Harvard had yet recognized such a field.

My grandfather Du Bois died while I was at Harvard, and although the settlement of the estate was held up for lack of exact data concerning my father's death, eventually $400 was paid me during my senior year. I finished the first draft of my thesis and delivered an outline of it at the seminaries of American history and political economy December 7, 1891. I received my Masters degree in Feb 1892 was thereupon elected to the American Historical Society and asked to speak in Washington at their meeting in December 1892. The New York Independent noted this among the "three best papers presented," and continued:

"The article upon the 'enforcement of the Slave Laws' was written and read by a black man. It was thrilling when one could, for a moment, turn his thoughts from listening to think that scarcely thirty years have elapsed since the war that freed his race, and here was an audience of white men listening to a black man-- listening moreover, to a careful, cool, philosophical history of the

laws which had not prevented the enslavement of his race. The voice, the diction, the manner of the speaker were faultless. As one looked at him, one could not help saying 'Let us not worry about the future of our country in the matter of race distinctions.'"

I began with a bibliography of Nat Turner and ended with this history of the suppression of the African Slave Trade to America; neither needed to be done again at least in my day. Thus in my quest for basic knowledge with which to help guide the American Negro, I came to the study of sociology, by way of philosophy and history rather than by physics and biology, which was the current approach; moreover at that day, Harvard recognized no "science" of sociology and for my doctorate, after hesitating between history and economics, I chose history. On the other hand, psychology, hovering then on the threshold of experiment under Muensterberg, soon took a new orientation which I could understand from the beginning. I worked on my thesis, "The Suppression of the African Slave Trade to the United States of America" ~~taking my master's degree, and hoping~~ and to get my doctor's degree in another two years.

Already I had made up my mind that what I needed was further training in Europe. The German Universities were at the top of their reputation. Any American scholar who wanted preferment went to Germany for study. The faculties of John Hopkins and the new University of Chicago, were beginning to be filled with German PH.D's, and even Harvard had imported Muensterberg for the new experimental psychology, and Kuno Frank had long taught there. British universities did not recognize American degrees and French universities made no special effort to encourage American graduates. I wanted then to study in Germany. I was determined that any failure on my part to become a recognized American scholar must not be based on any lack of modern training. I was confident. So far I had met no failure. I willed and lo! I was walking beneath the elms of Harvard,-- the name of allurement, the college of my youngest, wildest visions! I needed money; scholarships and prizes fell into my lap-- not all I wanted or strove for, but all I needed to keep in school. Commencement came and standing before governor,

president, and grave gowned men, I told them certain truths, waving my arms and breathing fast! They applauded with what may have seemed to many as uncalled-for fervor, but ~~then~~ I walked home on pink clouds of glory! I asked for a fellowship and got it. I announced my plan of studying in Germany, but Harvard had no more fellowships for me. A friend, however, told me of the Slater Fund and how the Board was looking for colored men worth educating.

No thought of modest hesitation occurred to me. I rushed at the chance. It was one of those tricks of fortune which always seem partly due to chance: In 1882, the Slater Fund for the education of Negroes had been established and the board in 1890 was headed by ex-President R.B. Hayes. Ex-President Hayes went down to John Hopkins University which admitted no Negro students and told a "darkey" joke in a frank talk about the plans of the fund. The Boston Herald of November 2, 1890, quoted him as saying:"If there is any young colored man in the South whom we find to have a talent for art or literature or any special aptitude for study, we are willing to give him money from the education funds to send him to Europe or give him advanced education." He added that so far they had been able to find only "orators." This seemed to me a nasty fling at my black classmate, Morgan, who had been Harvard class orator a few months earlier.

The Hayes statement was brought to my attention at a card party one evening; it not only made me good and angry but inspired me to write ex-President Hayes and ask for a scholarship. I received a pleasant reply saying that the newspaper quotation was incorrect; that his board had had some such program in the past but had no present plans for such scholarships. I ~~proceeded to collect letters~~ wrote him referring him to my teachers and to others who knew me and from ~~every person I knew in the Harvard Yard and places outside, and literally deluged the unfortunate chairman of the Slater Fund,~~ intimating that his change of plan did not seem to me fair nor honest. He wrote again in apolgetic mood and said that he was sorry the plan had been given up; that he recognized that I was a candidate who might otherwise have been given attention.

I then sat down and wrote Mr. Hayes this letter:

May 25, 1891

"Your favor of the 2nd. is at hand. I thank you for your kind wishes. You will pardon me if I add a few words of explanation as to my application. The outcome of the matter is as I expected it would be. The announcement that any agency of the American people was willing to give a Negro a throughly liberal education and that it had been looking in vain for men to educate was to say the least rather startling. When the newspaper clipping was handed me in a company of friends, my first impulse was to make in some public way a categorical statement denying that such an offer had ever been made know to colored students. I saw this would be injudicious and fruitless, and I therefore determined on the plan of applying myself. I did so and have been refused along with a "number of cases" beside mine." As to my case I personally care little. I am perfectly capable of fighting alone for an education if the trustees do not see fit to help me. On the other hand the injury you have - unwittingly I trust - done the race I represent, and am not ashamed of, is almost irreparable. You went before a number of keenly observant men who looked upon you as an authority in the matter, and told them in substance that the Negroes of the United States either couldn't or wouldn't embrace a most liberal opportunity for advancement. That statement went all over the country. When now finally you receive three or four applications for the fulfillment of that offer, the offer is suddenly withdrawn, while the impression still remains." If the offer was an experiment, you ought to have had at least one case before withdrawing it; if you have given aid before (and I mean here toward liberal education - not toward training plowmen) then your statement at John Hopkins was partial. From the above facts I think you owe an apology to the Negro people. We are ready to furnish competent men for every European scholarship furnished us off paper. But we can't educate ourselves on nothing and we can't have the moral courage to try, if in the midst of our work our friends turn public sentiment against us by making statements which injure us and which they cannot stand by.

"That you have been looking for men to liberally educate in the past may be so,

but it is certainly strange so few have heard of it. It was never mentioned during my three years stay at Fisk University. President Price of Livingstone has told me that he never heard of it, and students from various other Southern schools have expressed great surprise at the offer. The fact is that when I was wanting to come (to) Harvard, while yet in the South, I wrote to Dr. Haygood for a loan merely, and he never even answered my letter. I find men willing to help me thro' cheap theological schools, I find men willing to help me use my hands before I have got my brains in working order, I have an abundance of good wishes on hand, but I never found a man willing to help me get a Harvard PH.D."

Hayes was stirred ~~and apologized~~. He promised to take up the matter the next year with the board. Thereupon, the next year I proceeded to write the board: "At the close of the last academic year at Harvard, I received the degree of Master of Arts, and was reappointed to my fellowship for the year 1891-92. I have spent most of the year in the preparation of my doctor's thesis on the Suppression of the Slave Trade in America. I prepared a preliminary paper on this subject and read it before the American Historical Association at its annual meeting at Washington during the Christmas holidays . . . . Properly to finish my education, careful training in an European university for at least a year is, in my mind and the minds of my professors, absolutely indispensable." I thereupon asked respectfully "aid to study at least a year abroad under the direction of the graduate department of Harvard or other reputable auspices" and if this was not practicable, "that the board loan me a sufficient sum for this purpose." I did not of course believe that this would get me an appointment, but I did think that possibly through the influence of people who thus came to know about my work, I might somehow borrow or beg enough to get to Europe.

I rained recommendations upon Mr.Hayes. The Slater Fund Board surrendered, and I was given a fellowship of seven hundred and fifty dollars to study abroad a year; with the promise that it might possibly be renewed for a second year. To salve their souls, however, this grant was made as half gift and a half repayable loan with 5% interest.

I remember rushing down to New York and talking with ex-President Hayes in the old Astor House, and ~~then going~~ emerging at walking on air. I saw an especially delectable shirt in a shop window. I went in and asked about it. It cost three dollars, which was about four times as much as I had ever paid for a shirt in my life; but I bought it.

CHAPTER IX

EUROPE 1892 TO 1894

When I was a young man I conceived that the foundations of World culture were laid, the way was charted, the progress toward certain great goals was undoubted and inevitable. There was room for argument concerning details and methods and possible detours in the onsweep of civilization; but the fundamental facts were clear, unquestioned and unquestionable.

Between the years 1885 and 1894 I received my education at Fisk University, Harvard College and the University of Berlin. It was difficult for me at the time to form any critical estimate of any meaning of the world which differed from the conventional unanimity about me. Apparently one consideration alone saved me from complete conformity with the thoughts and confusions of then current social trends; and that was the problem of racial and cultural contacts. Otherwise I might easily have been simply the current product of my day. Even as it was, the struggle for which I was preparing and the situations which I was trying to conceive and study, related themselves primarily to the plight of the comparatively small group of American Negroes with which I was identified, and theoretically to the larger Negro race. I did not face the general plight and conditions of all human mankind. That I took for granted, and in the unanimity of thought and development of that day, as I saw it, this was scarcely to be wondered at.

It was to my mind and the minds of most of my teachers a day of Progress with a capital P. Population in all the culture lands was increasing, awfully doubling and more; cities everywhere were growing and expanding and making themselves the centers and almost the only centers of civilization; transportation by land and sea was drawing the nations near and making the lands of the earth increasingly accessible. Inventions and technique were a perpetual marvel and their accomplishment infinite in possibility. Commerce was madly seeking markets all around the earth; colonies were being seized and countries integrated into European civilization in Asia, Africa, South America and the islands. Of the methods of this colonial imperialism, the condition of colonial peoples and the effect of colonies on home labor, I knew little until years later.

Above all, science was becoming ~~religious~~ religion; psychology was reducing metaphysics to experiment and a sociology of human action was planned. Fighting the vast concept of evolution, religion went into its heresy trials, its struggles with "higher criticism," its discomfort at the "revised version" of the New Testament which was published the year I entered college. Everywhere men sought wealth and especially in America there was extravagant living among the rich; everywhere the poor planned to be rich and the rich planned to be richer; everywhere wider, bigger, higher, better things were set down as inevitable.

All this, of course, dominated education; especially the economic order determined what the next generation should learn and know. On the whole, looking at the marvelous industrial expansion of America, seeing the rise of the western farmer and the wages of the eastern mechanic, all seemed well; or if not, if there were ominous protests and upheavals, these were but the friction necessary to all advance. "God's in His heaven; All's right with the world," Browning was singing -- that colored Robert Browning, who died just after I received my first bachelor's degree.

Had it not been for the race problem early thrust upon me and enveloping me, I should have probably been an unquestioning worshipper at the shrine of the established social order and of the economic development into which I was born. But just that part of this order which seemed to most of my fellows nearest perfection, seemed to me most inequitable and wrong; and starting from that critique, I gradually, as the years went by, found other things on which to question in my environment.

At first, however, my criticism was confined to the relation of my people to the world movement. I was not questioning the world movement in itself. What the white world was doing, its goals and ideals, I had not doubted were quite right. What was wrong was that I and people like me and thousands of others who might have my ability and aspiration, were refused permission to be a part of this world. It was as though moving on a rushing express, my main thought was as to my relations with the other passengers on the express, and not to its rate of speed and its destination.

In the days of my formal education, my interest became concentrated upon the race struggle. [redacted] My attention from the first was focused on democracy and democratic development; and upon the problem of the admission of my people into the freedom of democracy. This my school training touched but obliquely. We studied history and politics almost exclusively from the point of view of ancient German freedom, English and New England democracy, and the development of the white United States. Here, however, I could bring criticism from what I knew and saw touching the Negro.

Europe modified profoundly my outlook on life and my thought and feeling toward it, even though I was there but two short years with my contacts limited and my friends few. But something of the possible beauty and elegance of life permeated my soul; I gained a respect for manners. I had been before, above all, in a hurry. I wanted a world, hard, smooth and swift, and had no time for rounded corners and ornament, for unhurried thought and slow contemplation. Now at times I sat still. I came to know Beethoven's symphonies and Wagner's Ring. I looked long at the colors of Rembrandt and Titian. I saw in arch and stone and steeple the history and striving of men and also their taste and expression. Form, color, and words took new combinations and meanings.

I crossed the ocean in a trance. Always I seemed to be saying, "It is not real; I must be dreaming!" I can live it again -- the little, Dutch ship -- the blue waters -- the smell of new-mown hay -- Holland and the Rhine. I saw the Wartburg and Berlin; I made the Harzreise and climbed the Brocken; I saw the Hansa towns and the cities and dorfs of South Germany; I saw the Alps at Berne, the Cathedral at Milan; Florence, Rome, Venice, Vienna, and Pesth; I looked on the boundaries of Russia; and I sat in Paris and London.

On mountain and valley, in home and school, I met men and women as I had never met them before. Slowly they became, not white folks, but folks. The unity beneath all life clutched me. I was not less fanatically a Negro, but "Negro" meant a greater, broader sense of humanity and world-fellowship. I felt myself standing, not against

the world, but simply against American narrowness and color prejudice, with the greater, finer world at my back.

In Germany, [illegible] in 1892, I found myself on the outside of the American world, looking in. With me were white folk -- students, acquaintances, teachers -- who viewed the scene with me. They did not always pause to regard me as a curiosity, or something sub-human; I was just a man of the somewhat privileged student rank, with whom they were glad to meet and talk over the world; particularly, the part of the world whence I came.

I found to my gratification that they, with me, did not regard America as the last word in civilization. Indeed I derived a certain satisfaction in learning that the University of Berlin did not recognize a degree even from Harvard University, no more than Harvard did from Fisk. Even I was a little startled to realize how much that I had regarded as white American, was white European and not American at all: America's music is German, the Germans said; the Americans have no art, said the Italians; and their literature, remarked the English, is mainly English. All agreed that Americans could make money and did not care how they made it. And the like. Sometimes their criticism got under even my anti-American skin, but it was refreshing on the whole to hear voiced my own attitude toward so much that America had meant to me.

I sailed in the summer of 1892 on a Dutch boat, the old "Amsterdam," landing in Holland. I wrote in my diary:

"Holland is an extremely neat and well-ordered mud-puddle, situated at the confluence of the English, French, and German languages. My memory of my first sight of it is inextricably interwoven with a smell of clover. It was after a two weeks' sea voyage -- pleasant to be sure, fascinating as the changing, changeless sea ever is, but <u>two weeks</u> -- then I came on deck one sunny morning to see long low green fields, sleepy little farm-houses, long, prim, and decent rows of trees, stolid windmills and cows. So far as landscape is concerned, I never saw ought else in Holland and had I (God forbid!) followed my first inclinations, I should have gone away from this dear old nook with the usual uninteresting tale. I stayed a week or

so, and I am very glad.

"There is to be sure a certain sameness about the homely country -- a slowness which makes an American gasp and sometimes swear, and yet the very monotony of the country, the low dogged hum of its simple life, has for the leiterer a charm I can only liken to that of the old backyard of my New England home. The Dutchman is in no hurry; he sees no necessary connection between the new and the good -- rather the contrary; he is ponderously honest, and he is guiltless of anything savoring of personal beauty. His nation may become grasping and greedy, but the individual Dutchman is too honest to know it or to believe it when it is told.

"Moreover the Dutchman is distressingly neat. I thought my soul they would scrub every splinter of the little Dutch steamer I crossed in, off into the ocean, before we made port. They scrubbed morning, noon, and night; then they polished and swept; then they painted; and when we were that neat that we dared scarcely breathe carelessly, we discovered them scraping off some of the paint in order to paint again. In the cozy little hotel where I stopped in Rotterdam, I have yet to get a good glimpse of the chambermaid -- but oh! her work: clean linenn and fresh water appeared by magic; modest and prim candles mysteriously climbed the candlestick; at twilight the window-curtains were decorously closed -- or possibly closed themselves; and when I dared during the day to rumple my bed, its frigid and unruffled appearance when I returned warned me against a repetition of the offense. And all I saw of the maid was now and then the vision of a white befrilled head-dress.

"Out of doors, too, the case is the same; a Dutch tree seldom stands in the shameless abandon of an American tree -- rather it is the modest and regular member of a row of two or three hundred of its fellows along a long road.

"But the glory of Holland is its windmills: none of your little popinjay skeletons of painted wood -- but just what a Dutch windmill should be -- short, sturdy, stolid, and stone; with great beams and canvas sails, and covered with story and history. Then, too, I mustn't forget the Dutch cows; the calm and sweet-eyed cow,

whose life in a little green island of pasture, passed in the peace and contentment of knowing that its butter will not be colored or even salted, but served in nice fresh dabs for beakfast -- ah me! such a life very nearly approaches the ideal heaven of my Sunday school days; and I could even now find myself wishing that instead of being a black and white American, I was a little black and white Dutch cow.

"If Rotterdam had been any but a Dutch town, I shouldn't have seen it -- I mean if Dutch business methods had not been so exasperatingly deliberate as to take six days to get a draft on Baring Bros. of London cashed, I should not have spent even a night at this interesting place. As it was, I was imprisoned for nearly a week in the town, in daily terror lest mine host should present his ruddy bill before my extremely wan purse. And I liked it: a nice place in its way. To be sure I must say I never saw such a poorly tailored town in my life. I saw very few persons whose clothes seemed to have been made with the slightest reference to their bodies, except the housemaids. In maidservants, Rotterdam has apparently reached the ne plus ultra: elaborately beruffled caps, immaculate white stockings and slippers, simple gingham dresses, and healthy, honestly homely faces, made them most pleasant figures to meet on the promenade. Rotterdam as a city has a certain lack of individuality which is in itself characteristic. You see, it lies in the midstream of Dutch commerce with the great world and the current has changed it. It has almost forgotten its native tongue -- so used is it to jabbering English, French, and German, and it has a general unconnected sort of air which would make a nervous people picturesque, but only makes the Rotterdamites a wee bit ludicrous.

"One annoyance I met here and all over Europe: the landlord would hasten to inform me beamingly that 'Fellow Americans had just arrived ~~from Boston~~'. If there was one thing less desirable than 'white fellow Americans' to me, it was black 'fellow Americans' to them."

Of greatest importance was the opportunity which my Wanderjahre in Europe gave of looking at the world as a man and not simply from a narrow racial and

provincial outlook. This was primarily the result not so much of my study, as of my human companionship, unveiled by the accident of color. From the days of my later youth on the South to my boarding a Rhine passenger steamer at Rotterdam in August, 1892, I had not regarded white folk as human in quite the same way that I was. I had reached the habit of expecting color prejudice so universally, that I found it even when it was not there. So when I saw on this little steamer a Dutch lady with two grown daughters and one of twelve, I proceeded to put as much space between us as the small vessel allowed. But it did not allow much, and the lady's innate breeding allowed less. Soon the little daughter came straight across the deck and placed herself squarely before me. She asked if I spoke German; before I could explain, the mother and other daughters approached and we were conversing.

Before we reached the end of our trip, we were happy companions, laughing, eating and singing together, talking English, French and German and viewing the lovely castled German towns. Once or twice when the vessel docked for change of cargo, the family strolled off to visit the town. Each time I found excuse to linger behind and visit alone later; until once at Düsseldorf, all got away before I sensed it and left me and the prettiest daughter conversing. Then seeing we had docked she suggested we follow and see the town. We did; and thereafter we continued acting like normal, well-bred human beings. I waved them all good-bye, in the solemn arched aisles of the Cologne cathedral, with tears in my eyes.

So too in brave old Eisenach, beneath the shadow of Luther's Wartburg, I spent a happy holiday ~~with French and English boys, and German girls~~, in a home where university training and German home-making left no room for American color prejudice; although one American woman did what she could to introduce it. She thought that I was far too popular with the German girls, and secretly warned the house-mother. I was popular, but there was no danger in the American sense. I was quite wedded to my task in America. When blue-eyed blond-haired Dora confessed her readiness to marry me "gleich!" I told her frankly and gravely that it would be unfair to himself and cruel to her for a colored man to take a white bride to America. She could not understand. I found it

difficult to explain.

From this unhampered social intermingling with Europeans of education and manners, I emerged from the extremes of my racial provincialism. I became more human; learned the place in life of "Wine, Women, and Song;" I ceased to hate or suspect people simply because they belonged to one race or color; and above all I began to understand the real meaning of scientific research and the dim outline of methods of employing its technique and its results in the new social sciences for the settlement of the Negro problems in America.

In the Marbach home which took only properly introduced "paying guests" were two grown daughters, and two young women who were relatives; two young Frenchmen, an English youth and myself. Herr Oberpharrer Doctor Marbach and his efficient and correct wife presided. At first my German was halting and I was shy. But soon the courtesy of the elders and the ebullient spirits of the young folks brought out my good nature and keen sense of cameraderie. The very mistakes of those of us who were foreigners -- mistakes in grammer and usage and etiquette -- became a source of merriment and sympathy. We became a happy group closely bound to each other. We went together to church services and to concerts. We took long excursions through field and forest to places of interest, lunching in homely inns or in the open.

I remember once the contest in poetry we had in a forest glen looking out on a great mountain range; I recited in English and one of the Frenchmen in his tongue. Then Madame Marbach (who always chaperoned us) recited "Du bist wie eine Blume". We wept openly at its beauty and I looked at Dora with her blue eyes and black hair and the lovely coloring of her skin. Dora almost always paired with me, first to correct my German and then by preference. Once we all went to the annual ball of the upper middle class folk in the town. It was formal and a little stiff. The carefully gowned matrons sat around the walls of the room, knitting and gossiping and keeping watch over the demure white gowned girls in their charge. The fathers sat at tables and drank beer. I danced with all the girls of our home; then bowing

from the waist ventured to ask other young ladies to whom I had been introduced. Then came the "Damen Wahl"; I drew back, but it was unnecessary, for my card was filled for every dance.

I was very fond of Dora Marbach and as I well knew, so was she of me. Our fellows joked about us and when I sang the folk-song of "Die Lora am There", little Bertha invariably changed the name to "Dora". ~~But I did not make love to Dora, for~~ I knew this would be unfair to her and fatal for my work at home, where I had neither property nor social standing for this blue-eyed stranger. (She could not quite understand) Naturally I received much advice as to marriage plans. One lady told me very seriously "Sie soll heirathen eine hell-blonde!" But I knew better, although there may have been some echo in my mind of the proverb:

"Es waer so schoen gewesen
Es hat nicht sollen sein!"

~~But~~ it was an American woman who sought to see to it that no entanglement between me and Dora took place. She and her husband came to board with the Marbachs for a month or so. He was a professor in Colorado, a good-natured, ill-mannered Westerner. She was a nervous gossip, astonished to see a Negro so ~~popular and~~ well-received in this household. What she told Frau Marbach about American Negroes I do not know, but I can imagine. There was nothing said of the couple but all were glad when they left. I felt a little sensitive when I left. I exchanged letters with the family while I remained in Germany but I never returned to this beloved foster home.

Eisenach was so interesting that I wrote to my Great Barrington Sunday school about it; on September 29, 1892:

"In the middle of Germany, on the north-west edge of the famous Thuringian forest stand the town of Eisenach, one of the most beautiful spots of a beautiful region. I shall not attempt to describe the natural beauty of the place, first because I know I would not do it justice, and secondly because the memory of my own blue Berkshire hills tells me that the task would be an unnecessary one. It is however of the rich legacy of history and legend which belongs to these hills that I wish to speak. It

is ever a strange experience for an American to walk for the first time in a land, the natural beauty of which is surrounded and enhanced by the thought, legends, and deeds of a thousand years. Such is the case here, and the deeds are all the more interesting because they furthered that freedom of conscience and deeper religion which is the heritage of Great Barrington and of the world.

"Let us suppose our hills were thrown in somewhat wilder confusion, our shingles turned into red tiles, and our streets a bit more crooked; so would you imagine yourselves in Eisenach. We can take a walk through the old town treading on centuries of footsteps and breathing air full of ancient whispers. Here on the Luther Square is the house where Martin Luther, the first Protestant, lived, while he attended school in Eisenach. His father and mother dwelt over the hills yonder to the west, in "Mohra" -- poor ordinary peasants, too poor to keep the boy in school. So Frau Vreula Cotta gave him a place at her table and here, in the same decade as that in which Columbus discovered America, lived the great boy, in this queer old house with its projecting stories and little windows.

" A little farther on, in the great square market-place, he went to school under the shadow of a huge, unsightly Gothic church, which for half a thousand years has stood here. I attended service here last Sunday; it is a queer place with stiff old pews, great pillars, galleries, ancient gravestones, and an old high gilded pulpit. As I heard the grey-haired preacher in the pulpit, I remembered that 371 years ago, Luther himself had preached in the self-same pulpit, and under the same cherub-bedecked covering. It was on his return from the Diet of Worms in 1521, where, before the Emperor Charles V, and the assembled princes and prelates of Europe he had defended liberty of conscience. 'Here I stand; God help me, I cannot do otherwise'.

"Excommunicated by the church and forbidden to preach, he defied the edict of the Emperor and preached in this church, and then was spirited away by his friends and for nearly a year remained hidden from his persecutors -- so costly was it to be brave. And where was he hidden? Let us see: imagining still that Great

Barrington is Eisenach, let us take our stand in the market-place in front of our Town Hall. Look now upon East Mountain, and in place of East Rock, imagine the height crowned by a rambling old castle with great walls, buildings and towers. It is the castle Wartburg, and it is very old. When Washington was President it was old; when your great-great-grandfathers stole my great-[redacted]-grandfather and brought him a slave to America, it was old; when Wycliffe translated the Bible, it was old -- indeed, it was at the time that William the Conqueror invaded England, that Ludwig the Springer, a warrior, saw this height and saying: 'Wart, Berg! Du sollst mir ein Burg sein' (Wait, mountain! You shall be my fortress), he forthwith builded this castle. Thus for 825 years has it guarded the land, and her Luther found asylum in 1521 when the rest of Christenthum was closed against him.

"Protestantism could have had no more significent cradle. Here classic heathen and Christian legend meet and join hands. Here is the scene of Wagner's great opera Tannhäuser. The Frankish singer came riding out of the west at the behest of Herman, lord of the Wartburg, but upon the Horselberg, a peak facing the castle, he was turned aside from his journey by the goddess of beauty and perished miserably. So runs the legend.

"Here too lived that beautiful half-mystic Austrian princess, St. Elizabeth, whom the Germans have made an ideal figure of self-denying charity, and whom they always picture as standing before her hard-hearted lord with the food in her apron which she carried to the hungry, turned, as by a miracle, into roses to deceive his greed. In the midst of such scenes, of such more or less true tales, Luther lived for nearly a year, known in the castle as Junker-Jorg, burying himself in writing polemics and translating the bible. The chamber where he lived and the table on which he wrote are still shown to visitors."

In the fall I went up to Berlin and registered in the university. In my study, I came in contact with several of the great leaders of the developing social sciences: in economic sociology and in social history. My horizon in the social sciences was broadened not only by teachers, but by students from France, Belgium, Russia, Italy and Poland.

For matriculation in groups of one hundred we went into a large room with a high ceiling ornamented with busts of Berlin's famous professors. The year's Rector Magnificus was the widely famous Rudolf Virchow. He was a meek and calm little man, white-haired and white-bearded, with kindly face and pleasant voice. I had again at Berlin as at Harvard, unusual opportunity. Although a foreigner, I was admitted my first semester to two seminars under Schmoller and Wagner, both of them at the time the most distinguished men in their line; I received eventually from both of them pleasant testimony on my work in economics, history, and sociology. I sat under the voice of the fire-eating Pan-German, von Treitschke; I heard Sering and Weber; I wrote on American agriculture for Schmoller and discussed social conditions in Europe with teachers and students. Under these teachers and in this social setting, I began to see the race problem in America, the problem of the peoples of Africa and Asia, and the political development of Europe as one. I began to unite my economics and politics; but I still assumed that in these groups of activities and forces, the political realm was dominant.

"Yes, it is a wonderful and beautiful place, this great and famous University, in the center of the new, old world of Tannhauser and Bismarck. The spell of the city is upon me tonight as I stand looking from the Mittelbau of the vast building in the Opera Platz. On the right is the Royal Library with its treasury of souls dead and gone; that and this is Germany, whose empire is the air. Directly opposite over the flickering gas jets of a pretty little methodical Square stands the stolid Dresdener Bank which is the mercantile Germany which once met the ridicule of the Royal Library. In the left-hand corner rises the dark bulk of the Catholic Church -- a stucco reproduction of the Pantheon at Rome. That is the Germany that sought to lead this world.

"On the left is the Opera House, which Frederick Wilhelm raised "Appolini et Musis" (To Appolo and the Muses). Above, the setting sun has left applauding pink and blue clouds, and the tender crescent moon hangs hesitatingly above the Augustine Vase. A silently eloquent scene: a tale of a great city -- the past and present hopefully ominous. I wonder why this all is -- I wonder what it all means -- I wonder --

and wonder! I look out over the bowed head of Alexander von Humboldt sitting in his great marble chair and I see the bronze Frederick surrounded by his soldiers and his Kant, riding up the Unter den Linden under the full moon. His back is toward the Reichstag and he seems coming toward the great dark palace yonder where William the Second sits brooding over his army bill.

"I find a boarding place. My landlady is elderly, a bit garrulous, but motherly and kind withal, and it really is fun to see her puzzle over my German now and then. My bill is ceremoniously directed to the 'Geehrter Herr von Bois'. For the various privileges enjoyed in this den of mine I pay $8 per month, including coffee. I had nearly forgotten to mention my colossal stove -- a German tile stove with its cleanliness and ornamentation is certainly a thing of beauty but it's hardly a joy at the time of year when it should be. It is altogether too modest and unobtrusive and has inherited the national characteristic of slowness to a most surprising extent.

"After coffee I wander up to the University. Through the busy little square, with its fine statue of the great Stein, through the Leipziger Strasse, the third great thoroughfare of Berlin, with its metropolitan hurry and sheen; then into the second great stretch, the Friedrichstrasse with its continual crowd and more easy, pleasure-seeking aspect; finally into the Unter den Linden, rightly more famous for its history than for its rather disappointing appearance as a thoroughfare.

"In such surroundings I live pretty contentedly and with no more than the average amount of homesickness. I take my coffee at eight with two fat rolls and butter. Most students, I believe, take it earlier, and about ten o'clock shoot through the academic halls munching a "Zweiter Fruestik" consisting of a roll sandwich, if they have pretensions to upper-ten-dom; or black bread sandwich if they are more humble. My dinner I take at 12 or 1, the time of dining being irrevocably settled for the nation by the name of the meal -- Mittagsessen. I always eat in a restaurant and generally get enough for about 21 cents, including beer and a tip to the waiter. My supper I take in my room from my private larder -- my landlady warming tea for me. My total expense including the opera and theater once or twice a week, the Philharmonic and various miscellanies cost me about $200 a semester. I could make it for $150, on a

pinch.

"On the Unter den Linden, just beyond the Friedrich der Grosse statue and opposit the Opera Platz, stands the "Friedrich-Wilhelm-Universitaet zu Berlin" as official documents call it. There's a story around Harvard, of a simple-minded stranger looking over the Yard and finding the buildings strewn about in that endless irregularity so dear to English traditions, who inquired anxiously: "Well, now, just which one is the Harvard University?" Here the problem is simplified, for the vast stone building before us, with its two wings, contains so much of the institution that it can be right off called the University. It is built of gray sandstone and consists of a center and two wings, enclosing a paved court on three sides. The fourth side on the Linden is closed by an iron palisade with a great gate in the center and on the side two large marble statues of William and Alexander von Humboldt.

"The building is three stories high, the second story being the highest and the first story more of a basement and flush with the ground. Six fluted Greek columns reaching to the roof adorn the front entrance surrounded by sculptures and the inscription "Universitati Litterarae Fredricus Wilhelmus III, Rex ~~[illegible]~~ A-C1D1 ccc VIIII The rather small main portal is surmounted by the inevitable grilled Prussian eagle and leads into a large low, marble-paved hall. This is the general students' rendezvous; it contains the various business offices, the theater ticket agency, a small lunchroom, notice board for official news, advertisements, etc. and numerous recitation rooms. This is generally thronged with students from nine to twelve on weekdays; at twelve or one they disappear and not a soul can be found till four or five, when again it is crowded. It is not a Harvard student crowd, however, rather a dress parade, where all are uniformly polite, hats being raised to most intimate acquaintances and all promenading and conversing in groups in ordinary conversational tones.

"Matriculation commenced the 15th of October. I registered as number 85 of the more than 5,000 who usually matriculate here. The lectures mostly began the week following. Each professor writes a more or less legible announcement as to the

time and place of the commencement of his lectures. The student then has to scurry about and examine a dozen different blackboards and hundreds of different slips of paper to find his particular professor's announcement. Poorly written English is bad enough, but when puzzling German is cloaked in execrably written German script, it is a combination fearful and wonderful to behold. Schmoller's scrawl caused me trouble, Wagner was well-nigh illegible, but Treitschke -- well, I haven't deciphered his announcement yet.

"The lectures are of two sorts -- private and public. The first have four hours a week, generally mornings on Tuesdays or Fridays, or on two afternoons from four to six. These lectures must be paid for at the rate of $5 a course for the semester. In this heaven of eclecticism every student must take at least a one-point course. The public lectures are full, and have one or two hours a week, on Wednesday or Saturday mornings or on other evenings at six or seven.

"An American astounded a professor by asking how much work a student was expected to do. The real answer is none or all he can manage. Only two things are required: the signature of the teacher at the beginning and at the end of the course. One of the articles furnished at matriculation is an "Anmelde-Buch" in which the names of the various professors and lectures you propose to take must be written. This is taken to the Questor who receives the tuition and receipts. Then you must trot to each professor and get his signature for each set of lectures at the beginning and end of the semester. Autographically this is interesting, but otherwise it is an unmitigated nuisance. In the first few weeks scarcely has a professor the last words of his lecture out of his mouth, than students waving their white books swoop down on him like an avalanche, forming a circle about his desk, of which he is the worried center. One does not wonder that the writing of Berlin professors is frightfully bad, and the Anmelde-Buch signatures in most cases absolutely unrecognizable.

"The recitation rooms are lighted by electricity, plainly furnished with desks and seats, and fairly well heated and ventilated. The regular recitation room proceedings are much different from ours and warrant description. Take for example a

lecture in political economy by Wagner. It is booked for Mondays and Fridays, from six to eight in the afternoon in Auditorium No. 40 -- a large room seating perhaps 300 and generally full. At six you find a half-dozen students. They stroll in desultorily till ten minutes past. Then they come in crowds until 15 minutes past. The regular lecture room paraphernalia consists of a small black desk piled high with notebooks, pen, and pocket inkstand. At 15 or 20 minutes past, there is a general stamping of feet that betokens the arrival of the professor. A tall man enters. He is bald on the crown, with a little fringe of brown hair hanging to his collar; he is probably past sixty, with a closely cropped little gray mustache, a firm chin, a face rather stern but still kindly, with traces of wrinkles used for emphasis and for smiling. This is Adolf Wagner, the great economist. He speaks in a quick, decisive manner, does not confine himself much to his notes, and shows a certain sympathy with his audience not common in German professors. He wears eyeglasses over a pair of spectacles. He sits when he lectures, tilts his chair, gesturing a bit with his right hand, and using his little finger as an exclamation point.

"The students take part in the recitation room proceeding mainly with their feet. A shuffle of feet presages disapproval, a stamping means applause. A few days ago, when Wagner mentioned Bismarck and called him the principal creator of German unity, a rub-a-dub followed from the 300 students for nearly five minutes. Shuffling is used also to express disapproval of late arrivals. Sometimes the disturbance is not generally thought great enough and the shuffling is rebuked by hissing. At other times when the tardy one is unusually noisy, there is a deafening whirr of feet which stops the lecture and never fails to abash the intruder. Commencing late, the lectures also end late. The students generally submit to remaining 5 minutes past but after that there comes an ominous clicking of inkstands and now and then designed and premature applause cuts off the lecturer's last words.

"To me by far the most interesting of the professors is the well-known von Treitschke, the German Machiavelli. He never comes to his lectures until very late, often commencing his ten o'clock lecture on Politik at 10:30 -- never before 10:20

He is a large man, of 'fair round belly with good capon lined', or possibly with the more unpoetic beer; he generally dresses rather carefully in dark gry or blue cutaway with cylinder hat, gloves and the all-pervading German cane. His complexion is dark, his well-kept hair and full beard iron gray, and his features rather gross. He is ston deaf with a slight impediment in his speech, and a sort of breathless way of speaking that makes him very difficult at first for a foreigner to understand. The task, however, is worth all pains, for his is one of the most forcible and independent minds on the faculty. His entrance is always the same. He comes in slowly, somewhat out of breath, with his overcoat, hat, and cane on his left arm. These he hangs on the wall and ascends to his desk where he stands as he speaks. He then takes off his right glove and putting his head a bit on one side says: 'Meine Herrn,' with a falling inflection. Then begins the lecture, which, as I overheard a puzzled and sighing American say, 'has but one period and that's at the end.' He does not speak so fast, but his articulation is bad (imagine badly articulated German!) and he has a way of catching his breath in the midst of his sentences instead of at the end, giving the ear no natural pause.

"His lectures are nevertheless intensely interesting. He is rapt in his subject, a man of intense likes and dislikes, beliefs and disbeliefs. He is the very embodiment of united monarchical, armed Germany. He has pity for France, hearty dislike for all things English -- while for America, well, the United States is his bete noir, which he seldom fails to excoriate. One day he startled me by suddenly declaring during a lecture on America: 'Die Mullattern sind niedrig! Sie fühlen sich niedrig.' ('Mulattoes are inferior; they feel themselves inferior.') I felt as if he were pointing me out; but I presume he was quite unaware of my presence. However my presence or absence would have made no difference to him. He was given to making extraordinary assertions out of a clear sky and evidently believing just what he said. My fellow students gave no evidence of connecting what he said with me. Yet von Treitschke was not a narrow man. His outlook is that of the born aristocrat who has something of the Carlyle contempt of levelling democracy. On the other hand he criticizes his own

government and nation unsparingly when he sees fit -- I have heard him characterize one of the highest officials as a 'verrueckte Dumkopf' while the students cheered. He grows enthusiastic in his lectures, gestures considerably, and has a little half-caustic smile which always foreshadows some sharp critical sally that usually brings down the house; as for instance when he characterized some current author's work as efforts 'to widen the boundaries of human stupidity.'

"The Berlin student is not typical of the type, nor will the stranger find here so much of the purely student life. Berlin stands, I imagine, to the smaller universities something as Harvard to the Western Universities. The students generally go to a local university first, then spend a semester or more in the classic glare of Berlin with its 83 full professors, 87 assistant professors, and 186 instructors; returning finally to their own universities to take their degree. The galaxy of learning here at Berlin is not so brilliant today, I imagine, as in the day of the great Mommsen.

"Yet it is sufficiently attractive. All of these professors, of course, I have not yet had the opportunity of seeing, much less hearing -- indeed, four years at Harvard left some great names and faces unconnected in my mind. Those I have seen here are more especially connected with my department of political science; but they are celebrated enough to merit some particular notice. Wagner I have already spoken of personally -- his hobby is the discovery of the golden mean between the warring extremes of his science. He comes dangerously near committing the common mistake in such cases of mistaking his extremes. He is publishing a new edition of his valuable Lehrbuch, and as inducement is offering various blandishments to the national apparition of socialism. The bete noire of the German economist is, of course, the British school founded, as Wagner says, with a jerk of his head, by 'Adahm Smiss.' Wagner, however, gives them due credit for their great work and agrees with them more fully than with the younger German radicals headed by Schmoller.

"There is evidently no intellectual love lost between Wagner and Schmoller.

Schmoller is a large man about 50, with flowing beard, grown bald and prematurely gray. His complexion is dark and his eyes small and bright. He wears glasses, speaks with an accent, and is evidently a man of strong prejudices, fearless and sharp in expression of opinion, but a tireless investigator. He strikes me as more of a historian than economist. He conducts the economics seminar every other semester, alternating with Wagner. This semester Schmoller has the seminar, consisting of upward of 40 members, two of whom are American born, representing Harvard and Boston University. The papers presented so far have been indifferent, but the discussion animated and intelligent.

"Von Gneist is apparently the only German who has any wide knowledge of the Anglo-Saxon history. He is old and rather droll, wears a little flaxen wig, and meager gray side-whiskers. His enunciation is not good, and he sits and talks away in easy conversational tones, interspersing his drier matter with a joke, a criticism, or a little general political philosophy at which he himself smiles complacently. Zeller, known in philosophy, is an old man, who dresses neatly, and stands while lecturing. He has a benevolent face, but a very weak voice and most of the Americans deserted him after the first lecture. Perhaps the most widely known professor today in Berlin is Dubois-Reymond.

"The difference in general appearance between the Berlin student and his Harvard brother is very marked. The Harvard man affects a slouchy stride, jams his hands in his pockets, dresses well, and yet with a certain conscious carelessness; and would appear as a sort of devel-may-care young fellow, out of swaddling clothes but not yet in straitjacket. The Berlin student affects a strut, never uses his trousers pockets or whistles in public, dresses poorly but with a certain primness of collar, gloves, and cane; and would appear as a young man of intellect, promise, and present importance. A crowd of German students is more picturesque.

"In social life particularism is more marked here than even at Harvard. The simpleton who asks: Well, how about the social life of the Harvard students? should be questioned in turn: Which Harvard students? So in Berlin. Most of the students have spent their 'kneipe' years elsewhere and come here if not for more serious, at least for a different sort of play. The 'Verbindungen' do not consequently play so

much of a role here as elsewhere.

"After so much has been written, most people understand the German student fraternities. They are of two sorts: the Verbindungen and the Vereine. The Verbindungen are in two great divisions: the ~~Inter~~-Verbindungen with affiliate chapters in all universities; under these come the corps, to which formerly only the nobles belonged, but which now differ but little from the other divisions -- the Burschenshaften, the Landsmannschaften, which have the bulk of members. Second, the 'Freie Verbindungen,' which are local societies.

"All the inter-university Verbindungen wear the student caps, a band of three colors across the breast; practice the sham scar duels to a considerable extent, do not wear bears, 'kneipe' together, and address each other by the familiar 'Du' instead of the polite 'Sie.' The objects of the Verbindungen are purely social. They meet at stated times in their 'local', drink beer, and sing, fight, etc. Duelling still goes on -- have recently seen three or four freshly cut cheeks and heads -- but not to a very great extent. I should judge that less than a tenth, possibly less than a twentieth of the ~~students,~~ members bear scars. The custom as carried out now is entirely harmless -- more so than the Harvard Dickey initiation, I should say. All the different societies parade slowly in the little square before the University in full regalia. Their number are, however, insignificant -- generally not more than fifty or sixty in all.

"The Vereine are clubs for local social and literary purposes. They wear no caps or only colors on their fob watch chains. There are numerous ~~such~~ Vereine in Berlin for all purposes, from philosophy to chess, and from converting the Jews to Alp-climbing. Outside of this, there is also an independent 'student union' of those belonging to no societies.

The political situation is followed with keen interest by the students, though there is very little outspoken opinion. It is easy to see, however, that William II is not altogether popular among the young men, that many are not averse to coquetting a bit with socialism, and that there is a general unrest and dissatisfaction among these future citizens. ~~One incident which recently occurred is not without interest.~~

The Independent Student Association has been holding a number of meetings lately in the auditorium of the University. The Jews, who are not admitted into the Verbindungen, and the socialist students, captured one of the meetings and had things their own way. This aroused a perfect furore among the German nationalist students, among whom a strong and even bitter anti-Semitic feeling is developing. They called a meeting in the same hall, but Rector Virchow refused to allow it, fearing that the breach among the students would become too great. Whereupon the honored professor received some disrespectful manifestations in his recitation room and the meeting was called in an outside hall by a handbill headed:

"Comrades! Since a full expression of opinion in the University precincts has been refused to the great national thinking part of the Berlin students," etc.

"There were upwards of 700 students present, seated along rows of tables, smoking and drinking beer. The meeting opened with a 'Hoch' to the Emperor, and than the assembly disported itself in condemning the Jews in no uncertain terms, even showing marked discourtesy to several speakers who sought to defend them. The meeting ended in smoke and song and afterward I went to a Socialist meeting as a fit conclusion to the day.

"Naturally I am attracted to the socialist movement, but the history of the development of Marxism and of the revisionists like Lasalle, Bernstein and Bakunin was too complicated for a student like myself to understand, who had received no real teaching along this line. I was overwhelmed with rebuttals of Marxism before I understood the original doctrine. Even such great occurrences as the French Commune were minimized by the main history teaching to which I had listened in America. Until the fall of Bismarck in 1890, socialist organization or agitation were illegal in Germany, but the increase of industrial workers had led to a vast scheme of state insurance for accidents, old age relief and the like under Bismarck. In 1891, William II through his new Chancellor Caprivi tried a new social policy which allowed socialists to organize and a new Social Democratic party was beginning to grow rapidly at the time I arrived as a student. I frequently attended their meetings, but my student rank hindered me from that close personal acquaintanceship

with workers which I should have had for complete understanding. I did soon realize that the Social Democratic party was the largest in the state, but kept from its rightful representation in the Reichstag by privilege and systematic gerrymandering.

The pageantry and patriotism of Germany in 1892 astonished me. In New England our patriotism was cool and intellectual. Ours was a great nation and it was our duty to preserve it. We "loved" it but with reason not passion. In the South, Negroes simply did not speak or think of patriotism for the nation which held their fathers in slavery for 250 years. On the other hand we revered rebels like John Brown, Garrison, Phillips and Douglass. We knew little or nothing of rebels like Robert Dale Owen, Henry George or Edward Bellamy. When I heard my German companions sing "Deutschland, Deutschland ueber Alles, ueber Alles in der Welt" I realized that they felt something I had never felt and perhaps never would.

The march of soldiers, the saluting of magnificent uniforms, the martial music and rhythm of movement stirred my senses.

Then there was that new, young Emperor, "von Gottes Gnade, deutsche Kaiser, Koenig von Preussen", who led and pin-pointed the pageantry. Ever and again he came riding ahead of his white and golden troops on prancing chargers through the great Brandenburg gate, up the Linden "With banners gaily flying, with trumpet and with drums!" I thrilled at the sight even though I knew of that shrivelled left arm and of his impossible demand for supreme power. I even trimmed my beard and mustache to a fashion like his and still follow it. If I a stranger was thus influenced, what about the youth of Germany? I began to feel that dichotomy which all my life has characterized my thought: how far can love for my oppressed race accord with love for the opporessing country? And when these loyalties diverge, where shall my soul find refuge?

Germany took up my music and art where Fisk had left me; to religious oratorio was now added opera and symphony, song and sonata. I heard cheaply and often from the balcony seats offered students, the great music of the world: but I heard it in reverse; I heard Wagner before Verdi; I listened to Tannhauser before "Il Trovatore." Nevertheless my delight in good music was signally increased. Beside the Negro folk

songs I could now place "Jetz geh' I' an's Brunelle, trink aber net!"

The many vacations of the academic year I used for trips in Germany and to other parts of Europe; but missing after the Summer in Eisenach, the companionship of close friends, I kept up my older habit of travelling alone. This began in New England where as I grew up I was thrown increasingly on my own company and began to enjoy uninterrupted thought and fantasy. At Fisk I had less of this and yet even there found myself taking walks alone and mooning in favorite nooks by myself. In later life this habit increased, especially when I was in conflict with my fellows and my world or preferred my own company to that of antagonistic or frivolous companions. The habit was early misconstrued as due to feelings of superiority, rather than to sheer lonesomeness.

I had some student companionship in Germany and might easily have had more, I was invited to join a "Gesellschaft" for study of comparative international law; I found there some good companions and we talked and published a set of by-laws. To this we added a song book, to which at unanimous request I added a translation of the then popular "Ta-ra-ra-boom-de ay!" Nevertheless I took my first excursion alone and chose the Hansa cities of north-west Germany. I planned this trip for March, but before leaving there came my twenty-fifth birthday on February twenty third. I asked in no companions.

It was in th long, dark winter of northern Germany, and while I was comfortable, I felt a little lonesome and far-away from home and boyhood friends. I arose at eight and took coffee and oranges, read letters, thought of my dead parents, and was sorry. The night before I had heard Schubert's beautiful unfinished symphony planned my celebration and written to Grandma and Mabel and had a curious little ceremony with candles, Greek wine, oil, and song and prayer. Then I dedicated my library to mother, I wandered up to the reading room, then to the art gallery, and finally had a fine dinner with Sonderhof over a bottle of Rudesheimer and cigarettes. Then we went to Potsdam for coffee and saw a pretty girl. We came back to the Seminar, took a walk supped on cocoa, wine, oranges and cake and came home alone. I had candles in

my room on Schoeneburger Ufer, and a dedication of my small library to the memory of my mother; and I wrote something rather sentimental about life in general:

"Night -- grand and wonderful. I am glad I am living. I rejoice as a strong man to win a race, and I am strong -- is it egotism -- is it assurance -- or is the silent call of the world spirit that makes me feel that I am royal and that beneath my sceptre a world of kings shall bow. The hot dark blood of a black forefather is beating at my heart, and I know that I am either a genius or a fool. O I wonder what I am -- I wonder what the world is -- I wonder if life is worth the Sturm. I do not know -- perhaps I never shall know: But this I do know: be the Truth what it may I will seek it on the pure assumption that it is worth seeking -- and Heaven nor Hell, God nor Devil shall turn me from my purpose till I die. I will in this second quarter century of my life, enter the dark forest of the unknown world for which I have so many years served my apprenticeship --- in the chart and compass which the world furnishes me I have little faith in -- yet I have nothing better -- I will seek till I find -- and die. There is a grandeur in the very hopelessness of such a life -- Life? And is life all? If I strive, shall I live to strive again? I do not know and in spite of the wild sehnsucht for Eternity that makes my heart sick now and then -- I shut my teeth and say I do not care. Carpe Diem! What is life but life, after all? Its end is its greatest and fullest self -- this end is the Good: the Beautiful is its attribute -- its soul, and Truth is its being. Not three commensurable things are these, they are three dimensions of the cube. Mayhap God is the fourth, but for that very reason he will be incomprehensible. The greatest and fullest life is by definition beautiful, beautiful -- beautiful as a dark passionate woman, beautiful as a golden-hearted school girl, beautiful as a grey haired hero. That is the dimension of breadth. Then comes Truth -- what is, cold and indisputable: What is height. Now I will, so help my soul, multiply breadth by height, beauty by truth and then goodness, strength shall bind them together into a solid whole. Wherefore? I know not now. Perhaps infinite other dimensions do. This is a wretched figure and yet it roughly represents my attitude

toward the world. I am striving to make my life all that life may be -- and I am limiting that strife only in so far as that strife is incompatible with others of my brothers and sisters making their lives similar. The crucial question now is where that limit comes. I am too often puzzled to know. Paul ~~it~~ put it as meat-eating, which was asinine. I have put it as the (perhaps) life-ruin of Amalie which is cruel. God knows I am sorely puzzled. I am firmly convinced that my own best development is not one and the same with the best development of the world and here I am willing to sacrifice. That sacrifice to the world's good becomes too soon sickly sentimentality. I therefore take the world that the Unknown lay in my hands and work for the rise of the Negro people, taking for granted that their best development means the best development of the world ....."

The next month I started on my trek and kept a diary:

"It was the 24th day of March, Friday, that I started -- a beautiful day with clear blue sky and floods of the sweetest yellow sunshine imaginable. I arose at half past six and put the finishing touches to my packing. My coffee came at 7 with some ham for my sandwiches. Then I bade them goodbye -- two lonely old people, and went downstairs and ordered a cab. The cabman cheated me -- they always do. I only try to escape as cheaply as possible. I rode only the Friedrichstrasse Bahnhof and sent my canvas bag to Cassell, then boarded an omnibus and rode to the Stettiner Bahnhof, where I took the 8.25 'express' for Luebeck -- I quote 'express' from the timetable, for it was like all German trains, very, very deliberate.

"Oh, but it was a glorious ride, scarcely a could in the sky -- one perfect symphony of yellow sunshine, blue sky, and blue lakes and marshes; with a little more highland, the scenery would have been perfectly grand. The country, however, was flat, with wide shallow lakes and marshes and now and then little rolling hillocks and over the little red-tiled villages with cute and curious guardian churches. There were many low-thatched roofs to be seen, and once a canal with boats propelled by hoisted sails. And over all was the breath of the new-born spring, breathing an

almost magic incense over the plowed fields, the roughly wholesome peasant maidens and the homely homes all full of love and sorrow.

"I had a coupe all to myself and I sang in my joy at the wonderful evening -- and sang what I had heard two nights before -- the wonderful chorus from the Ninth Symphony of the Master Beethoven -- 'Alle Mensehen werden Brueder" -- so wonderful -- so wonderful -- I could sing it over the wide gray-green fields, over the green pine forests -- over this great North world awakening today into a new life of toil and gladness. There was little change in the scenery -- every now and then shallow lakes and marshes, villages and rolling hills, pine and birch forests and the like. At a

Next comes the Rathhaus, its side elevation reminding one of the Lubeck but on the whole not nearly so interesting. Then I saw a palace again -- and wouldn't live in a palace on a salary, a great endless pile of square, cold, cheerless rooms full of mustn't-touch articles. The palace of the old Hanoverian kings was chiefly remarkable for its series of fine inlaid floors which were really grand.

"One notices in Hanover as in South Germany not a few signs of German particularism -- Hanover clings jealously to her title of 'royal' residence, erects a big statue to her king Ernst-August and speaks with some feeling of her old kings. In the afternoon I wandered to the Herrenhausen, saw the great palms and sat in the garden of the Georges looking at the bad statues and the green grass. Well, I caught the train -- one can't miss a German train -- and started on my journey.

"There was a pretty schloss in Naumberg, whose only fault was that it was new. Gottingen, a perfectly charming little town, nestles in a broad plain with blue mountains for a background. So at last I came back to Berlin and my work."

I was considerably alarmed at the end of my second semester toward the middle of the year 1893 when no word arrived as to re-appointment to my fellowship which I had confidently expected. I cabled without success. Finally this rather casual reply came from the President of Johns Hopkins, D.C. Gilman:

"The Slater Trustees have renewed your appointment with the understanding that you should give a note for one half the sum as before. You will presently hear from Mr. Strong representing the Treasurer.

"A telegram was received here May 8th, reading: 'Was Du Bois reappointed?' without signature. I answered it and there came back a dispatch from Berlin, saying that the message was undelivered. I did not repeat the message.

"I shall hope to hear from you after receiving this note, and to have the semi-annual letters in the coming year as in the past."

The Christmas holidays of 1893 I spent in making a trip through south Germany. Three of us visited Weimar, Frankfort, Heidelberg and Mannheim. From Christmas Day

to New Year's we stopped in a little German "Dorf" in the Rheinpfalz, where I had an excellent opportunity to study the peasant life closely and compare it with country life in the South. Three of us started out -- a Scotsman, an American and myself. The American was descended from German immigrants to the United States and had relatives in the Rhineland in southwest Germany. We spent Christmas in the village of Gimmeldigen. What a lovely holiday, with tasting of the new wine crop, visiting and feasting among peasant folk who treated me like a [redacted] prince. We visited perhaps twenty different families, talked, ate and drank new wine with them; listened to their gossip, attended their social assemblies, etc. The bill which my obsequious landlord presented on my departure was about one-tenth of what I expected. We stayed in Neustadt a week, with a family whose dead father had driven the first locomotive into France at the opening of the Franco-German war. The daughter was a fine, homely young woman who did everything to make us comfortable.

We then went to Strassburg, Stuttgart, Ulm, Muenchen, Nuernberg, Prague and Dresden. In those places we stayed from one to five days following our Baedekers closely and paying much attention to the Muenchen and Dresden art galleries. The whole trip cost me about eighty dollars. We parted from our American: he was a good-hearted but rather vulgar man, with an education that left no visible results. John Dollar my British companion and I got on famously together because we were so opposite in temperament. He was coldly and conventionally British in dress and speech. He paraded more than he walked, hated Catholic priests for no reason which he ever stated and was constitutionally afraid of women. With this went a strange simplicity and deep sympathy with human suffering. Later we decided to go down to Italy; to Genoa, Rome and Naples and then over to Venice and Vienna and Budapest. On this trip we used German instead of English because as Dollar assured me it would be much cheaper. He was quite right. We went over the vast barrier of the Alps gazing up on its heaven of snow and sky and then down on the incomparable beauty of the Italian lakes.

These were troubled days all over Europe. Switzerland was following Socialism

by adopting social insurance and was on the brink of buying up her railroads. Humbert I and Leo XIII were at loggerheads over papal territory in Italy. Crispi had risen, fallen and come back to power, and was now heading for the fatal Ethiopian war of 1896. We went to Genoa and Turin; to Florence, Rome and Naples. I saw for the first time some of the world's great sculpture and painting; its historical monuments; I sensed the historical difficulties between France and Italy when Dollar and I, mistaken for Frenchmen were stoned by youth in the Roman forum. We lived cheaply and fared bountifully. We saw Naples, free, lovely and dirty, in all the gay abandon of the fin-de-siecle. It was a great and inspiring trip. We turned back north and saw Venice with its doves and the Palace of the Doges, and then went north east to Vienna.

This was Vienna in its glory, not at its height but still magnificent. I remember the great Opera house and the way men stood in their seats and looked the audience over; the leisurely way in which we all promenaded in the wide and long halls and lunched at will; and then the finely conducted music and acting. It was one of the world's greatest and most influential cities. Here Dollar left me. I do not think he liked Austria as much as Rome and also his engagements called him.

As for me I had further scenes to examine. While at Berlin, I found myself once explaining to a schoolmate, Stanislaus Ritter von Estreicher, the race problem in America. He was not as impressed as I thought he should be. He said "I understand only too well; but you should see the race antagonism in my home. Come to Krakow and see the clash of German and Pole!" I promised that I would visit him when near. So now I travelled alone into Hungary, with the object of turning north through Slovenia and over the Tatra mountains into Poland. It was a journey with a hint of adventure and with a far-off likeness to my American South.

In Budapesth I was struck by the hostility to German Austria. This was four years after the suicide of Crown Prince Rudolf at Meyerling. Taafe was prime minister and had sought to placate the rising Hungarian drive to greater independence by grant of manhood suffrage. But the Hungarians were asserting their desire for independence. In the post office, they pretended not to understand German even when I tried to buy stamps. It would be the very next year that Kossuth was to

die in Italy and increase the demand for Hungarian independence from Austria.

I fared north over that great plain along which the Magyars came west a thousand years before. I had glimpses of Hungary as I travelled slowly by third-class railway coach, stopping to spend a night here and there. A Hungarian peasant wrote later of conditions in Hungary at the time: "Come with me in the Spring and hoe for sixteen hours for twelve cents a day; eat dry bread and rotten bacon, sleep in a hole dug with his own hoe for six hours. We work even longer in summer. On the putzsas four families, 20 to 25 people, live in one room. I have seen men collapsing on the street from starvation. Such things are not exactly calculated to make one enthusiastic about the Fatherland. Do our lords think we shall starve to death without a word?"

All this I did not actually see, but I heard its echoes; my dark face elicited none of the curiosity which it had in blonde north Germany, for there were too many dark Gypsies and other brunettes. I saw poverty and despair. I was several times mistaken for a Jew; arriving one night in a town of north Slovenia, the driver of a rickety cab whispered in my ear, "Unter die Juden?" I stared and then said yes. I stayed in a little Jewish inn. I was a little frightened as in the gathering twilight I traversed the foothills of the dark Tatras alone and on foot. I crossed into Poland and stopped to go down into the salt mines of Wielitza.

Finally I came to Krakow and my friend. It was an interesting visit and an old tale. Tyranny in school and work; insult in home and on the street. Of course here, in contrast to America, there were the privileged Poles who escaped personal insult; there was the aristocracy who had some recognized rights. The whole mass of the oppressed were not reduced to one level; nevertheless the degradation was only too familiar. The venerable librarian of the university treated me to Polish "schnapps" which nearly choked me. The family made me most welcome. I never saw my schoolmate again, but I heard later that in the First World War, the Germans tried to make him a Quisling for them. In 1940, von Estreicher died in a German concentration camp, after he had refused to be one of Germany's puppet rulers of Poland. I came back to Berlin by way of Prague and Dresden and started my third and final semester. Schmoller

wanted to present me for my doctorate, despite the fact that I had not finished the "triennium" required in a German University and my work at Harvard was not recognized. The faculty was willing in my case but was restrained by the professor of English who threatened to push the similar claims of several Britishers. I therefore regretfully had to forego the chance of a German doctorate and wait for the degree from Harvard.

As a farewell to Germany, I made the Hartzreise in the spring of 1894. Again I went alone, but with my now familiar German and wide experience of travel, I felt at home. I kept no diary of this trip, but started west from Berlin to Magdeburg and Halberstadt in Saxony. I passed the splendid seat of the Prince zu Steinberg-Wernigerhode. Then I climbed to the Brocken and lived Walpurgis night again. I forded streams and climbed mountains until in full darkness I came to an old inn. Back at the inn I ordered beer and kalbsbratten and dined alone. This was my peffect farewell to a Germany which no longer exists.

I stayed in Europe as long as the last penny allowed -- eager for work and home and yet reluctant. My old pal Dollar wrote me from England and we planned to meet in London before I left for America.

I now turned home. If I had spent a fourth semester at Berlin, that would not only have exceeded my funds covering two years of work but also have taken me up to Christmas and made the securing of work in America for the next year unlikely. A better alternative occurred to me and that was to spend the Spring in France. The years of preparation were over and life was to begin. I computed my balance of funds carefully. I could go first class to London, spend a short time with my friend Dollar and then take first class cabin accomodation to the United States. Or by carefully husbanding my funds, riding third class on railways and returning steerage to New York I could spend a month or more in France. My earlier idea had been to spend a year in Germany and a year in France in graduate study; but I had to choose between a more complete German experience and two incomplete glimpses of both countries. So I spent nearly all my time in Germany. But here at the end was an

opportunity at least to have a glimpse of France and then rough it home. Of course if I had intimated my need for further funds to Dollar he would have been willing and able to make me a loan. But here my New England frugality stopped me. I already was in debt for my half of my fellowships; I had no job; and I had lived well enough in Europe to endure for a week, the experiences of immigrants to America. Even they on arrival might easily have a better chance for life than I in my own country.

I went to France and saw Paris; wandered wide and deep and made my French fairly understandable. I sensed the everlasting lure of Paris, three years after the suicide of Boulanger and the year of the final completion of the Franco-Russian alliance. It was also the year President Carnot was assassinated and Dreyfus condemned for treason. But these events gained only my passing attention. I was fascinated by the glory of French culture in painting, sculpture, architecture and historical monument. I saw Sarah Bernhardt; I haunted the Louvre.

In June I met my friend Dollar in London for a few days of a last farewell. Dollar, dear old boy, hadn't the slightest idea that I was going steerage and prattled finely about "selecting a cabin" and all that. We whiled about the depot, watching the crowds, edified by Dollar's explanation of the station until finally I entered the carriage, bade my good friend adieu and rattled off.

We stopped at Southhampton in a sort of flurry, nobody not even the guards seeming to know what we were to do next. As we stood helplessly on the platform the guard suddenly screamed "2nd cabin passengers this way" and left us steerage people alone. Finally they called us and grabbing our luggage we followed our guide who led us thru' the streets in one long line to a small brick shed about a mile off, where we deposited our baggage in the ante-room and entered. Within the walls were white-washed bricks, the ceiling wooden and iron and wooden columns in the center. At one end there was an alcove where several cooks were busy and

distributed thru' the room were long wooden tables and benches on which not over clean tablecloths were spread. It was a most miscellaneous crowd: men, women, children, girls, husbands, wives, ~~English, German, Jews Negroes~~ — and as I should judge about an even mixture of honest people and rascals. Let me describe some types about me: opposite me a good-natured, honest, red bearded Englishman, well dressed — paper collar, silver ring etc. Tells me he's been in America before and talks sensibly. Beside me a short bull necked candidate for states prison, drunk and sleeping with his head on the table; on the other side an ill-smelling old man with chin beard, goodnatured and a bit stupid. Yonder is a tall girl — rather good looking, a bit tawdrily dressed — afraid for her future. There is a motherly old lady in black with a look of sorrow on her face — poor thing. They're eating now — grabbing things and swilling tea.

Well there we sat in this great bare room that whole afternoon: the ship would not sail till the morrow and we must of course sleep there unless as the steward gently hinted, we went to a hotel. By careful maneuvering I secured a doorless compartment alone and ~~a rather~~ an ill-smelling bunk. A rather restless night it was however — the smell, the noise of the drunken roisterers and the thoughts of the wild trip I was about to take. Two of the roisterers came staggering in about midnight, mistook my compartment for theirs, staggered about, guffawed, hiccoughed and joked and at last managed to tumble ~~into~~ bed. Then I was waked again by one of them crawling thru' the hall on his knees with a lighted match, seeking a penny he'd dropped — not exactly a comfort giving exhibition in a dry, wooden hovel. Finally my troubled morning dreams were mingled with the stench of the beer which his poor stomach refused longer to hold. This was too much — I could not eat breakfast but rushed out of the fetid atmosphere of the crowded hall into the wet misty atmosphere of Southhampton. It was early Sunday morning and all shops were closed — oh what a dreary lonesome feeling that was. At last I bought an

indifferent breakfast for 10 pence and then returned to the "barracks" to find that we would not sail before afternoon. In despair I started off again and succeeded in finding a more interesting wandering. Southampton is in many respects a fine old town with its historic gates and old bits of town wall and I enjoyed this all thoroughly. Finally I returned to dinner — a jam and a crowd in which I joined with loathing. Then came a baggage van and away we straggled to the quay amid the undisguised amusement of the inhabitants — and it was a picturesque and laughable crowd — young and old — lame and well — rags and fine clothes — Jew and gentile, russians, English, Americans, Poles, Germans, French, Greeks, Austrians — all running and waddling along. Ah — it was funny and yet sad — this great stream of hopes and longing — of disappointment and sorrw, of happiness and crime about to turn itself into Americans. At the quay we were hemmed in by ropes for about a half or three-quarters of an hour and a big red tag with the stamps of the U.S. Consul attached to our bags certifying that he had inspected us — which was of course a lie. Finally we showed our tickets and came on board. In a few minutes, the two tugs started with us in tow and we had embarked.

I'm not myself of the seasick getting kind but I must confess that the next morning as I felt the ship rising and fading away under my feet and rolling from side to side with something more than ordinary enthusiasm — I felt a certain settled melancholy which compelled me to confine my first breakfast to an orange and rush in rather undignified haste from the dark dungeons below onto the wet and dirty deck. I was not sicker than this — missed no meals and gave up no further offering to the sea; but it was a trying time. The sea was very choppy even a bit stormy. Then in addition to that, the filth and nastiness of the people about me, the small amount of deck room — that was enough to cause the stoutest stomach to revolt, even on land. And the people were sick — oh so sick, it was pitiable to see them and yet at the same time so laughable. In spite of the efforts of the crew it was well nigh impossible to keep the deck clean, everywhere lay unsightly messes — as one fellow

said as I told of the good dinner we'd had: "yes, I saw a lot of it up on deck." One can hardly realize how sick it's possible to get. Some of the pale, drawn faces looked quite deathlike and the whole tone of melancholly hopelessness that pervaded the ~~whole~~ crowd was most remarkable. Some made no attempt at first to come on deck and after a few days I was continually surprised by the appearance of new faces which until then had lain low in the cabins below. Such a sort of universal sickness however is a strange opportunity to view human character: these 350 human beings so accidently thrown together learned to know each other first amid pain and suffering and the little friendships made there, the little deeds good and bad, sank deeper into their souls than usual. It is perhaps this circumstance that gives a sea voyage its most peculiar flavor.

On this our floating island the world is much simpler than usual. First it consists of us ~~-~~ and the trembling world of cabins, decks, masts and chimneys. Then there is a great circle of dark blue waters stretching away, away evenly in a circle until meeting with the sky in the dim and misty distance it becomes one with the sky world and its clouds and pale day moon. Our ship is a fairly large one not very swift and a bit old -- the "Chester" of the American line with, all told, some 800 souls aboard. My first work in the morning is to get a slight bath -- a thing of no ordinary difficulty for steerage passengers. I generally get up on deck a bit early. A bell rings and I hasten down two rickety pairs of steep stairs -- that is two stories below the deck where our cabins are. This is a long room -- perhaps 15 yards long and as wide as the ship. The sides are taken up with the bunks leaving a space perhaps 15 feet in the middle through which a long narrow table of plain boards runs lengthwise. Beside this are narrow stationary seats without backs. The whole room is lighted by only a half dozen small port holes and kerosene lamps giving it a rather gloomy appearance. It is fairly well ventilated, considering its depth below the world. We range ourselves by the tables each bringing the utensils delivered to him by the steward at the beginning of the trip -- a tin plate, cup and

and spoon, and a knife and fork. The breakfast consists of rather poor coffee (with milk and molasses already in) plenty of good bread and fair butter, and good porridge or stew: a breakfast in which in spite of the noise the broad talk and the very primitive table manners of my neighbors, I generaly enjoy. The next duty is to wash your own dishes for which a can for slops and a can of hot water is provided — the dish cloth being furnished by the passenger. As usual, some omit even this bit of trouble and have apparently not washed their plates since starting.

~~The Negroes~~ There are two fullblooded Negroes aboard and (including myself) 3 mulattoes. We do not go together — indeed have not all spoken together, but I think all have had a pleasant voyage with little cause to complain of any prejudice. Of course we awakened more or less curiosity with some and I fancy something of dislike in others. Yet I find us all talking to the women and one, especially from his good heartedness seems a general favorite; in fine in a gradual line of individuals here the Blacks would by no means stand at the bottom of the row. What I notice in them is their goodheartedness — their straightforwardness. There is not a trace of deception and desire to injure or envy others traceable. A people with such hearts do not deserve annihilation.

Society: What happens when 350 people of the lower classes are for 9 days thrown together with very little outside government? The answer to this can be seen on this voyage and is most interesting. We have here of course all grades of society but a majority of what must be called lower. Yet I think that the better classes here, the better and more orderly elements though scarcely greater in numbers has been distinctly more influential. The experience has proven in a degree what I have always thought, that the number of "estates" is unlimited in a sense. One can scarcely bring any sort of a crowd of people together without finding a large number of distinct classes. Then again the number of estates is quite limited, for the several classes here developed differences here in no great degree from the

classes elsewhere in the world — it is the same old strife of finer souls against brutality.

We have of course strange divisions here: that of education, of course, that of wealth, that of life object, that of nation, and that of language and that of color. There is here a great number of half educated men — men who for lack of opportunity or perseverance have but tasted the beginning of life. They are, when not dogmatic and conceited, most interesting men and in all cases studies in human nature. They are often compounded of opposites and intellectual acuman and desire to learn with low habits and even brutality; then again there are embryonic cranks.

After a week we began to become tired and uneasy. We wanted Life to end and begin. A new land loomed there beyond the horizon and we began searching the skies. I who was born there was also approaching something new and untried after 24 years of preparation. At last it loomed on the morning when we saw the statue of Liberty. I know not what multitude of emotions surged in the others, but I had to recall that mischievous little French girl whose eyes twinkled as she said: "O, yes! the statue of Liberty! With its back toward America, and its face toward France!"

CHAPTER ~~VI~~ XI

WILBERFORCE

As a student in Germany, I builded great castles in Spain and lived therein. I dreamed and loved and wandered and sang; then after two long years I dropped suddenly back into "nigger"-hating America!

My Days of Disillusion which followed were not disappointing enough to discourage me. I was still upheld by that fund of infinite faith, although dimly about me I saw the shadow of disaster. I began to realize how much of what I had called Will and Ability was sheer Luck! Suppose my good mother had preferred a steady income from my child labor rather than bank on the precarious dividend of my higher training? Suppose that pompous old village judge, whose dignity we often ruffled and whose apples we stole, had had his way and sent me while a child to a "reform" school to learn a "trade": Suppose Principal Hosmer had been born with no faith in "darkies," and instead of giving me Greek and Latin had taught me carpentry and the making of tin pans? Suppose I had missed a Harvard scholarship? Suppose the Slater Board had then, as now, distinct ideas as to where the education of Negroes should stop? Suppose and suppose! As I sat down calmly on flat earth and looked at my life a certain great fear seized me. Was I the masterful captain or the pawn of laughing sprites? Who was I to fight a world of color prejudice? I raise my hat to myself when I remember that, even with these thoughts, I did not hesitate or waver; but just went doggedly to work, and therein lay whatever salvation I have achieved.

I returned to the United States by way of Paris where I stayed as long as possible and then, having reduced myself almost to the last cent, took passage to the United States in steerage. It was no no means a pleasant trip, but perhaps it was a good introduction to the new life; because ~~now at last~~ at twenty-six years of age and after twenty years of study I was coming home to look for a job and begin work.

It was a disturbed world in which I landed; 1892 saw the high tide of lynching in the United States; Cleveland had entered his second term in 1893 and the Chicago Exposition had taken place. The Dreyfus case had opened in France with his conviction and imprisonment, and he was destined for twelve years to suffer martyrdom. The war between China and Japan broke out the year of my return. I had rejoiced in the million dollar gift of Daniel Hand for education in my graduation year but recognized clearly the blow that democracy received when Congress repealed the so-called Force bills in 1894, refusing longer even to try to protect the legal citizenship rights of Negroes. But on the other hand, I did not at all understand the implications of the Matabele War in 1893. I did not see how the gold and diamonds of South Africa and later the copper, ivory, cocoa, tin and vegetable oils of other parts of Africa and especially the black labor force were determining and conditioning the political action of Europe.

First came the task of earning a living. I was not nice or hard to please. I just got down on my knees and begged for work, anything and anywhere. I began a systematic mail campaign. I wrote on a public school in East Tennessee, not far from where I had taught school. The board hesitated, but finally indicated that I had rather too much education for their use. I applied to Howard University, Hampton Institute and my own Fisk. They had no openings. I wrote my friend Dollar in London:

"You know I landed in New York in June, 1924 with $2 plus my fare home up in the Berkshire. It was not altogether a happy homecoming -- it was too much of a disillusionment after months of picturesque German gutturals, days of sunny skies, and weeks of dirty mighty Romes. I felt as though the bottom of the universe was loose and might go down if after all this soaring I stepped full feet upon it. And I must step, walk, stumble and climb now; for the lehrjahre were passed -- I fancied -- and the meister jahre begun."

So I sat down and wrote more letters -- let's see: "President of so and so college:

I wrote to no white institution
I knew there were no openings
there

Sir: I am a Negro, 27 years of age, educated in the public schools of Massachusetts, at Fisk University, Nashville and Harvard University, where I took the degrees of A.B. and A.M. I wish to teach next year. Have you a vacancy, etc." I wrote so many that I scarcely remember where. The hot months rolled by and answers came slowly — brief no's, polite regret, general disclaimers and one or two vague notes with dubious hopes. The editors notwithstanding, no college man expects the gates of the wide world to fly open before him 'with impetuous recoil' and yet I say it wasn't too much for a colored man with a Harvard A.M. to expect a bread and butter job — was it?

At last a few offers came — ~~in a bunch~~. The first was a telegram from Wilberforce University, a colored church school in Ohio. "Our chair of classics $800 is yours. Wire acceptance. Come next week." I immediately accepted with gratitude. Later there was Lincoln Institute, a state colored school out in Missouri, that offered $1,050 for a teacher of "classics and mathematics." I refused, ~~I preferred~~ Wilberforce, I ~~had heard of it~~, (knew something about it) it was venerable and well known. Finally, August 25, I received a telegram: "Can give mathematics if terms suit. Will you accept. Booker T. Washington." It would be interesting to speculate just what would have happened, if I had ~~accepted~~ received the offer of Tuskegee instead of that of Wilberforce.

(Since I had accepted first,)

So late in hot August I started for Wilberforce. Life was now begun and I was half happy. Up through the Berkshire Valley with its quiet beauty, then across New York I glided, wrapped in dreams. The lights of Buffalo bade me goodnight, and half asleep I drifted across Ohio.

The depot at Xenia was small and "busy" with a slight admixture of dirt and tobacco juice which was unpleasant. I telephoned to Wilberforce. Then I waited an hour. Finally the President entered the waiting room. I shall never forget that man. He had by long odds the prettiest smile of any man I ever saw -- so quiet and charming. All I remember now of that first meeting is the vision of that smile softly entering the waiting room and remember too that it was borne on two short and rather disreutable looking bowlegs.

Wilberforce was a small colored denominational college, married to a state normal school. The church was too poor to run the college; the State tolerated the normal school so as to keep Negroes out of other state schools. Consequently, there were enormous difficulties in both church and state politics. This I soon realized. I had been hired to teach "Latin and Greek." They were not my specialty and despite years spent in their study I really knew far too little to teach them. But I had assumed that I was to assist Professor Scarborough, a well-known Negro scholar long working at Wilberforce. To my amazement I found that I was to replace him, since in a quarrel between him and the President, he had been ousted and I had been advertised as a learned professor just from Germany. This was my introduction to Church politics. I did not like it but the name of Wilberforce lured me.

The breath of it had swept the water and dropped into southern Ohio, where white Southerners had once taken their cure at Tawawa Springs and where white Methodists later planted a school. Then came the little bishop, Daniel Payne, a Negro, who bought it and made it a school of the African Methodists. This was the school that called me, and when re-considered offers from Tuskegee and Jefferson City followed, I refused; I was so thankful for that first offer.

Into this situation I landed with the cane and gloves of my German student days; with my rather inflated ideas of what a "university" ought to be and with a terrible plainness of speech that was continually getting me into difficulty; as when, for instance, the student leader of a prayer meeting into which I had wandered casually to look local religion over, suddenly and without warning announced that "Professor Du Bois will lead us in prayer," I simply answered, "No, he won't," and as a result nearly lost my new job. It took a great deal of explaining to the board of bishops why a professor in Wilberforce should not be able at all times and sundry to address God in extemporaneous prayer. I was saved only by the fact that my coming to Wilberforce had been widely advertised and I was so willing to do endless work when the work seemed to me worth doing.

I went to Wilberforce with high ideals. I wanted to help build a great university. I was willing to work night as well as day. I helped ~~in the discipline~~, took part in the social life, and began to write books. But I found myself against a stone wall. Nothing stirred before my impatient pounding! Or if it stirred, it soon slept again.

The African Methodist Church was the greatest social institution of American Negroes. Wilberforce was its ~~greatest~~ largest school. This school therefore became the capital of a nation-wide institution. Its ~~vast~~ large body of trustees were interested in the church organization, not in the college. The bishops and would-be bishops gathered here in force on each commencement where elders and ministers waylaid them in long conferences. The teachers also found it expedient to make powerful acquaintances at these occasions; but I in my independence met no one but walked off into the woods as the hosts talked.

But I worked hard and this most students and many teachers liked. My program for the day at Wilberforce looked almost as long as a week's program now. I taught Latin, Greek, German, and English, and wanted to add sociology. I had charge of some of the most unpleasant duties of discipline and had outside work in investigation. ~~But~~ I met and made many friends: Charles Young, a Negro soldier not long graduated from West Point, was one; he was serving as military instructor here for the Federal government. He and I both refused to attend the annual "revivals" of religion which interrupted school work every year at Christmas time. We both dreamed of a great future for this Negro school. Later Young fought in Mexico against Villa. He ranked first for a generalship in the army when the First World

War opened, but was deftly shoved aside. He accepted duty later in Nigeria, West Africa, and died deliberately of black water fever. There was also at Wilberforce a student Charles Burroughs, a gifted reader, who was in my classes; Paul Laurence Dunbar came over from Dayton and read to us. I had known his work but was astonished to find that he was a Negro. And not least, I met the slender, quiet, and dark-eyed girl Nina Gomer who became Mrs. Du Bois in 1896. Her father was chef in the leading hotel of Cedar Rapids, Iowa, and her dead mother a native of Alsace.

In May, 1896, I was not only in love with a beautiful girl, but also had carefully calculated that (A) I should marry before thirty, and that (B) my salary of $800 was sufficient for two -- if paid. They had an irritating way at Wilberforce in those days of not paying salaries very promptly. Indeed this nearly ruined my plans. It was May 1, I was penniless and my bride was awaiting me in Iowa. The treasurer was about to leave for General Conference where he had more weighty matters to discuss than teachers' salaries. I waylaid him ~~firmly~~ firmly, and persuaded him that until my salary due was paid, he was unlikely to see General Conference. He agreed and on May 12, I arrived in Cedar Rapids.

I went to a little white cottage and met a tall, heavy father, a young step-mother and a shy fat little sister. A benevolent white minister married us, and after inarticulate greetings, we rushed to the Chicago train and next day were back at Wilberforce with a very tired young bride. There was a reception with hilarious students, critical teachers, and good town folk. I had ~~myself~~ furnished ~~the~~ a two-room apartment in the men's dormitory, a bedroom on the west looking down on the ravine and across the hall a sitting-room which I remember chiefly because of a gorgeous crimson

couch-cover which I had bought of Carson-Pirie (in Chicago) by mail order.

Probably Wilberforce was about the least likely of all Negro colleges to adopt me and my program. First of all I was cocky and self-satisfied; ~~I were invariably the cane and gloves of a German student.~~ I doubtless strutted and I certainly knew what I wanted. My redeeming feature was infinite capacity for work and terrible earnestness, with appalling and tactless frankness. But not all was discouragement and frustration at Wilberforce. Of importance that exceeded everything, was the group of students whom I met and taught. Most of the student body was in high school grades and poorly equipped for study. But filtering into the small college department were a few men and women of first-class intelligence, able and eager to work. As working companions, we made excursions into Greek literature; I gathered a class in German which talked German from the first day; I guided the writing of English themes and did a bit of modern history. Try as I might, however, the institution would have no sociology, even though I offered to teach it on my own time.

I tried various other lines of effort: there was for instance a beautiful ravine where a stream of water flowing through the campus rolled and slithered down to a wide, green meadow, amid trees, vines, and boulders. On the campus above stood Shorter Hall, named after a dead bishop whose middle-aged son was a professor of mathematics, a good-hearted, irascible man, combined of orthodox religion and wrath for students who couldn't count. In the wing of Shorter Hall, next the ravine, was the library; or rather a few piles of old books which I had arranged to drag down from the attic and planned in this big empty room a real library and reading

room for students and teachers. Hitherto the only [redacted] library facilities were in that upper attic where Professor Scott might admit you with his key, if perchance he could spare time from his chemistry. Remember the libraries at Harvard and Berlin which I had used! And even that at Fisk! I was determined to have a library. But there was no money. There was never money for anything. Then I had an idea: there were my students, boys and girls, with rare talent with voice and action. There was the divine ravine: why not give "A Midsummer Night's Dream" in that rare bit of wood and foliage? The campus went quite wild over the proposal. It could be given in the Spring just after Commencement. It need not cost much. The whole county would visit it. We began to study the text, plan the scenes, and choose the players. I began to see this play as the greatest course in education of the whole year, of many years gone.

Then came the catastrophe: we haard that Ben Arnett had been appointed Professor of Literature for the year beginning with Commencement. We lay down our text; we turned our backs on the lush ravine; the waters trickled in vain and the students wandered disconsolately. We teachers began to fight: we wrote, we visited, we held meetings; we stormed through the campus; we faced the bishop. And to understand all this, one must know the Bishopric of the great African Methodist Church.

It was a hierarchy of the conventional type and yet more and different. I knew a dozen of these bishops and a more varied and impressive, a more astonishing body of men I never met. Bishop Payne died the year before I arrived at Wilberforce. He was a man of tremendous character, a Man of God, if such there ever was. Tiny in figure, soft in voice, he thundered through this widespread mass of black folk like a prophet. He made them buy

Wilberforce when they had nothing and knew little; he arranged the grounds, gathered the first teachers, and husbanded the pennies. He enforced discipline in the church, he traveled, he preached until his name was known from Carolina to the Rockies. Then he died, but his soul lived on.

Among his successors was Benjamin Arnett, the presiding Bishop over Wilberforce when I arrived; and what Arnett said, went. He was a thick-set man with a sharp, dark face, a blazing eye, and a rare smile and a will to do. With little literary ability, he established hm a sort of school of literature, bringing together and reprinting thousands of books, pamphlets, and scraps of the writings of American Negro literature. He was a power in Ohio politics. He distributed offices in the church and settled the appointment of teachers at Wilberforce. My own appointment must have had his consent, perhaps even his advocacy, else I would not have been at Wilberforce. He lived in a lovely old home bowered by oaks and there he was handicapped by his family. His oldest son, named after him, was not a complete devil, but he certainly was not fitted to teach youth at Wilberforce. Yet at the end of my first year, the Bishop thrust him down our throats without even the courtesy of a notice; and we raised Hell without stopping to consider what opposition to Bishop Arnett meant. As a body we refused to teach with Ben Arnett

We won. Young Ben Arnett never became professor at Wilberforce. But of course the Bishop won too. He held power for life and no one stayed at Wilberforce long when he did not like him. Under my impetuous and uncurbed assault, the Bishop had to bend, but I knew well that my days at Wilberforce were numbered. The ravine with its vines and shrubbery,

its singing waters and all its faerie, slept long in peace until twenty-five years later it was buried beneath a culvert of stone and its voice stilled forever.

As I realized that none of my dreams would be realized at Wilberforce, I knew all the sadness of a spent dream. Wilberforce was near the center of the Negro population of the nation. We drew students from New Orleans and New York; from the Atlantic and the Pacific. We escaped the "Jim-Crow" of the slave South and the ostracism of the cold North. The college was poor and neglected and yet the Church which owned it and whose prized child it was, formed a marvellous human institution. Its leaders were of every sort: selfless saints like Payne, Lee, and William Mitchell; ruthless politicians like Arnett; scoundrels like Derrick; and charging bulls like Turner. With high ideals and brute force they rolled and jammed this mass of men and women forward and together until they became a force in the whole nation. Suppose I had had the cunning to help harness and guide this superhuman energy, what could I/not have helped to turn it into? Not into a University, certainly, such as I dreamed, but perhaps into something greater. But no, I did not have ability of that sort, nor will to dream of it. And so I turned away, or, rather, I was turned toward other and different goals.

I left one curious and subtle complication spun in the subtle brain of that President Mitchell of whom I have spoken. Wilberforce, as I said, lacked funds. There was no visible source of Negro income large enough to support a college. The members of the church were fighting desperately for food and clothes. Their labor was being exploited to the last dime by every white American who had a chance or could steal it. President Mitchell found

himself always in a financial hole and he eyed the coffers of the State of Ohio, as many before and since had done. Miss Bierce carried on certain classes in teaching. She was a stern, accurate white daughter of the Western Reserve, severe and devoted to her work. When these normal classes threatened to cease because of lack of funds, the President suggested that he and Miss Bierce ask the state teaching authorities for a little help, since the state so needed teachers for its colored children. These children had a right to attend the white schools but they seldom did. The State helped. Opponents pointed out that the State had no right to support a colored State institution, but the President was ready. He and Arnett induced the Legislature to establish "a combined Normal and Industrial Department at Wilberforce University." The witchery in this wording lay in "Industrial" which lured the support of the followers of the rising Booker T. Washington; and also in that little word "at" which made this University a department not of Wilberforce, but at Wilberforce. This appropriation grew yearly until by 1900 two-thirds of the cost of Wilberforce was borne by the State. Finally the State set up its own college, and Wilberforce again tried indifferently to stand alone.

in 1942

Probably, looking back after the event, I have rationalized my life into a planned, coherent unity which was not as true to fact as it now seems; probably there were hesitancies, gropings, and half-essayed bypaths, now forgotten or unconsciously ignored. But my first quarter-century of life seems to me at this distance as singularly well-aimed at a certain goal, along a clearly planned path. I returned ready and eager to begin a life-work, leading to the emancipation of the American Negro. History and the other social sciences were to be my weapons, to be sharpened and applied by research and writing. Where and how, was the question in 1895. I became uneasy about my life program. I had published my first book, Sud in 1894. I was doing nothing directly in the social sciences and saw no immediate prospect. Then the door of opportunity opened: just a crack, to be sure, but a distinct opening.

When, ~~therefore,~~ a temporary appointment came from the University of Pennsylvania for one year as "assistant instructor" at $900, I accepted forthwith in the fall of 1896; that year Abyssinia ~~overthrew~~ vanquished Italy, and England, suddenly seeing two black nations threatening her Cape to Cairo plans, threw her army back into the Sudan and recaptured Khartoum. The next year the free silver controversy of Bryan and McKinley flamed in America.

First, then, in 1896, I married -- a slip of a girl, beautifully ~~dark~~-eyed and thorough and good as a German ~~housewife.~~ her mother. Then I accepted a job to make a study of Negroes in Philadelphia for the University of Pennsylvania -- one year at $900. How did I dare these two things? I do not know. Yet they spelled salvation. To remain at Wilberforce without doing my ideals meant spiritual death. Both my wife and I were homeless. I dared a home and a temporary job. But it was a different daring from the days of my first youth. I was ready to admit that the best of men might fail. I meant still to be captain of my soul, but I realized that even captains are not omnipotent in uncharted and angry seas.

~~I knew too that there was no future for me at Wilberforce.~~

I did not hesitate at institute but reported for duty with a complete plan of work and outline of methods and aims and even proposed schedules to be filled out. My general plan was promptly accepted and I started to work, consulting Lindsay regularly but never meeting the faculty

CHAPTER XII

UNIVERSITY OF PENNSYLVANIA

In the Fall of 1896, I went to the University of Pennsylvania as "Assistant Instructor" in Sociology. It all happened this way: Philadelphia, then and still one of the worst governed of America's badly governed cities, was having one of its periodic spasms of reform. A thorough study of causes was called for. Not but what the underlying cause was evident to most white Philadelphians: the corrupt, semi-criminal vote of the Negro Seventh Ward. Everyone agreed that here lay the cancer; but would it not be well to give scientific sanction to the known causes by an investigation, with imprimatur of the University? It certainly would, answered Samuel McCune Lindsay of the Department of Sociology. And he put his finger on me for the task.

There must have been some opposition, for the invitation was not particularly cordial. I was offered a salary of $900 for a period limited to one year. I was given no real academic standing, no office at the University, no official recognition of any kind; my name was eventually omitted from the catalogue; I had no contact with students, and very little with members of the faculty, even in my own department. With my bride of three months, I settled in one room, over a cafeteria run by a College Settlement, in the worst part of the Seventh Ward. We lived there a year, in the midst of an atmosphere of dirt, drunkenness, poverty, and crime. Murder sat on our doorsteps, police were our government, and philanthropy dropped in with periodic advice.

The world seized and whirled me. I hardly know what was important — what negligible; somehow I remember life, curiously enough, chiefly as a succession of homes: the settlement at Philadelphia at Seventh and Lombard in the slums where kids played intriguing games like "cops and Lady Bums"; and where in the night when pistols popped, you didn't get up lest you find you couldn't.

I wrote of my first Christmas in Philadelphia:

"We haven't been married long enough to escape the condescending smiles of our neighbors, and yet we feel quite like old married folks. This is our first

CHAPTER XII

UNIVERSITY OF PENNSYLVANIA

In the Fall of 1896, I went to the University of Pennsylvania as "Assistant Instructor" in Sociology. It all happened this way: Philadelphia, then and still one of the worst governed of America's badly governed cities, was having one of its periodic spasms of reform. A thorough study of causes was called for. Not but what the underlying cause was evident to most white Philadelphians: the corrupt, semi-criminal vote of the Negro Seventh Ward. Everyone agreed that here lay the cancer; but would it not be well to give scientific sanction to the known causes by an investigation, with imprimatur of the University? It certainly would, answered Samuel McCune Lindsay of the Department of Sociology. And he put his finger on me for the task.

There must have been some opposition, for the invitation was not particularly cordial. I was offered a salary of $900 for a period limited to one year. I was given no real academic standing, no office at the University, no official recognition of any kind; my name was eventually omitted from the catalogue; I had no contact with students, and very little with members of the faculty, even in my own department. With my bride of three months, I settled in one room in the early cafeteria run by a College Settlement, in the worst part of the Seventh Ward. We lived there a year, in the midst of an atmosphere of dirt, drunkenness, poverty, and crime. Murder sat on our doorsteps, police were our government, and philanthropy dropped in with periodic advice.

The world seized and whirled me. I hardly know what was important — what negligible; somehow I remember life, curiously enough, chiefly as a succession of homes: the settlement at Philadelphia at Seventh and Lombard in the slums where kids played intriguing games like "cops and Lady Bums"; and where in the night when pistols popped, you didn't get up lest you find you couldn't.

I wrote of my first Christmas in Philadelphia:

"We haven't been married long enough to escape the condescending smiles of our neighbors, and yet we feel quite like old married folks. This is our first

If Lindsay had been a smaller man and had been induced to follow the usual American pattern of treating Negroes, he would have asked me to assist him as his clerk in this study. Probably I would have accepted having nothing better in sight for work in sociology. But Lindsay regarded me as a scholar in my own right and probably proposed to make me an instructor. Evidently the faculty demurred at having a colored instructor. But since I had a Harvard Ph.D., and had published a recognized work in history, the University could hardly offer me a fellowship. A compromise was hit on and I was nominated to the unusual status of "assistant" instructor. Even at that there

Christmas and wife thinks we owe to the public to tell just how merry it has been. It began some days ago when wife asked me cautiously how much we could afford to spend for Christmas. I sat down and figured carefully: for there was the sewing machine to pay for out of this month's salary, and doctor's bill, and one other debt -- an old family friend. I finally evolved a surplus of $10.56, and told wife that we could spend five dollars apiece for the holidays. She was perfectly happy, and after some hours of calculating, sallied forth to Wanamaker's.

"The next week was filled with shopping and bookkeeping; one would have thought we were spending hundreds of dollars. Wife consulted me religiously on many points: what grandma would like best -- how to make Edna's collar, and so forth. On other points, however, both of us maintained a jolly silence. Tuesday we both went down South Street to the Second Street market, and bought two wreaths, a cross, and a fifteen-cent Christmas tree. Wife was somewhat alarmed at first at the prospect of a Christmas tree in our snug little room, but when it was safely ensconced in a corner on the machine, with tinsel, fruit, and cotton snow, she was quite delighted.

"Christmas Eve found our little gift-packages mailed, the tree glowing and both our empty stockings hung beside it. I had secreted a dainty silk umbrella under the lounge, and I knew that other corners of the room held secrets -- the question being how to get them into the stockings.

"About eight in the evening we sallied out into the crisp air and hurried down to the Mission, where the folks had a tree for the little ones. How much happiness can be packed within four walls! The children were boisterous, rude, and noisy, but so brimming over with pleasure that it did one good to see them. Once at home again and with a last look at our own little tree, we were soon snug in bed, and the thought of the hidden umbrella alone kept me awake. I had almost despaired of getting it into the stocking, when the regular breathing of my wife told me that she

had fallen asleep in spite of herself. I carefully slipped from bed, listened, crawled across the floor, listened again, and at last slipped the umbrella into wife's stocking; in a minute more I had chuckled myself to sleep. I was dreaming that I held a professorship that paid $1500 a year — when suddenly I awoke with a start. Wife hasn't forgiven me yet for awaking so inopportunely, and if I had known the situation before I awoke, I would have stayed asleep. As it was I awoke and caught wife in her little white gown secreting bundles in and about my sock. I laughed, then kept as quiet as I could, and wife didn't say a word.

"Christmas day came with laughing over the night's adventure, the revealing of hiding places and enjoyment of the umbrella, suspenders, and neckties. At three came a cozy dinner with a little brown chicken and bills-of-fare written on old visiting cards. Finally the whole day melted away in misty happiness and to round it out, I wrote this."

The Provost of the University furnished the following credentials:

"In connection with the College Settlement, the Trustees of the University of Pennsylvania have undertaken the study of the social condition of the Colored People of the Seventh Ward of Philadelphia. The University has entered upon this work as a part of its duty and wishes to make the investigation as thorough and exact as possible. We want to know precisely how this class of people live; what occupations they follow; from what occupations they are excluded; how many of their children go to school; and to ascertain every fact which will throw light upon this social problem; and then having this information and these accurate statistics before us, to see to what extend and in what way, proper remedies may be applied. D.r W.E.B. Du Bois is the investigator on behalf of the University, and I write to bespeak for him your cordial reception and earnest co-operation."

The two years at Wilberforce had been my uneasy apprenticeship, and with my advent into the University of Pennsylvania, I began a more clearly planned career which had an unusual measure of success, but was in the end pushed aside by forces which, if not entirely beyond my control, were yet of great weight.

The opportunity opened at the University of Pennsylvania seemed just what I wanted. I had offered to teach social science at Wilberforce outside of my overloaded program, but I was not allowed. My vision was becoming clearer. The Negro problem was in my mind a matter of systematic investigation and intelligent understanding. The world was thinking wrong about race, because it did not know. The ultimate evil was stupidity. The cure for it was knowledge based on scientific investigation. At the University of Pennsylvania I ignored the pitiful stipend. It made no difference to me that I was put down as an "assistant instructor" and even at that, that my name never actually got into the catalogue; it goes without saying that I did no instructing save once to pilot a pack of idiots through the Negro slums.

Of ~~this~~ the theory back of the plan of this study of Negroes I neither knew nor cared. I saw only here a chance to study an historical group of black folk and to show exactly what their place was in the community. I did it despite extraordinary difficulties both within and without the group. Whites said: Why study the obvious? Blacks said: Are we animals to be dissected and by an unknown Negro at that? Yet, I made a study of the Philadelphia Negro so thorough that it has withstood the criticism of sixty years.

I counted my task here as simple and clear-cut; I proposed to find out what was the matter with this area and why. I started with no "research methods" and I asked little advice as to procedure. The problem lay before me. Study it. I studied it personally and not by Proxy. I sent out no canvassers. I went myself. Personally I visited and talked with 5000 persons. What I could, I set down in orderly sequence on schedules which I made out and submitted to the University for criticism. Other information I stoed in my memory or wrote out as memoranda. I went through the Philadelphia libraries for data, gained access in many instances to private libraries of colored folk and got individual information. I mapped the district, classifying it by condition; I compiled two centuries of the history of

the Negro in Philadelphia and in the Seventh Ward.

I essayed a thorough piece of work in Philadelphia. I labored morning, noon, and night. Few persons ever read that fat volume on "The Philadelphia Negro," but they treat it with respect, and that consoles me. The colored people of Philadelphia received me with no open arms. They had a natural dislike to being studied like a strange species. I met again and in different guise those curious cross-currents and inner social whirlings ~~of my own people~~. They set me to groping. I concluded that I did not know so much as I might about my own people.

It was a hard job, but I completed it by the Spring of 1898 and published it a year later, under the auspices of the University, as The Philadelphia Negro: a formidable tome of nearly a thousand pages. But the greatest import to me was the fact, that after years, I had at last learned just what I wanted to do, in this life program of mine, and how to do it. First of all I became painfully aware that merely being born in a group, does not necessarily make one possessed of complete knowledge concerning it. I had learned far more from Philadelphia Negroes than I had taught them concerning the Negro Problem.

It was as complete a scientific study and answer as could have then been given, with defective facts and statistics, one lone worker and little money. It revealed the Negro group as a symptom, not a cause; as a striving, palpitating group, and not an inert, sick body of crime; as a long historic development and not a transient occurrence. ~~It~~

In this ointment there was one fly which I have never mentioned; it would have been a fine thing if after this difficult, successful piece of work, the University of Pennsylvania had at least offered me a temporary instructorship in the college or in the Wharton School. Harvard had never dreamed of such a thing; a half century later one of Harvard's professors said of a gifted Negro student: "We'd give him a position if he were not a Negro!" White classmates of lower academic rank than I, became full

professors at Pennsylvania and Chicago. Here in my case an academic accolade from a great American university would have given immense impetus to my life work which I was already determined to make in a Negro institution in the South. The thing that galled was that such an idea never even occurred to this institution whose head was a high official of the Sugar Trust. But I did not mention this rebuff. I did not let myself think of it. But then, as now, I know an insult when I see it.

Before the American Academy, affiliated with the University, I laid down in public session in 1899, a broad program of scientific attack on this problem, by systematic and continuous study; and I appealed to Harvard, Columbia and Pennsylvania, to take up the task.

Needless to say, they paid not the slightest attention to this challenge and for twenty-five years thereafter not a single first-grade college in America undertook to give any considerable scientific attention to the American Negro. Of the methods of my research, I wrote:

"The best available methods of sociological research are at present so liable to inaccuracies that the careful student discloses the results of individual research with diffidence; he knows that they are liable to error from the seemingly ineradicable faults of the statistical method; to even great error from the methods of general observation; and, above all, he must ever tremble lest some personal bias, some moral conviction or some unconscious trend of thought due to previous training, has to a degree distorted the picture in his view. Convictions on all great matters of human interest one must have to a greater or less degree, and they will enter to some extent into the most cold-blooded scientific research as a disturbing factor.

"Nevertheless, here are some social problems before us demanding careful study, questions awaiting satisfactory answers. We must study, we must investigate, we must attempt to solve; and the utmost that the world can demand is, not lack of human interest and moral conviction, but rather the heart-quality of fairness and an earnest desire for the truth despite its possible unpleasantness."

At the end of that study, I announced with a certain pride my plan of studying the complete Negro problem in the United States. I spoke at the forty-second meeting of the American Academy of Political and Social Sciences in Philadelphia, November 19, 1897, and my subject was "The Study of the Negro Problems." I began by asserting that in the development of sociological study there was at least one positive answer which years of research and speculation had been able to return, and that was: "The phenomena of society are worth the most careful and systematic study, and whether or not this study may eventually lead to a systematic body of knowledge deserving the name of science, it cannot in any case fail to give the world a mass of truth worth the knowing." I then defined and tried to follow the development of the Negro problem not as one problem, but "rather a plexus of social problems, some new, some old, some simple, some complex; and these problems have their one bond of unity in the fact that they group themselves about those Africans whom two centuries of slave-trading brought into the land."

I insisted on the necessity of carefully studying these problems and said: "The American Negro deserves study for the great end of advancing the cause of science in general. No such opportunity to watch and measure the history and development of a great race of men ever presented itself to the scholars of a modern nation. If they miss this opportunity -- if they do the work in a slip-shod, unsystematic manner -- if they dally with the truth to humor the whims of the day, they do far more than hurt the good name of the American people; they hurt the cause of scientific truth the world over, they voluntarily decrease human knowledge of a universe of which we are ignorant enough, and they degrade the high end of truth-seeking in a day when they need more and more to dwell upon its sanctity."

Finally I tried to lay down a plan for the study, postulating only: that the Negro "is a member of the human race, and as one who, in the light of history and experience is capable to a degree of improvement and culture, is entitled to have his interests considered according to his numbers in all conclusions as to the

common weal."

Dividing the prospective scientific study of the Negro into two parts: the social group and his peculiar social environment, I proposed to study the social group by historical investigation, statistical measurement and sociological interpretation. Particularly with regard to anthropology, I said:

"That there are differences between the white and black races is certain, but just what those differences are is known to none with an approach to accuracy. Yet here in America is the most remarkable opportunity ever offered of studying these differences, of noting influences of climate and physical environment, and particularly of studying the effect of amalgamating two of the most diverse races in the world — another subject which rests under a cloud of ignorance."

In concluding, I said:

"It is to the credit of the University of Pennsylvania that she has been the first to recognize her duty in this respect and in so far as restricted means and opportunity allowed, has attempted to study the Negro problems in a single definite locality. This work needs to be extended to other groups, and carried out with larger system; and here it would seem is the opportunity of the Southern Negro college. We hear much of high Negro education, and yet all candid people know there does not exist today in the center of Negro population a single first-class fully equipped institution, devoted to the higher education of Negroes; not more than three Negro institutions in the South deserve the name of 'college' at all; and yet what is a Negro college but a vast college settlement for the study of a particular set of peculiarly baffling problems?

"What more effective or suitable agency could be found in which to focus the scientific efforts of the great universities of North and East, than an institution situated in the very heart of these social problems, and made the center of careful historical and statistical research? Without doubt the first effective

step toward the solving of the Negro question will be the endowment of a Negro college which is not merely a teaching body, but a center of sociological research, in close connection and co-operation with Harvard, Columbia, Johns Hopkins, and University of Pennsylvania.

"Finally the necessity must again be emphasized of keeping clearly before students the object of all science, amid the turmoil and intense feeling that clouds the discussion of a burning social question. We live in a day when in spite of the brilliant accomplishments of a remarkable century, there is current much flippant criticism of scientific work; when the truth-seeker is too often pictured as devoid of human sympathy, and careless of human ideals. We are still prone in spite of all our culture to sneer at the heroism of the laboratory while we cheer the swagger of the street broil. At such times true lovers of humanity can only hold higher the pure ideals of science, and continue to insist that if we would solve a problem we must study it, and there is but one coward on earth and that is the coward that dare not know."

While I was making this study, I tried to interest the Federal government in making some such studies in other areas. In 1897, I wrote Carrol D. Wright, head of the Federal Labor Bureau, and received an encouraging reply. I then wrote more in detail.

"In accordance with your suggestion I have been for the last month giving considerable thought as to method of studying certain aspects of the industrial development of the Negro. It seems to me that the difficulties of studying so vast and varied a subject are so large that the first work to be done should be rather of an experimental or preliminary nature calculated to locate and define the difficulties and to indicate lines upon which a larger investigation could be carried to success. At the same time the results of a series of preliminary studies could be published and would by allaying false notions and prejudices prepare the public mind for the larger work.

Both the preliminary and the main work must of course be strictly limited in scope; great care must be taken to avoid giving offense to white or black, to raise no suspicions and at the same time to get definite accurate information. For the preliminary work I propose two plans -- the first o my mind preferable, the second feasable:

Plan A

The Industrial Development of the Negro

Preliminary Study: The economic situation of a typical town containing from 1,000-5,000 Negro inhabitants situated in Va., or the Carolinas, or Ga.

Study:
- Occupations
- Wages
- Ownership of homes
- Hours of labor
- Economic history
- Cost of living
- Organizations
- Crops

Study to be conducted, visits, schedules, county records, etc.
To be carried out in the months of July and August 1897

Plan B

The Industrial Development of the Negro

Preliminary Study: Condition of Negroes in the (Barber / Public waiter / Caterer / Building / Mining / etc.) trade

In the city of Richmond or Raleigh or Charleston or Atlanta etc.

Study:
- Number
- Wages
- Hours of Labor
- Cost of Living
- Economic history
- Organization
- General condition

OTHER PLANS

A study of domestic service in a certain city

A study of the Negro in the professions in several cities

A study of the Negro farm laborer in a typical agricultural region

A study of the Negro church as a ~~sound~~ social institution in certain cities

An "Enquete" of the graduates of Southern schools into their own economic life and the general industrial situation

A study of the attitude of organized labor toward Negroes

A study of Negro stevedores

A bibliography of the economic condition of the Negro since emancipation

Plan A could be begun immediately. I could spend the summer in some typical village of the South and have the results ready to print in the fall. This plan could be repeated from time to time until from these preliminary studies conducted in various districts in various times of year and under various circumstances would give a basis of fact and experience upon which a larger survey could be planned with a great saving of time and expense. Or, after one or two experiments the whole enterprise might take the form of a series of simultaneous investigations of this sort in selected typical districts of ~~the~~ town and country upon lines indicated by the actual experience of the preliminary studies.

Plan B could also be carried out this summer within certain limitations. The other plans are suggested and if they strike you as preferable to the first two I could work them out more carefully.

Will you kindly look over these plans and let me know which, if any, meet your ideas. We can than discuss details further."

Eventually this resulted in a series of studies for the Labor Bureau and one major effort which I shall tell of ~~in~~ a later chapter. The successors of Carrol Wright deliberately destroyed this piece of my best sociological work.

CHAPTER ~~VIII~~ XIII

(1)

ATLANTA UNIVERSITY

From the fall of 1894 to the spring of 1910, for sixteen years, I was a teacher. For two years I remained at Wilberforce; for a year and a half at the University of Pennsylvania; and for thirteen years at Atlanta University in Georgia. I sought in these years to teach youth the meaning and way of the world. ~~What did I know about the world and how could I teach my knowledge?~~

The main result of my schooling had been to emphasize science and the scientific attitude. I got some insight into the laws of the physical world at Fisk and in the chemical laboratory and class in geology at Harvard. I was interested in evolution, geology and the new psychology. I began to conceive of the world as a continuing growth rather than a finished product. In Germany I turned still further from religious dogma and began to grasp the idea of a world of human beings whose actions, like those of the physical world, were subject to law. The triumphs of the scientific world thrilled me: the X-ray and radium came during my teaching term, the airplane and the wireless. The machine increased in

technical efficiency and the North and South Poles were invaded.

On the other hand the difficulties of applying scientific law and discovering cause and effect in ~~the so-called~~ a world (of Runny heroes Wo) ~~were~~ still great. Social thinkers were engaged in vague statements and were seeking to lay down the methods by which, in some not too distant future, social law analogous to physical law would be discovered. Herbert Spencer finished his ten volumes of Synthetic Philosophy in 1896. The biological analogy, the vast generalizations, were striking, but actual scientific accomplishment lagged. For me an opportunity seemed to present itself. I could not lull my mind to hypnosis by regarding a phrase like "consciousness of kind" as a scientific law. But turning my gaze from fruitless word-twisting and facing the facts of my own social situation and racial world, I determined to put science into sociology through a study of the conditions and problems of my own group.

I was going to study the facts, any and all facts, concerning the American Negro and his plight, and by measurement and comparison and research, work up to any valid generalizations which I could. I entered this primarily with the utilitarian object of reform and uplift; but nevertheless, I wanted to do the work with scientific accuracy. Thus, in my own sociology, because of firm belief in a changing racial group, I easily grasped the idea of a changing developing society rather than a fixed social structure.

The decade and a half in which I taught, was riotous with happenings in the world of social development; with economic expansion, with political control, with racial difficulties. Above all, it was the era of empire

3.

and while I had some equipment to deal with a scientific approach to social studies, I did not have any clear conception or grasp of the meaning of that ~~industrial~~ Colonialism imperialism which was beginning to grip the world. My only approach to meanings and helpful study there again was through my interest in race contact.

That interest began to clear my vision and interpret the whirl of events which swept the world ~~a~~. Japan was rising to national status and through the Chinese War and the Russian War, despite rivalry with Germany, Russia, and Great Britain, she achieved a new ~~semi-nearly equal~~ status in the world, which only the United States refused to recognize. But all this, I began to realize, was but a result of the expansion of Europe into Africa where a fierce fight was precipitated for the labor, gold, and diamonds of South Africa; for domination of the Nile Valley; for the gold, cocoa, raw materials, and labor of West Africa; and for the exploitation of the Belgian Congo. Europe was determined to dominate China and all but succeeded in dividing it between the chief white nations, when Japan stopped the process. After sixteen years, stirred by the triumph of the Abyssinians at Adowa, and the pushing forward of the French in North Africa, England returned to the Egyptian Sudan.

The Queen's Jubilee ~~in China~~, I knew, was not merely a sentimental outburst; it was a triumph of English economic aggression around the world and it aroused the cupidity and fear of Germany who proceeded to double ~~in~~ her navy, expand into Asia, and consolidate her European position. Germany challenged France and England at Algeciras, prelude to the World War. Imperialism, despite Cleveland's opposition, spread to America,

and the Hawaiian sugar fields were annexed. The Spanish war brought Cuban sugar under control and annexed Puerto Rico and the Philippines. The Panama Canal brought the Pacific nearer the Atlantic and protected capital investment in San Domingo and South America.

All this might have been interpreted as history and politics. Mainly I did so interpret it; but continually I was forced to consider the economic aspects of world movements as they were developing at the time. Chiefly this was because the group in which I was interested were workers, earners of wages, owners of small bits of land, servants. The labor strikes interested and puzzled me. They were for the most part strikes of workers led by organizations to which Negroes were not admitted. There was the great steel strike; the railway strikes, actual and threatened; the teamsters' strike in Chicago; the long strike in Leadville, Colorado. Only in the coal strike were Negroes involved. But there was a difference. During my school days, strikes were regarded as futile and ill-advised struggles against economic laws; and when the government intervened, it was to cow the strikers as law-breakers. But during my teaching period, the plight of the worker began to sift through into the consciousness of the average citizen. Public opinion not only allowed but forced Theodore Roosevelt to intervention in the coal strike, and the steel strikers had widespread sympathy.

Then there were the tariff agitations, the continual raising and shifting and manipulation of tariff rates, always in the end for the purpose of subsidizing the manufacturer and making the consumer pay. The political power of the great organizations of capital in coal, oil and sugar, the extraordinary immunities of the corporations, made the President openly attack the trusts as a kind of super-government and we began

to see more and more clearly the outlines of economic battle. The Supreme Court stood staunchly behind capital. It outlawed the labor boycott, it denied the right of the states to make railway rates. It declared the income tax unconstitutional.

With all that, and the memory of the Panic of 1873 not forgotten, came the Panic of 1893 and the financial upheaval of 1907. Into this economic turmoil, politics had to intrude. The older role of free, individual enterprise, with little or no government interference, had to be surrendered and the whole political agitation during these days took on a distinct economic tinge and object. The impassioned plea of Bryan in 1896 that labor be not "crucified upon a cross of gold" could not be wholly ridiculed to silence. The Populist Movement which swept over the West and South, I began now to believe, was a third party movement of deep significance and it was kept from political power on the one hand by the established election frauds of the South, of which I knew, and by the fabulous election fund which made McKinley President of the United States. With this went the diversion of the Spanish war with its sordid scandals of rotten beef, cheating and stealing, fever and death from neglect. Politics and economics thus in those days of my teaching became but two aspects of a united body of action and effort.

I tried to isolate myself in the ivory tower of race. I wanted to explain the difficulties of race and the ways in which these difficulties caused political and economic troubles. It was this concentration of thought and action and effort that really, in the end, saved my scientific accuracy and search for truth. But first came a period of three years when I was casting about to find a way of applying science to the race

problem. In these years I was torn with excitement of quick-moving events. Lynching, for instance, was still a continuing horror in the United States at the time of my entrance upon a teaching career. It reached a climax in 1892, when 235 persons were publicly murdered, and in the sixteen years of my teaching nearly two thousand persons were publicly killed by mobs, and not a single one of the murderers punished. The partition, domination, and exploitation of Africa gradually centered my thought as part of my problem of race. I saw in Asia and the West Indies the results of race discrimination while right here in America came the wild foray of the exasperated Negro soldiers at Brownsville and the political-economic riot at Atlanta.

One happening in America linked in my mind the race problem with the general economic development and that was the speech of Booker T. Washington in Atlanta in 1895. When many colored papers condemned the proposition of compromise with the white South, which Washington proposed, I wrote to the New York Age suggesting that here might be the basis of a real settlement between whites and blacks in the South, if the South opened to the Negroes the doors of economic opportunity and the Negroes co-operated with the white South in political sympathy. But this offer was frustrated by the fact that between 1895 and 1909 the whole South disfranchised its Negro voters by unfair and illegal restrictions and passed a series of "Jim Crow" laws which made the Negro citizen a subordinate caste.

As a possible offset to this came the endowment of the General Education Board and the Sage Foundation; but they did not to my mind plan clearly to attack the Negro problem: the Sage Foundation ignored us, and the General Education Board in its first years gave its main attention

to the education of whites and to black industrial schools.

(7)

I was approached by President Horace Bumstead of Atlanta University in 1896 and asked to come to Atlanta University and take charge of the work in sociology, and of the new conferences which they were inaugurating on the Negro problem. With this program in mind, I eagerly accepted the invitation, although at the last moment there came a curious reminiscence of Wilberforce in a little hitch based on that old matter of extemporaneous public prayer. Dr. Bumstead and I compromised on my promise to use the Episcopal prayer book; later I used to add certain prayers of my own composing. I am not sure that they were ~~[illegible]~~ or reached heaven, but they certainly reached my audience. Dr. Bumstead writes:

"Let me express the keen satisfaction I take in having been the one chiefly responsible, perhaps, for bringing Doctor Du Bois to Atlanta University. He has recently called his thirteen years of service there his 'real life work'; and I am proud to have helped open the way for him to begin it, and to have been closely associated with his labors for more than a decade, till I ceased to be president. I cannot but smile when I think of the objections and misgivings of some of our trustees and other friends when he came. We wanted a professor of sociology with special reference to investigating conditions concerning the Negro; and I said that Dr. Du Bois was the one man, white or black, far and away best fitted for the position. I knew of his long preparation at Fisk, Harvard, and in Germany, and I had read the unstinted praise which the New York Nation had given to his first publication, "The Suppression of the Slave Trade", and I knew of the confidence which Provost Harrison of the University of Pennsylvania had in him when he engaged him to spend a year or more in making a scientific study of the Philadelphia Negro. But, said some, if you are going to give the position to a Negro, why not to a graduate of Atlanta rather than of Fisk? Because, said I, we want the best man, regardless of where he was graduated. But how about his religion -- he's studied in Germany -- perhaps if you scratch him, you'll find an agnostic. Now it is true

that Atlanta University has always had a pronounced religious, though undenominational, life -- a life inherited from the New England people represented by its founders; and it has always looked to its teachers, so far as possible, to help to maintain it -- so I must needs have some assurances on this point. But, as Doctor Du Bois will remember, they were not very easy to get. He seemed to be one of those persons who, when asked about their religion, reply that they 'have none to speak of'. But though reluctant to speak of his religion or to say what he would do at Atlanta, I observed that at the time of my interview with him he was living with his newly wedded bride in the centre of the Negro slums of Philadelphia, doing the beneficent work to which Provost Harrison had called him, and I thought there were some indications of genuine religion in that fact. Nor was I disappointed, later, when some of the deepest and most vital expressions of the religious life came from his lips as he conducted evening devotions at the University.

"So, in spite of objections and misgivings, Doctor Du Bois came to Atlanta University, and we held him there for thirteen years notwithstanding several offers to go elsewhere and get double the salary that we could afford to pay him. His work became a memorable part of the history of the Institution. Let me specify two of its most prominent and valuable features.

"One was the inauguration, for the first time in any American college, of a thoroughly scientific study of the conditions of Negro life, covering all of its most important phases, and resulting in a score of annual "Atlanta University Publications", conceded to be of the highest authority, both in this country and in Europe.

"Even more important than this, was the stimulating personal influence of Doctor Du Bois upon our students. He had acquired his own education where the highest standards prevailed, and he would tolerate no lower ones in his own classrooms. Not only in study but also in conduct, he demanded of his pupils the best that was in them. He taught them the nobility and sacredness of their manhood -- endowed, as

they were, with all the inherent rights and possibilities of development enjoyed by humanity anywhere. To his fellow teachers, too, he brought joy, for though often looked upon in the outside world as a pessimist, he was about the jolliest member of our Faculty. The inspiration of his stimulating personality has gone out through all the South and will be felt for generations to come."

The hundred hills of Atlanta are not all crowned with factories. On one, toward the west, the setting sun throws three buildings in bold relief against the sky. The beauty of the group lies in its simple unity: — a broad lawn of green rising from the red street with mingled roses and peaches; north and south, two plain and stately halls; and in the midst, half hidden in ivy, a larger building, boldly graceful, sparingly decorated, and with one low spire. It is a restful group — one never looks for more; it is all here, all intelligible. There I live, and there I hear from day today the low hum of restful life.

In winter's twilight, when the red sun glows, I can see the dark figures pass between the halls to the music of the nightbell. In the morning, when the sun is golden, the clang of the day-bell brings the hurry and laughter of three hundred young hearts from hall and street, and from the busy city below — children all dark and heavy-haired — to join their clear young voices in the music of the morning sacrifice. In a half-dozen class-rooms they gather then — here to follow the love-song of Dido, here to listen to the tale of Troy divine; there to wander among the stars, there to wander among men and nations — and elsewhere other well-worn ways of knowing this queer world. Nothing new, no time-saving devices, — simply old time-glorified methods of delving for Truth, and searching out the hidden beauties of life, and learning the good of living.

The riddle of existence is the college curriculum that was laid before the Pharaohs, that was taught in the groves by Plato, that formed the <u>trivium</u> and <u>quadrivium</u>, and is today laid before the freedmen's sons by Atlanta University. And this course of study will not change; its methods will grow more and deft and

effectual, its content richer by toil of scholar and sight of seer; but the true college will ever have one goal — not to earn meat, but to know the end and aim of that life which meat nourishes.

The vision of life that rises before these dark eyes has in it nothing mean or selfish. Not at Berlin nor at Leipsic, not at Harvard nor Yale is there an air of higher resolve or more unfettered striving; the determination to realize for men, both black and white, the broadest possibilities of life, to seek the better and the best, to spread with their own hands the Gospel of Sacrifice — all this is the burden of their talk and dream. Here, amid a wide desert of caste and proscription, amid the heart-hurting slights and jars and vagaries of a deep race-dislike, lies this green oasis, where hot anger cools, and the bitterness of disappointment is sweetened by the springs and breezes of Parnassus; and here men may lie and listen and learn of a future fuller than the past, and hear the voice of Time:

"Entbehren sollst du, sollst entbehren."

They made their mistakes, those who planted Fisk and Howard and Atlanta before the smoke of battle had lifted; they made their mistakes, but those mistakes were not the things at which we lately laughed somewhat uproariously. They were right when they sought to found a new educational system upon the University: where, forsooth, shall we found knowledge save on the broadest and deepest knowledge? The roots of the tree, rather than the leaves, are the sources of its life; and from the dawn of history, from Academus to Cambridge, the culture of the University has been the broad foundation-stone on which is built the kindergarten's A B C.

But these builders did make a mistake in minimizing the gravity of the problem before them; in thinking it a matter of years and decades; in therefore building quickly and laying their foundation carelessly, and lowering the standard of knowing, until they had scattered haphazard through the South some dozen poorly equipped high schools and miscalled them universities. They forgot, too, just as

their successors are forgetting, the rule of inequality -- that of the million black youth, some were fitted to know and some to dig; that some had the talent and capacity of university men, and some had the talent and capacity of blacksmiths: and that true training meant neither that all should be college men nor all artisans, but that the one should be made a missionary of culture to an untaught people, and the other a free workman among serfs.

(12.) begun

My real life work was done at Atlanta for thirteen years, from my twenty-ninth to my forty-second birthday. They were years of great spiritual upturning, of the making and unmaking of ideals, of hard work and hard play. Here I found myself. I lost most of my mannerisms. I grew more broadly human, made my closest and most holy friendships, and studied human beings. I became widely-acquainted with the real condition of my people. I realized the terrific odds which faced them. I saw the Atlanta riot.

The main significance of my work at Atlanta University, during the years 1897 to 1910 was the development at an American institution of learning, of a program of study on the problems affecting the American Negroes, covering a progressively widening and deepening effort designed to stretch over the span of a century. This program was grafted on an attempt by George Bradford of

Boston, one of the trustees, to open for Atlanta University a field of usefulness for City Negroes comparable to what Hampton and Tuskegee were doing for rural districts in agriculture and industry. At the Hampton and Tuskegee Conferences, there came together annually and in increasing numbers, workers, experts and observers to encourage by speeches and interchange of experience the Negro farmers and laborers of adjoining areas. Visitors, white and colored, from North and South, joined to advise and learn. Mr. Bradford's idea was to establish at Atlanta a similar conference, devoted especially to problems of city Negroes. The first conference, emphasizing particularly Negro health problems, was held in 1896. Immediately the University looked about for a man to teach history and political science, and take charge of future conferences. I was chosen.

When I took charge of the Atlanta Conference, I did not pause to consider how far my developed plans agreed or disagreed with the ideas of the already launched project. It made little essential difference, since only one conference had been held and a second planned. These followed the Hampton and Tuskegee model of being primarily meetings of inspiration, directed toward specific efforts at social reform and aimed at propaganda for social uplift in certain preconceived lines. This program at Atlanta, I sought to swing as on a pivot to one of scientific investigation into social conditions, primarily for scientific ends: I put no special emphasis on special reform effort, but increasing and widening emphasis on the collection of a basic body of fact concerning the social condition of American Negroes, endeavoring to reduce that condition to exact measurement whenever or wherever occasion permitted. As time passed, it happened that many uplift efforts were in fact based on our studies: the kindergarten system of the city of Atlanta, white

as well as black; the Negro Business League, and various projects to better health and combat crime. We came to be however, as I had intended, increasingly, a source of general information and a basis for further study, rather than an organ of social reform.

The proverbial visitor from Mars would have assumed as elemental a study in America of American Negroes -- as physical specimens; as biological growths; as a field of investigation in economic development from slave to free labor; as a psychological laboratory in human reaction toward caste and discrimination; as an unique case of physiaal and cultural intermingling. These and a dozen other subjects of scientific interest, would have struck the man from Mars as eager lines of investigation for American social scientists. He would have been astonnded to learn that the only institution in America in 1900 with any such program of study was Atlanta University, where on a budget of $5000 a year, including salaries, cost of publication, investigation and annual meetings, we were essaying this pioneer work.

My program for the succession of conference studies was modified by many considerations: cost, availability of suitable data, tested methods of investigation; moreover I could not plunge too soon into such controversial subjects as politics or miscegenation. Within these limitations, I finished a ten-year cycle study as follows:

1896, Mortality among Negroes in Cities

1897, Social and Physical Condition of Negroes in Cities

1898, Some Efforts of Negroes for Social Betterment

1899, The Negro in Business

1900, The College-Bred Negro

1901, The Negro Common School

1902, The Negro Artisan

1903, The Negro Church

1904, Notes on Negro Crime

1905, A Select Bibliography of the American Negro

I then essayed for the second decade a broader program, more logical, more inclusive, and designed to bring the whole subject matter into a better integrated whole. But continued lack of funds, and outside diversions (like the request of the Carnegie Institution of 1907 for a study of co-operation) kept even the second decade from the complete logic of arrangement which I desired; finally, my leaving Atlanta in 1910 and at last the severing of my connection with the conference in 1914, left the full form of my program still unfinished. I did, however, publish the following eight studies:

1906, Health and Physique of the Negro American

1907, Economic Co-operation among Negro Americans

1908, The Negro American Family

1909, Efforts for Social Betterment among Negro Americans

1910, The College-Bred Negro American

1911, The Common School and the Negro American

1912, The Negro American Artisan

1914, Morals and Manners among Negro Americans

With the publication of 1914, my connection with Atlanta ceased for twenty years. Although studies and publications were prepared by others at the University in 1915 and 1918, the war finally stopped the enterprise.

What I was laboriously but steadily approaching in this effort was a recurring cycle of ten studies in succeeding decades; with repetition of each subject or some modification of it in each decade, upon a progressively

broader and more exact basis and with better method; until gradually a foundation of carefully ascertained fact would build a basis of knowledge, broad and sound enough to be called scientific in the best sense of that term.

Just what form this dream would eventually have taken, I do not know. So far as actually forecast, it had assumed in 1914, some such form as this:

1. Population: Distribution and Growth
2. Biology: Health and Physique
3. Socialization: Family, Group and Class
4. Cultural Patterns: Morals and Manners
5. Education
6. Religion and the Church
7. Crime
8. Law and Government
9. Literature and Art
10. Summary and Bibliography

I proposed as I have said, to repeat each of these every ten years, basing the studies on ever broader and more carefully gathered data. Eventually I hoped to keep all the inquiries going simultaneously, only emphasizing and reporting on one particular subject each year. This would have allowed some necessary shifting or combination of subjects as time and developments might suggest; and adjustments to new scientific advance in fields like anthropology and psychology. The plan would have called in time for a large and well-paid staff of experts and a study of method and testing of results such as no group of Americans were engaged in at the time; beginning with a definite, circumscribed group, but ending with the human race. ~~If it could have been~~

The program however was weak on its economic side. It did not stress enough the philosophy of Marx and Engels and was of course far too soon for Lenin. The program ought to have been-- and as I think would have been if I had kept on this work-- the Economic development of the American Negro slave; on this central thread all the other subjects would have been strung. But this I had no chance to ess

Social scientists (at the time 18) were [illegible] thinking in terms of theory and vast and eternal laws, but I had a concrete group of living beings artificially set off by themselves and capable of almost laboratory experiment. I laid down an ambitious program for a hundred years of study. I proposed to take up annually in each decade the main aspects of the group life of Negroes with as thorough study and measurement as possible, and repeat the same program in the succeeding decade with additions, changes and better methods. In this way, I proposed gradually to broaden and intensify the study, sharpen the tools of investigation and perfect our methods of work, so that we would have an increasing body of scientifically ascertained fact, instead of the vague mass of the so-called Negro problems. And through this laboratory experiment I hoped to make the laws of social living clearer, surer, and more definite.

Some of this was accomplished, but of course only an approximation of the idea. For thirteen years we poured forth a series of studies; limited, incomplete, only partially conclusive, and yet so much better done than any other attempt of the sort in the nation that they gained attention throughout the world. In all we published a total of 2,172 pages which formed a current encyclopaedia on the American Negro problems.

These studies with all their imperfections were widely distributed in the libraries of the world and used by scholars. It may be said without undue boasting that between 1896 and 1920 there was no study of the race problem in America made which did not depend in some degree upon the investigations (longer) made at Atlanta University; often they were widely quoted and commended.

I had heartening letters from persons of eminence and character. William James wrote in 1907: "I have just looked through the last installment of your studies on the American Negro. I wish the portraits might have been better printed. But it is splendid scientific work." Frank Taussig of Harvard wrote the same year: "In my judgment no better work is being done in the country, and no better opportunity is afforded for financial support on the part of those who wish to further the understanding of the Negro problem." Booker Washington, who spoke at our conference on the Negro artisan in 1911, said: "The whole country should be grateful to this

institution for the painstaking and systematic manner in which it has developed from year to year a series of facts which are proving most vital and helpful to the interests of our nation." Professor E.R.A. Seligman wrote: "I take great pleasure in testifying to my very high appreciation of the studies on the Negro problem which you have been editing for the past few years. They are essentially scholarly and that means sober and temperate, and they are covering a field which is almost untilled and which is not apt to be cultivated by others." Jane Addams attended our conference in 1908 and commended our work. Charles William Eliot ~~lectured for us on his trip~~ many hundreds mentioned our work

London Spectator ,1900:

This work is being done with much intelligence, discrimination and assiduity at the instance and under the inspiration of the Atlanta University.

Publications of the Southern History Association, ~~1901; 1902~~; 1904

The work done under the direction of the Atlanta Conference is entitled to the respectful and thoughtful consideration of every man interested in any aspect of the life of the American Negro.

School Review, 1902:

The work of this conference is constructive and merits hearty support.

Outlook, 1902

Every year since their organization in 1896 the Atlanta Conferences have published an invaluable report upon present conditions among the Negroes.

Outlook, 1903:

No student of the race problem, no person who would either think or speak upon it intelligently, can afford to be ignorant of the facts brought out in the Atlanta series of sociological studies of the conditions and the progress of the Negro.

South Atlantic Quarterly, 1904:

They constitute, so far as the reviewer can learn, the most important body of direct evidence ever published as to moral and religious conditions of our colored people.

N.Y. Evening Post, 1905:

The only scientific studies of the Negro question being made today are

It must be remembered that the significance of these studies lay not so much in what they were actually able to accomplish, as in the fact that at the time of their publication Atlanta University was the only institution in the world carrying on a systematic study of the Negro and his development, and putting the result in a form available for the scholars of the world.

In addition to the publications, we did something toward bringing together annually at Atlanta University persons and authorities interested in the problem of the South. Among these were Booker T. Washington, Frank Sanborn, Franz Boas, ~~Jane Addams~~ Charles William Eliot and Walter Wilcox. We were asked from time to time to co-operate in current studies. ~~I wrote a number of studies for the Bureau of Labor in Washington,~~ I co-operated in the taking of the Twelfth Census and wrote one of the monographs. I ~~not only published the Atlanta Conference reports, and~~ wrote magazine articles in the World's Work and in the Atlantic Monthly where I joined in a symposium and one of my fellow contributors was Woodrow Wilson. ~~At the same time~~ also I joined with the Negro leaders of Georgia in efforts to better local conditions; to stop discrimination in the distribution of school funds; to keep the legislature from making further discriminations in railway travel. ~~I prepared an exhibit showing the condition of the Negro for the Paris Exposition which gained a Grand Prize.~~ I became a member of the American Association for the Advancement of Science in 1900 and was made a fellow in 1904. I went to Europe ~~steerage to help in this exhibit~~ and while abroad I ~~there~~ sat in

London with the wife of Coleridge-Taylor and heard the first rendition of Hiawatha's Wedding Feast. In 1909 I tried to start an "Encyclopedia Africana" and secured as members of the board of advisers the following distinguished scholars:

Sir Harry Johnston, K.C.B., England
Prof. W.M. Flinders Petrie, D.C.L., England
William Archer, Esq., England
Miss Alice Werner, England
Dr. Francis Hoggan, England
Prof. Giuseppi Sergi, Italy
Dr. Karl Weule, Germany
Dr. J. Deniker, France
Major R.M. Daniel, Bechuanaland, Africa
Prof. A.B. Hart, L.L.D., Harvard
Prof. William James, L.L.D., Harvard
Prof. Hugo Munsterberg, L.L. D., Harvard
President G. Stanley Hall, L.L.D, Clark
Prof. A.F. Chamberlain, Ph.D., Clark
Prof. Franz Boaz, Ph.D., Columbia

~~The following~~ Negro scholars were on the Editorial Board, including

Kelley Miller, A.M., (Howard)
H.O. Tanner, France
Richard T. Greener, A.B. (Harvard)
Charles W. Chesnutt
~~Bishop J.A. Johnson, South Africa~~
~~J.W.E. Bowen, L.L.D~~
John R. Lynch, U.S. Army
~~W.H. Crogman, Litt.D. (Atlanta)~~
~~R.R. Wright, Jr. A.M. (U. of Chicago)~~
~~C.H. Turner, A.M. (U. of Chicago)~~
~~J.W. Cromwell~~
~~J.B. Simpson, A.M. (Colby)~~
~~L.F. Hill, A.B. (Harvard)~~
~~G.C. Cook, A.B. (Cornell)~~
W.S. Scarborough, L.L.D. (Oberlin)
~~Charles H. Royer, A.B. (Yale)~~
~~Paul M. Nash, A.B., L.L.B. (Harvard)~~
~~S.C. Fuller, M.D.~~
~~William Pickens, A.B. (Yale)~~
John Hope, A.M. (Brown)
~~B.C. Brawley A.M. (U. of Chicago)~~
~~B.C. Williams, A.B. (Western Reserve)~~
Caseley Hayford, West Africa
~~T.E.S. Scholes, England~~
~~W.N. DeBerry A.B. (Fisk)~~
~~J.L.R. Diggs, A.B.~~
~~Anna H. Jones, A.B. (U. of Michigan)~~
~~H.L. Pinckett, A.B. (Howard)~~
~~Sutton E. Griggs, A.M., B.D.~~
~~George W. Forbes, A.B. (Amherst)~~
~~A.H. Grimke~~

22

I never was able to raise funds to carry this enterprise further forward.

I testified before Congressional Commissions in Washington and appeared on the lecture platform with Walter Page, afterwards ambassador to England; I did a considerable amount of lecturing throughout the United States. I had wide correspondence with men of prominence in America and Europe: Lyman Abbott of the Outlook; E.D. Morel, the English expert on Africa; Max Weber of Heidelberg; Professor Wilcox of Cornell; Bliss Perry of the Atlantic Monthly; Horace Traubel, the great protagonist of Walt Whitman; Charles Eliot Norton and Talcott Williams. I began to be regarded by many groups and audiences as having definite information on the Negro to which they might listen with profit.

In 1900, came a signigant occurence which not until lately have I set in its proper place in my life. I had been for over nine years studying the American Negro problem. The result had been significant because of its unusual nature and not for its positive accomplishment. I wanted to set down its aim and method in some outstanding way which would bring my work to the notice of the thinking world. The great World Fair at Paris was being planned and I thought I might put my findings into plans, charts and figures, so one might see what we were trying to accomplish. I got a couple of my best students and put a series of facts into charts: the size and growth of the American Negro group; its division by age and sex; its distribution, education and occupations; its boks and periodicals. We made a most interestering set of drawings, limned on pasteboard cards, about a yard square and mounted on a number of movable standards. The details of finishing these fifty or more charts, in colors, with accuracy, was terribly difficult with little money, limited time and not too much encouragement. I was threatened with nervous prostration before I was done and had little money left to buy passage to Paris, nor was there a cabin left for sale, but the exhibit would fail unless I was there. So at the last moment I bought passage in the steerage and went over and installed the work. It was an immediate success. It occupied a small room, perhaps 20 feet square but the room was always full. The American press, white and colored was full of commendation and in the end, the exhibit received a Grand Prize, and I as its author a Gold Medal.

I was pleased and satisfied. I sat back quietly to hear the commendation and they came, that only for this particular exhibit but for the work of the Atlanta conferences in general.

2233

I was sure that the work I had planned was sure of support and growth. But it was not. Within less than ten years it had to be abandoned because five thousand dollars a year could not be found in this rich land for its support. Where had I failed? There were many answers, but one was typically American, as the event proved, I did the deed but I did not advertise it. Either I myself or someone for me should have called public attention to what had been done or otherwise it would quickly be forgotten. Indeed the philosophy then current and afterward triumphant was that the Deed without advertising was worthless and in the long run Advertising without the Deed was the only lasting value. Perhaps Americans do not realize how completely they have adopted this philosophy. But Madison Avenue does.

At the very time when my studies were most successful, there cut across this plan which I had as a scientist, a red ray which could not be ignored. I remember when it first, as it were, startled me to my feet: a poor Negro in central Georgia

Sam Hose, had killed his landlord's wife. I wrote out a careful and reasoned statement concerning the evident facts and started down to the Atlanta Constitution office, carrying in my pocket

24

a letter of introduction to Joel Chandler Harris. I did not get there. On the way news met me: Sam Hose had been lynched, and they said that his knuckles were on exhibition at a grocery store farther down on Mitchell Street, along which I was walking. I turned back to the University. I began to turn aside from my work. I did not meet Joel Chandler Harris nor the editor of the Constitution.

Two considerations thereafter broke in upon my work and eventually disrupted it: first, one could not be a calm, cool, and detached scientist while Negroes were lynched, murdered and starved; and secondly, there was no such definite demand for scientific work of the sort that I was doing, as I had confidently assumed would be easily forthcoming. I regarded it as axiomatic that the world wanted to learn the truth and if the truth was sought with even approximate accuracy and painstaking devotion, the world would gladly support the effort. This was, of course, but a young man's idealism, not by any means false, but also never universally true. The work of the conference for thirteen years including my own salary and small office force did not average five thousand dollars a year. Probably with some effort and sacrifice Atlanta University might have continued to raise this amount if it had not been for the controversy with Booker T. Washington that arose in 1903 and increased in virulence until 1908.

There were, of course, other considerations which made Atlanta University vulnerable to attack at this time. The university from the beginning had taken a strong and unbending attitude toward Negro prejudice and discrimination; white teachers and black students ate together in the same dining room and lived in the same dormitories. The charter of the

23

193

institution opened the doors of Atlanta University to any student who applied, of any race or color; and when the state in 1887 objected to the presence of a few white students, who were all children of teachers and professors, the institution gave up the small appropriation from the State rather than repudiate its principles. In fact, this appropriation represented not State funds, but the Negroes' share of the sum received from the Federal government for education. When later there came an attempt on the part of the Southern Education Board and afterwards of the General Education Board to form a working program between educated Negroes and forward-looking whites in the South, it gradually became an understood principle of action that colored teachers should be encouraged in colored schools; that the races in the schools should be separated socially; that colored schools should be chiefly industrial; and that every effort should be made to conciliate Southern white public opinion. Schools which were successfully carrying out this program could look for further help from organized philanthropy. Other schools, and this included Atlanta University, could not.

Even this would not necessarily have excluded Atlanta University from consideration at the hands of the philanthropists. The university had done and was doing excellent and thorough work. Even industrial training in the South was often in the hands of Atlanta graduates. Tuskegee had always been largely manned by graduates of Atlanta and some of the best school systems of the South were directed by persons trained at Atlanta University. The college department was recognized as perhaps the largest and best among negroes in the South at the time. But unfortunately, at this time, there came a controversy between myself and Booker Washington, which became more personal and bitter than I had ever dreamed and which necessarily dragged in the University.

Meantime, the task of raising money for Atlanta University and my work became increasingly difficult. In the fall of 1904 the printing of our conference

report was postponed by the trustees until special funds could be secured. I did not at the time see the handwriting on the wall. I did not realize how strong the forces were back of Tuskegee and how they might interfere with my scientific study of the Negro. My continuing thought was that we must have a vehicle for both opinion and fact which would help me carry on my scientific work and at the same time be a forum less radical than the Guardian , and yet more rational than the rank and file of Negro papers now so largely arrayed with Tuskegee. With this in mind, as early as 1904, I helped one of the Atlanta University graduates, who was a good printer, to set up a job office in Memphis.

In 1905 I wrote to Jacob Schiff, reminding him of having met him in Bar Harbor in 1903:

"I want to lay before you a plan which I have and ask you if it is of sufficient interest to you for you to be willing to hear more of it and possibly to assist in its realization. The Negro race in America is today in a critical condition. Only united concerted effort will save us from being crushed. This union must come as a matter of education and long continued effort. To this end there is needed a high class of journal to circulate among the intelligent Negroes, tell them of the deeds of themselves and their neighbors, interpret the news of the world to them, and inspire them toward definite ideals. Now we have many small weekly papers and one or two monthlies, and none of them fill the great need I have outlined. I want to establish, therefore, for the nine million American Negroes and eventually for the whole Negro world, a monthly journal. To this end I have already in Memphis a printing establishment which has been running successfully at job work a year under a competent printer -- self-sacrificing educated young man. Together we shall have

about $2,000 invested in this plant by April 15."

Mr. Schiff wrote back courteously, saying: "Your plans to establish a high class journal to circulate among the intelligent Negroes is in itself interesting, and on its face has my sympathy. But before I could decide whether I can become of advantage in carrying your plans into effect, I would wish to advise with men whose opinion in such a matter I consider much of/value." Nothing ever came of this, because, as I might have known, most of Mr. Schiff's friends were strong and sincere advocates of Tuskegee.

It was with difficulty that I came fully to realize the situation that was thus developing: first of all, I could not persuade myself that my program of solving the Negro problem by scientific investigation was wrong, or that it could possibly fail of eventual support when once it was undertaken; that it was understood in widening circles of readers and thinkers, I was convinced, because of the reception accorded the Atlanta University Studies. When, however, in spite of that, the revenue of the University continued to fall off, and no special support came for my particular part of its work, I tried several times by personal effort to see if funds could not be raised.

In 1906 I made two appeals: first and boldly, I outlined the work of the Atlanta Conference to Andrew Carnegie, reminding him that I had been presented to him and Carl Schurz some years before. I hoped that despite his deep friendship for Mr. Washington and the Tuskegee idea, he would see the use and value of my efforts at Atlanta. The response was indirect. At the time a white Mississippi planter, Alfred W. Stone, was popular in the North. He had grave doubts about the future of the Negro race, widely

criticized black labor, and once tried to substitute Italians on his own plantations, until they became too handy with the knife. To his direction, Mr. Carnegie and others entrusted a fund for certain studies among Negroes. Why they selected Slater and neglected an established center like Atlanta University, I cannot imagine; but at any rate, Stone turned to me and offered to give the University a thousand dollars to help finance a special study of the history of economic cooperation among Negroes. I had planned that year, 1907, to study the Negro in politics, but here was needed support, and I turned aside and made the study asked for.

About the same time, I approached the United States Commissioner of Labor. For several years I had been able to do now and then certain small studies for the Bureau of Labor, which had been accepted and paid for. It began with a proposal to Carroll D. Wright in 1897 for a study of the Negro in a Virginia town in 1898, which Mr. Wright authorized me to make on my own responsibility, promising only to print it if he liked it. He did like it. This was followed by a major study of the Negro in the Black Belt in 1899 and among Negroes in Georgia in 1901; and I then approached the Bureau with a new proposal.

I asked United States Commissioner of Labor Neill, in 1906, to authorize a study of a Black Belt community. I wanted to take Lowndes County, Alabama, in a former slave state with a large majority of Negroes, and make a social and economic study from the earliest times where documents were available, down to the present; supplemented by studies of official records and a house to house canvas of Negroes. I plied Commissioner Neill with plans and specifications until at last he author-

This is standard American procedure ; if there is a job to be done and a Negro fit to do it, do not give the job or the responsibility to the Negro; give it to some white man and let the Negro work under him

criticized black labor, and once tried to substitute Italians on his own plantations, until they became too handy with the knife. To his direction, Mr. Carnegie and others entrusted a fund for certain studies among Negroes. Why they selected Hampton and neglected an established center like Atlanta University, I cannot imagine; but at any rate, Stone turned to me and offered to give the University a thousand dollars to help finance a special study of the history of economic cooperation among Negroes. I had planned that year, 1907, to study the Negro in politics, but here was needed support, and I turned aside and made the study asked for.

About the same time, I approached the United States Commissioner of Labor. For several years I had been able to do now and then certain small studies for the Bureau of Labor, which had been accepted and paid for. It began with a proposal to Carroll D. Wright for a study of the Negro in a Virginia town in 1898, which Mr. Wright authorized me to make on my own responsibility, promising only to print it if he liked it. He did like it. This was followed by a major study of the Negro in the Black Belt in 1899 and among Negroes in Georgia in 1901, and I now approached the Bureau with a new proposal.

I asked United States Commissioner of Labor Neill, in 1906, to authorize a study of a Black Belt community. I wanted to take Lowndes County, Alabama, in a former slave state with a large majority of Negroes, and make a social and economic study from the earliest times where documents were available, down to the present; supplemented by studies of official records and a house to house canvas. I plied Commissioner Neill with plans and specifications until at last he author-

This is standard American procedure ; if there is a job to be done and a Negro fit to do it, do not give the job or the responsibility to the Negro; give it to some white man and let the Negro work under him

ized the study. Helped by Monroe Work, of Tuskegee Institute, and R. R. Wright, now a bishop of the A. M. E. Church, and a dozen or more local employees, I settled at the Calhoun School and began the study.

It was carried on with all sorts of difficulties, including financing which was finally arranged by loans from the University, and with the greeting of some of my agents with shotguns in certain parts of the county; but it was eventually finished. The difficult schedules were tabulated and I made chronological maps of the division of the land; I considered the distribution of labor; the relation of landlord and tenant; the political organization and the family life and distribution of the population. The report was finally finished by Frank Wells no copy, and rewritten

~~work~~ to Washington and I spent some weeks there in person, revising and perfecting it. It was accepted by the government, and $2,000 paid for it, most of which went back to the University in repayment of funds which they had kindly furnished me to carry on the work. But the study was not published. I knew the symptoms of this sort of treatment: in 1898, S. S. McClure had sent me to south Georgia to make a study of social situations there. He paid for the report but never published the manuscript, and afterward did the same thing in the case of Sir Harry Johnston.

I finally approached the bureau and tried to find out when it would be published and was told that the bureau had decided not to publish the manuscript, since it "touched on political matters." I was astonished and disappointed, but after a year went back to them again and asked if they would allow me to have the manuscript ~~published~~ since they were not going to use it. They told me it had been destroyed. While I was down in Lowndes County finishing this study, there came the news of the Atlanta riot. I took the next train for Atlanta and my family. On the way, I wrote the "Litany of Atlanta"

28A

Professor Seligman of Columbia wrote me:

"Like so many other of your well wishers I was amazed and disgusted at the happenings in Atlanta. But perhps I did not realize the horror of it all, until I read your beautiful poem in the Independent. It must indeed be a tragedy for men like you -- a tragedy all the greater because of the seeming impasse. But perhaps you will learn -- as I have learned after going thro' the fire of affliction -- that there are really only two things worth living for in this world -- the one is the love of those most nearly related to you, or thrown into close contact with you -- and the other is work, the chance to express oneself in some form of activity however humble. Those things are open to every human being, and at bottom there is nothing else which is comparable with them -- wealth, reputation, ambition or what not. Let us hold to the things that are eternally true, and let us seek within ourselves the compensation for the things that are withheld by an unthinking and uncivilized world."

29

It was of course crazy for me to dream that America, in the dawn of the Twentieth Century with Colonial Imperialism, based on the suppression of colored folk, at its zenith, would encourage, much less adequately finance, such a program at a Negro college under Negro scholars. My faith in its success was based on the firm belief that race prejudice was based on widespread ignorance. My long-term remedy was Truth: carefully gathered scientific proof that neither color nor race determined the limits of a man's capacity or desert. I was not at the time sufficiently Freudian to understand how little human action is based on reason; nor did I know Karl Marx well enough to appreciate the economic foundations of human history.

I was therefore astonished and infinitely disappointed, gradually to realize that our work in the Atlanta conferences was not getting support; that, far from being able to command increased revenue for better methods of investigation and wider fields, it was with increasing difficulty that the aging and overworked President, with his deep earnestness and untiring devotion to principle, could collect enough to maintain even our ~~present~~ normal activities. The conference had not been without a measure of success. Our reports were widely read and commented upon. We could truthfully say that between 1900 and 1925, no work on the Negro and no study of the South was published which was not indebted in some respect to the studies at Atlanta University. The United States Census Bureau and the Federal Labor Bureau asked our help and co-operation; institutions and philanthropies; authors, students and individuals in all walks of life, and in Europe, Asia and Africa, wrote us for information and advice. On the other hand, so far as the American world of science and letters was concerned, we never "belonged"; we remained unrecognized in learned societies and academic groups. We rated merely as Negroes studying Negroes, and after all, what had Negroes to do with America or Science? Gradually and with deep disappointment I began to realize, as early as 1906,

that my program for studying the Negro problems must soon end, unless it received unforeseen support.

With all this came the strengthening and hardening of my own character. The billows of birth, love, and death swept over me. I saw life through all its paradox and contradiction of streaming eyes and mad merriment. I emerged into full manhood, with the ruins of some ideals about me, but with others planted above the stars; scarred and a bit grim, but hugging to my soul the divine gift of laughter and withal determined, even unto stubbornness, to fight the good fight.

At last, forebear and waver as I would, I faced the great Decision. My life's last and greatest door stood ajar. What with all my dreaming, studying, and teaching was I going to do in this fierce fight? Despite all my youthful conceit and bumptiousness, I found developed beneath it all a reticence and new fear of forwardness, which sprang from searching criticisms of motive and high ideals of efficiency; but contrary to my dream of racial solidarity and notwithstanding my deep desire to serve and follow and think, rather than to lead and inspire and decide, I found myself suddenly the leader of a great wing of people fighting against another and greater wing.

Nor could any effort of mine keep this fight from sinking to the personal plane. Heaven knows I tried. I finally wrote in March, 1910:

"I insist on my right to think and speak; but if that freedom is made an excuse for abuse of and denial of aid to Atlanta University, then with regret I shall withdraw from Atlanta University."

For the American Negro, the last decade of the 19th and the first decade of the 20th centuries were more critical than the Reconstruction years of 1868 to 1876. Yet they have received but slight attention from historians and social students. They were usually interpreted in terms of personalities, and without regard to the great social forces that were developing. This was the age of triumph for Big Business, for Industry, consolidated and organized on a world-wide scale, and run by white capital with colored labor. The southern United States was one of the most

promising fields for this development, with a fine climate invaluable staple crops, with a mass of cheap and potentially efficient labor, with unlimited natural power and use of unequalled technique, and with a transportation system reaching all the markets of the world.

The profit promised by the exploitation of this quasi-colonial empire was facing labor difficulties, threatening to flare into race war. The relations of the poor-white and Negro working classes were becoming increasingly embittered. In the year when I undertook the study of the Philadelphia Negro, lynching of Negroes by mobs reached a crimson climax in the United States, at the astounding figure of nearly five a week. Government throughout the former slave states was conducted by fraud and intimidation, with open violation of state and federal law. Reason seemed to have reached an impasse; white demagogues,

like Tillman and Vardaman, attacked Negroes with every insulting epithet and accusation that the English language could afford, and got wide hearing. On the other hand Negro colleges and others were graduating colored men and women, few in the aggregate, but of increasing influence, who demanded the full rights of American citizens; and even if their threatening surroundings compelled silence or whispers, they were none the less convinced that this attitude was their only way of salvation. Supporting Negro education were the descendants of those Northerners who founded the first Negro institutions and had since contributed to their upkeep. But these same Northerners were also investors and workers in the new industrial organization of the world. Toward them now turned the leaders of the white South, who were at once apprehensive of race war and desirous of a new, orderly industrial South.

Conferences began between whites of the North and the South, including industrialists as well as teachers, business men rather than preachers. At Capon Springs, on the Robert Ogden trips to Hampton and Tuskegee, in the organization of the Southern Education Board, and finally in the founding of the General Education Board, a new racial philosophy for the South was evolved. This philosophy seemed to say that the attempt to over-educate a "child race" by furnishing chiefly college training to its promising young people, must be discouraged; the Negro must be taught to accept what the whites were willing to offer him; in a world ruled by white people and destined so to be ruled, the place of Negroes must be that of an humble, patient, hard-working group of laborers, whose ultimate destiny would be determined by their white employers. Meantime, the South must have education on a broad and increasing basis, but primarily for whites; for Negroes, education, for the present, should be confined increasingly to elementary instruction,

and more especially to training in farming and industry, calculated to make the mass of Negroes laborers contented with their lot and ~~tractable~~ cheap.

White and Negro labor must, so far as possible, be taken out of active competition, by segregation in work: to the whites the bulk of well-paid skilled labor and management; to the Negro, farm labor, unskilled labor in industry and domestic service. Exceptions to this general pattern would occur especially in some sorts of skills like building and repairs; but in general the "white" and "Negro" job would be kept separate and superimposed.

Finally, Northern philanthropy, especially in education, must be organized and incorporated, and its dole distributed according to this program; thus a number of inefficient and even dishonest attempts to conduct private Negro schools and low-grade colleges would be eliminated; smaller and competing institutions would be combined; above all, less and less total support would be given higher training for Negroes. This program was rigorously carried out until after the first World War.

To the support of this program, came Booker T. Washington in 1895. The white South was jubilant; public opinion was studiously organized to make Booker Washington the one nationally recognized leader of his race, and the South went quickly to work to translate this program into law. Disfranchisement laws were passed between 1890 and 1910, by all the former slave states, and quickly declared constitutional by the courts, before contests could be effectively organized. "Jim-Crow" legislation, for travel on railroads and street-cars, and race separation in many other walks of life, were rapidly put on the statute books.

By the second decade of the Twentieth Century, a legal caste system based on race and color, had been openly grafted on the democratic constitution of the

United States. This explains why, in 1910, I gave up my position at Atlanta University and became Director of Publications and Research for the newly formed National Association for the Advancement of Colored People, of which I was one of the incorporators in 1911.

Very early in my work in Atlanta, I began to feel, on the one hand, pressure being put upon me to modify my work; and on the other hand an inner emotional reaction at the things taking place about me. To note the latter first: as a scientist, I sought the traditional detachment and calm of the seeker for truth. I had deliberately chosen to work in the South, although I knew that there I must face discrimination and insult. But on the other hand I was a normal human being with strong feelings and pronounced likes and dislikes, and a flair for expression; these I could not wholly suppress, nor did I try. I was on the other hand willing to endure and as my dear friend, Henry Hunt, said to me in after years, "I could keep still in seven different languages." But, if I did speak I did not intend to lie.

In one aspect of the Negro problem in America, my program had limited sucess; that was its relation to the white working class. The Negroes were working folk -- farmers, laborers, porters and servants. They belonged in the main to the "Have-nots" as over against the "Haves" Yet they were not regarded as an integral part of the American workers and I as student of their plight and their efforts was continually treating them as a separate class instead of grouping them with the mass of workers. This was not because of any failure on my part to conceive of the Negroes as primarily workers whose chief interest lay in the working class. The fault lay at the door of the powerful forces in the state which had separated the working class into antagonistic groups hating and fearing each other more than they feared their exploiters. In slavery days the poor whites hated and feared the black slaves. These slaves deprived the free white workers of land and livelihood; drove them to the hills and barrens or to the slums of cities; they were largely disfranchised and managed to make a ~~living often as managers of slave labor under white slave owners~~. They protested bitterly against this condition. To these poor whites emancipation seemed not an opportuniy for Negroes to rise to the status of free white workers, but rather the chance of white labor to climb on the backs of Negroes. The freedmen therefore was not only exploited by former slaveowners but even more by the up-struggling whites; and ~~soon~~ a caste legislation put the Negro legally under the feet of the white workers, limiting his work, his wages, his dwelling place ~~his political rights and~~ his personal freedom. In the eyes of the Negro the white worker became his chief enemy; he led the lynching mobs, insulted him on the streets and took the food out of his mouth

The mass of the Northern working class ~~theory~~ opposed slavery and wanted slaves emancipated. But they were largely foreign emigrants and many like the Irish met the competition of free Negro workers on arrival and fought for work in pitched battles. The newer emigrants were warned against did not fear Negro cheap competing labor and did not regard these dark strangers as fellow workmen. Employers threw white and black into competing groups. So that the National Labor Union representing the best of American labor, despite its brave repudiation of color discrimination was unable in 1869 to secure admission of Negro workers into unions. Negroes rebuffed, tried to form their own unions but had to start could only resort to political power, with demand for ~~xxixex~~ Yet they depended on through Whig, the Republican party reduced them to but that party in turn serfdom in 1876. The Northern Unions in tight craft organizations so segregated the Negro worker that in 1902, the older trades like miners, longshoremen and cigar makers admitted Negroes; but the newer and better paid trades, like ~~bakers~~, blacksmiths, shelters, ~~seamers~~, engineers, metal workers, boilermakers ~~bookbinders, weavers~~, electric workers, glassmakers, oil workers, textile workers

When white workers got the vote & Blacks were disfranchised

and a host of similar x unions admited in ~~1900~~ few or no Negroes. When therefore I essayed to study the Negro worker, I had no meeting ground with the white laboring class. I invited the secretary of the Georgia Federation of labor to our conference and he spoke. But his hearers knew that his federation ~~did not admit~~ discriminated against Negroes. We studied Negro employees in Southern factories. We corresponded with all the unions in the nations but with small result. The American working class remains split by the color line. My study therefore became a study not of a working class but of a small part of one and relations of these groups became more important than relations between worker and employer

a living by bearing on slaveowners,
bearing slave-overseers or ~~[illegible]~~
~~[illegible]~~ bearing arms to keep black
slaves from revolt

(over)

Of the general life in Atlanta, a word must be said. I stayed upon the campus as much as possible. My contact with the surrounding white city was limited to some necessary shopping. I did not vote; I did not enter parks nor museums. I assumed that when the public was invited to any place or function, either the white people were meant, or if not, attendance of Negroes meant segregated parts or times. Once I remonstrated with a colored teacher of literature for attending the "jim-crow" section of a theater in the top balcony. She answered: "Where else can I see Shakespeare? I cannot afford to go to New York."

One of the most annoying sorts of race discrimination was on the railroads. Did you ever see a "jim-crow" waiting room? There are some exceptions but usually no heat in winter and no air in summer; undisturbed loafers and train hands, and broken, disreputable settees; to buy a ticket is torture: you stand and stand and wait and wait until every white person at the "Other Window" is waited on. Then the tired agent yells across, (because all the tickets and change are over there;) "What d'y' want? WHAT! WHERE?" He brow-beats ahd contradicts you, hurries and confuses the ignorant; gives many the wrong change; for lack of time compells a number to purchase tickets on the train at a higher price and sends all out on the platform burning with indignation and hatred.

The "jim-crow" car is up next the baggage car and engine. The train stops out beyond the covering in the rain or sun or dust. Usually there is nox step to help one climb on, and often the car is a smoker cut in two and you must pass through the white smokers and then they pass through your part with swagger and noise and stares. Your apartment is a half or a quarter or an eighth of the oldest car in service on the road. Unless it happens to be a through express, the old plush is caked with dirt, the floor is gummy and the windows dirty.

An impertinent white newsboy occupies two seats at the end and importunes you to buy cheap candy, "Coca-Cola" and worthless if not vulgar books. He yells

and swaggers and a continued stream of white men saunters back and forth from the smoker to buy and listen. The white train crew from the baggage car uses the "jim crow" to lounge in and perform their toilet. The conductor appropriates two seats for himself and his papers and yells gruffly for your tickets before the train has scarcely started. It is best not to ask him for information even in the gentlest tones. His information is for whites chiefly. It is difficult to get lunch or drinking water. Lunch rooms either "don't serve niggers" or serve them at some dirty and ill-attended hole in the wall. Toilet rooms are often filthy. If you have to change cars be wary of junctions which are usually without accomodation and filled with quarrelsome whites who hate a "darky" "dressed up"/ you are apt to have the company of a sheriff and a couple of meek or sullen black prisoners on part of your way and the dirty colored section hands will pour in toward night and drive you to the smallest corner. "No" -- said the little lady in the corner (she looked like an ivory cameo and her dress flowed on her like a caress) -- "We don't travel much."

Pessimism is cowardice. The man who cannot frankly acknowledge the "Jim-Crow" car as a fact and yet live and hope is simply afraid either of himself or the world. There is not in the world a more disgraceful denial of human brotherhood than the "Jim Crow" car of the Southern United States, but too there is nothing more beautiful in the universe than sunset and moonlight over the hills of Atlanta. And both things are true, both are facts, both belong to this our world and neither can be denied.

CHAPTER XIV (1)

THE NIAGARA MOVEMENT

In 1905 I was a teacher at Atlanta University and was in my imagination a scientist, and neither a leader nor an agitator; I had nothing but the greatest admiration for Mr. Washington and Tuskegee, and I had in 1894 applied at both Tuskegee and Hampton for work. If Mr. Washington's telegram had reached me before the Wilberforce bid, I should have doubtless gone to Tuskegee. Certainly I knew no less about mathematics than I did about Latin and Greek.

Since however the controversy has become historic, it deserves more careful statement than it has had hitherto, both as to the matters and the motives involved. There was first of all the ideological controversy. I believed in the higher education of a Talented Tenth who through their knowledge of modern culture could guide the American Negro into a higher civilization. I knew that without this the Negro would have to accept white leadership, and that such leadership could not always be trusted to guide this group into self-realization and to its highest cultural possibilities. Mr. Washington, on the other hand, believed that the Negro as an efficient worker could gain wealth and that eventually through his ownership of capital he would be able to achieve a recognized place in American culture and could then educate his children as he might wish and develop their possibilities. For this reason he proposed to put the emphasis at present upon training in the skilled trades and encouragement in industry and common labor.

These two theories of Negro progress were not absolutely contradictory. Neither I nor Booker Washington, understood the nature of capitalistic exploitation of labor, and the necessity of a direct attack on the principle of exploitation as the beginning of labor uplift

2

but did not attack the fundamental wrong of giving the laborer less than the earned

I recognized the importance of the Negro gaining a foothold in trades and his encouragement in industry and common labor. Mr. Washington was not absolutely opposed to college training, and sent his own children to college. But he did minimize its importance, and discouraged the philanthropic support of higher education; ~~while~~ I openly and repeatedly criticized what seemed to me the poor work and small accomplishment of the Negro industrial school. ~~Moreover,~~ it was characteristic of the Washington statesmanship that whatever he or anybody believed or wanted must be subordinated to dominant public opinion and that opinion deferred to and cajoled until it allowed a deviation toward better ways. ~~This is no new thing in the world, but it is always dangerous.~~

It was my chief opposition and fear

~~But beyond~~ On this difference of ideal lay ~~another and~~ other more bitter and ~~insistent controversy.~~ This started with the rise at Tuskegee Institute, and centering around ~~Booker T. Washington,~~ of what I may call the Tuskegee Machine. ~~Of its existence and work, little has ever been said and almost nothing written.~~ The years from 1899 to 1905 marked the culmination of the career of Booker T. Washington. In 1899 Mr. Washington, Paul Laurence Dunbar, and myself spoke on the same platform at the Hollis Street Theater, Boston, before a distinguished audience. Mr. Washington was not at his best and friends immediately raised a fund which sent him to Europe for a three months' rest. He was received with extraordinary honors: he had tea with the aged Queen Victoria, but two years before her death; he was entertained by two dukes and ~~other~~ members of the aristocracy; he met James Bryce and Henry M. Stanley; he was received at the Peace Conference at The Hague and was greeted by many distinguished Americans, like ex-President Harrison, Archbishop Ireland and two justices

He thought emphasis "gave" laborers work, thus shown the door to acquiring wealth

While my leadership was a matter of work and teaching, the Washington leadership became a making organization and money

of the Supreme Court. Only a few years before he had received an honorary ~~degree~~ AM from Harvard; in 1901, he received a LL.D. from Dartmouth, and that same year he dined with President Roosevelt to the consternation of the white South.

Returning to America he became during the administrations of Theodore Roosevelt and William Taft, from 1901 to 1912, the political referee in all Federal appointments or action taken with reference to the Negro and in many regarding the white South. In 1903 Andrew Carnegie made the future of Tuskegee certain by a gift of $600,000. There was no question of Booker T. Washington's undisputed leadership of the ten million Negroes in America, a leadership recognized gladly by the whites and conceded by most of the Negroes.

But there were discrepancies and paradoxes in this leadership. It did not seem fair, for instance, that on the one hand Mr. Washington should decry political activities among Negroes, and on the other hand dictate Negro political objectives from Tuskegee. At a time when Negro civil rights called for organized and aggressive defense, he broke down that defense by advising acquiescence or at least no open agitation. During the period when laws disfranchising the Negro were being passed in all the Southern states, between 1890 and 1909, and when these were being supplemented by "Jim Crow" travel laws and other enactments making color caste legal, his public speeches, while they did not entirely ignore this development, tended continually to excuse it, to emphasize the shortcomings of the Negro, and were interpreted widely as putting the chief onus for his condition upon the Negro himself.

All this naturally aroused increasing opposition among Negroes and

especially among the younger class of educated Negroes, who were beginning to emerge here and there, especially from Northern institutions. This opposition began to become vocal in 1901 when two men, Monroe Trotter, Harvard 1895, and George Forbes, Amherst 1895, began the publication of the Boston Guardian, a weekly periodical. The Guardian was bitter, satirical, and personal; but it was well-edited, it was earnest, and it published facts. It attracted wide attention among colored people; it circulated among them all over the country; it was quoted and discussed. I did not wholly agree with the Guardian, and indeed only a few Negroes did, but nearly all read it and were influenced by it.

This beginning of organized opposition, together with other events, led to the growth at Tuskegee of what I have called the Tuskegee Machine. It arose first quite naturally. Not only did presidents of the United States consult Booker T. Washington, but governors and congressmen; philanthropists conferred with him, scholars wrote to him. Tuskegee became a vast information bureau and center of advice. It was not merely passive in these matters but, guided by a young Emmett Scott who was secretary, intelligent, suave and far-seeing, active efforts were made to concentrate influence at Tuskegee. After a time almost no Negro institution could collect funds without the recommendation or acquiescence of Mr. Washington. Few political appointments of Negroes were made anywhere in the United States without his consent. Even the careers of rising young colored men were very often determined by his advice and certainly his opposition was fatal. How much Mr. Washington knew of this work of the Tuskegee Machine and was directly responsible, one cannot say, but of its general activity and scope he must have been aware.

5

Moreover, it must not be forgotten that this Tuskegee Machine was not solely the idea and activity of black folk at Tuskegee. It was largely encouraged and given financial aid through certain white groups and individuals in the North. This Northern group had clear objectives. They were capitalists and employers of labor and yet in ~~most~~ cases sons, relatives, or friends of the abolitionists who had sent teachers into the new Negro South after the war. These younger men believed that the Negro problem could not remain a matter of philanthropy. It must be a matter of business. These Negroes were not to be encouraged as voters in the new democracy, nor were they to be left at the mercy of the reactionary South. They were good laborers and they ~~might be better~~. They could become a strong labor force and properly guided they would restrain the unbridled demands of white labor, born of the Northern labor unions and now spreading to the South: and encouraged by European Socialism.

Could be made a tremendous force in the world's economy [illegible]

One danger must be avoided and that was to allow the silly idealism of Negroes, half-trained in ~~Southern~~ missionary "colleges," to mislead the mass of laborers and keep them stirred-up by ambitions incapable of realization. To this school of thought, the philosophy of Booker T. Washington came as a godsend and it proposed by building up his prestige and power, to control the Negro group. The control was to be drastic. The Negro intelligentsia was to be suppressed and hammered into conformity. The process involved some cruelty and disappointment, but that was inevitable. This was the real force back of the Tuskegee Machine. It had money and it had opportunity, and it found in Tuskegee tools to do its bidding.

There were some rather pitiful results in thwarted ambition and

curtailed opportunity. I remember one case which always stands in my memory as typical. There was a young colored man, one of the most beautiful human beings I have ever seen, with smooth brown skin, velvet eyes of intelligence, and raven hair. He was educated and well-to-do. He proposed to use his father's Alabama farm and fortune to build a Negro town and independent economic unit in the South. He furnished a part of the capital but soon needed more and he came North to get it. He struggled for more than a decade; philanthropists and capitalists were fascinated by his personality and story; and when, according to current custom, they appealed to Tuskegee for confirmation, there was silence. Mr. Washington would not say a word in favor of the project. He simply kept still. Will Benson struggled on with ups and downs, but always balked by a whispering galley of suspicion, because his plan was never endorsed by Tuskegee. In the midst of what seemed to us who looked on the beginnings of certain success, Benson died of overwork, worry, and a broken heart.

From facts like this, one may gauge the bitterness of the fight of young Negroes against Mr. Washington and Tuskegee. ~~Contrary to most opinion,~~ The controversy as it developed was not entirely against Mr. Washington's ideas, but became the insistence upon the right of other Negroes to have and express their ideas. Things came to such a pass that when any Negro complained or advocated a course of action, he was silenced with the remark that Mr.Washington did not agree with this. Naturally the bumptious, irritated, young black intelligentsia of the day declared, "I don't care a damn what Booker Washington thinks! This is what I think, and I have a right to think."

It was at this point, and not merely disagreement with Mr. Washington's

plans, that brought eventually violent outbreak. It was more than opposition to a program of education. It was opposition to a system and that system was part of the economic development of the United States at that time. The fight cut deep: it went into social relations; it divided friends; it made bitter enemies. I can remember that years later, when I went to live in New York and was once invited to a social gathering among Brooklyn colored people, one of the most prominent Negroes of the city refused to be present because of my attitude toward Mr. Washington.

When the Guardian began to increase in influence, determined effort was made to build up a Negro press for Tuskegee. Already Tuskegee filled the horizon so far as national magazines and the great newspapers were concerned. In 1901 the Outlook, then the leading weekly, chose two distinguished Americans for autobiographies. Mr. Washington's "Up From Slavery" was so popular that it was soon published and circulated all over the earth. Thereafter, every magazine editor sought articles with Washington's signature and publishing houses continued to ask for books. A number of talented "ghost writers," black and white, took service under Tuskegee, and books and articles poured out of the institution. An annual letter "To My People" went out from Tuskegee to the press. Tuskegee became the capital of the Negro nation. Negro newspapers were influenced and finally the oldest and largest was bought by white friends of Tuskegee. Most of the other papers found it to their advantage certainly not to oppose Mr. Washington, even if they did not wholly agree with him.

I was greatly disturbed at this time, not because I was in absolute opposition to the things that Mr. Washington was advocating, but because I was strongly in favor of more open agitation against wrongs and above all I resented the practical buying up of the Negro press and choking off of even mild and reasonable opposition to Mr. Washington in both the Negro press and the white.

Then, too, during these years there came a series of influences that were brought to bear upon me personally, which increased my discomfort and resentment. I had tried to keep in touch with Hampton and Tuskegee, for I regarded them as great institutions. I attended the conferences which for a long time were held at Hampton, and at one of them I was approached by a committee. It consisted of Walter Hines Page, editor of the Atlantic Monthly; William McVickar, Episcopal bishop of Rhode Island; and Dr. Frissel, principal of Hampton. They asked me about the possibilities of my editing a periodical to be published at Hampton. I told them of my dreams and plans, and afterwards wrote them in detail. But one query came by mail: that was concerning the editorial direction. I replied firmly that editorial decisions were to be in my hands, if I edited the magazine. This was undiplomatic and too dogmatic; and yet, it brought to head the one real matter in controversy: would such a magazine be dominated by and subservient to the Tuskegee philosophy, or would it have freedom of thought and discussion? Perhaps if I had been more experienced, the question could have been discussed and some reasonable outcome obtained; but I doubt it. I think any such magazine launched at the time would have been seriously curtailed in its freedom of speech. At any rate, the project was dropped.

9

Beginning in 1902 ~~considerable~~ pressure was put upon me to give up my work at Atlanta University and go to Tuskegee. There again I was not at first adverse in principle to Tuskegee, except that I wanted to continue ~~what~~ I had begun and if my work was worth support, it was ~~work~~ worth support at Atlanta University. ~~Moreover~~, I was unable to ~~be assured~~ obtain assurance that my studies would be continued at Tuskegee, and that I would not sink to the level of a "ghost writer." I remember ~~the~~ a letter came from Wallace Buttrick late in 1902, asking that I attend a private conference in New York with Felix Adler, William H. Baldwin, Jr., George Foster Peabody, and Robert Ogden. The object of the conference was ostensibly the condition of the Negro in New York City. I went to the conference and did not like it. Most of the more distinguished persons named were not present. The conference itself amounted to little, but (after adjournment) I was whisked over to William H. Baldwin's beautiful Long Island home and there what seemed to me to be the real object of my coming was disclosed. Mr. Baldwin was at that time president of the Long Island Railroad and slated to be president of the Pennsylvania. He was the rising industrial leader of America; also he was a prime mover ~~of~~ on the Tuskegee board of trustees. Both he and his wife insisted that my place was at Tuskegee; that Tuskegee was not yet a good school, and needed the kind of development that I had been trained to ~~provide~~ promote.

This was followed by two interviews with Mr. Washington himself. I was elated at the opportunity and we met twice in New York City. The results to me were disappointing. Booker T. Washington was not an easy person to know. He was wary and silent. He never expressed himself frankly or clearly until he knew exactly to whom he was talking and just

what their wishes and desires were. He did not know me, and I think he was suspicious. On the other hand, I was quick, fast-speaking and voluble. I found at the end of the first interview that I had done practically all the talking and that no clear and definite offer or explanation of my proposed work at Tuskegee had been made. In fact, Mr. Washington had said about as near nothing as was possible.

The next interview did not go so well because I myself said little. Finally, we resorted to correspondence. Even then I could get no clear understanding of just what I was going to do at Tuskegee if I went. I was given to understand that the salary and accomodations would be satisfactory. In fact, I was invited to name my price. Later in the year I went to Bar Harbor for a series of speeches in behalf of Atlanta University, and while there met Jacob Schiff, the Schieffelins and Merriam of Webster's dictionary. I had dinner with Schieffelins and again was urged to go to Tuskegee.

Early in the next year I received an invitation to join Mr. Washington and certain prominent white and colored friends in a conference to be held in New York. The conference was designed to talk over a common program for the American Negro and evidently it was hoped that the growing division of opinion and opposition to Mr. Washington within the ranks of Negroes would thus be overcome. I was enthusiastic over the idea. It seemed to me just what was needed to clear the air.

There was difficulty, however, in deciding what persons ought to be invited to the conference, how far it should include Mr. Washington's extreme opponents, or how far it should be composed principally of his

friends. There ensued a long delay and during this time it seemed to me that I ought to make my own position clearer than I had hitherto. I was increasingly uncomfortable under the statements of Mr. Washington's position: his depreciation of the value of the vote; his evident dislike of Negro colleges; and his general attitude which seemed to place the onus of blame for the status of Negroes upon the Negroes themselves rather than upon the whites. And above all, I resented the Tuskegee Machine.

I had been asked sometime before by A.C. McClurg and Company of Chicago if I did not have some material for a book; I planned a social study which should be perhaps a summing up of the work of the Atlanta Conferences, or at any rate, a scientific investigation. They asked, however, if I did not have some essays that they might put together and issue immediately, mentioning my articles in the Atlantic Monthly and other places. I demurred because books of essays almost always fell so flat. Nevertheless, I got together a number of my fugitive pieces. I then added a chapter, "Of Mr. Booker T. Washington and Others," in which I sought to make a frank evaluation of Booker T. Washington. I left out the more controversial matter: the bitter resentment which young Negroes felt at the continued and increasing activity of the Tuskegee Machine. I concentrated my thought and argument on Mr. Washington's general philosophy. As I read that statement now, a generation later, I am satisfied with it. I see no word that I would change. I said:

"The black men of America have a duty to perform, a duty stern and delicate — a forward movement to oppose a part of the work of their greatest leader. So far as Mr. Washington preaches Thrift, Patience, and Industrial Training for the masses, we must hold up his hands and strive with him, rejoicing in his honors and glorying in the strength of this Joshua called of God and of man to lead the headless host. But so far as Mr. Washington apologizes for injustice, North or South, does not rightly value the privilege and duty of voting, belittles the

emasculating effects of caste distinctions, and opposes the higher training and ambition of our brighter minds — so far as he, the South, or the Nation, does this — we must unceasingly and firmly oppose them. By every civilized and peaceful method we must strive for the rights which the world accords to men, clinging unwaveringly to those great words which the sons of the Fathers would fain forget: "We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness."

Pressure came from white Northern friends, who I believed appreciated my work and on the whole wished me and my race well. But they were apprehensive; fearful because as perhaps the most conspicuously trained young Negro of my day, and, quite apart from any question of ability, my reaction toward the new understanding between North and South, and especially my attitude toward Mr. Washington, were bound to influence Negroes. As a matter of fact, at that time I was not over-critical of Booker Washington. I regarded his Atlanta speech as a statesman-like effort to reach understanding with the white South; I hoped the South would respond with equal generosity and thus the nation could come to understanding for both races. When, however, the South responded with "Jim-Crow" legislation, I became uneasy. Still I believed that my program of investigation and study was just what was needed to bring understanding in the long run, based on truth. I tried to make this clear. I attended the conferences at Hampton for several years, to attest my interest in industrial training. There I was approached with tentative offers to come to Hampton and edit a magazine. But I could not be certain that I was to be allowed to express my own opinions or only the opinions of the school. Of those Hampton opinions, I became increasingly critical. In all the deliberations to which I listened, and resolutions, which were passed at Hampton, never once was the work of Atlanta University nor college work anywhere

for Negroes, commended or approved. I ceased regular attendance at the conferences; but when later I was invited back I delivered a defense of higher training for Negroes and a scathing criticism of the "Hampton Idea." I was not asked to return to Hampton for twenty-five years.

My book settled pretty definitely any further question of my going to Tuskegee as an employee. But it also drew pretty hard and fast lines about my future career. Meantime, the matter of the conference in New York dragged on until finally in October, 1903, a circular letter was sent out setting January, 1904, as the date of meeting. The conference took place accordingly in Carnegie Hall, New York. About fifty persons were present, most of them colored and including many well-known persons. There was considerable plain speaking but the whole purpose of the conference seemed revealed by the invited white guests and the tone of their message. Several ~~white~~ persons of high distinction came to speak to us, including Andrew Carnegie and Lyman Abbott. Their words were lyric, almost fulsome in praise of Mr. Washington and his work, and in support of his ideas. Even if all they said had been true, it was a wrong note to strike in a conference of conciliation. The conferences ended with two speeches by Mr. Washington and myself, and the appointment of a Committee of Twelve in which we were also included.

The Committee of Twelve which was thus instituted was unable to do any effective work as a steering committee for the Negro race in America. First of all, it was financed, through Mr. Washington, probably by Mr. Carnegie. This put effective control of the committee in Mr. Washington's hands. It was organized during my absence and laid down a plan of work which seemed to me of some value but of no lasting importance and having little to do with the larger questions and issues. I therefore soon resigned so as not to be responsible for work and pronouncements over which I would have little influence. My friends and others accused me of refusing to play the game after I had assented to a program of co-operation. I still think, however, that my action was wise.

15

By this time I was pretty thoroughly disillusioned. It did not seem possible for me to occupy middle ground and try to appease the Guardian on the one hand and the Hampton-Tuskegee idea on the other. I began to feel the strength and implacability of the Tuskegee Machine; the Negro newspapers were definitely showing their reaction and publishing jibes and innuendoes at my expense. Filled with increasing indignation, I published in the Guardian a statement concerning the venality of certain Negro papers which I charged had sold out to Mr. Washington. It was a charge difficult of factual proof without an expenditure of time and funds not at my disposal. I was really at last openly tilting against the Tuskegee Machine and its methods. These methods have become common enough in our day for all sorts of purposes: the distribution of advertising and favors, the sending out of special correspondence, veiled and open attacks upon recalcitrants, the harrowing of opportunities for employment and promotion. All this is a common method of procedure today, but in 1904 it seemed to me monstrous and dishonest, and I resented it. On the other hand, the public expression of this resentment greatly exercised and annoyed Mr. Washington's friends. Some knew little about these activities at Tuskegee; others knew and approved. The New York Evening Post challenged me to present proof of my ~~extraordinary~~ statements and refused to regard my answer as sufficient, which was of course true.

Then came a new and surprising turn to the whole situation which in the end quite changed my life. In the early summer of 1905, Mr. Washington went to Boston and arranged to speak in a colored church to colored people -- a thing which he did not often do in the North. Trotter and Forbes, editors of the Guardian, determined to heckle him and make him answer publicly certain

questions with regard to his attitude toward voting and education. William H. Lewis, a colored lawyer whom I myself had introduced to Mr. Washington, had charge of the meeting, and the result was a disturbance magnified by the newspapers into a "riot," which resulted in the arrest of Mr. Trotter. Finally he served a term in jail.

With this incident I had no direct connection whatsoever. I did not know beforehand of the meeting in Boston, nor of the projected plan to heckle Mr. Washington. But when Trotter went to jail, my indignation overflowed. I did not always agree with Trotter then or later. But he was an honest, brilliant, unselfish man, and to treat as a crime that which was at worst mistaken judgment was an outrage. I sent out from Atlanta in June, 1905, a call to a few selected persons "for organized determination and aggressive action on the part of men who believe in Negro freedom and growth." I proposed a conference during the summer "to oppose firmly present methods of strangling honest criticism; to organize intelligent and honest Negroes; and to support organs of news and public opinion."

Fifty-nine colored men from seventeen different states eventually signed a call for a meeting near Buffalo, New York, during the week of July 9, 1905. I went to Buffalo and hired a little hotel on the Canada side of the river at Fort Erie, and waited for the men to attend the meeting. If sufficient men had not come to pay for the hotel, I should certainly have been in bankruptcy and perhaps in jail; but as a matter of fact, twenty-nine men, representing fourteen states, came. The "Niagara Movement" was ~~organized~~ incorporated/January 31, 1906, in the District of Columbia.

Its particular business and objects ~~are~~ were to advocate and promote the following principles:

1. Freedom of speech and criticism.

2. An unfettered and unsubsidized press.

3. Manhood suffrage.

4. The abolition of all caste distinctions based simply on race and color.

5. The recognition of the principle of human brotherhood as a practical present creed.

6. The recognition of the highest and best human training as the monopoly of no class or race.

7. A belief in the dignity of labor.

8. United effort to realize these ideals under wise and courageous leadership.

The Niagara Movement raised a furor of the most disconcerting criticism. I was accused of acting from motives of envy of a great leader and being ashamed of the fact that I was a member of the Negro race. The leading weekly of the land, the New York Outlook, pilloried me with scathing articles. But the movement went on. The next year, 1906, instead of meeting in secret, we met openly at Harper's Ferry, the scene of John Brown's raid, and had in significance if not in numbers one of the greatest meetings that American Negroes ever held. We made pilgrimage at dawn bare-footed to the scene of Brown's martyrdom and we talked some of the plainest English that had been given voice to by black men in America. The resolutions which I wrote expressed with tumult of emotion my creed of 1905:

"The men of the Niagara Movement, coming from the toil of the year's hard work, and pausing a moment from the earning of their daily bread, turn toward the nation and again ask in the name of ten million the privilege of a hearing. In the past year the work of the Negro hater has flourished

in the land. Step by step the defenders of the rights of American citizens have retreated. The work of stealing the black man's ballot has progressed and ~~the~~ fifty and more representatives of stolen votes still sit in the nation's capital. Discrimination in travel and public accomodation has so spread that some of our weaker brethren are actually afraid to thunder against color discrimination as such and are simply whispering for ordinary decencies.

"Against this the Niagara Movement eternally protests. We will not be satisfied to take one jot or tittle less than our full manhood rights. We claim for ourselves every single right that belongs to a freeborn American, political, civil, and social; and until we get these rights we will never cease to protest and assail the ears of America. The battle we wage is not for ourselves alone, but for all true Americans. It is a fight for ideals, lest this, our common fatherland, false to its founding, become in truth the land of the Thief and the home of the Slave -- a by-word and a hissing among the nations for its sounding pretensions and pitiful accomplishment.

"Never before in the modern age has a great and civilized folk threatened to adopt so cowardly a creed in the treatment of its fellow-citizens, born and bred on its soil. Stripped of verbiage and subterfuge and in its naked nastiness, the new American creed says: fear to let black men even try to rise lest they become the equals of the white. And this in the land that professes to follow Jesus Christ. The blasphemy of such a course is only matched by its cowardice.

"In detail our demands are clear and unequivocal. First, we would vote; with the right to vote goes everything: freedom, manhood, the honor of your wives, the chastity of your daughters, the right to work, and the chance to

rise, and let no man listen to those who deny this.

"We want full manhood suffrage, and we want it now, henceforth and forever.

"Second. We want discrimination in public accomodation to cease. Separation in railway and street cars, based simply on race and color, is un-American, undemocratic, and silly. We protest against all such discrimination.

"Third. We claim the right of freemen to walk, talk and be with them who ~~that~~ wish to be with us. No man has a right to choose another man's friends, and to attempt to do so is an impudent interference with the most fundamental human privilege.

"Fourth. We want the laws enforced against rich as well as poor; against Capitalist as well as Laborer; against white as well as Black. We are not more lawless than the white race, we are more often arrested, convicted and mobbed. We want justice even for criminals and outlaws. We want the Constitution of the country enforced. We want Congress to take charge of the Congressional elections. We want the Fourteenth Amendment carried out to the letter and every State disfranchised in Congress which attempts to disfranchise its rightful voters. We want the Fifteenth Amendment enforced and no State allowed to base its franchise simply on color.

"The failure of the Republican Party in Congress at the session just closed to redeem its pledge of 1904 with reference to suffrage conditions at the South seems a plain, deliberate, and premeditated breach of promise, and stamps that party as guilty of obtaining votes under false pretense.

"Fifth. We want our children educated. The school system in the country districts of the South is a disgrace and in few towns and cities are the Negro schools what they ought to be. We want the national government to

Here at last I approached in my thinking the fundamental matter of the exploitation of the worker, regardless of race and color. The thought was not yet clear and the philosophy was not yet applied. But the philosophy hovered in the background.

of Socialism

20

step in and wipe out illiteracy in the South. Either the United States will destroy ignorance, or ignorance will destroy the United States.

"And when we call for education, we mean real education. We believe in work. We ourselves are workers, but work is not necessarily education. Education is the development of power and ideal. We want our children trained as intelligent human beings should be, and we will fight for all time against any proposal to educate black boys and girls simply as servants and underlings, or simply for the use of other people. They have a right to know, to think, to aspire.

"These are some of the chief things which we want. How shall we get them? By voting where we may vote; by persistent, unceasing agitation; by hammering at the truth; by sacrifice and work.

"We do not believe in violence, neither in the despised violence of the raid nor the lauded violence of the soldier, nor the barbarous violence of the mob; but we do believe in John Brown, in that incarnate spirit of justice, that hatred of a lie, that willingness to sacrifice money, reputation, and life itself on the altar of right. And here on the scene of John Brown's martyrdom, we reconsecrate ourselves, our honor, our property to the final emancipation of the race which John Brown died to make free."

Meantime, I refused to give up the idea that a critical periodical for the American Negro might be founded. I had started in Memphis with the help of two graduates of Atlanta University the little printing shop that I have already mentioned, and from this was published weekly a paper called The Moon beginning in 1906. The Moon was in some sort precursor of The Crisis. It was published for a year in Memphis and then the printing office given up and in 1907 in conjunction with two friends in Washington there was issued a

minature monthly called the Horizon. The Horizon was published from 1907 to 1910, and in the fall of 1910 The Crisis was born.

Gradually I began to realize that the difficulty about support for my work in Atlanta University was largely personal; that on account of my attitude toward Mr. Washington I had become persona non grata to powerful interests, and that Atlanta University would not be able to get support for its general work or for its study of the Negro problem so long as I remained at the institution. No one ever said this to me openly, but I sensed it in the worries which encompassed the new young President Ware who had succeeded Dr. Bumstead. I began to realize that I would better look out for work elsewhere.

About this time an offer came from the city of Washington. The merging of the white and colored school systems into one, had thrown colored folk into uproar lest their control of their own schools be eliminated. The new and rather eccentric W. C. Chancellor, superintendent of schools, wanted an assistant superintendent to put in charge of the Negro schools. To my great surprise he offered the position to me, while I was on a chance visit to the city. I asked for time to consider it. My reaction was to refuse even though the salary was twice what I was getting; for I doubted my fitness for such a job; but when I thought the matter over further and my position at Atlanta University, I began to wonder if I should not accept.

I was not called upon to decide, for forces started moving in Washington. The Tuskegee Machine was definitely against me and local interests of the Negro group were opposed. A prominent colored official took the matter straight to President Theodore Roosevelt and emphasized the "danger" of my appointment. He never forgot the "danger" of my personality as later events proved.

The offer was never actually withdrawn, but it was not pressed, and I finally realized that it probably would not have gone through even if I had indicated my acceptance.

Still my eventual withdrawal from Atlanta University seemed wise. Young President Ware had received almost categorial promises that under certain circumstances increased contributions from the General Education Board and other sources might be expected, which would make the University secure, and perhaps even permit the continuance of the Conference studies. I was sure that I was at least one of these "circumstances," and so my work in Atlanta and my dream of the settlement of the Negro problem by science faded. I began to be acutely conscious of the difficulty which my attitudes and beliefs were making for Atlanta University.

My career as a scientist was to be swallowed up in my role as master of propaganda. This was not wholly to my liking. I was no natural leader of men. I could not slap people on the back and make friends of strangers. I could not easily break down an inherited reserve; or at all times curb a biting, critical tongue. Nevertheless, having put my hand to the plow, I had to go on. The Niagara Movement with less momentum met in Boston in 1907 and in Oberlin in 1908. It began to suffer internal strain from the dynamic personality of Trotter and my own inexperience with organizations. Finally it practically became merged with a new and enveloping organization.

of which I became a leading officer — the National Association for the Advancement of Colored People

CHAPTER ~~I~~ XV

THE NAACP

The NAACP started with a lynching 100 years after the birth of Abraham Lincoln, and in the city, Springfield, Ohio, which was his long-time residence. William English Walling dramatized the gruesome happening and a group of liberals formed a committee in New York, which I was invited to join. A conference was held in 1909.

This conference contained four groups: scientists who knew the race problem; philanthropists willing to help worthy causes; social workers ready to take up a new task of Abolition; and Negroes ready to join a new crusade for their emancipation. An impressive number of scientists and social workers attended; the friend of wealthy philanthropists were scared and many but few followers of Booker Washington Negroes, were divided. In the end Trotter the most radical Negro leader and Ida Wells Barnet who was leading an anti-lynching crusade refused to join the new organization, being distrustful of white leadership. I myself and most of the Niagara Movement group were willing to join and encourage. The National Association for the Advancement of Colored People, was formed, which without formal merger absorbed practically the whole membership of the Niagara Movement, Trotter, who distrusted our white allies and their objects. With some hesitation I was asked to join the organization and Du Bois, as Director of Publications and Research, with the idea that my research work was to go on but with the further idea that my activities would be so held in check that the Association would not develop as a center of attack upon Tuskegee, — a difficult order; because how, in 1910, could one discuss the Negro problem and not touch upon Booker T. Washington and Tuskegee? But after all, as I interpreted the matter, it was a question of temperament and manner rather than of subject.

Here was an opportunity to enter the lists in a desperate fight aimed straight at the real difficulty: the question as to how far educated Negro opinion in the United States was going to have the right and opportunity to guide the Negro group.

Back of this lay an unasked question as to the relation of the American Negro group to the whole Labor Movement. This was not yet raised but several of the group were socialists, including myself.

CHAPTER ~~I~~ XV

THE NAACP

The NAACP started with a lynching 100 years after the birth of Abraham Lincoln, and in the city, Springfield, Ohio, which was his long-time residence. William English Walling dramatized the gruesome happening and a group of liberals formed a committee in New York, which I was invited to join. A conference was held in 1909.

This conference was continued four groups: scientists who knew the race problem;; philanthropists willing to help worthy causes; social workers ready to take up a new task of Abolition; and Negroes ready to join a new crusade for their emancipation. An impressive number of scientists and social workers attended; ~~the~~ friends of wealthy philanthropists were ~~not moved~~ and ~~the~~ Negroes, ~~were divided~~. In the end Trotter the radical leader and Ida Wells Barnet who was leading ~~the~~ anti-lynching crusade refused to join the new organization, being distrustful of white leadership. I myself and most of the Niagara Movement group were willing to join ~~the whites~~. The National ~~Association~~ for the Advancement of Colored People, was formed, which without formal merger absorbed practically the whole membership of the Niagara Movement, ~~save Trotter, who distrusted our white allies and their objects~~. With some hesitation I was asked ~~to come~~ as Director of Publications and Research, ~~with the idea that~~ my research work was to go on ~~and with the further idea that~~ my activities would be so held in check that the Association would not develop as ~~a~~ center of attack upon Tuskegee — a difficult order; because how, in 1910, could one discuss the Negro problem and not touch upon Booker T. Washington and Tuskegee? But after all, as I interpreted the matter, it was a question of temperament and manner rather than of subject.

Here was an opportunity to enter the lists in a desperate fight aimed straight at the real difficulty: the question as to how far educated Negro opinion in the United States was going to have the right and opportunity to guide the Negro group.

I did not hesitate because I could not. It was the voice without reply, and I went to New York.

One may consider these personal equations and this clash of ideologies as biographical or sociological as a matter of the actions and thoughts of certain men, or as a development of larger social forces beyond personal control. I suppose the latter aspect is the truer. My thoughts, the thoughts of Washington, Trotter and others, were the expression of social forces more than of our own minds. These forces or ideologies embraced more than reasoned acts. They included physical, biological and psychological forces habits, conventions and enactments. Opposed to these came natural reaction: the physical recoil of the victim, the unconscious and irrational urges, as well as reasoned complaints and acts. The total result was the history of our day. That history may be epitomized in one word — Empire; the domination of white Europe over black Africa and yellow Asia, through political power built on the economic control of labor, income and ideas. The echo of this industrial imperialism in America was the expulsion of black men from American democracy, their subjection to caste control and wage slavery. This ideology was triumphant in 1910.

The presidents of Negro colleges, mostly white men, who began service with Reconstruction, were now beginning to retire or die of old age. Dr. Bumstead died in 1919. He was particularly disliked in the South because his white teachers and colored students ate together and because he gave up state aid rather than bar white students from his institution. He had been succeeded by a young man, son of Edmund Asa Ware, our first president. Young Ware was a good friend of mine and started his work with enthusiasm. But in raising funds he found himself against a stone wall; I do not know that he was actually advised to get rid of me, but I sensed his burden. I accepted the offer of the National Association for the Advancement of Colored People in 1910 to join their new organization in New York as Director of Publications and Research.

My new title showed that I had modified my program of research, but by no means abandoned it. First, I directed and edited my Atlanta study of 1912, in absentia, with the help of my colleague, Augustus Dill, my student and successor as teacher in Atlanta. Then in our study of 1913, I secured the promise of Dr. Dillard, of the Slater Board, to join Atlanta University in keeping up the work of the conferences. The work of research was to be carried on in New York, with a conference and annual publication at Atlanta. I was jubilant at the projected survival of my work. But on advice of President Ware, this arrangement was not accepted by the trustees. Ware was probably warned that this tie with a radical movement would hamper the University. In August, 1910, I reported at my new office and new work at 20 Vesey Street, New York.

As I have said elsewhere, the National Association for the Advancement of Colored People, "proved between 1910 and the first World War, one of the most effective organizations of the liberal spirit and the fight for social progress which America has known." It fought frankly to make Negroes "politically free from disfranchisement; legally free from caste and socially free from insult." It established the validity of the Fifteenth Amendment, the unconstitutionality of the "Grandfather Clause," and the illegality of residential segregation. It reduced lynching from two hundred and thirty-five victims a year to a half dozen. But it did not and could not settle the "Negro Problem."

This new field of endeavor represented a distinct break from my previous purely scientific program. While "research" was still among my duties, there were in fact no funds for such work. My chief efforts were devoted to editing and publishing the Crisis, which I founded on my own responsibility, and over the protest of many of my associates. With the Crisis, I essayed a new role of interpreting to the world the hindrances and aspirations of American Negroes. My older program appeared only as I supported my contentions with facts from current reports and observation or historic reference. My writing was reinforced by lecturing, and my knowledge increased by travel; my thought was broadened by study of Socialism and of Karl Marx.

3) We had on our board of directors many incongruous elements as was to be expected: philanthropists like Oswald Villard; social workers like Florence Kelly liberal Christians like John Haynes Holmes and liberal Jews like the Spingarns, spiritual descendants of the Abolitionists like Mary Ovington and radical Negroes. Clashes now and then were inevitable.

To a white philanthopist like Villard, a Negro was quite naturally expected to be humble and thankful and certainly not assertive and aggressive, and this naturally Villard resented. I knew Villard's mother, who was Garrison's favorite child, and I liked her very much. His uncles were cordial and sympathetic. There was much that I liked in Villard himself, but one thing despite all my effort kept us far apart. He had married a wife from Georgia, and consequently I could never

step foot in his house as a guest, nor could any other of his colored associates. Indeed I doubt if any of his Jewish co-workers could ever be guests. I saw and respected the reasons for this discrimination, but I could hardly be expected to be happy over it, or to be his close friend.

My first, rather bitter falling out with Villard, was at a meeting of the Board of Directors.

Villard presumed to tell me how to edit the Crisis, and suggested that with my monthly record of lynchings, I also publish a list of Negro crimes. I resented it, not only because it was logically silly, but because he was interfering with my business. It was for this reason and from similar clashes, that he finally resigned the chairmanship of the board, and was replaced by Joel Spingarn. Villard, however kept his membership on the board, and his interest in our work.

My status: I held the rather anamalous position of being both a member of the board and as executive officer, the boards employee. This was not from any demands which I made, but due to the inescapable fact that I knew the Negro problem better than any of the white members of the board, and at the same time I was the one man whom they could put their hands on to carry out the objects of the organization. My double capacity was repeatedly a matter of discussion, and sometimes dispute; but no answer was however forthcoming, for 24 years.

4) Few of us ~~A few Americans~~ realized what an organization ~~is in this country~~ of this sort had and what changes of form it had to go ~~has gone~~ through. In early years it was a conference of men seeking agreement for common action, and finally carrying out the work decided upon by means of a committee of one or more. It was this form that the National Assoication of the Advancement of Colored People had in mind when it was organized in 1909. It ~~first~~ needed money, and that Villard and some of the other members of the committee proposed to raise from their wealthy friends, or from well-known philanthropists. It became increasingly necessary for the organization to have a paid executive whose chief business was to raise money. When I was called to join the group it was expected that I would become that executive, but that was just what I refused to do, because I knew that raising money was not a job for which I was fitted . It called for a friendliness of approach and knowledge of human nature, and an adaptability which I did not have. What I had was knowledge of the

Negro problem, and an ability to express my thoughts clearly, and a logical method of thought. I wanted then to write and lecture; and this became my job. We needed ~~then~~ however an executive secretary, and after relying a few years on ~~voluntary but unpaid~~ untrained services, we hired a white trained social worker at five thousand dollars a year. It seemed to many of us ~~an impossible effort~~ a huge sum and, but it worked out under three secretaries; the first white, the other two colored. It was carried on with accordance with growing experiences among philanthropic organizations. The secretaries trained to raise money ~~using~~ used approved and tried methods and ~~expecting~~ expected and ~~receiving~~ received cooperation from a Board of ~~Trustees~~ Directors, whom they helped to select because of their money and their advertising ~~following~~ value. This meant that the secretary had to have power put in its hands and the more money he raised for the objects of the organization, the more power he got. If he knew his job and had a broad conception of the purposes of his organization, things would go well. If he became more interested in money and power, and less clear as to ideal, the organization might not go as well. Changes due to these facts have occurred in the National Association of the Advancement of Colored People during its long and successful career.

The span of my life from 1910 to 1934 is chiefly the story of Crisis magazine under my editorship but it had also an astonishing variety of subsidiary interests and activities.

Beginning a little before this period I continued my visits to Europe. I went in 1900 (to the Paris Exposition) and again by the grace of an English friend in 1907 (to France) I (held organize and) took part in the great Races Congress in 1911 and went again in December, 1918, just after the Armistice. This close touch with Europe and European developments had much to do with my understanding of social problems and trends of the world. I followed the development of English imperialism and the forces in England, France, Italy and Germany which resulted in the Balkan War, the World War and eventually the Russian Revolution. In the United States I studied the political development from the free silver controversy led by Bryan, through the administrations of Theodore Roosevelt and Taft and especially the "Bull Moose" campaign and the election of Wilson.

I kept on writing and publishing not with as much concentration of effort as I ought to have, but with some effectiveness. In 1907 appeared "The Negro in the South" — from lectures, two by myself and two by Mr. Washington. In 1909 I published "John Brown," one of the best written of my books, but one which aroused the unfortunate jealousy. In 1915 I published my volume on "The Negro". To this must be added part of a bulletin in the Twelfth Census (of the United States) and several magazine articles and, of course, eight years of the Crisis.

I was active in the organization of the new National Association for the Advancement of colored People but carefully avoided the temptation of becoming its executive head. I still clung to my idea of investigation in lines which would temper and guide my exposition of a racial philosophy; and for that reason I determined from the beginning to make my work with the Association not that of executive secretary but editor of an official organ. There was opposition to this (Organ) from the first. First of all, organs of this sort were known to be usually

(I published a volume also written on Autobiography of W. E. B. Du Bois)

6,

-520

costly and this organization had no money. Secondly, organs were of doubtful efficiency. My good friend, Albert E. Pillsbury, Attorney-General of Massachusetts, wrote ~~and said~~ feelingly: "If you have not decided upon a periodical, for heaven's sake don't. They are as numerous as flies" — and he meant to conclude about as useful. I came to New York to occupy a bare office; associated with a treasurer, Villard, who said frankly, "I don't know who is going to pay your salary. I have no money;" and with a generally critical if not hostile public which expected the National Association for the Advancement of Colored People to launch upon a bitter attack upon Booker T. Washington and Tuskegee.

My first job was to get the Crisis going; and arriving in August I ~~finally~~ got the first copy off the press in November, 1910. It came at the psychological moment and its success was phenomenal. From the one thousand which I ventured to publish first, it went up a thousand a month until by 1918 (due, of course, to special circumstances) we published and sold over a hundred thousand copies.

With this organ of propaganda and defense we were able to organize one of the most effective assaults of liberalism upon reaction that the modern world has seen. We secured extraordinary helpers; great lawyers like Moorfield Storey and Louis Marshall; earnest liberals like Villard, Milholland, John Haynes Holmes, ~~Mary~~ Ovington, Jane Addams, and the Spingarns; socialists like Mary White Ovington, Charles Edward Russell and William English Walling. We gained a series of court victories before the highest courts of the land which perhaps never have been equalled, beginning with the overthrow of the vicious Grandfather Clauses in 1915, and the recognition of the validity of the 14th amendment and the breaking of the backbone of housing segregation in 1917. Above all, we could, through the Crisis and our officers, our secretaries and friends, place consistently and continuously before the country a clear-cut statement of the legitimate aims of the American Negro and the facts concerning his condition. We tried to organize his political power and make it felt and we started a campaign against lynching and mob law which was the most effective ever organized and at long last seemed to bring the end of the evil in sight.

With these efforts came other activities. I lectured widely in nearly every state in the Union. I furnished information to people everywhere on all sorts of subjects closely and remotely connected with race problems, and carried on from time to time studies and investigations. I was held more responsible for the success of the National Association for the Advancement of Colored People than I cared to confess to myself; than most other people wanted to admit. I had to spread myself over a whole field of activities when I would have done great deal better work if I could have confined myself to writing and study.

The development of the Crisis where most of my writing was done was interesting and difficult. It was impaired first and last by lack of trained business management. For the most part I was my own business manager which meant the loss of much time in learning the details. Then there was the delicate matter of policy; of how far I should express my own ideas and reactions in the Crisis or the studied judgment of the organization. From first to last I thought strongly, and as I still think rightly, to make the opinion expressed in the Crisis a personal opinion; because as I argued, no organization can express definite and clear-cut opinions; so far as this organization comes to conclusions it states them in its annual resolutions but the Crisis states openly the opinion of its editor so long as that opinion is in general agreement with that of the organization.

This of course was a dangerous and delicate matter bound eventually to break down in case there was any considerable divergence of opinion between the organization and the editor. It was perhaps rather unusual that for two decades the two lines of thinking ran so largely together. If on the other hand the Crisis had not been in a sense a personal organ and the expression of myself, it could not possibly have attained its popularity and effectiveness. It would have been the dry kind of organ that so many societies support for purposes of reference and not for reading. It took on the part of the organization, a great deal of patience and faith to allow me the latitude

that they did for so many years; and on the other hand I was enabled to lay down for the National Association for the Advancement of Colored People, a clear, strong and distinct body of doctrine that could not have been started by majority vote. It was probably inevitable that in the end a distinct and clear-cut difference of opinion on majority policies should lead to the dissolution of this interesting partnership.

One of the first difficulties that the National Association met was the case of its attitude toward Mr. Washington. I carefully tried to avoid any exaggeration of our differences of thought; but to discuss the Negro question in 1910 was to discuss Booker T. Washington and almost before we were conscious of the inevitable trends we were challenged from Europe. Mr. Washington was in Europe in 1910 and made some speeches in England in his usual conciliatory lines. John Milholland who had been so influential with paid employees and an office, in the organization of the National Association wrote me and said that American Negroes must combat the idea that they were satisfied with conditions. I therefore wrote an appeal to England and Europe.

"If Mr. Booker T. Washington, or any other person, is giving the impression abroad that the Negro problem in America is in process of satisfactory solution, he is giving an impression which is not true. We say this without personal bitterness toward Mr. Washington. He is a distinguished American and has a perfect right to his opinions. But we are compelled to point out that Mr. Washington's large financial responsibilites have made him dependent on the rich charitable public and that, for this reason, he has for years been compelled to tell, not the whole truth, but that part of it which certain powerful interests in America wish to appear as the whole truth. In flat contradiction, however, to the pleasant pictures thus pointed out, let us not forget that the concensus of opinion among eminent European scholars who know the race problem in America from De Tocqueville down to Von Halle, De Laveleys, Archer and Johnston, is that it forms the gravest of American problems. We Black men who live and suffer under present conditions, and who have no reason, and refuse to accept reasons, for silence, can substantiate this unanimous testimony."

In furtherance of this statement and in anticipation of the meeting of the Races Congress in 1911 Mr. Milholland arranged that I should go early to the conference and make some addresses. The plan simmered down to a proposed address before the Lyceum Club, the leading woman's group of London, and there it ran against the opposition of an American woman who wrote: "I think there is serious objection to entertaining Dr. Du Bois at the Lyceum." The result was a rather acrimonious controversy, from which I tried gently to withdraw but was unable to; and finally led by Her Highness the Ranée of Sarawak and Dr. Etta Sayre, a luncheon was held at the Lyceum Club with a bishop and two countesses and several knights and ladies and with Maurice Hewlett and Sir Harry Johnston.

The Races Congress in 1911 would have marked an epoch in the racial history of the world if it had not been for the World War. It was a great and inspiring occasion bringing together representatives of numerous ethnic and cultural groups and bringing new and frank conceptions of scientific bases of racial and social relations of people. I had a chance twice to address the Congress (in the great hall of the University of London) and to write one of the two poems which greeted the assembly.

Returning to the United States I was plunged into the "Bull Moose" campaign. I thought I saw a splendid chance for a third party movement on a broad platform of votes for Negroes and industrial democracy. Sitting in the office of the Crisis I wrote out a proposed plank for the Progressives to adopt at their Chicago meeting: "The Progressive party recognizes that distinctions of race or class in political life have no place in a democracy. Especially does the party realize that a group of 10,000,000 people who have in a generation changed from a slave to a free labor system, re-established family life, accumulated $1.000,000,000 of real property, including 20,000,000 acres of land, and reduced their illiteracy from 80 to 30 per cent, deserve and must have justice, opportunity and a voice in their own government. The party, therefore, demands for the American of Negro descent the repeal of unfair

Secretaries of the American section of the World Races Congress in London, where I spoke twice in the Great Hall of the University of London. Felix Adler and I were made

discriminatory laws and the right to vote on the same terms on which other citizens vote."

This was taken to Chicago by Joel E. Spingarn and advocated by two other directors of the Association, Dr. Henry Moskowitz and Jane Addams. They worked in vain for its adoption. Theodore Roosevelt would have none of it. He told Mr. Spingarn frankly that he should be "careful of that man Du Bois" who was in Roosevelt's opinion a "dangerous" person. The "Bull Moose" convention not only refused to seat most of the colored delegates; elected a Southern "lily white" to run on the ticket with Mr. Roosevelt and finally succeeded in making Woodrow Wilson president of the United States.

~~Immediately~~ Bishop Walters and myself conceived the idea that Mr. Wilson might be approachable. I proposed to throw the weight of the Crisis against Roosevelt and Taft and for Wilson, and Bishop Walters went to see him. He secured from Woodrow Wilson a categorical expression over his signature "of his earnest wish to see justice done the colored people in every matter; and not mere grudging justice, but justice executed with liberality and cordial good feeling. I want to assure them that should I become President of the United States they may count upon me for absolute fair dealing, for everything by which I could assist in advancing the interests of their race in the United States." In this effort to divide the Negro vote which was successful to an unusual degree, we were cruelly disappointed when the Democratic (Harding were and the north) Congress met. There was the greatest flood of discriminatory bills both in Congress and among the states that has probably ever been introduced since the Civil War. Only united and determined effort defeated bills against intermarriage and for other discriminations in eight states; and while most of the proposed legislation in Congress was kept from the statute books, the administration carried out a segregation by color in the various departments which we had to fight for years and vestiges of which even remain today.

In other respects our lines were cast in difficult places. The Socialists began to consider the color ~~question~~ line and to discriminate against the membership of colored

Felix Adler and I were made

people in the South, lest whites should not be attracted. Mr. Villard tried to get the President to appoint a National Race Commission to be privately financed to the extent of $50,000, but nothing was done, and suddenly war and revolution struck the world: the Chinese Revolution in 1912; the Balkan War in 1912-13, and finally in 1914 the World War. In that very year the National Council of Social Agencies met in Memphis without daring to discuss the color question but Spingarn and I went down and held open meetings advertising "for all who dared hear the truth." We had an interesting time. This success and the death of Booker T. Washington in 1915 led to the first Amenia conference and tried to unite the American Negro in one program of advance.

Finally the World War touched America; with it and in anticipation of it, came a sudden increasing of lynching including the horrible burning alive of a Negro at Dyersburg; there came renewed efforts at segregation; the whole extraordinary difficulties of the draft and the question of Negro officers.

The cry for service as high as heaven, as wide as human feeling seemed filling the earth. What were petty slights, silly insults, failing problems beside this call to do and dare and die. We offered our service to fight. What happened? Most Americans have forgotten the extraordinary series of events which worked the feelings of black America to fever heat.

First was the refusal to accept Negro volunteers for the army except in the four black regiments already established. While the nation was combing the country for volunteers for the regular army it would not let the American Negro furnish even his proportionate quota of regular soldiers. This led to some grim bantering among Negroes:

"Why do you want to volunteer?" asked many. "Why should you fight for this country?

Before we had chance to reply to this there came the army draft bill and the proposal by Vardaman and his ilk to exempt Negroes. We protested to Washington in various ways and while we were insisting that colored men should be drafted just as other citizens, the bill went through with two little "jokers."

237.

First, it provided that Negroes should be drafted but trained in "spparate" units and, secondly, it somewhat ambiguously permitted men to be drafted for "labor."

A wave of fear and unrest spread among Negroes; and while we were looking at both these provisions askance suddenly we received the draft regulation istration blank. It directed persons "of African descent" to "tear off the corner!" Probably never before in the history of the United States has a portion of the citizens been so openly and crassly discriminated against by action of the general government. It was disheartening and on top of it came the celebrated "German plots". It was alleged in various parts of the country with singular unanimity that Germans were working among the Negroes and it was further intimated that this would make the Negroes too dangerous an element to trust with guns. To us, of course, it looked as though the discovery and the proposition came from the same thinly-veiled sources.

Considering carefully these series of happenings the American Negro sensed an approaching crisis and faced a puzzling dilemma. Here was evidently preparing fertile ground for the spread of disloyalty and resentment among the black masses as they were forced to choose apparently between forced labor or a "Jim Crow" draft. Manifestly when a minority group is thus segregated and forced out of the nation they can in reason do but one thing — take advantage of the disadvantage. In this case we asked for colored officers for the colored troops.

General Wood was early approached and asked to admit suitable candidates to the Officers' Camp Plattsburg. He refused. We thereupon pressed the government for a "separate" camp for the training of Negro officers. Not only did the War Department hesitate at this request but strong opposition arose among the colored people themselves. They said this really was going too far. "We will obey the law but to ask for voluntary segregation is to insult ourselves." But strong, sober second thought came to rescue. We said to our protesting brothers: "We face a condition, not a theory. There is not the slightest chance of our being admitted to white camps, therefore,

it is either a case of a "Jim Crow" officers training camp or no colored officers. Of the two things no colored officers would be the greatest calamity.

Thus we gradually made up our minds. But the War Department still hesitated. It was besieged and when it presented its final argument, "We have no place for such a camp," the trustees of Howard University said: "Take our campus." Eventually twelve hundred colored cadets were assembled at Fort Des Moines for training.

The city Des Moines promptly protested but it finally changed its mind. The city never before had seen such a class of colored men. They rapidly became popular with many classes and encomiums were passed upon their conduct. Their commanding colonel pronounced their work first class and declared that they presented excellent material for officers.

Meantime, with one accord, the thought of the colored people turned toward Colonel Young, their highest officer in the regular army. Charles Young was an heroic figure. He was the typical soldier -- silent, uncomplaining, brave and efficient. From his days at West Point throughout his twenty-eight years of service he has taken whatever task was assigned him and performed it efficiently and there is no doubt but that the army has been almost merciless in the requirements which it has put upon this splendid officer. He came through everything with flying colors. In Haiti, in Liberia, in Western camps, in the Sequoia Forests of California, and finally with Pershing in Mexico -- in every case he triumphed. Just at the time we were looking to the Government to call him to head the colored officers training at Des Moines, he was retired from the Army because of "high blood pressure!" There is no disputing army surgeons and their judgment in this case may have been justified, but coming at the time it did, every Negro in the United States believed that the "high blood pressure" that retired Colonel Young was in the prejudiced heads of the southern army oligarchy who were determined that no Negro should ever wear the star of a General.

Especially was the money they spent for public work much needed

He had been segregated, discriminated against and insulted

To say that Negroes of the United States were disheartened at the retirement of Colonel Young is to put it mildly; but there was more trouble. The provision that Negro troops must be trained separately looked simple and was simple in places where there were large Negro contingents; but in the North with solitary Negroes drafted here and there we had some extraordinary developments. Regiments appeared with one Negro and he had to be separated like a pest and put in a house or even a village by himself, while the Commander frantically telegraphed to Washington. Small wonder that one poor black fellow in Ohio solved the problem by cutting his throat. The whole process of drafting Negroes had to be held up until the Government could find methods and and places for assembling them.

On the top of this came Houston. In a moment the nation forgot the whole record of one of the most celebrated regiments in the U.S. Army and their splendid service in the Indian Wars and in the Philippines. It was the first regiment mobilized in the Spanish American War and it was the regiment that volunteered to a man to clean up the yellow fever camps when others hesitated. It was one of the regiments to which Pershing said [illegible]:

"Men, I am authorized by Congress to tell you all that our people back in the States are mighty glad and proud at the way the soldiers have conducted themselves while in Mexico, and I, General Pershing, can say with pride that a finer body of men never stood under the flag of our nation than we find here tonight."

The nation also forgot the deep resentment mixed with the pale ghost of fear which Negro soldiers call up in the breasts of the white South. It is not so much that they fear that the Negro will strike if he gets a chance, but rather that they assume with curious unanimity that he has REASON to strike; that any other persons in his circumstances or treated as he is would rebel. Instead of seeking to relieve the cause of such a possible feeling, most of them strain every effort to bottle up the black man's resentment. Is it inconceivable that now and then it bursts all bounds, as at Brownsville and Houston?

So, in the midst of this mental turmoil came Houston and East St. Louis, in 1917. At Houston, black soldiers goaded and insulted suddenly went wild and "shot up"

240.

the town. At East St. Louis, white strikers on war work killed and mobbed Negro workingmen. And this is the result:

HOUSTON	EAST ST. LOUIS
Offense	Offense
17 white persons killed	125 Negroes killed
Punishment	Punishment
19 colored soldiers hanged	9 white men imprisoned 5 - 15 years
51 colored soldiers imprisoned for life	11 white men imprisoned 1 year
40 colored soldiers imprisoned	18 white men fined
	10 colored men imprisoned 14 years

My career had at this time a certain sense of drama. I had never before seen Theodore Roosevelt but in November, 1918, I presided at a meeting in Carnegie Hall where he made his last public speech, appearing together with Irwin Cobb and a representative of the French High Commission. I remember my introduction: "I have the honor to present Theodore Roosevelt." Then on my fiftieth birthday there was a public celebration and many kindly messages. The Crisis had reached a monthly circulation of 68,000 and during the year I had a little dinner with Glendowen Evans, Margaret DeLand and William James. John Hope wrote: "How glad I am that your fiftieth birthday is going to be such a happy one because you can look back on so much good work done. But not the good work alone. What you may look back upon with greatest comfort is good intention."

And Albert Bushnell Hart wrote a word ~~which one quotes with a certain diffidence~~: "Out of his fifty years of life I have followed a good thirty -- and have counted him always among the ablest and keenest of our teacher-scholars, an American who viewed his country broadly."

The most important work of the decade as I now look back upon it was my travel. Before 1918 I had made three trips to Europe: but now between 1918 and 1928 I made four trips of extraordinary meaning: to France directly after the close of the War and during the Congress of Versailles; to England, Belgium, France and Geneva in the

earliest days of the League of Nations; to Spain, Portugal and Africa in 1923 and 1924; and to Germany, Russia, and Constantinople in 1926. I could scarcely have encompassed a more vital part of the modern world picture than in those stirring journeys. They gave me a depth of knowledge and a breadth of view which was of incalculable value for realizing and judging modern conditions, and above all the problem of race in America.

But this was only part of my work: In the United States I was still fighting the battle of liberalism against race prejudice; trying to adjust war and post-war problems to the questions of racial justice; trying to show from the injustices of war time what the new vision must encompass; fighting mobs and lynchings; encouraging Negro migration; helping woman suffrage; encouraging the new rush of young Blacks to college; watching and explaining the political situation and travelling and lecturing over thousands of miles and in hundreds of centers. In addition to this I was encouraging the writing of others and trying to help develop Negro art and literature. Besides editing the Crisis continuously, I published "Darkwater" in 1920; "The Gift of Black Folk" in 1924; the article on Georgia "In These United States" in 1924; and the concluding chapter in "The New Negro" in 1925, besides a number of magazine articles. I also wrote Most of the young writers who began what was called the renaissance of Negro literature in the twenties saw their first publication in the Crisis magazine.

Above all in these days I made two efforts toward which I look back with infinite satisfaction: the two-year attempt in the Brownie's book to furnish a little magazine for Negro children in which my efforts were ably seconded by Augustus Dill and Jessie Fauset; and most especially my single-handed production of the pageant "The Star of Ethiopia". The pageant was an attempt to put into dramatic form for the benefit of large masses of people, a history of the Negro race. It was first attempted in the New York celebration of Emancipation in 1913; it was repeated with magnificent

This Georgia fought bitterly to keep from appearing. Ernest Gruening, now sena tor from Alaska, who edited the series, accepted it

[redacted], When President Wilson was planning to attend the Congress of Versailles, I wrote him a letter saying:

"The International Peace Congress that is to decide whether or not peoples shall have the right to dispose of themselves will find in its midst delegates from a nation which champions the principle of the 'consent of the governed' and 'government by representation'. That nation is our own, and includes in itself more than twelve million souls whose consent to be governed is never asked. They have no members in the legislatures of states where they are in the majority, and not a single representative in the national Congress."

and breath-taking success in Washington with 1200 participants; it was given again in Philadelphia in 1916; and in Los Angeles in 1924.

Finally in New York I attempted a little theatre movement which went far enough to secure for our little group second prize in an international competition in New York. In 1918 I was asked rather suddenly by the N.A.A.C.P. to go to Europe right after the Armistice, to investigate the treatment of Negro soldiers and keep the record straight; and then at the behest of a group of American Negroes I considered that the interest of Africa ought to be represented during the peace efforts following the War. With infinite difficulty and through the cooperation of Blaise Diagne, the French Deputy from Senegal, I succeed in gathering in February, 1919, at the Grand Hotel in Paris a Pan-African congress of fifty-seven delegates including sixteen American Negroes, twenty West Indians and twelve Africans. France, Belgium, and Portugal were represented by officials. This was to my mind but a beginning and in 1921 I returned and held a Second Pan-African Congress in London, Brussels and Paris from August 28 to September 6. There were 113 accredited delegates from twenty-six different groups including thirty-five from the United States, thirty-nine from Africa and the rest from the West Indies and Europe. Among the speakers were Sir Sidney afterward Lord Olivier, Florence Kelly, Bishop Hurst, Paul Otlet, often called the father of the League of Nations, Senator La Fontaine of Belgium, Dr. Vitellian, former physician to Menelik of Abyssinia, General Sorelas, Blaise Diagne, Norman Leys, and others. The attention which the congress evoked all over Europe was astonishing. It was discussed in the London Times, Observer and Daily Graphic; in the Paris Petit Parisian, Matin and Temps; in the Manchester Guardian and in practically all the daily papers of Belgium. It led to heated debate in Brussels touching the rights of these delegates to discuss the relation of colonies and it emphasized in the minds of all of us the consequent importance of such discussions.

I knew little of Africa. I had met few if any native-born Africans. I had learned little of Africa in school. But it early became an obcession with me that Africans must prove their equality with men and that I must help. Here was a chance

.....

243.

Two of us visited the League of Nations and the International Labor Office with petitions and suggestions. In 1923 a third Pan-African Congress, less broadly representative than the second, but nevertheless of some importance was held in London, Paris and Lisbon; and thence I went to Africa and for the first time saw the homeland of the black race.

It was the time when the U.S. had disappointed Liberia by not granting her a promised loan and a gesture of good will was in order. At the suggestion of Assistant Attorney-General Weaver, William H. Lewis I was therefore designated by cable as special minister plenipotentiary and envoy extraordinary to represent President Coolidge at the inauguration of President King. In the presence of the diplomatic and consular representatives of England, France, Germany, Spain, Belgium, Holland and Panama I had the honor to tell the President of Liberia: "Your Excellency: ..... I am sure that in this special mark of the President's favor, he has had in mind the wishes and hopes of Negro Americans. He knows how proud they are of the hundred years of independence which you have maintained by force of arms and by brawn and brain upon the edge of this mighty continent; he knows that in the great battle against color caste in America; the ability of Negroes to rule in Africa has been and ever will be a great and encouraging reinforcement."

of whom I was Dean

At the London meeting of the third Pan-African Congress, Harold Laski, H.G. Wells, and Sir Sidney Olivier spoke, and Ramsey McDonald promised to speak to us but was hindered by the sudden opening of the campaign which eventually made him prime minister of England. Among other efforts, at this time we held conferences with members of the Labor Party of England at which Mrs. Sidney Webb, Mr. Clynes and others were present. We emphasized the importance of labor solidarity between white and black labor in England, America and elsewhere. In Portugal our meeting was attended by cabinet ministers and deputies and though small was of great interest. To return again to the fight in the United States, there arose early in this decade

They were most particularly impressed.

the case of Marcus Garvey. I heard of him first when I was in Jamaica in 1915 when he sent a letter "presenting his compliments" and giving me "a hearty welcome to Jamaica, on the part of the United Improvement and Conservation Association." Later he came to the United States. In his case, as in the case of others, I have repeatedly been accused of enmity and jealousy, which have been so far from my thought that the accusations have been a rather bitter experience. In 1920 when his movement was beginning to grow in America I said in the Crisis that he was "an extraordinary leader of men" and declared that he had "with singular success capitalized and made vocal the great and long suffering grievances and spirit of protest among the West Indian peasantry." On the other hand, I noted his difficulties of temperament and training, inability to get on with his fellow workers, and denied categorically that I had ever interfered in any way with his work. Later when he began to collect money for his steamship I characterized him as a sincere and hard working idealist but called his methods bombastic, wasteful, illogical and almost illegal and begged his friends not to allow him foolishly to overwhelm with bankruptcy and disaster one of the most interesting spiritual movements of the modern world. But he went ahead, wasted his money, got into trouble with the authorities and was deported. As I said at the time: "When Garvey was sent to Atlanta, no word or action of ours accomplished the result. His release and deportation was a matter of law which no deed or wish of ours influenced in the slightest degree. We have today, no enmity against Marcus Garvey. He has a great and worthy dream. We wish him well. He is free; he has a following; he still has a chance to carry on his work in his own home and among his own people and to accomplish some of his ideas. Let him do it. We will be the first to applaud any success that he may have."

I felt for a moment ~~during~~ as the war progressed that I could be without reservation a patriotic American. The government was making sincere efforts to meet our demands. It had commissioned over seven hundred Negro officers; I had had a personal interview with Newton Baker, Secretary of War, and he had made categorical promises; Wilson

had spoken out against lynching; and I myself had been offered a captaincy in the Intelligence Service, afterwards to be sure rather incontinently withdrawn as the higher command realized just who I was. Nevertheless, I tried to stand by the country and wrote the widely discussed editorial "Close Ranks" in which I said to the Negroes: Forget your grievances for the moment and stand by your country.

I am not sure that I was right but certainly my intentions were. I did not believe in war, but I thought that in a fight with America against militarism and for democracy we would be fighting for the emancipation of the Negro race. With the Armistice came disillusion. I saw the mud and dirt of the trenches; I heard from the mouths of soldiers the kind of treatment that black men got in the American army; I was convinced and said that American white officers fought more valiantly against Negroes within our ranks than they did against the Germans. I still believe this was largely true. I collected some astonishing documents of systematic slander and attack upon Negroes and demands upon the French for insulting attitudes toward them, and when I published these documents in America the government started to interfere by refusing the Crisis mailing facilities; then realizing that this was an admission of guilt, they quickly withdrew their prohibition.

I was especially upset by the mobs and lynchings during this time: by that extraordinary upheaval wherein for several hours black men fighting against a mob practically held the city of Washington in their hands; then the riot and murder in Chicago. We fought back through the National Association for the Advancement of Colored People, the columns of the Crisis, through lectures and articles, with every force at hand. Mary Talbert started the Anti-Lynching Crusaders and with her help and that of our secretary, James Weldon Johnson, we raised a defense fund of $70,000 and put the Dyer Lynch Bill through the House of Representatives and on to the floor of the Senate. It was not until years after, that I knew what killed that anti-lynching bill. It was a bargain between the South and the West by which lynching was permitted on condition that the Japanese were excluded.

Court cases kept pressing upon us: there were the Elaine riots and the Arkansas cases; there was the Sweet case in Detroit; and equally significant to my mind but to few other Negroes the Sacco-Vanzetti case in Massachusetts. We continued winning court victories and yet somehow, despite them, we did not seem to be getting very far. We added to the Grandfather Case of 1915 and the Segregation Case of 1917, the victories in the Arkansas cases, the white [illegible] primary case and another segregation case in the high courts, in addition to the eventual freeing of Dr. Sweet and his family. Still injustice prevailed. In the case of the Mississippi flood, the Red Cross allowed the Negroes to be treated as slaves and peons, and in Okolona, the Episcopal church refused to prosecute a white murderer on its own school grounds. Above all there came disquieting situations among Negro students: A strike at Hampton, disturbed conditions at Wilberforce, turmoil at Howard, and an uprising at Fisk.

It was thus a decade of infinite effort and discouraging turmoil. I suppose it had to be. I suppose that with the best will, it would have been impossible for me to concentrate on a few great lines of creative effort. I had to be a part of the revolution through which the world was going and to feel in my own soul the scars of its battle. Two things made a sort of finale to the decade: the fourth Pan-African Congress held in New York in 1927 with Dantes Bellegarde, George Sylvain and other speakers; and news of the Congress of British West Africa which began its meetings in 1920 and forced the British government to the greatest step toward democratic method ever taken in black colonies. And finally, to my surprise and quite against my best judgment, there was given for me upon my return from Africa at the Cafe Savarin in New York, a dinner. Among the speakers were Heywood Broun, Walter Hampden and Mrs. Bethune, and tributes were sent by Witter Bynner, Zona Gale and Eugene O'Neil. It was a very beautiful and touching tribute.

CHAPTER ~~XI~~ XVI

MY CHARACTER

When I was a young man, we talked much of Character. At Fisk (University) character ~~among students~~ was discussed and emphasized more than scholarship. I knew what was meant and agreed that the sort of person a man was would in the long run prove more important for the world than what ~~a person~~ he knew or how logically he could think. It is typical of our time that insistance on character (today in this country) has almost ceased. Freud and others have stressed the unknown factors of our personality so that today we do not advise youth about their development of character; we watch and count their actions with almost helpless disassociation from thought of advice.

Nevertheless from that older generation which formed my youth I still retain an interest in what men are rather than what they do; and at the age of fifty, I began to take stock of myself and ask what I really was as a person. Of course I knew that self-examination is not a true unbiassed picture; but (on the other hand) without it no picture is quite complete.

From childhood I tried to be honest; I did not mean to take anything which did not belong to me. I told the truth even when there was no call for the telling and when silence would have been golden. I did not (usually) ~~always~~ speak in malice but often blurted out the truth (because) when the story was incomplete and was therefore as seemed to me ~~scandalously~~ wrong. I had strict ideas about money and its earning. I worked and worked hard for (the) ~~my~~ first 25 cents a week which I earned. I could never induce myself to gamble or take (unnecessary) silly chances because I figured the loss vividly in fatigue and pain. Once on a French train I played the pea in a shell (E) game and (forty years later in Mexico I won two dollars on a horse-race. These were) lost two dollars. ~~That was~~ my first and last game of chance.

I was careful about debt. My folk were poor but seldom in debt. I have before me a statement of my indebtedness, September 1, 1894 when I started on my first life job; ~~I owed the Slater Fund two notes for $375, with interest.~~ My salary was $800 a year and my living expense I calculated at:

(2)

2

Board $100; Room $35; Clothes $65; Books $100; Debts $350; Sundries $25 — Total $650; Savings $125. This proved too optimistic but still I kept out of debt. When I taught at Atlanta at a salary of $1200 a year for twelve years, I owed nobody. I had a wife and child and each year I took them somewhere north so as to give them fresh air and civilization. It took almost every cent of my salary, together with small fees from lectures and writing to pay our way and yet we kept out of debt and only once was I compelled to overdraw my salary for a month ahead.

Saving I neglected. I had had no experience in saving. My mother's family with whom I lived as a child never had a bank account nor insurance; and seldom a spare dollar. I took out a small life insurance of $1,000 when I was 27. I was cheated unmercifully by the white Pennsylvania company in the fee charged because I was colored. Later after marriage I took out $10,000 of insurance in a Negro Company, the Standard Life. Eventually the company went bankrupt and I lost every cent. I was then too old to obtain more insurance on terms which I could afford.

My income has always been low. During my 23 years with the NAACP, I received for the first 5 years $2500 a year. For the next 18 years, $5,000. With savings from this I bought a home and then sold it later for an apartment building in Harlem. There were five apartments, one of which my family was to occupy and the others would pay me a permanent calculable income. But the house was overpriced; neglected orders for expensive sewer repairs were due. The down payment which I could afford was low and the property was overloaded with three mortgages on which I had to pay bonuses for renewal. Downtown banks began to squeeze black Harlem property holders and taxes increased. With the depression, tenants could not pay or moved. There was one recourse: to turn the property into a rooming house for prostitution and gambling. I gave it to the mortgagors and shouldered the loss of all my savings at 60 years of age. In all this I had followed the advice of a friend skilled in the handling of real estate but who assumed that I was trying to make money and not dreaming of model housing conditions. As many of my friends have since informed me, I was a fool; but I was not a thief which I count to my credit.

3

149

I returned to Atlanta University in 1933 at a salary of $4,500 a year but still out of debt. When ten years later, I retired without notice, I had no insurance and but small savings. A classmate, grandson of a railway magnate, berated me for not wishing to give up work. He could not conceive of a man working for fifty years without saving enough to live on the rest of his days. In money matters I was surely negligent and ignorant; but that was not because I was gambling, drinking or carousing; it was because I spent my income in making myself and my family comfortable instead of "saving for a rainy day". I may have been wrong, but I am not sure of that.

On one aspect of my life, I look back upon with mixed feelings; and that is on matters of friendship and sex. I couple them designedly because I think they belong together. I have always had more friends among women than among men. This began with the close companionship I had with my mother. Friends used to praise me for my attention to my mother; we always went out together arm in arm and had our few indoor amusements together. This seemed quite normal to me; my Mother was lame, why should I not guide her steps? And who knew better about my thoughts and ambitions? Later in my life among my own colored people the women began to have more education, while the men imitated an American culture which I did not share: I drank no alcoholic beverages until I went to Germany and there I drank light beer and Rhine wine. Most of the men I knew drank whiskey and frequented saloons which from my boyhood were out of bounds. ~~My women friends however for the most part were not bound to me by the sex allure.~~

Indeed the chief blame which I lay on my New England schooling was the inexcusable ignorance of sex which I had when I went south to Fisk at seventeen. I was precipitated into a region, with loose sex morals among black and white, while I actually did not know the physical difference between men and women. At first my fellows jeered in disbelief and then became sorry and made many offers to guide my abysmal ignorance. This built for me inexcusable and startling temptations. It

~~I took I adopted a Connecticut attitude toward women~~

250.

began to turn one of the most beautiful of earth's experiences into a thing of temptation and horror. I fought, ~~fell, wept and cursed,~~ one found amid what should have been a climax of true living. I avoided women about whom anybody gossipped and as I tried to solve the contradiction of virginity and motherhood I was inevitably faced with the other contradiction of prostitution and adultery. ~~I almost fled to marriage as sanctuary rather than approaching it with thought and reason.~~

~~5~~ 5 My ~~sex life has bee~~ normal and reasonable. In my home town sex was deliberately excluded from talk and ~~for children~~ of course from thought. ~~I was 20 years of age before I knew the physical difference between male and female.~~ In public school there were no sexual indulgences of which I ever heard. We talked of girls looked at their legs and there was rare kissing of a most unsatisfactory sort, We teased about sweethearts, but quite innocently. When I went South, my fellow students being much older and reared in a region of loose sextual customs regarded me as liar or freak when I asserted my innocence. I liked girls and sought their company, but my wildest exploits were kissing. Then as teacher in the rural districts of east Tennesee, I was literally raped by the unhappy wife who was my landlady. From that time through my college course at Harvard and my study in Europe, I went through a desperately recurrin fight to keep the sex instinct in control. Abrief trial with prostitut in Paris ~~repelled~~ affronted my sense of decency. I lived more or less regularly with a shop girl in Berlin, but was ashamed ~~and frightened~~. Then when I returned home to teach, I was faced with the connivance of certain fellow teachers at adultery with their wives. I was literally ~~scared~~ frightened into marriage before I was able to support a family. I married a girl whose rare beauty and household training from her dead mother attracted and held me, ~~[illegible]~~

I married at twenty-nine and we lived together for fifty-three years. It was not an absolutely ideal union, but it was happier than most, so far as I could perceive. It suffered from the fundamental drawback of modern American marriage: a difference in aim and function between its partners; my wife and children were incidents of my main life work and ~~aims; sex indulgence, food, a home and comfort were its objects.~~ incidents but did not spend time I was not neglectful; I furnished a good home, and plenty of food, I educated the children and planned vacations and recreation. But my main work was out in the world and not at home. That work out there my wife ~~shared~~ understood but a little ~~She was interested~~ appreciated, but was too busy to share could not be absorbed, because of cooking, marketing sweeping and cleaning, and the endless demands of children. This she did without complaint until our firstborn died. Died not of neglect but because of the city's

careless sewage . His death tore our lives in two. I threw myself more completely into my work, while most reason for living left the soul of my wife. Another child, a girl, came later, but my wife never forgave God for the unhealable wound.

As I wandered across the world to wider and higher goals, I ~~xxxxx~~sensed two complaints against the pairing of the sexes in modern life : one that ties between humand beings are usually assumed to be sexual if a man and woman are concerned; and that normal friendships between men and women could not exist without sex being the main ingredient. Also if a man and woman are friendship, they must be married and their friendship ~~must~~ may become a cloying intimacy, often lasting 24 hours a day with few outside friends of the opposite sex on painof gossip, scandal and even crime engulphing the family. My travel and work away from home saved us from this.

Most of my friends and helpers have been women; from my mother, aunts and cousins, to my fellow teachers, students, secretaries and dreamers toward a better world. Sex indulgence was never the cause or aim of these friendships. I do not think my women friends ever ~~cause~~ gave my wife harm or unease. I was thoughtful of her comfort and support and of heer treatment in public and private. But I have often wondered if her limitation to a few women friends and they chiefly housekeepers; and if her lack of contact with men, because of her conventional upbringing and her surroundings -- if this did not make her life unnecessarily narrow and confined. My life on the other hand threw me widely with women of brains and great effort to work on the widest scale. I am endlessly grateful for these contacts.

My first married life lasted over half a century, and its ending was normal and sad, with the ~~endless~~ loneliness which is always the price of death. To fill this great gap, and let my work go on, I married again near the end of my days. She was a woman forty years my junior but her work and aim in life had been close to mine because her father had long believed in what I was trying to do. The faith of Shirley Graham in me was therefor inherited and received as a joy and not a duty. She has wisely made these days rich and rewarding.

In the midst of my career there burst on me a new and undreamed of aspect of sex. Ayoung man, long my disciple and student; then my co-helper and successor to part of my work, was suddenly arrested for molesting men in public places I had before that time no conception of homo-sexuality. I had never understood the tragedy of an Oscar Wild. I dismissed my co-worker forthwith. And spent heavy days regretting my act.

One difficulty of married life we faced as many others must have. My wife's life-long training as a virgin made it almost impossible for her ever to regard sexual intercourse as not fundamentally indecent. it took careful restraint on my part not to make her unhappy at this most beautiful of human experiences. This was no easy task for a normal and lusty young man

My absence from home so much helped us the "household drudgery"
I still make my own bed of mornings; for many years I prepared my own breakfast - especially my coffee; I always leave a bath room cleaner than when I entered; but sewing + cooking my I neglect

I knew far too few of my contemporaries. I was on occassion incomprehensibly shy, and almost invariably loath to interrupt others in seeking to explain myself. This in the case of my fellow Negroes was balanced by our common experiences, and shared knowledge of what each other had lived through; but in the case of white companions, and especially these newly met, we could not talk together, we lived in different worlds. We belonged to no social clubs, and did not visit the same people or even stand at the same liquor bars. We did not lunch together. I did not play cards, and could never get wildly enthusiastic even over baseball. Naturally we could not share stories of sex.

Thus I did not seek white acquaintances, I let them make the advances, and they therefore thought me arrogant. In a sense I was, but after all I was in fact rather desparately hanging on to my self respect.

I was not fighting to dominat others; I was fighting against my own degradation. I wanted to meet my fellows as an equal; they offered only a status of inferiority and submission

I did not for the most part meet my great contemporaries. Doubtless this was largely my own fault. I did not seek them. I deliberately ~~avoided opportunities~~ refused invitations to spend week-ends with Henry James and H.G. Wells. I did not follow up the offer of the wife of Havelock Ellis to meet him and Bernard Shaw. Several times I could have met Presidents of the United States, and did not. The great statesman and writers and artists of America, I might have met, and in some cases known intimately. I did not try to accomplish this. This was partly because of my fear that color caste would interfere with our meeting and understanding; if not with the persons themselves, certainly with their friends. But even beyond this, I was not what Americams called a good fellow. ~~I did not slap people on the back.~~ Yet in the long run my circle of ~~acquaintances and firm friends was wide, especially among Negroes.~~

This too illustrates a certain lack of sympathy and understnding which I had for my ~~fellowmen~~ students. I was for instance a good teacher. I stimulated inquiry and accuracy. I met every question honestly and never dodged an earnest doubt. I read my examination papers carefully and marked them with sedulous care. But I did not know my students as human beings; they were ~~too~~ lone apt to be intellects and not souls. To the world in general I was nearly always the isolated outsider looking in and seldom part of that inner life. Partly that role was thrust upon me because of the color of my skin. But I was not a prig. I was a lusty man with all normal appetites. I loved "Wine, Women and Song". I worked hard and slept soundly; and if, as many said, I was hard to know, it was that with all my belligerency I was in reality unreasonably shy.

One thing I avoided: and that was envy. I tried to give the other fellow his due even when I disliked him personally and disagreed with him logically. It became to me a point of honor never to refuse appreciation to one who had earned it, no matter who he was. I loved living, physically as well as spiritually. I could not waste my time on baseball but I could appreciate a home run. My own ~~experience~~ exercise was walking, but there again I walked alone. I knew life and death. The passing of my First Born boy was an experience from which I never quite recovered. I wrote:

"The world loved him; the women kissed his curls, the men looked gravely into his wonderful eyes, and the children hovered and fluttered about him. I can see him now, changing like the sky from sparkling laughter to darkening frowns, and then to wondering thoughtfulness as he watched the world. He knew no color-line, poor dear -- and the Veil, though it shadowed him, had not yet darkened half his sun. He loved the white matron, he loved his black nurse; and in his little world walked souls alone, uncolored and unclothed. I -- yea, all men -- are larger and purer by the infinite breadth of that one little life. She who in simple clearness of vision sees beyond the stars said when he had flown -- "He will be happy There; he ever loved beautiful things." And I, far more ignorant, and blind by the web of my own weaving, sit alone winding words and muttering, "If still he be, and he be There, and there be a There, let him be happy, O Fate!"

" Blithe was the morning of his burial, with bird and song and sweet-smelling flowers. The trees whispered to the grass, but the children sat with hushed faces. And yet it seemed a ghostly unreal day -- the wraith of Life. We seemed to rumble down an unknown street behind a little white bundle of posies, with the shadow of a song in our ears. The busy city dinned about us; They did not say much, those pale-faced hurrying men and women; they did not say much -- they only glanced and said 'Niggers'."

811

My relogious developement has been slow and uncertain . I grew up in a liberal Congregational sunday school and listened once a week to a serman on doing good as a reasonable duty. Theology played a minor part and our teachers had to face some searching queastions. At seventeen I was in a missionary colleg where religious orthodoxy was srtressed; but I was more developed to meet it with argument, which I did. My "morals" were sound, even a bit puritanic, but when a hidebound old deacon inveighed against dancing I rebelled. To me dancing was sheer pleasure which I had praiced since boyhood. Then the teachers brought forward the old Pauline srgument 'if meet maketh thy brother offend". I smoled with this as takin a mean advantage of a conscientious youth. By time of graduation I was still a "believer" but in orthodox religion strong questions which were encouraged at Harvard. In Germany I became a freethinker and when I came to teach at an orthodox Methodist Negro school I was soon regarded with suspicion, especially when I refused to lead the students in puclic prayer. When I became head of a Department at Atlanta, the engagement was hotly cancelled because again I balked at leading in prayer. But the liberal president let me substitue the episcopal prayer book for extemporaneous prayers. Later I improvised on my own. Finally I faced a crisis: I was using Crapsey's "Religion and Politics" as a Sundayschool text. When Crapsey was hauled up for heresy, I refused further to teach Sunday school. When Archdeacon Henry Phillips my last rector died, I flatly refused again to join any church or sign any church creed. It smacked of hypocrisy. From my thirtieth year on I have increasingly regarded the Church as an institution, which defended such evils as slavery, color caste, and exploitation of labor, and War I think the greatest gift of the Soviet Union to modern civilizton was the dethronment of the clergy and the refusal to let religion be taught in the public schools

9J

~~The silly worship of Virginity and punishment of Fertility~~ the often barbarous

Religion helped and hindered my artistic sense. I know the old English and German hymns by heart. I ~~know~~ their silly words with studied inattention. Great music came at last in the religious oratorios, but burst in Berlin with the Ninth Symphony and its Hymn of Joy. I worshipped Cathredral and ceremony but I knew what I was looking at when a Cardinal became a strike-breaker and the Chruch of Chirst fought the Communism of Chirstianity.

Which I saw in Europe

which was learned at Yale University

Loved their music but ignored their words

I reversed life

I have never killed a bird nor shot a rabbit. I never liked fishing and always let others kill even the chickens which I ate. Nearly all my ~~Pisk~~ schoolmates in the South carried pistols. I never owned one. I could never conceive myself killing a human being. But ~~once~~ in 1906 I rushed back from Alabama to Atlanta where my wife and six year old child were living. A mob had raged for days killing Negroes. I bought a Winchester double-barrelled shot-gun and two dozen rounds of shells filled with buckshot. If a white mob had stepped on the campus where I lived I would without hesitation have sprayed their guts over the grass. They did not come, ~~perhaps because~~ they knew ~~this. This gun was never fired~~ but once. Then by accident into a row of Congressional Records

They went to south Atlanta where the police let them steal and kill. My gun was fired but once and then by error into a row of Congressional Records, which lined the lower shelf of my library.

10) My attitude toward current problems arose from my long habit of keeping in touch with world affairs by repeated trips to Europe and other parts of the world. I became internationally-minded during my four years at Harvard, two in college and two in the graduate school. It early became my ambition, then, to study in Germany, and when finally I obtained a fellowship from the Slater Fund, I made plans through Albert Bushnell Hart, my Harvard mentor, to enroll at the University of Berlin.

Since that first rip in 1892 I have made fourteen trips to Europe, one of which circled the globe. I have been in most European countries and travelled in Asia, Africa, and the West Indies. Travel became a habit and knowledge of current thought in modern countries was always a part of my study, since before the first World War when the best of American newspapers took but small account of what Europe was thinking.

I can remember meeting in London in 1911 a colored man who explained to me his plan of leading a black army out of Africa and across the Pyrenees. I was thrilled

at his earnestness! But gradually all that disappeared, and I began building a new picture of human progress.

This picture was made more real in 1926 when it became possible for me to take a trip to Russia. I saw on this trip not only Russia, but prostrate Germany, which I had not seen for thirty years. It was a terrible contrast. I visited Leningrad, Moscow, Nizhni Novgorod and Kiev, and finally came home by way of Odessa and Constantinople. It was for me a never-to-be-forgotten experience, and it strengthened my basic belief in Socialism as the one great road to progress.

By 1945 all these contacts with foreign peoples and foreign problems and the combination of these problems with the race problem here was forced into one line of thought by the Second World War. This strengthened my growing conviction that the first step toward settling the world's problems was Peace on Earth.

Many men have judged me, favorably and harshly. But the verdict of two I cherish. One knew me in mid-life for fifty years and was without doubt my closest friend. John Hope wrote me in 1918:

"Until the last minute I have been hoping that I would have an opportunity to be with you next Monday when you celebrate the rounding out of fifty years in this turbulent but very attractive world. But now I am absolutely certain that I cannot come, so I am writing to Mr. Shillady expressing my regret and shall have to content myself with telling you in this letter how glad I am that your fiftieth birthday is going to be such a happy one because you can look back on so much good work done. But not the good work alone. What you may look back upon with greatest comfort is good intention. The fact that every step of the way you have purposed to be a man and to serve other people rather than yourself must be a tremendous comfort to you. Sometime soon if I chance to be back in New York I am going to have you take your deferred birthday dinner with me. You do not realize how much that hour or two which we usually spend together when I am in New York means to me." ~~There is a certain solemnity about a man becoming fifty years old. If I am spared until the second day of June I shall be fifty years old.~~

~~JOHN HOPE~~

Six years later another friend whom I found when I came to New York wrote

~~In 1927~~ Joel Spingarn Said

~~Dear Dr. Du Bois,~~

"I have been hoping until the last moment to be able to attend the dinner in your honor, for nothing but an illness that has held me prisoner for weeks, could have kept me away.

"I should like to have given public expression by my presence and by my words, not merely to the sense of personal friendship which has bound us together for fifteen years, but to the gratitude which in common with all other Americans I feel we owe you for your public service. It so happens that by an accident of fate, you have been in the forefront of the great American battle, not merely for justice ~~to~~ to a single race, but against the universal prejudice which is in danger of clouding the whole American tradition of toleration and human equality.

"I congratulate you on your public service, and I congratulate you also on the power of language by which you have made it effective. I know that some people think that an artist is a man who has nothing to say and who writes in order to prove it. The great writers of the world have not so conceived their task, and neither have you. Though your service has been for the most part the noble one of teacher and prophet (not merely to one race or nation but to the world), I challenge the artists of America to show more beautiful passages than some of those in "Dark Water" and "The Souls of Black Folk."

Let one weekend ~~Ever yours,~~ Illustrate the paradox of my life

~~J.E. Spingarn~~

Robert Morss Lovett was perhaps the closest white student friend I made at Harvard, when not long before his last visit to New York (about 1950) he wanted to see and talk with me, he proposed the Harvard Club of which he was a member. I was not. No Negro graduate of Harvard was ever elected to membership in a Harvard club. For a while Jews were excluded, but no longer. I swallowed my pride and met Lovett at the Club. A few months later he died.

CHAPTER XVII

THE DEPRESSION

From 1910 to 1920, I had followed ~~the pursuit of~~ sociology as the path to ~~an inseparable~~ ~~pursuit~~ of social reform, and social uplift as a result of scientific investigation. Then, in practice, I had conceived an interracial culture as superseding our goal of a purely American culture. Before I had learned a program for this path, and after throes of bitter racial strife, I had emerged with a program of Pan-Africanism, as organized protection of the Negro world led by American Negroes. But American Negroes were not interested.

Abruptly, I had a beam of new light. Karl Marx was scarcely mentioned at Harvard and entirely unknown at Fisk. At Berlin, he was a living influence, but chiefly in the modification of his theories then dominant in the Social Democratic Party. I was attracted by the rise of this party and attended its meetings. I began to consider myself a socialist. After my work in Atlanta and my advent in New York, I followed some of my white colleagues -- Charles Edward Russell, Mary Ovington, and William English Walling, into the Socialist Party. Then came the Russian Revolution and the fight of England, France and the United States against the Bolsheviks. I began to read Karl Marx. I was astounded and wondered what other areas of learning had been roped off from my mind in the days of my "broad" education. I did not however jump to the conclusion that the new Russia had achieved the ideal of Marx. And when I was offered a chance to visit Russia in 1926, with expenses paid, I carefully stipulated in writing that the visit would not bind me in any way to set conclusions.

My visit to Germany and the Soviet Union in 1926 and then to Turkey and Italy on return, brought change in my thoughts and action. The marks of war were all over Russia — of the war of France and England to turn back the clock of revolution. Wild children were in the sewers of Moscow; food was scarce, clothes were in rags, and the fear of renewed Western aggression hung like a pall. Yet Russia was and still is to my mind, the most hopeful land in the modern world. Never before had I seen a

I resigned when I received a vote for W Dean, William English Walling & Upton Sinclair for Negroes. Also a vote for Theodore Roosevelt, Taft or any unknown candidate

suppressed mass of poor, working people -- people as ignorant, poor, superstitious and cowed as my own American Negroes-- so lifted in hope and starry-eyed with new determination, as the peasants and workers of Russia, from Leningrad and Moscow to Gorki and from Kiev to Odessa. The art galleries were jammed, the theatres crowded, the schools opening in new places and new programs each day; and work was joy. Their whole life was renewed and filled with vigor and ideal, as Youth Day in the Red Square proclaimed.

I saw of course but little of Russia in one short month. I came to no conclusions as to whether the particular form of the Russian state was permanent or a passing phase. I met but few of their greater leaders; only Radek did I know fairly well, and he was imprisoned during the subsequent purge. I do not judge Russia in the matter of war and murder, no more than I judge France and England. But of one thing I am certain: I believe in the dictum of Karl Marx, that the economic foundation of a nation is widely decisive for its politics, its art and its culture. I saw clearly, when I left Russia, that our American Negro belief that the right to vote would give us work and decent wage; would abolish our illiteracy and decrease our sickness and crime, was justified only in part; that on the contrary, until we were able to earn a decent, independent living, we would never be allowed to cast a free ballot; that poverty caused our ignorance, sickness and crime; and that poverty was not our fault but our misfortune, the result and aim of our segregation and color caste; that the solution of letting a few of our capitalists share with whites in the exploitation of our masses, would never be a solution of our problem, but the forging of eternal chains, as India knows to its sorrow.

I did not believe that the Communism of the Russians was the program for America; least of all for a minority group like the Negroes; I saw that the program of the American Communist party was inadequate for our plight. But I did believe that a people where the differentiation in classes because of wealth had only begun, could be

so guided by intelligent leaders that they would develop into a consumer-conscious people, producing for use and not primarily for profit and working into the surrounding industrial organization so as to reinforce the economic revolution bound to develop in the United States and all over Europe and Asia sooner or later. I believed that revolution in the production and distribution of wealth could be a slow, reasoned development and not necessarily a blood bath. I believed that 13 millions of people, increasing albeit slowly in intelligence, could so concentrate their thought and action on the abolition of their poverty, as to work in conjunction with the most intelligent body of American thought; and that in the future as in the past, out of the mass of American Negroes would arise a far-seeing leadership in lines of economic reform.

The Pan-African congresses which I called in 1919, 1921, and 1923, were chiefly memorable for the excitement and opposition which they caused among the colonial imperialists. Scarcely a prominent newspaper in Europe but used them as a text of warning, and persisted in coupling them with the demagogic "Garvey Movement," then in its prime, as a warning for colonial governments to clamp down on colonial unrest. My only important action in this time, was a first trip to Africa, almost by accident, and a vaster conception of the role of black men in the future of civilization.

But here I was going too fast for the National Association for the Advancement of Colored People. The board was not interested in Africa. Following post-war reaction it shrank back to its narrowest program: to make Negroes American citizens, forgetting that if the white European world persisted in upholding and strengthening the color bar, America would follow in its wake.

If it had not been for the depression, I think that through the Crisis, the little monthly which I had founded in 1910, and carried on with almost no financial assistance for twenty years, I could have started this program on the way to adoption by American Negroes. But the depression made the survival of the Crisis dependent on the charity of persons who feared this thought and forced it under the control of influences to whom such a program was Greek. In a program of mere agitation for "rights"

help from the main office of the N.A.A.C.P. This would change my whole conception of The Crisis as an independent organ leading a liberal organization toward radical reform. It was this sting in The Crisis which for thirteen years had made it was it was. But the Board was still mainly conservative; it represented Capital and Investment, and only to a small degree Labor and Socialism. If the Association had to pay for The Crisis it would have a right to determine its policy, not only in broad outline but in every detail.

The financial relations of the Crisis and the NAACP were unusual. I was responsible for the publishing of the magazaine. The NAACP at first paid all my $2500 salary. After two years the Crisis paid half and after four years all the salary; but the NAACP determined its amount. I was responsible for all the other expenses-- salaries of all the clerks and employees, and finally paid our share of the rent. We could incur no debts nor accumulate a back-log At first we had no bank account but when Walter Sachs became treasurer he let me set up a Crisis Fund and draw our own checks. But we could solicit no gifts nor organize any group of "Crisis Associates" to help support us in need. The NAACP promised to meet any deficit we might incur up to $50 a month, but we never called on them for a cent. At times, as for instance when I went abroad for the Second Pan-African Congress, the NAACP ordered my business manager to pay $700 from the Crisis Fund toward my expenses. I made no complaint on this situation. After all the NAACP was the object of the Crisis. It was never a profit-making institution. We could get few advertisements because we were classed as a propaganda organ. I was helped enormously by a Negro, Robert Wood, the first Negro Tammany politician, who was also a printer contractor and gave me unselfish advice in buying paper and securing printers. For 23 years we paid our way. We left no debts and made the NAACP a universally known organization. But when the Depression came we had nothing to fall back on and had to hand over control to the NAACP who legally owned the Crisis It was often suggested to me that I claim at least part ownership and try

to run it as a personal organ. This I refused to consider although I do not doubt but that a good lawyer might have made a case. But my attitude was that the Crisis belonged to the NAACP and that its future value depended on how the NAACP upheld its high ideals. However there was one circumstance whic which worried me and that was the change of secretaries which took place in I93I. James Weldon Johnson had resigned and Walter White had suceede him, and was destined to head the organization for twenty-five years. I knew Walter White

I knew his father and mother; I taught in college his brother and sisters. When in 1917, James Weldon Johnson, our field secretary met White in Atlanta, he suggested to me that White would make a good assistant secretary. I readily concurred and urged his appointment. White could be one of the most charming of men. He was small in stature, appealing in approach, with a ready smile and a sense of humor. Also he was an indefatigable worker, who seemed never to tire. On the other hand he was one of the most selfish men I ever knew. He was absolutely self-centered and egotistical to the point that he was almost unconscious of it. He seemed really to believe that his personal interests and the interest of his race and organization were identical. This led to curious complications.

As assistant to James Weldon Johnson who became Secretary in 1920, White was an outstanding success. He investigated lynchings at great personal risk; and especially, he carried out the plans which Johnson laid down. It was Johnson's strong point to consult widely and decide carefully. White than took over and put the plans to work. For twelve years this team worked harmoniously and well. Then Johnson was invited to the Pacific to study relations and given a fellowship by the Rosenwald fund. White ran the Association during his ~~xxxxxx~~ absence. After Johnson's return he came to me and said that White was not cooperating as usual, At the conference in Cleveland, White had simply done almost no work; Johnson intimated that he would have to resign if he lost the confidence of his executive helper. I think that White had already concluded that he should be secretary instead of working under Johnson.

Nothing more was said but in 1931, Johnson resigned and went to Fisk University. Walter White was elected to succeed him. within a year

¶ White's assumption of office soon set off an explosion. His attitude and actions ~~became~~ were unbearable. The whole staff appealed to me as the senior executive officer to lead a protest to the Board of Directors. As editor of The Crisis, this was not in my line of duty; but on the other hand as one of the incorporators of the Association, I could not shirk this appeal. I wrote a protest and all the staff signed it including the new assistant, Roy Wilkins; and all the older members, Pickens, Bagnall, and others. It was a strong and biting arraignment but all accepted it and signed it. ¶ The Board was deeply moved and while it did not attempt to deny the charges, thought it was too strong and not quite fair. They asked us to withdraw our signatures and promised to investigate the situation. Nearly all the signers, at the urgent request of Joel Spingarn, President of the Board, withdrew their names. But I refused. The matter dropped and was not heard of afterwards. But White radically changed his attitude toward the staff. He became pleasant and approachable. Above all he went to work. He worked hard ~~and~~

White refused humbly before the Board and made every promise of reform

I did not trust Walter White

but went under-ground & accomplish his aims. Many of them soon lost his job; but White never appeared as the cause. Every one who signed the protest except Wilkins, lost his position and Wilkins yielded to White in every request.

P White

[redacted] increased his prestige, and under his administration the Association grew in membership and influence.

[redacted] by 1932 it was evident that The Crisis could survive only if the Association helped support it. As such, The Crisis would become the traditional "organ" of an organization. Moreover, White was increasingly raising the funds which helped keep the N.A.A.C.P. alive. This would soon impose an impossible position for me and a difficult one for White.

I think I may say without boasting that in the period from 1910 to 1930 I was a main factor in revolutionizing the attitude of the American Negro toward caste. My stinging hammer blows made Negroes aware of themselves, confident of their possibilities and determined in self-assertion. So much so that today common slogans among the Negro people are taken bodily from the words of my mouth.

But, of course, no idea is perfect and forever valid. Always to be living and apposite and timely, it must be modified and adapted to changing facts. [redacted] I began to realize [redacted] that the heights and fastnesses which we black folk were assailing, could not in America be gained by sheer force of assault, because of our relatively small numbers. They could only be gained as the majority of Americans were persuaded of the rightness of our cause and joined with us in demanding our recognition as full citizens. This process must deal not only with conscious rational action, but with irrational and unconscious habit, long buried in folkways and custom. Intelligent propaganda, legal enactment, and reasoned action must attack the conditioned reflexes of race hate and change them.

Slowly but surely I came to see that for many years, perhaps many generations, we could not count on any such majority; that the whole set of the white world in America, in Europe, and in the world was too determinedly against racial equality, to give power and persuasiveness to our agitation. Therefore, I began to emphasize and restate certain implicit aspects of my former ideas. I tried to say to the American Negro: during the time of this frontal attack which you are making upon American and European prejudice, and with your unwavering statement and restatement of what is right and just, not only for us, but in the long run, for all men; during this time, there are certain things you must do for your own survival and self-preservation. You must work together and in unison; you must evolve and support your own social institutions; you must transform your attack from the foray of self-assertive individuals to the massed might of an organized body. You must put behind your demands, not simply American Negroes, but West Indians and Africans, and all the colored races of the world. These things I began to say with no lessening, or thought of lessening, of my emphasis upon the essential rightness of what we had been asking for a generation in the political and civic and social equality.

It was clear to me that agitation against race prejudice and a planned economy for bettering the economic condition of the American Negro were not antagonistic ideals but part of one ideal; that it did not increase segregation; the segregation was there and would remain for many years. But now I proposed that in economic lines, just as in lines of literature and religion, united racial action should be planned and organized and carefully thought through. This plan would not establish a

[INSERT PAGE 8]

It was a curious dilemma still unsolved for most American Negroes: the N AACP said "No discrimination based on race and color". But it did not say nor even contemplate what path Negroes would follow when they once became Americans who suffered no discrimination. I tried to face the problem of what to do, assuming that discrimination would last through our life time. The legal department of the NAACP sought to attack discrimination head on. They were beginning to win and in 1954, they won. But this posed another dilemma: the court decision was not enforced and will not be for many years. Meantime what should be our program? We must accept and fight for integrated schools which we do not have in the overwhelming portion of the South where most Negroes live. ~~What shall we do? Leave~~ That leaves the battle to our children and let them learn nothing in school of Negro history, do nothing for Negro culture, have no program for themselves as Americans. I wavered for years, advocating Socialism first as a racial program; then as a national effort and then after this trip of 1958 as a definite and direct ~~movement~~ step to join the world movement toward a Socialism leading toward Communism, and embracing the colored world and that part of the white world willing to give up colonialism and private capitalism. But, as I say, this decision was slow in making. Meantime, I was fighting segregation but simultaneously advocating such segregation as would prepare my people for the struggle they were making

new segregation; it did not advocate segregation as the final solution of the race problem; exactly the contrary; but it did face the facts and faced them with thoughtfully mapped effort.

The N.A.A.C.P. from the beginning faced this bogey. It was not, never had been, and never could be an organization that took an absolute stand against race segregation of any sort under all circumstances. This would be a stupid stand in the face of clear and incontrovertible facts. When the N.A.A.C.P. was formed, the great mass of Negro children were being trained in Negro schools; the great mass of Negro churchgoers were members of Negro churches; the great mass of Negro citizens lived in Negro neighborhoods; the great mass of Negro voters voted with the same political party; and the mass of Negroes joined with Negroes and co-operated with Negroes in order to fight the extension of this segregation and to move toward better conditions. What was true in 1910 was still true in 1940 and will be true in 1970. But with this vast difference: that the segregated Negro institutions are better organized, more intelligently planned and more efficiently conducted, and today form in themselves the best and most compelling argument for the ultimate abolition of the color line.

No sooner had I come to this conclusion than I saw that I was out of touch with my organization and that the question of leaving it was only a matter of time. This was not an easy decision; to give up The Crisis was like giving up a child; to leave the National Association was leaving the friends of a quarter of a century. But on the other hand, staying meant silence, a repudiation of what I was thinking and planning. Under such circumstances, what could I do? I had seen the

especially as the Crisis was no longer self-supporting

modern world as few of my fellow workers had: West African villages, Jamaican homes, Russian communism, German disaster, Italian fascism, Portuguese and Spanish life, France and England repeatedly, and every state in the United States. I knew something of the seething world. I could ~~not~~ seek through my editorship of The Crisis slowly but certainly to change the ideology of the N.A.A.C.P. and of the Negro race into a racial program for economic salvation along the paths of peace and ~~organ-~~ isation. Socialism

When now I came advocating new, deliberate, and purposeful segregation for economic defense in precisely the lines of business and industry whither the N.A.A.C.P. was not prepared to follow, it was not an absolute difference of principle, but it was a grave difference as to further procedure. When I criticized the Secretary for his unsound explanation of the historic stand of the N.A.A.C.P. on segregation, the Board of Directors voted May 21, 1934, "that The Crisis is the organ of the Association and no salaried officer of the Association shall criticize the policy, work, or officers of the Association in the pages of The Crisis." Thereupon I forthwith gave up my connection with the Association saying:

"In thirty-five years of public service my contribution to the settlement of the Negro problems has been mainly candid criticism based on a careful effort to know the facts. I have not always been right, but I have been sincere, and I am unwilling at this late day to be limited in the expression of my honest opinions in the way in which the Board proposes. . . . I am, therefore, resigning, . . . this resignation to take effect immediately." The Board refused to accept this resignation and asked me to reconsider. I did so, but finally wrote, June 26, "I appre-

ciate the good will and genuine desire to bridge an awkward break which your action indicated, and yet it is clear to me, and I think to the majority of the Board, that under the circumstances my resignation must stand." Negotiations followed but there was but one possible decision

In finally accepting my resignation the Board was kind enough to say in part: "He founded The Crisis without a cent of capital, and for many years made it completely self-supporting, reaching a maximum monthly circulation at the end of the World War of 100,000. This is an unprecedented achievement in American journalism, and in itself worthy of a distinguished tribute. But the ideas which he ~~expressed~~ propounded in it and in his books and essays transformed the Negro world as well as a large portion of the liberal white world, so that the whole problem of the relation of black and white races has ever since had a completely new orientation. He created, what never existed before, a Negro intelligentsia, and many who have never read a word of his writings are his spiritual disciples and descendants. Without him the Association could never have been what it was and is.

"The Board has not always seen eye to eye with him in regard to various matters, and cannot subscribe to some of his criticism of the Association and its officials. But such differences in the past have in no way interfered with his usefulness, but rather on the contrary. For he had been selected because of his independence of judgment, his fearlessness in expressing his ~~courageous~~ convictions, and his acute and wide-reaching intelligence. A mere yes-man could not have attracted the attention of the world, could not even have stimulated the Board itself to further study of various important problems. We shall be the poorer for his loss, in

intellectual stimulus, and in searching analysis of the vital problems of the American Negro; no one in the Association can fill his place with the same intellectual grasp. We therefore offer him our sincere thanks for the services he has rendered, and we wish him all happiness in all that he may now undertake."

I had already for some years begun to canvass the possibility of a change of work. This, of course, is not easy when a person is over sixty years of age. If he has not had the grace to die before this, he ought, in accordance with prevalent public opinion, at least be willing to stop acting and thinking. I did not agree with that. I thought of many possibilities, but at last determined to accept an offer that had been made to me quietly in 1929, and periodically repeated from time to time when John Hope of Atlanta came to town. We had been close friends since 1897. We taught together until 1910. Hope had joined the Niagara movement and the N.A.A.C.P. We met in France in 1918 while he was a Y.M.C.A. secretary, and I promoting Pan-Africa. Always when he came to New York, we did a theater and a dinner, and discussed the reformation of the world. When he became President of the newly organized Atlanta University, he invited me to join him.

Every American should read the story of John Hope as told by Ridgely Torrence. No one "Colored" a white man with Negro blood and American Negro culture

About 1925, the General Education Board adopted a new program. It had become clear that the studied neglect of the Negro college was going too far; and that the Hampton-Tuskegee program was inadequate even for its own objects. A plan was adopted which envisaged, by consolidation and endowment, the establishment in the South of five centers of University education for Negroes. Atlanta had to be one of these centers, and in 1929 Atlanta University became the graduate school of an

affiliated system of colleges which promised a new era in higher education for Negroes. My life-long friend, John Hope, became president, and immediately began to sound me out on returning to Atlanta to help him in his great enterprise. He promised me leisure for thought and writing, and freedom of expression, so far, of course, as Georgia would permit it.

It seemed to me that a return to Atlanta would not only have a certain poetic justification, but would relieve the N.A.A.C.P. from financial burden during the depression, as well as ~~from the~~ greater efforts of re-considering its essential program.

The untimely death of John Hope in 1936 marred the full fruition of our plans, ~~following my return to Atlanta in 1933~~. These plans in my mind fell into three categories; first, with leisure to write, I wanted to fill in the background of certain historical studies concerning the Negro race; secondly, I wanted to establish at Atlanta University a scholarly journal of comment and research on race problems; finally, I wanted to restore in some form at Atlanta, the systematic study of the Negro problem.

The first thing which hindered this program was the set opposition of Florence ~~Hunty~~ Reed, President of Spelman College, the institution for women in the newly integrated Atlanta University. Miss Reed was a white woman. She was not a scholar but she was a capable executive, who had worked for

I went to Atlanta in 1933 for a series of lectures and the next year became head of the Department of Sociology.

Lauren Spelman was a Rockefeller creation, ~~Spelman had been endowed~~ the Rockefellers had endowed this school

267

The Rockefellers and

represent the Rockefeller interests in the new organization. She believed completely in American business methods and was put in her position by those who wanted to placate the white South in every reasonable way and keep the new institution from radical influences. She was very fond personally of John Hope at a time when he needed friendship. She respected me but feared my radical thought in many directions. She was set to act as a balance wheel to Hope's plans for accommodation and my plans for social reform. She delayed the invitation for me to join the University and when I came, delayed some of my proposals. I proposed a quarterly magazine to record the situation of the colored world and guide its course of development. Her opposition delayed the starting of Phylon from 1934 until 1940. She made the reopening of the Atlanta University studies of the Negro Problems much slower than I had hoped and she made my efforts to confer and plan with Hope very difficult. Indeed I fear that the very pressure exerted on him from two of his closest friends depressed Hope very much and contributed to his untimely death. Hope was sensitive and over careful to do no injustice. He was the perfect target for overwork at Atlanta University.

Between 1935 and 1941, I wrote and published three volumes: a study of the Negro in Reconstruction; a study of the black race in history and an autobiographical sketch of my concept of the American race problem. To these I was anxious to add an Encyclopaedia of the Negro. I had planned an "Encyclopedia Africana" in 1909 but my leaving Atlanta for New York postponed this project and the World War prevented its renewal. In 1934 I was chosen to act as editor-in-chief of a new project of the Phelps-Stokes Fund to prepare and publish an Encyclopedia of the Negro. I spent nearly ten years of intermittent effort on this project and secured co-operation from many scholars, white and black, in America, Europe and Africa. But the necessary funds could not be secured. Perhaps again it was too soon to expect large aid for so ambitious a project directed by Negroes and built mainly on Negro scholarship. Nevertheless, a preliminary volume summarizing this effort was published in 1944.

John Hope died in 1936 and after a year Rufus Clement became his successor. Clement was head of a colored municipal college in Louisville and while

[illegible]

not experienced came of a good family and had done some ~~good~~ work in research for his doctorate. I greatly preferred him over Miss Reed who was an active candidate. On his advent I immediately began pushing for my delayed program.

At Atlanta University I celebrated quite elaborately my 70th anniversary. There was a bronze bust by Alexander Portnoff; J.E. Spingarn and James Weldon Johnson spoke; Braithwaite read a poem written for the occasion. I succeeded in getting Phylon published in 1940. I kept it going for the four years that I remained at the University with a subvention of only one thousand dollars a year from the University. We sold it for only a dollar a year. I then began to push the re-establishment of my plan of study of the Negro problem. ~~I posed the situation in 1941~~.

In this we faced the fact that in the twenty-three years which had passed since their discontinuance, the scientific study of the American Negro had spread widely and efficiently. Especially in the white institutions of the South had intelligent interest been aroused. There was, however, still need of systematic, comprehensive study and measurement, bringing to bear the indispensable point of view and inner knowledge of Negroes themselves. Something of this was being done at Fisk University, but for the widest efficiency, large funds were required for a South-wide study. I made a beginning in 1941 and thus explained the situation:

Some eleven million Americans ~~are placed today~~ were in an unenviable position. Theoretically they ~~are~~ were asked to take sides in a struggle between democracy and dictatorship. Realistically, they ~~have~~ had not been able themselves to enjoy many of the advantages of democracy in the United States: two-thirds of them living in the South are almost completely disfranchised; the other third living in the North are compelled to use their political power primarily as means of income. Moreover, beyond themselves and in the general organization of the country they ~~are~~ were unable to see the triumph of democracy for the masses of the people in the nation. ~~American Negroes cannot, therefore, enter into the~~ present controversy ~~with enthusiasm~~. Quite naturally as lifelong victims of caste, autocracy, and privilege, they believe that the democratic way of life ~~will~~ would in

the long run triumph in human government and in economic organization, if civilization survived. They did not believe that democracy has triumphed in the British Empire, nor in America, and they know it had failed in their own case.

On the other hand, facing the menace of Hitlerism as shown in Germany, Italy, and elsewhere, they were painfully aware that the increase of race antagonism and exaggerated theories of race threaten many people of the world, and particularly the darker races. Their mental reaction, therefore, in the present situation was a paradox. They know that their progress in America has probably been greater than that of any Negro group in the world; that this was due partly to the cooperation and attitude of white Americans, but in much greater degree to the determination and hard work of Negroes themselves, in spite of slavery and caste. They know, on the other hand, that back of Hitlerism, and one of its strongest foundation stones, was industrial rationalization and state control of economic factors and redistribution of goods and services among the mass of people; to this plan both England and America would have to yield, in the long run.

What, then, must American Negroes do? First of all, as a minority group they are compelled to obey the law and take their place among the armed forces, in spite of the segregation which the basic draft law laid down; and despite the discrimination and other difficulties which the administration of the draft involved. On the other hand, there was in the defense organization opportunities for Negroes which they must recognize as being of the highest importance. They have been systematically and deliberately excluded from many modern techniques. The older technical training which they inherited from slavery and added to through industrial education, has lost much of its importance because of great changes in industrial methods during the last half century. From the newer techniques in mechanics, chemistry and electricity, and in much of mass production, the Negro has been excluded: first, by public opinion; second, by the attitude of employers; third, and especially, by the fact that the great majority of the more powerfully organized

trades unions had sought deliberately to exclude Negroes, no matter what their abilities might be. For a generation the Negro group in the United States in a sense went simultaneously forward and backward, increasing in average intelligence, with notable cases of individual accomplishment; and at the same time losing economic status and receiving a fluctuating but on the whole progressive decrease in average income below that of white workers

A few facts illustrate the fluctuation of Negro employment from 1910 to 1930. Negro farmers and farm laborers have shown steady decrease in actual numbers and in proportion from the beginning of the century; domestic service has wavered decreasing until 1920 and then suddenly increasing under the burden of the depression; artisans fluctuated; blacksmiths steadily decreased; masons decreased rapidly after the first World War; carpenters remained stationary; machinists increased at the time of the first World War and then decreased. The increased use of cement has multiplied the number of plasterers and cement finishers, and painters also increased. Favorable attitudes of the miners union led to an increase of Negro workers in the decadent mining industry. In the manufacturing and mechanical industries, and in transportation and communication, the number of Negroes increased until after the first World War, although chiefly as unskilled laborers. Since 1920, the number has remained about stationary.

The story of the depression as it affected American Negroes, has not yet been adequately attempted. In many great centers of population more than a third of the Negroes went on public charity and more ought to have gone but suffered deliberate discrimination in the South. In addition to this, the greater tragedy was the loss of thousands of farms and homes, the disappearance of savings among the rising Negro middle class, the collapse of Negro business -- banks, insurance, and retail businesses. The economic change deserves to be called revolutionary, because this "middle" class was the upper class in the Negro world in knowledge, training and wealth.

Organizations demanded the displacement of the Negro in industry, and the Ku Klux Klan rose and flourished with new life, largely on this issue. The new organizations of "White Shirts," "Blue Shirts," and the like, spread in the South; and beyond such organized demand, was the widespread feeling in America that in the matter of re-employment and re-adjustment after the depression, the first duty of white Americans was toward white folk and that consideration of long service and desert and need ought not to be taken into account across the Color Line.

Under the New Deal the Negro came in for some attention, but the pressing question was chiefly as to how far discrimination against him should be recognized either in wage, hours of work, or employment under any circumstances. Also starting with the New Deal came a rationalization of the displacement of the Negro worker due to efforts toward raising wages. When minimum wages and standards of work have been enforced by law or made advisable by public opinion, in numberless cases poorly paid Negro workers were replaced by white workers with better wages and better hours of work. The resultant natural increase in efficiency has often been attributed to racial replacement alone. In the labor movement, the organization of the CIO gave Negroes far better recognition than the American Federation of Labor ever had. Despite all this, unemployment among Negroes reached a dangerous height.

This worked for social dislocation among Negroes. It is difficult to get figures, but certainly spread of disease must have greatly retarded the Negro population; and stealing and homicide must have been largely augmented. A general philosophy arose tinged with irritation and despair. Pressure groups demanding employment and even threatening violence appeared in Chicago, New York, and Washington. Their success both encouraged and appalled.

A rough calculation of Negro incomes which I essayed in 1939 had to be largely guesswork because of lack of data; and yet it seemed to indicate that of over 2,800,000 Negro families in the United States, 1,200,000 were receiving less than $500 a year and 1,000,000 between $500 and $1,000; leaving 600,000 families with $1,000 a year or more a year,

of whom only one-tenth received more than $2,500. This estimate is not accurate, and may be too low, but I believe that it is not an unfair indication of the truth. Housing and youth projects have helped Negroes greatly, but only indirectly have they faced the basic problem of employment and income.

The years of the depression and of the New Deal illustrated the complicated currents which influenced me. I was for example born in a world which was not simply fundamentally capatalistic, but had no conception of any system except one in which capital was privately owned. Whatever was mentioned in school, or in books, did not fundamentally contradict that what a man made or received as gift or inheritance was his to do with as he wished. A wages contract might be entered into in thich the laborers work was balanced against the savings of the man who hired him. I remember hearing my grandmother in sharp and angry arguement with a white land owner, for whose father she had worked. She was insisting that the wages paid had not been fair, and he was retorting that the fact that they had been received without complaint at the time, settled the matter. The truth concerning the wages contract remained largely hidden from me, because I had so little actual contact with artisans and workers. I never saw the inside of the cotton mills in our town. I knew little of the actual work of carpenters and plumbers. My relatives had moved from farming to house service, or to work in hotels, and not in factories. My cousin Ned, a kind and intelligent young man, who had gone through the elementary schools, but who died in his thirties, as a hotel waiter, with never a chance and probably little fault of being anything more. In High School and college, socialism meant to me some amelioration of the wages contract, more human relations between employer and employee, but it involved no fundamental study of Marxism. While I was at Harvard, Frank Taussing taught a course in the wages fund. It followed Ricardo, and never touched Marx. Later my long and continuous fight for racial equality landed me in a curious spiritual provincialism, from which I did not extricate myself until later in life. What I wanted was the same economic opportunities that white Americans had. Beyond this I was not thinking, and did not realize what wretched exploitation white

Americans and white workers of all sorts faced and had faced in the past, and would face in years to come. Although a student of social progress, I did not know the labor development in the United States. I was bitter at lynching, but not moved by the treatment of white miners in Colorado or Montana. I never sang the song of Joe Hill, and the terrible strike at Lawrence Massachusetts did not stir me, because I knew that factory strikers like these would not let a Negro work beside them or live in the same town. It was hard for me to outgrow this mental isolation, and to see that the plight of the white workers was fundamentally the same as that of the black. Even if the white worker helped enslave the black.

When now the depression came and thousands of workers, black and white, were starving in the thirties, I began to awake and to see in the socialism of the New Deal, emmancipation for all workers, and the labor problem, which included the Negro problem. I knew that Hitler and Mussolini were fighting Communism, and using race prejudice to make some white people rich and all colored peoples poor. But it was not until later that I realized that the colonialism of Great Britain and France had exactly the same object and methods as the facists and the Nazi's were trying to clearly use. While going through this transformation, I found myself fighting for such projects as the Tennessee Valley Authority, and also opposing Roosevelt because in his industrial organization he deliberately provided lower wages for southern Negro workers. I even brought myself to sympathize with Roosevelt when he strove to use American wealth to save the British empire, not realizing that the British empire had been built on the same exploitation of land and labor and race hate which Hitler and Mussolini were planning to establish, so that they could rule the world. I blamed the Communists when their agitation made the ignorant Scottsboro boys suffer for the sins of others, and failed to give those same Communists credit for making the Scottsboro case known to the civilized world. It was not until I saw the

miracle of modern China that I realized how splendidly and surely the world could be led by the working class; even when at times they wavered and made vast mistakes.

The advent of the second World War finds the Negro fighting desperately for a place in the new defense industry and accomplishing something; but in the long run that is a passing and minor matter as compared with the general economic future when the world is again sane and at peace, and when the world's whole pattern of income, work, and wage will be found radically altered.

There looms, then, before colored men of education and vision the question as to what can be done by thought and planning for the future of Negro economy, for solving the question as to how the Negro is going to earn a decent living and be in position to take a normal part in the future world. If economic planning for nations presents great difficulties, similar planning for national minorities is unusually hazardous. It faces all the difficulties of racial segregation, of artificial loyalties and increased animosities; so that among Negroes today there is serious difference of opinion, first as to whether any such economic planning is possible; and secondly, whether it is in any way advisable. Can a group within a group plan for its work and wage except as a part of a larger group and in accordance with the will of the majority? And even if it can, is not this a direct and dangerous way of increasing racial friction?

Whatever the answer to this question is, manifestly it is a time for careful conference and thought. Several such conferences have been held, notably at Hampton Institute, Fisk University, and elsewhere. But they have been primarily concerned with the integration of the Negro in the defense program. It seemed to me at Atlanta University that a further movement was necessary -- that is, a series of conferences looking toward a long-time program of Negro economic stabilization after the war.

CHAPTER XIX

I RETRURN TO THE NAACP

Howard University, Fisk University and North College for Negroes offered me work after my retirement. For the most part it was for lectures and part time employment. Then came an unexpected offer for me to return to the employment of the NAACP which I had helped to found and from which I had resigned in 1933. I had had at various times requests to cooperate with the NAACP -- to attend mass meetings, to take part in Spingarn medal installations, to serve on committees, etc. I had stedfastly refusdd in order to avoid seeming to interfere in any way with an organization from which I had parted. And especially because I never had come to trust the Secretary, Walter White. But now I was without employment to support me and my family and two men whom I regarded as close ffiends urged me to give serious heed to this invitation;

Arthur Spingarn and Louis Wright. Spingarn's brother was one of my closest friends before his untimely death. I believed that Arthur was also a friend, although we had not been thrown as closely together. Louis Wright I had known from his youth. His step-father was my family physician and since I had come to New York Louis also a physician had willingly taken care of me and my family without charge.

These two friends assured me that a real welcome awaited me at the NAACP. They said that Walter White was the chief mover in this offer and urged my acceptance. I wrote them in detail and at last came to New York to consult Arthur Spingarn, Louis Wright, Walter White and Hubert Delaney. I asked a salary of $5000; two offices, one for myself and library and one for my secretary; I wanted leisure to write and assured tham that I expected no role in the executive department of the organization; that I would be glad to revive the Pan-African movement and give general attention to the foreign aspects of the race problem. The committee assented to everything, willingly although nothing was reduced to writing except my letters.

As events soon proved, in my invitation to return to the National Association for the Advancement of Colored People, there were three conflicting ideas as to what my status would be. My own thought was that I was to have no power or place in the regular organization except to give such advice as I was asked for. I was to have freedom to write and express my opinions avoiding of course anything that would hurt the organization. I was to continue the long interrupted interest of the National Association for the Advancement of Colored People in Africa, by calling Pan African Congresses and consulting with them. The National Association for the Advancement of Colored Pople might be able to help finance such Congresses, and perhaps other methods of assisting the Africans, but that naturally would be at the discretion of the main organization under the secretary, Walter White.

But I naturally expected to work and to have an area of work which was mine. That I would continue to think and express and publish my thoughts; that in fine I would continue to be myself, working in cooperation but not in complete subordination to anybody. It did not occur to me that anyone would expect or ask that.

On the other hand, as his actions later developed, Walter White expected me to help him by writing such documents as he needed, by ~~representing~~ appearing for him on such public occasions as he wished, and in general to act as ghost writer and representative. It was for this reason that he did not want me to occupy separate offices, or to take any action which he did not ~~permit and~~ initiate. The ~~three~~ third theories of my new status was a theory of my two friends, my former physician, Louis Wright, who was chairman of the Board of Directors, and the brother of one of my closest friends, Arthur Spingarn, who was President of the Association. They assumed with some

that at seventy-six my life work was done. That what I wanted was leisure and comfort and that what I would willingly give in return to act as window-d dressing, to say a proper word now and then and give the Association and its secretary moral support. This theory did not occur to me. I had no thought of doing nothing or of subordinating myself entirely tok anybody in thought o or deed. I was determined not to try to run the Association and I wanted to cooper ate with Walter White in every possible way (Ever)

Since the donations from the philanthropists never became large, the National Association for the Advancement of Colored People depended more and more on membership dues. The three first of the secretaries, Shillady, Johnson and White increased this source of support, until Negroes were themselves paying mainly the cost of their emancipation. Especially under White, the income increased rapidly, and with it his power and independence. The Board of Directors became chiefly window dressing, and real power of the organization lay in the hands of an executive committee, who were selected by White from among his subordinate appointees.

I returned to the NAACP after an absence of ten years during which I had not followed closely its development. The results astonished me. The income had quadrupled, the membership approached a half-million; the staff had tripled or more. It had become a big business, smoothly run and extraordinarily influential. The newspapers vied for its releases, courts listened to its attorneys, and men of prominence accepted readily places on its Board of Directors.

One thing, however, filled me with foreboding: almost every vestige of democratic method and control had disappeared from the organization. This change slapped me hard in the face within three months. I had hesitated in accepting this work; repeatedly during my sojourn at Atlanta, I had refused invitations from Mr. White to sttend NAACP meetings and to cooperate in other ways. Invariably I had refused because I did not like Mr. White's methods nor did I trust his personal attitude toward me.

But it never occurred to me that anybody, least of all a group of my friends would have so poor an opinion of me as to think I would be willing utterly to efface myselfand sink into silent senility.

No sooner however had I reached New York than ominous things occurred which I tried to ignore. I was expected to join the NAACP in August; but the United States Government invited me to join their organization in Haiti and lecture before the teachers as a Summer conference. I thought this an ideal start of my work, but White objected. When I pressed the necessity of acceptance, White declared that my salary could not be paid while I was in Haiti. However Spingarn and Wright intervened and in the end all was amicably adjusted. However when in September I reported for my duties at the NAACP, I found that despite the rush for my presence, my promised office space was not ready for me, and indeed for the 4 years that I remained I was never furnished the offices promised. I was jammed -- books, desk and secretary -- in one office about five by ten feet, where the voices of the whole organization were plainly audible. Most of my books and office paraphernalia had to be stored. I asked and protested about adequate quarters but got no results until the secretary took a trip to the military front in Asia and loaned me his own office during his absence.

This was in 1945 and the meeting of the UNO in San Francisco was projected. The NAACP was asked to send a consultant and the Board of Directors of the NAACP selected me. I corresponded with interested persons, especially Negroes and was making ready to start to San Franciso when White without notice appeared on the scene and took back his offices. Also when final authorization came from Washington, White was set down as Consultant and I as assistant. The NAACP Board was not consulted. I made no complaint since as secretary he undoubtedly would have been so designated had he been in the country. Yet it was his ~~acquaintanceship~~ maneuvering in Washington which enabled him without notice to me or the Board to change my

Noone but a writer can realize what lack of office facilities means to an author. I had had beautiful and commodious offices in Atlanta. My first request on considering coming back to the NAACP was office accomodations. I remembered my offices which I occupied from 1910 to 1933 and while I did not insist on similar accomodations I did want comfort, space and quiet. I asked this clearly and there was no whisper of objection. It proved however that this was the one thing to which White objected. He wanted me visibly at his elbow so that at no point could my subordination to him be doubted. I did not dream of this reaction of his and could not understand why in all New York he could not find me office space

designation. I went with him and rendered every service I could. I wrote statements and appeals; wrote a daily column in the San Francisco Chronicle and consulted men like John Foster Dulles. Yet White was the official representative of the NAACP and was consulted in many cases where I was not invited.

When I returned to New York, no offices were yet ready. I protested to Spingarn and Wright and to the Board of Directors, but got no results. ~~It began to dawn on me that the understanding was that I was to obey Walter White or go.~~ This seemed to me wretchedly unfair, ~~but~~ finally I hired offices for myself, ~~secretary and books~~ on Sixth Avenue and 42nd St. in the suite of a friend. I paid $476 for these out of my own pocket ~~and despite my request was never reimbursed~~. However it was true that the NAACP offices were crowded and that ~~when~~ the organization was moving ~~moved to the~~ into a new building which was being purchased on 40th St. I hoped to have the space there promised. I laid my plight before Mr. Spingarn in person, with plans based on the new building.

By this time after much delay I had finally arranged for attending the Fifth Pan-African Congress in England. In the four years in which I remained with the NAACP I attended the Fifth Pan African Congress in England, wrote two books on colonies and Africa, edited two others and wrote many articles, pamphlets and newspaper columns. I attended several conferences and travelled 20,000 miles to deliver 150 lectures on subjects connected with my work for the NAACP as I conceived it. I was instructor for two semesters at the New School for Social Research in New York and I was guest speaker at Vassar, Yale and Princeton.

I was however taken aback when I saw how the organization was being conducted. At first I attended meetings of the Board of which I was not a member. Few Directors usually attended. Their work was to accept the report of the Committee on Administration which consisted of the secretary, and his five assistants whom he appointed; and nine members of the Board, only two or three of whom usually attended. Unfinished business of the Board was referred to this committee. There was little discussion at Board meetings and the chief work was to accept the report of the Committee of Administration after brief discussion

G

I was included in the invitation and thought my presence was desired

278

after brief discussion.

Once the secretary summoned a staff conference for general criticism. It was at a suburban resort and elaborately conducted. I wrote a general criticism pointing out that the executive was trying to do too many things and not giving his helpers enough initiative and authority. The statement won wide assent, but it was given no attention and no further conferences were called.

The result of this close dictatorship was soon apparent in my work. I tried to confine myself to my department of relations of the organization to Africa, colored people and colonies. But try as I did I could get no action nor directive as to this work.

Walter White soon undoubtedly set out to get rid of me. In 1946, he accused me before the Board of Directors of appearing before a Congressional Committee without his consent. This was Connally's committee on assent to the Charter of the United Nations. They invited me as an individual and not as representative of the NAACP. My first words in testifying were that I spoke for no organization and only for myself. Walter White was also invited but did not go.

Next he accused me of interfering with a court case on school segregation being tried by the NAACP in Dayton, Ohio. This was my answer to one of dozens of letters asking my opinion on many subjects. In this case I was asked my present interpretation of a passage in my "Dusk of Dawn". My answer expressed my personal opinion. Finally White demanded the right to open and read my mail for the reason that many persons wrote me as an officer of the NAACP rather than as an individual. I assured the secretary that I would turn over to him immediately any letter which came to me but belonged in his hands; but that under no circumstances could he open mail addressed to me. I saw the handwriting on the wall, but I was sure that my two sponsoring friends would see the attack being made on me and stand by me.

In 1946 I was asked to visit Columbia S.C. and speak to a meeting of the Southern Negro Race Congress, whose leaders, James Jackson and Louis Burnham, I knew

and admired for their hard work and sacrifice. They had called a "Southern Youth Legislature" in the former center of secession with white and Negro members. I went and said in part:

"The future of American Negroes is in the South. Here three hundred and twenty-seven years ago, they began to enter what is now the United States of America; here they have made their greatest contribution to American culture; and here they have suffered the damnation of slavery, the frustration of reconstruction and the lynching of emancipation. I trust then that an organization like yours is going to regard the South as the battle-ground of a great crusade. Here is the magnificent climate; here is the fruitful earth under the beauty of the Southern sun; and here if anywhere on earth, is the need of the thinker, the worker and the dreamer. This is the firing line not simply for the emancipation of the American Negro but for the emancipation of the African Negro and the Negroes of the West Indies; for the emancipation of the colored races; and for the emancipation of the white slaves of modern capitalistic monopoly."

"There has always been in the South that intellectual elite who saw the Negro problem clearly. They have always lacked and some still lack the courage to stand up for what they know is right. Nevertheless they can be depended on in the long run to follow their own clear thinking and their own decent choice. Finally even the politicians must eventually recognize the trend in the world, in this country, and in the South. James Byrnes, that favorite son of this commonwealth, and Secretary of State of the United States, is today occupying an indefensible and impossible position; and if he survives in the memory of men, he must begin to help establish in his own South Carolina something of that democracy which he has been recently so loudly preaching to Russia. He is the end of a long series of men whose eternal damnation is the fact that they looked truth in the face and did not see it; John C. Calhoun, Wade Hampton, Ben Tillman are men whose names must ever be besmirched by the fact that they fought against

freedom and democracy in a land which was founded upon Democracy and Freedom.

"'Behold the beautiful land which the Lord thy God hath given thee.' Behold the land, the rich and resourceful land, from which for a hundred years its best elements have been running away, its youth and hope, black and white, scurrying North because they are afraid of each other, and dare not face a future of equal, independent, upstanding human beings, in a real and not a sham democracy.

"To rescue this land, in this way, calls for the Great Sacrifice; This is the thing that you are called upon to do because it is the right thing to do. Because you are embarked upon a great and holy crusade, the emancipation of mankind black and white; the upbuilding of democracy; the breaking down, particularly here in the South, of forces of evil represented by race prejudice in South Carolina; by Lynching in Georgia; by disfranchisement in Mississippi; by ignorance in Louisiana and by all these and monopoly of wealth in the whole South.

"There could be no more splendid vocation beckoning to the youth of the twentieth century, after the flat failures of white civilization, after the flamboyant establishment of an industrial system which creates poverty and the children of poverty which are ignorance and disease and crime; after the crazy boasting of a white culture that finally ended in wars which ruined civilization in the whole world; in the midst of allied peoples who have yelled about democracy and never practised it either in the British Empire or in the American Commonwealth or in South Carolina.

"Here is the chance for young women and young men of devotion to lift again the banner of humanity and to walk toward a civilization which will be free and intelligent; which will be healthy and unafraid; and build in the world a culture led by black folk and joined by peoples of all colors and races -- without poverty, ignorance and disease!"

In 1945 I had planned an appeal to the Commission on Human Rights of the UN, in behalf of American Negroes and their disabilities. I had proposed a pamphlet which I would edit and to which a group of experts would contribute articles. I secured the cooperation of Earl Dickerson, Milton Korvitz, William R. Ming, Jr., Leslie S. Perry and Rayford Logan. To this appeal of 80 pages I wrote an introduction.

~~Further difficulty came in the matter of the NAACP appeal to the UN.~~ When the affair was ready for the press, the Secretary, without consulting me as editor, held it up for weeks because he wanted to add an introduction by himself. I pointed out that for a pamphlet of less then 100 pages there was no call for two introductions, and that my introduction of 14 pages was an integral part of the plan. After further and unnecessary delay the appeal was issued. At first the Human Rights Commission refused to receive it except for filing. At last however the appeal was received formally by an Undersecretary and at a public meeting. Walter White made the speech of presentation, ~~and I followed~~.

One other development of the NAACP gradually dawned on me. The organization had divided into two parts: A Legal Department under Arthur Spingarn as chairman and Thurgood Marshall as legal director, occupied separate offices and was supported by a separate fund. Although still a department of the NAACP, they were largely independent of the executive secretary and their work was decided by decision of a few men. They achieved unexpected and extraordinary success in a series of court decisions which culminated in the decision of the Supreme Court in 1954, outlawing race segregation in schools and other public facilities. To me this success was beyond anything I had dreamed. But it proved two things which the public did not realize: 1. No such decision would have been possible without the world pressure of Communism led by the Soviet Union. It was simply impossible for the United States to continue to lead a "Free World" with race segregation kept legal over a third of its territory. 2. Legal enactment and decision in the United States is necessary but it does not ensure action. The South is rebelling against this Supreme Court decision and for many years will have its way; not forever but long enough to ruin the education of millions of black and white children.

Then came the political campaign of 1948. I have never belonged to an active political organization, but I have expressed my views on candidates since the election of 1912. I early donned a Wallace button and let it be known that I was going to support him. A poll in the NAACP office showed that 70% of the staff favored Wallace. I was then warned by the Secretary not to take part in "political activity". I replied that I

certainly would be careful not to appear to speak for the NAACP nor to take the time for active political work; but I assumed that I had the right to vote and to tell my choice; that this was what the NAACP had stood for for 30 years. The Secretary merely reiterated that the Board insisted that no salaried employee should take part in politics. When later at a non-political meeting in Philadelphia, I advised the audience to vote for Wallace, I was careful to preface my remarks by saying that I did not officially speak for the NAACP or any official. I was rebuked by the Secretary for this, while at the same time he was making a nation-wide drive for Truman, by letter, newspaper articles, telegram, and public speech.

In 1947 the Human Rights Commission of the UN scheduled a meeting in Paris at which our Appeal would be considered. Walter White decided, himself, to attend. Naturally I regarded White's trip at this point as interfering into a matter which was in my domain. He asked for memoranda from me which I furnished. Then he asked for a second memorandum from me which I refused to write until the Board of Directors took some action on the matter of just what my area of work was.

Here again I quite misconceived the attitde of the Board toward me and my work. I was to have no area of work which was mine. I was to be completely at the direction of the secretary. He could direct or interfere as he chose and he was the judge as to whatwas the properprocedure. In a tight modern business corporarion this has become standard procedure. But I could not conceive being asked to function in such acapacity. Surely in my nearly fifty years of work for the American Negro ~~I had earned~~ I had earned the right to some small niche where I could think and act with reasonable freedom

The Board paid not the slightest attention to my request. Indeed since I sent it in care of the secretary it is quite possible that the Board never received it at all.

White prepared to sail before the next meeting of the Board.

At Geneva nothing important took place. The Soviet delegate tried to take up our appeal and another appeal from women. But Mrs. Roosevelt and Daniels objected. Mr. White not being a member of the Commission did not even have the right to attend its meeting.

I sent a memorandum to each member of the Board protesting against the handling of this case which lay in my department. And protesting also against the political activity of the Secretary and his representation of his appointment as consultant to the UNO as reason for supporting Truman. I pointed out that the Annual Meeting of the NAACP to which I was not invited, was turned into a Truman rally. I sent copies of this protest to the Board, and the office staff. I did not send any copy of this protest to any newspaper

then took a decision adv. 9

nor did I speak to any newspaper reporter.

The Board promptly dismissed me from my position effective December 31. They did not discuss at all the facts, but dismissed me for refusing "to cooperate" with the Secretary and for distributing my memorandum before the Meeting of the Board.

A considerable number of persons now urged me to lead a fight protesting my treatment and planning a reorganization of the NAACP. I refused. I was too old for such a task which was the duty of younger persons. Moreover White was not wholly responsible for what had happened. Much of the blame lay on the shoulders of my two friends at whose insistence I had returned to the NAACP. I now realized that between Spingarn and Wright on the one hand and the secretary on the other, there had been an understanding that at any time White could not get along with me, I was to go. They assumed that my days of work were over and they wanted to furnish me leisure and dignity before death. White, on the other hand, wanted me for window dressing, someone who would boost his prestige with reports which he would use and speeches made at his direction. On the other hand I myself had not even at the age of eighty felt any serious diminution of my power to work or to follow my ideals. I could not work as long or reason so quickly; but in joining the NAACP I had no thought of sitting down and doing nothing; and it never occurred to me that I would be expected to act as show piece or figure head for someone else.

I started in to do a job and I was succeeding when White decided that my work interfered with his and he asked Spingarn and Wright to redeem their promise. They hesitated. They asked me once when I had appealed to them about office space. "Why do you work so hard? Why not take it more leisurely?" I did not understand. I merely smiled and proceeded to point out that in the newly purchased headquarters I had been alloted a small office of some 10 by 12 feet for myself and secretary, 2500 books ten file-cases and office furniture. They pointed out that the new offices were too small and that the growing legal department was seriously cramped and needed even the

space that I was occupying.

Finally I was not dismissed because of my radical thought — this was never discussed; nor for disobeying the Secretary or the rules of the organization. I was dismissed on the technical charge of sending to the newspapers facts about a difference of opinion between the secretary and myself over furnishing him more data for his trip to the Human Relations Conference in Paris. This in fact I had not done and told this to the Board. But I added that if the newspapers had asked me [13] about this difference I would have stated the facts. For this the Board dismissed me.

The NAACP has a noble record of which all Negroes and all Americans should be proud. All the more reason that its future path be guided by wisdom and by use of that vast reservoir of human knowledge and experience which ~~we call~~ (can be called into use by) democracy. It is difficult to guide a mass of people. Continually we are tempted to use our own limited knowledge and experience to push through decisions and compel action, instead of trusting the slower, muddled and hesitating development of mass action. Yet without this action we land in tyranny and fatal mistake. The hundred thousands of members of the NAACP are not people of the highest education or widest experience. But that is no excuse for turning their most effective organ of protest and progress into a fascist dictatorship, virtually under the control of one man. We see too much of this attitude already current in (America, in) the broad areas of business and industry; in the organized church; in social reform and uplift of every sort; in politics and government; it is the growing custom to narrow control, concentrate power, disregard and disfranchise the public; and assuming that certain persons by divine right (of money raising) or by sheer assumption, have the power to do as they think best without consulting the wisdom of mankind.

It is the tragedy of the day that the democracy of which we prate so glibly is being murdered in the house of its friends, and in everyday life far more than in broad governmental decisions. The nation which cannot conduct its philanthropy in a democratic manner, will not in the end convince the world that it knows more of good government abroad than it does at home.

The present condition of the NAACP illustrates what I have said. The NAACP is today divided in two parts, with separate offices, officials and funds. The Legal Department is under control of two lawyers; one a conservative white man, honest and careful, trained as an expert in conserving the private funds of the rich and well-to-do. He has had broad human contacts, but he has no sympathy with radical thought or experiment. The other lawyer is a talented colored man, trained in the strict field of current law and with narrow cultural background. These men have collected a fund which they administer and pursued a line of legal attack on color castse with extraordinary sucess, culminating with the epoch-making decision of the Supreme Court against segregation by race in the public schools. They have drawn around them a number of able young helpers and are supported by the strong public opinion of the nation, black and white. Walter White tried several times in vain to interfere with their work but never suceeded.

The remaining field of the NAACP has to do with social uplift of all sorts: education, housing, occupations, race relations, literature and art, history , science and social progress of every sort. Here rests the whole theory of the future of the Negro race in America and its relation to the Negroes of Africa and the West Indies, and the Colored peoples of the world. It matters not how many may think that these relations may be ignored, the fact is that they must be considered. Moreover and beyond this, the relations of American Negroes to the working people of America and to the Socialist and Communist movements of the world have got to be matters of grave and present consideration. The whole world is confronting thesae problems, while the NAACP the greatest organization among fifteen million of the most advanced group of Negroes in the world has no program or leadership; no experts, no commentators or leaders but can only answer to each problem with the parrot-like call " No Discrimination". This was the slogan of the last generation. It is desperately inadequate today

Given no race discrimination, Negro citizens must still face modern problems and for a long time face them as a group, working together because of blood relationship and cultural ties. For this they must organize, plan and work: how can they plan to live with friends and acquaintances; how shall the history of Negroes be taught; what occupations shall their children be prepared to follow, what shall their attitude be toward Socialism and Communism, and especially toward the Soviet Union and China who above all nations fight the very color bar which we try to get rid of. All these matters call for trained knowledge and expert advice and wide experience.

This the main office of the NAACP today lacks. Its secretary has been trained as a newspaper reporter; he is ~~pleasant~~ intelligent and good-willed but lacks all training in social science, has travelled little and has no broad background of education; he has a staff of excellent clerks but not a single professional social ~~st~~ worker, artist ~~or~~ or research specialist, writer. The branches and their officials have no scientifically planned program except to raise money and defend cases of injustice or discrimination in courts. The organization fears the processes of democracy and avoids discussion. All meetings and programs are "fixed". When a North Carolina official voices what every Negro at sometime has thought -- namely retaliation for attack and injustice-- there is no discussion, but he is buried by a prepared vote. What is demanded is wide planning, thoughtful cooperation, organized social work and the selection of men and women of genius and training to solve one of the most difficult of modern problems of race relations

Above all the American Negro needs to be taught to read ~~literature~~ and to support a school of art and literature which will preserve ~~their~~ his history and culture and add to the great treasure of human accomplishment; rather than let the unique and marvelous life and experience of the black race in America be lost to memory as it threatens to be today.

CHAPTER ~~XXII~~ XXIII

MY TENTH DECADE

My ninetieth birthday was a surprising occassion. Friends wanted to celebrate it, but I recoiled. Who would sponser such an event? There had I admitted been some pleasant occurrences. I had a successfull television interview over the Dumont Broadcasting system; my bust by Zorach had been accepted by the New York Public Library and installed in the Schomburg Collection at the 135th. street branch. At the dedication Franklin Frazier, Judge Jane Bolin and Van Wyck Brooks took part. Tablet, the official organ of the Brooklyn diocese of the Roman Catholic church, naturally added one sour note, writing the library "This corporation writes to enquire whether you would accept a bust of Benedict Arnold, which we would be happy to present to you."

I spoke at Paul Robeson's sixtieth birthday:

"The persecution of Paul Robeson by the government and people of the United States during the last nine years has been one of the most contemptible happenings in modern history. Robeson has done nothing to hurt or defame this nation. He is, as all know, one of the most charming, charitable and loving of men. There is no person on earth who ever heard Robeson slander or even attack the land of his birth. Yet he had reason to despise America. He was a blackman; the son of black folk whom Americans had stolen and enslaved. Even after his people's hard won and justly earned freedom, America made their lot as near a hell on earth as was possible. They discouraged, starved and insulted them. They sneered at helpless black children. Someone once said that the best punishment for Hitler would be to paint him black and send him to the United States. This was no joke. To struggle up as a black boy in America; to meet jeers and blows; to meet insult with silence and discrimination with a smile; to sit with fellow students who hated you and work and play for the honor of a college that disowned you -- all this was America for Paul Robeson. Yet he fought the good fight; "He was despised and rejected of men; a man of sorrows and acquainted with grief and we hid as it were our faces from Him; He was despised and we esteemed Him not."

"Why? Why? Not because he attacked this country. Search Britain and France, the Soviet Union and Scandinavia for a word of his against America. What then was his crime? It was that while he did not rail at America he did praise the Soviet Union; and he did that because it treated him like a man and not like a dog; because he and his family for the first time in life were welcomed like human beings and he was honored as a great man. The children of Russia clung to him, the women kissed him; the workers greeted him; the state named mountains after him. He loved their homage. His eyes were filled with tears and his heart with thanks. Never before had he received such treatment. In America he was a "nigger" in Britain he was tolerated; in France he was cheered; in the Soviet Union he was loved for the great artist that he is. He loved the Soviet Union in turn. He believed that every black man with blood in his veins would with him love the nation which first outlawed the color line.

"I saw him when he voiced this. It was in Paris in 1949 at the greatest rally for world peace this world ever witnessed. Two thousand persons from all the world filled the Salle Pleyel from floor to rafters. Robeson hurried in, magnificent in height and breadth, weary from circling Europe with song. The audience rose to a man and the walls thundered. Robeson said that his people wanted Peace and "would never fight the Soviet Union". I joined with the thousands in wild acclaim.

"This, for America, was his crime. He might hate anybody. He might join in murder around the world. But for him to declare that he loved the Soviet Union and would not join in war against it -- that was the highest crime that the United States recognized. For that, they slandered Robeson; they tried to kill him at Peekskill; they prevented him from hiring halls in which to sing; they prevented him from travel and refused him a passport. His college RUTGERS lied about him and dishonored him. And above all, his own people, American Negroes, joined in hounding one of their greatest artists -- not all, but men like Langston Hughes, who wrote of Negro Musicians and deliberately omitted Robeson's name-- Robeson who more than any living man has spread the pure Negro folk song over the civilized world. Yet has Paul Robeson kept his soul and stood his ground. Still he loves and honors the Soviet Union. Still he has hope for America.

Still he asserts his faith in God. But we -- what can we say or do; nothing but hang our heads in endless shame."

On my ninetieth birthday, my friends invited my well-wishers to a party at the Roosevelt Hotel. No body of sponsers could be found, but Angus Cameron acted as chairman, and Eslanda Robeson as treasurer. Two thousand persons were present including my own great grandson, who behaved with exemplary decorum. I addressed my remarks to him. I quote from the National Guardian:

"The most distinguished guest of this festive occasion is none other than my great-grandson, Arthur Edward Mc Farlane II, who was born this last Christmas day. He has kindly consented to permit me to read to you a bit of advice which, as he remarked with a sigh of resignation, great-grandparents are supposed usually to inflict on the helpless young. This then is my word of advice.

"As men go, I have had a reasonably happy and successful life, I have had enough to eat and drink, have been suitably clothed and, as you see, have had many friends. But the thing which has been the secret of whatever I have done is the fact that I have been able to earn a living by doing the work which I wanted to do and that work was what the world needed done.

"I want to stress this. You will soon learn, my dear young man, that most human beings spend their lives doing work which they hate and work which the world does not need. It is therefore of prime importance that you early learn what you want to do; how you are fit to do it and whether or not the world needs this service. Here, in the next 20 years, your parents can be of use to you. You will soon begin to wonder just what parents are for besides interfering with your natural wishes. Let me therefore tell you: parents and their parents are inflicted upon you in order to show what kind of person you are, what sort of world you live in and what the persons who dwell here need for their happiness and well-being.

"Right here, my esteemed great-grandson, may I ask you to stick a pin. You will find it the fashion in the America where eventually you will live and work to judge that life's work by the amount of money it brings you. This is a grave mistake. The return from your work must be the satisfaction which that work brings you and the world's need of that work.

With this, life is heaven or as near heaven as you can get. Without this--with work which you despise, which bores you and which the world does not need-- this life is hell. And believe me, many a $25,000-a-year executive is living in just such a hell today.

Income is not greenbacks, it is satisfaction; it is creation; it is beauty. It is the supreme sense of a world of men going forward, lurch and stagger though it may, but slowly, inevitably going forward, and you, you yourself with your hand on the wheels. Make this choice then, my son. Never hesitate, never falter.

And now comes the word of warning: the satisfaction with your work even at best will never be complete, since nothing on earth can be perfect. The forward pace of the world which you are pushing will be painfully slow. But what of that: the difference between a hundred and a thousand years is less than you now think. But doing what must be done, that is eternal even when it walks with poverty.

> And I care not to garner while others
> Know only to harvest and reap
> For mine is the reaping of sowing
> Till the spirit of rest gives me sleep."

Five hundred

A purse of seven thousand dollars was given me. Later in Chicago, Truman Gibson and Margaret Burroughs arranged another birthday celebration and gave me seventeen hundred dollars more. After talks in California, I was able to take a trip to the West Indies and see the beginnings of the new British West Indian Federation.

I was invited to attend the All African conference at Accra. At the Fifth Pan-African Congress at Manchester, England in 1945, a Sixth Congress on the continent of Africa had been projected. When Ghana gained her independence it was planned. I was not allowed to attend the inauguration. If I had been present undoubtedly the matter would have been further discussed. Meantime George Padmore, secretary of the Pan-African Congress, was called to Ghana as chief adviser to the Prime Minister, and he published a book called"Pan-Africanism or Communism" in which he said:

"In our struggle for national freedom, human dignity and social redemption, Pan-Africanism offers and ideological alternative to Communism on the one side

and Tribalism on the other. It rejects both white racialism and black chauvinism. It stands for racial co-existence on the basis of absolute equality and respect for human personality."

I ventured to advise Nkrumah. "I have your kind invitation of January 22, 1957. In behalf of myself and of my wife, Shirley Graham, I thank you for it and want to say how great was our desire to accept it. But since the United States government refused to issue us passports, we must with deep regret inform you of our inability to accept. I have recently also, and for the same reason, been compelled to my sorrow to decline a trip to China for lectures and participation in the celebration of the 250th anniversary of the birth of Benjamin Franklin. However, because of the fact that I am now entering the 90th. year of my life and because of my acquaintanceship with you during the last 12 years, which cover the years of your imprisonment, vindication, and political triumph, I trust you will allow me a few words of advice for the future of Ghana and Africa.

"Today, when Ghana arises from the dead and faces this modern world, it must no longer be merely a part of the British Commonwealth or a representative of the world of West Europe, Canada, and the United States. Ghana must on the contrary be the representative of Africa.

"The consequent Pan-Africa, working together through its independent units, should seek to develop a new African economy and cultural center standing between Europe and Asia, taking from and contributing to both. It should stress peace and join no military alliance and refuse to fight for settling European quarrels. It should avoid subjection to and ownership by foreign capitalists who seek to get rich on African labor and raw material, and should try to build a socialism founded on old African Communal life; rejecting the exaggerated private initiative of the West, and seeking to ally itself with the social program of the Progressive nations: with British and Scandinavian Socialism, with the progress toward the Welfare State of in India, Germany, France and the United States; and with the Communist States like the Soviet Union and China, in peaceful co-operation and without presuming to dictate as to how Socialism must or can be attained at particular times and places.

"Pan-African Socialism seeks the Welfare State in [redacted] Africa. It will refuse to be exploited by people of other continents for their own benefit and not for the benefit of the peoples of Africa. It will no longer consent to permitting the African majority of any African country to be governed against its will by a minority of invaders who claim racial superiority or the right to get rich at African expense. It will seek not only to raise but to process its Raw material and to trade it freely with all the world on just and equal terms and prices.

"Pan-Africa will seek to preserve its own past history, and write the present account, erasing from literature the lies and distortions about black folk which have disgraced the last centuries of European and American literature; above all, the new Pan-Africa will seek the education of all its youth on the broadest possible basis without religious dogma and in all hospitable lands as well as in Africa and for the end of making Africans not simply profitable workers for industry nor stool-pigeons for propaganda, but for making them modern, intelligent, responsible men of vision and character.

"I pray you, my dear Mr. Nkrumah, to use all your power to put a Pan-Africa along these lines into working order at the earliest possible date. Seek to save the great cultural past of the Ashanti and Fanti peoples, not by inner division but by outer cultural and economic expansion toward the outmost bounds of the great African peoples, so that they may be free to live, grow, and expand; and to teach mankind what Non-Violence and courtesy, Literature and Art, Music and Dancing can do for this greedy, selfish, and war-stricken world."

Meantime Big Business in America, surprised by the success of the Ghana revolution set itself to influence Nkrumah. Nkrumah was invited to the United States in 1958, and treated as never a Negro had been treated by the government. Hershey, a great manufacturer of chocolate sent a special plane to take him to his factories; and the New York Cocoa Board of Trade dined him at the Waldorf-Astoria. I saw Mr. Nkrumah briefly. He was most cordial and I expected soon to be invited to the Sixth Pan-African Congress in Accra. No invitation came, but I received my passport and sailed for Europe. While I was in Tashkent an invitation arrived but not

from Nkrumah nor for a Pan-African Congress. It was from a new "All-African" body for an African conference in December and it said nothing about my expenses. I sensed immediately that opposition had arisen in Africa over American Negro leadership of the African peoples. This had happened in 1920, when the West African Congress acknowledged no tie with the First Pan-African Congress in Paris which sparked it. American Negroes had too often assumed that their leadership in Africa was natural. With the rise of an educated group of Africans, this was increasingly unlikely. I realized how natural this was and knew that neither Nkrumah nor Padmore were calling a Sixth "Pan-African Congress" but that this "All-Africa Conference" was taking its place. Howefer later Padmore sent me a cordial note emphasing the invitation and offering to pay expenses.

By this time, however, my long travel was beginning to tell on me and I was in a Soviet Sanitarium at Barvieka near Moscow. I prepared to leave for Africa, but the council of physicians advised against the trip as too taxing. I had prepared three messages for Afroca. One I delivered at Tashkent, one I sent by my wife Shirley, who attended the conference at Accra, and the last I broadcast later from Peking on my ninety-first birthday.

At Tashkent, before my invitation to Accra had come. I warned Africa about borrowing capital from the West.

"Boycott the export of big capital from the exploiting world, led by America. Refuse to buy machines, skills, and comforts with cocoa, coffee, palm oil and fruit sold at ridiculously low price in exchange for imported foods, liquor, refrigerators and automobiles sold at exhorbitant prices. Live simply. Refuse to buy big capital ~~even for advance~~ from nations that cheat and overcharge. Buy of the Soviet Union and China as they grow able to sell at low price. Save thus your own capital and drive the imperialists into bankruptcy or into Socialism."

Shirley, my wife, took my speech to Accra. She was shown rare courtesy and was the only non-African allowed to address the Assembly. She read my words:

"My only role in this meeting is one of advice from one who has lived long, who has studied Africa and has seen the modern world. I had hoped to deliver this word in person, but this was not possible. I have therefore asked my wife, Shirley Graham, to read it to you. It is simple and direct. In this great crisis of the world's history, when standing on the highest peaks of human accomplishment we look foward to Peace and backward to War; when we look up to Heaven and down to Hell, let us mince no words. We face triumph or tragedy without alternative. Africa, ancient Africa has been called by the world and has lifted up her hands! Which way shall Africa go? First, I would emphasize the fact that today Africa has no choice between private Capitalism and Socialism. The whole world, including Capitalist countries, is moving toward Socialism, inevitably inexorably. You can choose betwwn blocs of military alliance, you can choose between groups of political union, you cannot choose between Socialism and Private Capitalism, because Private ownership of capital is doomed.

"But what is Socialism? It is disciplined economy and political organization in which the first duty of a citizen is to serve the state; and the state is not a selected aristocracy, or a group of self-seeking oligarchs who have seized wealth andpower. No! The mass of workers with hand and brain are the ones whose collective destiny is the chief object of all effort. Gradually,every state is coming to this concept of its aim. The great Communist states like the Soviet Union and China have surrendered completely to this idea. The Scandinavian states have yielded partially; Britain has yielded in some respects, France in part and even the United States adopted the New Deal which was largely socialistic, even though today further American socialism is held at bay by sixty great groups of corporations who control individual capitalists and the Trade Union leaders.

On the other hand, the African tribe, whence all of you sprung, was communistic in its very beginnings. No tribesman was free.

All were servants of the tribe of whom the chief was father and voice. Read of the West Coast trade as described by Casely-Hayford. There is no trace of private enterprise of individual initiative. It was the tribe which carried on trade through individuals, and the chief was mouthpiece of the common will.

9 When now, with a certain suddenness, Africa is whirled by the bitter struggle of dying private Capitalism into the last freat battleground of its death throes, you are being tempted to adopt at least a passing private capitalism as a step to some partial socialism. This would be a grave mistake. For four hundred years Europe and North America have built their civilization and comfort on theft of colored labor and the land and materials which rightly belong to those colonial peoples. They are still today determined to make most of the world's people work for the comfort of the few; this is today true in London, Paris and New York. The dominant exploiting nations are willing to yield more to the demands of the mass than were their fathers. But their yielding takes the form of sharing the loot - not of stopping the looting. It takes the form of stopping socialism by force and not of surrendering the fatal mistakes of private Capitalism. Either capital belongs to all or power is denied all.

10 Here then, by Brothers, you face your great decision: Will you for temporary advantage - for automobiles, refrigerators and Paris gowns, spend your income in paying interest of borrowed funds, or will you sacrifice present comfort and the chance to shine before your neighbors in order to educate your children, develop such industry as best serves the great mass of people and makes your country strong in ability, self-support and self-defense? Such union of effort for strength calls for sacrifice and self-denial, while the capital offered you at high price by the colonial powers like France, Britain, Holland, Belgium and the United States, will prolong fatal colonial imperialism, from which you have suffered slavery, serfdom and colonialism. You are not helpless. You are the buyers of catital goods, and to continue existence as sellers of catital, the great nations, former owners of the world, must sell or face bankruptcy. You are not compelled to buy all they offer now. You can wait. You can starve a while longer rather than sell your great heritage

for a mass of western capitalistic pottage. You can not only beat down the price of capital as offered by the united and monopolized western private capitalists, but at last today you can compare their offers with those of socialist countries like the Soviet Union and China, which with infinite sacrifice and pouring out of blood and tears, are at last able to offer weak nations needed capital on better terms than the West. The supply which socialist nations can at present spare is small as compared with that of the bloated monopolies of the West, but it is large and rapidly growing. Its acceptance involves no bonds which a free Africa may not safely assume. It certainly does not involve slavery and colonial control which is the price which the West has demanded, and still demands. Today she offers a compromise, but one of which you must beware: She offers to let some of your smarter and less scrupulous leaders become fellow capitalists with the white exploiters, if in turn they induce the nation's masses to pay the awful cost. This has happened in the West Indies and in South America. This may yet happen in the Middle East and Eastern Asia. Strive against it with every fibre of your bodies and souls. A body of local private capitalists, even if they are black, can never free Africa; they will simply soil it into new slavery to old masters overseas.

"As I have said, this is a call for sacrifice. Great Goethe sang, "Entbehren sollst du, sollst entbehren"-"Thou shalt forego, Shalt do without." If Africa unites it will be because each part, each nation, each tribe gives up a part of its heritage for the good of the whole. That is what union means; that is what Pan-Africa means: When the child is born into the tribe the price of his growing up is to give over a part of his freedom to the tribe. This he soon learns or dies. When the tribe becomes a union of tribes, the individual tribe surrenders some part of its freedom to the paramount ytibe.

"When the nation arises, the constituent tribes clans and groups must each yield power and much freedom to the demands of the nation or the nation dies before it is born. Your local tribal, much-loved languages must yield to the few world tongues which serve the largest numbers of people and promote understanding and world literature.

"This is the great dilemma which faces Africans today; faces one and all: Give up individual rights for the needs of the nation; give up tribal independence for the needs of Mother Africa. Forget nothing but set everything in its rightful place: the Glory of the six Ashanti Wars against Britain: the wisdom of the Fanti Confederation; the unity of Nigeria; the song of the Songhay and Haysa; the rebellion of the Mahdi and the hands of Ethiopia; the greatness of the Basuto and the fighting of Chaka; the revenge of Mutessa, and many other happenings and men; but above all - Africa, Mother of Men. Your nearest friends and neighbors are the colored people of China and India, the rest of Asia, the Middle East and the sea isles, once close bound to the heart of Africa and now long severed by the greed of Europe. Your bond is no more color of skin but the deeper experience of wage slavery and contempt.

"So too, your bond with the white world is closest to those like the Union of Soviet Socialist Republics, who support and defend China and help the slaves of Tibet and India, and not those who exploit the Middle East, the West Indies, and South America.

"Awake, awake, put on thy strength, O Zion; reject the meekness of missionaries who teach neither love nor brotherhood, but emphasize the virtues of private profit from capital, stolen from your land and labor. Africa awake, put on the beautiful robes of Pan-African Socialism.

"You have nothing to lose but your Chains!

"You have a continent to regain!

"You have freedom and human dignity to attain!!"

The address was ~~listened~~ greeted to with applause. Later Shirley and Mrs. Robeson with the help of Tom M'Boya the chairman, secured the removal of Chiang kai Chek's Formosa flag from the assembly hall.

When in Peking, my ninety-first birthday was given national celebration. I pled for unity of China and Africa and my speech was broadcast to the world:

"By courtesy of the government of the 680 million people of the Chinese Republic, I am permitted on my ninety-first birthday to speak to the people of China

and Africa and through them to the world. Hail, then, and farewell, dwelling places of the yellow and black races. Hail human kind!

" I speak with no authority; no assumption of age nor rank; I hold no position, I have no wealth. One thing alone I own and that is my own soul. Ownership of that I have even while in my own country for near a century I have been nothing but a "Nigger". On this basis and this alone I dare speak, I dare advise.

China after long centuries has arisen to her feet and leapt forward. Africa arise, and stand straight, speak and think! Act! Turn from the West and your slavery and humiliation for the last 500 years and face the rising sun.

" Behold a people the most populous nation on this ancient earth which has burst its shackles, not by boasting and strutting, not by lying about its history and its conquests, but by patience and long suffering, by blind struggle, moved up and on toward the crimson sky. She aims to "make men holy; to make men free."

" But what men? Not simply the mandarins but including mandarins; not simply the rich, but not excluding the rich. Not simply the learned, but led by knowledge to the end that no man shall be poor, nor sick, nor ignorant; but that the humblest worker as well as the sons of emperors shall be fed and taught and healed and that there emerge on earth a single unified people, free,well and educated.

" You have been told, my Africa: My Africa in Africa and all your children's children overseas; you have been told and the telling so beaten into you by rods and whips, that you believe it yourselves, that this impossible; that mankind can only rise by walking on men; by cheating them and killing them; that only on a doormat of the despised and dying, the dead and rotten, can a British aristocracy, a French cultural elite or an American millionaire be nurtured and grown.

" This is a lie. It is an ancient lie spread by church and state, spread by priest and historian, and believed in by fools and cowards, as well as by the downtrodden and the children of despair.

" Speak, China, and tell your truth to Africa and the world. What people have been despised as you have? Who more than you have been rejected of men? Recall when lordly Britishers threw the rickshaw money on the ground to avoid touching a filthy hand. Forget not,the time when in Shanghai no Chinaman dare set foot in a park which

he paid for. Tell this to Africa, for today Africa stands on new feet, with new eyesight, with new brains and asks: Where am I and why?

"The Western sirens answer: Britain wheedles; France cajoles; while America, my America, where my ancestors and descendants for eight generations have lived and toiled; America loudest of all, yells and promises freedom. If only Africa allows American investment.

"Beware Africa, America bargains for your soul. America would have you believe that they freed your grandchildren; that Afro-Americams are full American citizens, treated like equals, paid fair wages as workers, promoted for desert and free to learn and learn and travel across the world.

"This is not true. Some are near freedom; some approach equality with whites; some have achieved education; but the price for this has too often been slavery of mind, distortion of truth and oppression of our own people.

"Of 18 million Afro-Americans, 12 million are still second-class citizens of the UnitedStates, serfs in farming, low-paid laborers in industry, and repressed members of union labor. Most American Negroes do not vote. Even the rising six million are liable to insult and discrimination at any time.

"But this, Africa, relates to your descendants, not to you. Once I thought of you Africans as children, whom we educated Afro-Americams would lead to liberty. I was wrong. We could not even lead ourselves, much less you. Today I see you rising under your own leadership, guided by your own brains.

"Africa does not ask alms from China nor from the Soviet Union nor from France, Britain, nor the United States. It asks friendship and sympathy and no nation better than China can offer this to the Dark Continent. Let it be given freely and generously. Let Chinese visit Africa, send their scientists there and their artists and writers. Let Africa send its students to China and its seekers after knowledge. It will not find on earth a richer goal, a more promising mine of information.

"On the other hand, watch the West. The new British West Indian Federation is not a form of democratic progress but a cunning attempt to reduce these islands to the control of British and American investors. Haiti is dying under rich Haitian investors who with American money are enslaving the peasantry.

Cuba is showing what the West Indies, Central and South America are suffering under American Big Business.

" The American worker himself does not always realize this. He has high wages and many comforts. Rather than lose these, he keeps in office by his vote the servants of industrial exploitation so long as they maintain his wage. His labor leaders represent exploitation and not the fight against the exploitation of labor by private capital. These two sets of exploiters fall out only when one demands too large a share of the loot.

" This China knows. This Africa must learn. This the American Negro has failed so far to learn. I am frightened by the so-called friends who are flocking to Africa. Negro Americans trying to make money from your toil, white Americans who seek by investment and high interest to bind you in serfdom to business as the Near East is bound and as South America is struggling with. For this America is tempting your leaders, bribing your young scholars, and arming your soldiers. What shall you do?

" First, understand! Realize that the great mass of mankind is freeing itself from wage slavery, while private capital in Britain, France, and now in America, is still trying to maintain civilization and comfort for a few on the toil, disease and ignorance of the mass of men. Understand this, and understanding comes from direct knowledge. You know America and France, and Britain to your sorrow. Now know the Soviet and its allied nations, but particularly know China.

China is flesh of your flesh, and blood of your blood. China is colored and knows to what a colored skin in this modern world subjects its owner. But China knows more, much more than this: she knows what to do about it. She can take the insults of the United States and still hold her head high. She can make her own machines, when America refuses to sell her American manufactures, even though it hurts American industry, and throws her workers out of jobs. China does not need American nor British missionaries to teach her religion and scare her with tales of hell. China has been in hell too long, not to believe in a heaven of her own making. This she is doing.

" Come to China, Africa, and look around. Invite Africa to come, China, and see what you can teach by just pointing. Yonder old woman is working on the street.

But she is happy. She has no fear. Her children are in school and a good school. If she is ill, there is a hospital where she is cared for free of charge. She has a vacation with pay each year. She can die and be buried without taxing her family to make some undertaker rich.

" Africa can answer: but some of this we have done; our tribes undertake public service like this. Very well, let your tribes continue and expand this work. What Africa must realize is what China knows: that it is worse than stupid to allow a people's education to be under the control of those who seek not the progress of the people but their use as means of making themselves rich and powerful. It is wrong for the University of London to control the University of Ghana. It is wrong for the Catholic church to direct the education of the black Congolese. It was wrong for Protestant churches supported by British and American wealth to control higher education in China.

" The Soviet Union is surpassing the world in popular and higher education, because from the beginning it started its own complete educational system. The essence of the revolution in the Soviet Union and China and in all the "iron curtain" nations, is not the violence that accompanied the change; no more than starvation at Valley Forge was the essence of the American revolution against Britain. The real revolution is the acceptance on the part of the nation of the fact that hereafter the main object of the nation is the welfare of the mass of the people and not of a lucky few.

" Government is for the people's progress and not for the comfort of an aristocracy. The object of industry is the welfare of the workers and not the wealth of the owners. The object of civilization is the cultural progress of the mass of workers and not merely of an intelluctual elite. And in return for all this communist lands believe that the cultivation of the mass of people will discover more talent and genius to serve the state than any closed aristocracy ever furnished. This belief the current history of the Soviet Union and China is proving true each day. Therefore don't let the West invest when you can avoid it. Don't buy capital from Britain, France and the United States if you can get it on reasonable terms from the Soviet Union and China. This is not politics; it is common sense.

CHAPTER THREE

The Pawned Peoples

Pawned

THE ~~CAPTIVE~~ PEOPLES OF THE ~~PEOPLES RELEASED~~

Between Western Europe and the Union of Soviet Socialist Republics, lie a number of nations: The Baltic states, Poland ~~and~~ Czeckoslovakia, ~~and~~ Hungary, ~~and the Balkans~~. These peoples differing in race and composition, but have had a long history with many resemblances. ~~Much~~ Most of their territory has long been ruled by a hereditary aristocracy, conquering, invading and ~~by~~ great land holders. They have been invaded and annexed by neighbors and have fought each other. During the world wars, they (most of the territory) came to be looked upon as territory which would be used eventually by the west to re-conquer Russia, and ~~have~~ by the new Soviet Union, (it was looked on) as territory, which it must control in sheer self defense against expanding western Capitalism.

(and ~~Finland~~ the Scandinavian countries to the North and the Balkan states of Albania, Bulgaria and Rumania)

(the "London Daneliers" nations)

(9 of 9 Post Czechoslovakia nations)

These are the folk whom the Americans call "The Captive Peoples" Peoples and they include the Baltic states of Esthonia, Latvia and Lithuania; Poland, which for centuries has raped and torn by Europe and Bohemia and Slovakia, long a pat of the Austa Hungary empire and the Hungarian part of that alliance. These lands have been the center of the political machinations of the Catholic church. Beyond these come the Balkans, including today Bulgarya and Romania, and portions of what once belonged to Turkey and Greece

2

I have seen these countries ~~partly~~ on this trip and ~~partly~~ during former journeys. I was in Poland in 1893 and 1950. I was ~~briefly~~ in Czeckoslovakia in 1893 in 1950 and 1956. I studied two years in Germany from 1892 to 1894, and revisted the land in 1926, in 1936 and 1959. Hungary I saw ~~briefly~~ in 1893 and 1936. Save my sojurn in Germany, none of these trips were long enough for intensive study and observation; but taken together, they tell an intersting story.

For one thing, there was no doubt in my mid but that the people in these lands were far better off in 1959 than in 1893 or in 1950. They were better fed, better dressed and they looked more ~~satisfied~~. I shall never forget the abject grovelling of the Polish church goers in 1893; and how my classmate, the Ritter von Estreicher, begged me to visit him in Crakow, so as to show me how much worse oppression was there than Negro oppression in the United States. His father, librarian of the University, opened my doubting eyes. In 1950, Poland showed the horrible crucifixtion through which she had ~~gone~~ but she showed also, ~~her~~ beginnings of mighty resurrection.

3

Czeckoslovakia was a prosperous looking nation. The people were busy and decidedly more hopeful than when I had previously seen the nation uneasy look. Prague had spilled over into the neighboring valleys and was growing. Socialism was making a normal growth from private capitalism; even Slovakia, which when I had spoken there in 1950, seemed sullen if not discontent, was now humming with new hope and housing cooperation. Here I had one surprise which lifted my spirits. Charles University was founded 300 yeas before Columbus discovered America. It was a great center of learning in the Middle Age, and even after the First World War, many persons in the West hoped that Charles would lead the resistance against Communism. It did not, and in addition, it honored me in the face of the known attitude of the United States toward Negroes. No American University (except Negro Institutions) has ever recognized that I had any claim to scholarship. I had no reason to think that Charles University even knew my name.. But I was summoned to the restored beauty of the old Caroleum, and amid the fanfare of medieval trumpets, marched in procession with rector and faculties of the University to the high rostrum.

W. Dep. defense

I was given the degree of Doctor of the Science of History, "honoris causa" while the "Star-Spangled banner" was played in honor of my American citizenship. This gesture of a Communist nation doubtless prejudiced me in favor of Socialism. But I do not think it was decisive. In [redacted] Hungary the age-old strife between the Church and land-holding aristocracy, the rising Bourgeoisie supported by western enterprise and capital; and the degraded peasants who, as I saw them in 1893, were distinctly below the level of American Negro serfs. I was not surprised when the pushing business men and artisans, calling themselves "Commons" and despising laborers and serfs, rebelled against Communism. I wasglad when the Soviet Union intervened and thus served notice on all reactionaries that the Russian revolution was still unwilling to yield its gains before a show of force. I did not see the Balkans in 1959, but I met many of their folk. I knew what their petty aristocrats, joined with American money, had made their masses endure in the last century. The Hungarian Academy made me a corresponding member and the University of Sofia gave me a degree. I cannot imagine that the people of the Balkans are worse off then they were in the Nineteenth century. I think they are much better off.

Germany had been torn in two

5

by war. The eastern third ~~where I had lived and studied for two years,~~ is now ~~was~~ following the Social Democracy which I had known in 1892 to 1894. It ~~was~~ is developing the faith of Karl Liebknecht and Rosa Luxemburg and becoming a socialist state. But America, Britain, and France united after the war, to turn back the part of Germany, which they occupied, to the Nazis. Big Business of the United States, led by the banks; the cartels; and the Trade Unions, succeded in turning over German industry in West Germany to American business, as George Wheeler has so recently graphically revealed. The last bedevilment was the partition of Berlin, by planting a bit of West Germany in the capital of East Germany. I visited my old university in 1959. It looked familiar. It had dropped its old name "Friederich Wilhelm ~~Universitaet zu Berlin~~" and was now Humboldt University, after its greatest scholars.

6

I walked down the Unter den Linden to the Branderburger Thor. There I stopped. I could not visit again my old lodging on the Schoneberger Ufer. That lay in West Berlin, and if I had entered, American soldiers might arrest me. I turned back and traversed a ~~prosperous~~ city, with new buildings and enterprises, but also with ghosts of war and destruction. In the great hall of the University, with women students now common, but in 1892 never admitted, I sat in the office where in my day Rudolph Virchow had presided as Rector Magnificas. A group played the soft music of Sebastian Bach, and the faculty of economics bestowed on me the honorary degree of Doctor of Economics. I had coveted this degree 65 yeas before, but then the University of Berlin would not recognize the equal status of Harvard, and I was not allowed to take the examination.

7

Expansion by force is not true of Communism: the majority of intelligent people, work for a living in the Baltic States, Poland, Czechoslovakia , and the Balkans seem to me quite evidently to want Communism. It was probably quite true a generation ago that most of the landholdersm capitalists and aristocracy in these land opposed Communism, and being the only ones ~~who voted~~ with political power could truly say that their countries did not want to be socialized. But these classes did not represent the mass of the people, and when this mass obtained political power, they built and hold a Communist State.

Between the first and second world wars, Western Capitalism and ~~Russian~~ Soviet Socialism sought to increase their influence in these states. The Russians had the inside track in the Baltic states and practically annexed them. Poland sided with the West in bitter opposition to the Soviet Union. Czeckoslovakia swayed in the balance, and Hungary and the Balkans were torn by civil war.

Then came

the rise of Hitler and Mussolini, [redacted] contradictory series of moves

Stalin sought alliance with the west against Hitler and was repulsed.

The west joined with Hitler in tacit opposition to the Soviet Union.

The Soviet Union in swift counter movement made alliance with Hitler

against the west. Wheeling suddenly, Hitler attacked the Soviet Union,

and the west was certain that the vast German war power would wipe out

Communism. ~~The west hesitated and then made late alliance with the~~

~~Soviet Union, with the hope of delaying Hitlers attack on the west.~~

along with ruthless will and drunken beauty. There is the eternal struggle and endless contradiction within a people who can never die, so long as men remember Ronsard, the Kings called Louis, the Napoleons and the Alexander Dumas.

For France as for Portugal, Italy and Spain, salvation lies in Africa and Asia; in Negroid art and joy of life; in Asiatic work and patience; in the humility of the colored peoples

Sweden was a sort glimse of the West before I returned home. I had long known of this Scandinavian nation. The Socialists called it the "Middle Way" from private capitalism to Communism. They saw the increase of social control of the Welfare State over the anarchy of individual profit. its new housing intrigued us; its pension system, its schools. This was the way we hoped to ward off revolution and save rugged individualism. Moreover this visit was symbolic. Ten years ago in 1949, I had sat in on the formation of the World Council of Peace after that marvelous Paris meeting. Then for ten years I missed the meetings I could not attend that meeting which adopted the marvelous "Stockholm Appeal" which America called a Communist trick to disarm America. The meetings continued and most of the world joined but I could not go. Then came 1959, and I was present I saw Swedun, that beautiful Northern city, shing on its fourteen islands. I saw what is perhaps the finest popular housing in the world. Sweden had almost avoided war, She was now welcoming World Peace. But she was ashamed to do so. I was amazed as I realized this. She did not want this Council. She would not repulse it, but she gave it no welcome. Her Press and Pulpit ignored it. Its homes, with a few exceptions, closed their doors in the face of many men and women of world leadership, because they met to promote World Peace and because they met with nations who did not believe in capitalism but did hate war. It was astonishing. Was Sweden afraid, and if so of what? Did Peace encourage Communism and if so what a confession. Was Sweden afraid of America and Britain? If so what an accusation for Britain and America. I saw an Indian author whose books unprinted in the Unites States, I was just reading. He looked a bit upset; he said, "My publisher asks me not to call, until this council meeting is over." Only a few citizens of Stockholm attended the service in honor of Juliet-Curie. Few met the white-haired leader of the women of France and Madame Dluen of Belgium

There is at Canton a marble commercial building where the import and export exposition was recently opened. There are five floors of exhibits. I am convinced (12) that America can not make anything which is not today being made by China, or which cannot be made, and made cheaper, and for the most part made quite as well, and for ~~Come~~ Out of the things that China makes ~~which places~~ no profits ~~to~~ for private exploiters.

Most nations of the world are beginning to buy China's goods, except the United States. China sells increasingly to Europe, to Asia and South America, to India, Burma, Ceylon, Indonesia, and Malaya . To Africa and the West Indies; to Australia and New Zealand, and such goods; silk and woolen clothing; watches, clocks, radio's and television sets; looms, machinery and lamps, shoes and hats, pottery and dishes ~~pins and~~ all Chinese seem to be at work, and not afraid of unemployment, and welcoming every suggestion that displaces mucle with machinery.

INSERT CHAPTER ~~VII (CONT)~~ VII (13)

In every town and city, we went to the opera, and can never forget the assault of the monkey king on the hosts of heaven, facing God and the angels.
A night sleeping train took us over the thirty hour trip from Peiping to Hankow.
There I saw the bridge that had been miraculously thrown across the Yangstze.
We rested in a little hotel adorned with flowering cabbages. We visited the great steel mills and shook hands with welcoming workers. The colored American prisoner who ~~stayed here~~ stood in China rather than return to America, and is happy with his wife and baby, came to visit us.

The people of the land I saw: the workers, the factory hands, the farmers and laborers, scrubwomen and servants. I went to ~~theatres~~ halls and restaurants, sat in the homes of the high and the low; and always I saw a happy people; people with faith that need no Church nor priest and laughs gaily when the Monkey King fools the hosts of Heaven and overthrows the angels.

In all my wandering, I never felt the touch or breath of insult or even dislike- I who for 90 years in America scarcely ever saw a day without some expression of hate for "niggers."

What is the secret of China in the second half of the 20th. century? It is that the vast majority of a billion human beings have been convinced that human nature in some of its darkest recesses can be changed, if change is necessary. China knows, as no other people know, to what depths human meanness can go.

I used to weep for American Negroes, as I saw through what indignities and repressions and cruelties they had passed; but as I have read Chinese history in these last months and had it explained to me stripped of Anglo-Saxon lies, I know that no depths of Negro slavery in America have plumbed such abysses as the Chinese have seen for 2,000 years and more. They have seen starvation and murder; rape and prostitution; sale and slavery of children; and religion cloaked in opium and gin, for converting the "heathen". This oppression and contempt came not only from Tartars, Mongolians, British, French, Germans and Americans, but from the Chinese themselves: Mandarins and warlords, capitalists

Prime Minister of the Nation of 680 Million souls

We come to Cheng-Tu. We ride about this farthest Western stopping place, close to the crowds and the workers and the homes, old and new. We visit a commune of 60,000 members. We climb the mountain to see irrigation being widened today, yet started two thousand two hundred years ago. There is a glorious temple on its summit, and below a wide lake between a winding road. Four rivers roll down fron the Himilayas, out of Tibet into the Yangstze. Then we fly to Kunmin, the end of the American Burma road. It is warm and quiet, and at the state school, the minorities dance and sing welcome, and among them are the Tibetans. There are more Tibetans in China, than in Tibet.

In Tibet while we were on its border in Czechwan, the landholders and slave drivers and the religious fanatics revolted against the Chinese, and failed as they deserved to. Tibet has belonged to China for centuries. The Communists linked the two by roads and began reforms in land holding, schools and trade, which now moved quickly. At Kunmin we were at the end of the Burma Road and near the great Mekong river. Below lay Vietnam, Laos, Cambodia and Thailand. The nest of grafters, whoremongers and gamblers at Saigon, helped by Americans, have broken the Geneva treaty which closed the French Indo-Chinese War, and are attacking the Communists of Vietnam. That is called "Communist Aggression". It is the attempt of American business and the American Navy to supplant France as colonial ruler in southeast Asia.

Chan in Tibet. We are in Szechwan
bordering Tibet when the Landlords
and religious families
[illegible]

This monster was a nation, with [illegible] a dark tinted billion born at the beginning of time, and facing its end, this struggle from starved degradation, murder, and suffering to the triumph of that Long March, to world leadership. Oh beautiful, patient, self scarificing China, despised and unforgetable, Victorious and forgiving, crucified and risen from the dead!

ships rot.

Fifteen times I have crossed the Atlantic and once the Pacific. I have seen the world. But never so vast and glorious a miracle as China.

alliance rested on the understanding that the Baltic states, Poland, Czekoslovakia, Hungary and the Balkans, would decide as to their future status; but neither the West or the Soviet Union were quite frank with each other. Who constituted these states? What peoples within their borders had the power or could get the power to make this momentous decision concerning their future? The West tacitly assumed that the people who had been in power in the past would remain in power, especially if Western captial helped them. The Soviet Union saw in these states the same bitter struggle for dominion which had been carried on in Russia: foreign investors, hereditary aristocrats, great land-holders, a rising bourgeosie, and an almost helpless mass of voiceless city workers and rural serfs. The West was determined that no such revolution as had been successful in the Soviet Union would be carried out in these border states. The Soviet Union knew well that unless the revolution did succeed in these border states, the overthrow and re-conquest of Russia was but a matter of time. This was the vast difference of opinion that separated Capitalism and Communism at the conclusion of the second world war. The United States influenced by millions of immigrants from the Baltic states, Poland and the Balkans, struggled to increase western influence in these lands. These immigrants had left their country before the Communist revolution began. They were largely representatives of the bourgeosie, and did not know what was happening in these lands and in Russia; inherited their former enmities and worked against Communism. The Soviet Union in every possible way helped and encouraged the Communist revolution. As a result the Baltic states became Russian, Czeckoslovakia adopted Socialism, and the Balkans tried to adopt it

the equal status of Harvard, and I was not allowed to take the examination.

Expansion by force is not true of Communism; the majority of intelligent people work for a living in the Baltic States, Poland, Czeckoslovakia, and the Balkans seem to me quite evidently to want Communism. It was probably quite true a generation ago that most of the landholders, capitalists and aristocracy in these lands opposed Communism, and being the only ones with political power could truly say that their countries did not want to be socialized. But these classes did not represent the mass of the people, and when this mass obtained political power, they built and hold a Communist State. Between the first and second world wars, Western Capitalism and Soviet Socialism sought to increase their influence in these states. The Russians had the inside track in the Baltic states and practically annexed them. Poland sided with the West in bitter opposition to the Soviet Union. Czeckoslovakia swayed in the balance, and Hungary and the Balkans were torn by civil war.

Then came the rise of Hitler and Mussolini, threatening war with the West. A series of moves ensued. Stalin sought alliance with the West against Hitler and was repulsed. The West joined with Hitler at Munich in tacit opposition to the Soviet Union. The Soviet Union in swift counter movement made alliance with Hitler against the West. Wheeling suddenly, Hitler attacked the Soviet Union, and the West was certain that the vast German war power would wipe out Communism. But when the Soviet Union did not fall, decided at last to help it so that Communism and Nazism would destroy each other.

(1)

CHAPTER IV

THE SOVIET UNION

I have in a sense seen the Union of Soviet Socialist Republics grow, not as a casual visitor, or hurried tourrist. In 1926, I saw a Russia just emerging from war with the world. The people were poor and ill-clothed; food was scarce and long lines stood hours to get their share. Orphan children, ragged and dirty, crawled in and out of sewers. Men faced foreign force, and none betrayed. Yet, despite this, I saw a land of hope and hard work. Schools were multuplying; books were being printed and widely read; workers were being protected with living wage, nurseries for children, night schools, trade unions and wide discussion. Indeed this wide discussion and criticism intrigued me. Never had I seen such public interest in social matters on the part of men, women and children. Here was a people seeking a new way of life through learning the truth, and cooperating with each other and by willing sacrifice. Not everybody was happy but most Russians saw a bitter past being succeeded by a great future, not swiftly, but surely. I visited Cronstad, Leningrad, Nijni Novorod, Kiev, Moscow and Odessa. There were no signs of prostitution or crime. There was some drunkeness, but little gambling. Priests were plentiful and tarnished gold-domed churches abounded, but dogma was being driven from the schools. Above all the spirit of the people was high, the officials were working desperately hard, and with efficiency.

I remember one jarring note. A peasant cabman pointed to a new tractor in the fields. He said: "They want us to use them things. We'll never do it."

CHAPTER LII

BLIND STAGGERS, 1917-1936

Sitting in Moscow on my arrival August 28, 1926, I was reading the New York Times; it said " Revolution has broken out in Kronstadt. Streets are flowing with blood! " I stared with astonishment, for the issue was dated the very day I had landed in Kronstadt. One can know what Kronstadt looked like when I landed by reading page 20.
The dispatch was dated from Riga. That explained much. Riga was in Latvia; just south of Estonia and but 50 miles from Lithuania, these three states of Clemenceau's Cordon Sanataire, whence European Big Capital would one day re-conquer Russia. Thus Riga had long been a nest of liars who poured fairy tales about Russia into the West. Even I had known that and how could the Times be misled into printing this story without confirmation? I went back in my own mind to what I had known about Russia since the Revolution and remembered that I was astonished to learn how long the war had lasted in Russia after the Armistice. Leaving Russia in October 1926, I tried after my return to America to collect and organize my knowledge and read neglected books and reports.

The result was amazing. I presume in all our knowledge something like this takes place: save in some narrow file we know events and situations vaguely, from newspapers, magazines or a book or so. But soon we are making judgements and coming to conclusions not on a basis of carefully garnered knowledge, but on flimsy generalizations influenced tremendously by current public opinion. Thus we tend to learn our history backwards.

I had known that Czarist Russia naturally resisted the revolution. But of the extent of that counter-revolution and of the active help in manpower, material and arms, supplied by the civilized world; of the spying and intrigue from all Europe which had accompanied and inspired this war of reaction; I had but the vaguest information. Indeed I did

not learn the whole story until Sayers and Kahn published their "Great Conspiracy" in 1946.

3

What amazed and uplifted me in 1926 was to see a nation stoutly facing a problem which most other modern nations did not dare even to admit was real. Taking inspiration directly out of the mouths and dreams of the world's savants and prophets, who had inveighed against modern industrial methods; against the co-existance of progress and poverty; ~~against slums and disease;~~ this new Russia led by Lenin and inspired by Marx proposed to build a socialist state with production for use and not for private profit; with ownership of land and capital goods by the state abd state control of public services, including education and health. It was enough for me to see this mighty attempt. It might fail, I knew; but the effort in itself was social progress and neither foolishness nor crime.

Russia was handicapped by 95% of illiteracy among her peasants and nearly as much among her working classes; by a religion led by a ~~menial and~~ largely immoral priesthood, dealing in superstition and deception, and rich with the ~~land and~~ loot of grovelling followers. Most of her industrial capital was owned by foreigners whose only interest was the was the 50 or 75% which they reaped from merciless exploitation. Her government had long been shot through with dishonesty and graft under dissolute nobles and fawning lackeys. Her punishment of crime and independent thought had long affronted the civilized world. Yet the best people of Europe and America seldom raised a finger of protest but fawned on Russian royalty and aristocracy, receiving them with open arms and loud sympathy when they were repudiated.

Visioning now a real Dictatorship of the Proletariat, two questions follow. Is it possible today for a great nation to achieve such a worker's psychology? And secondly, if it does achieve it, what will be its effect upon the world? The achievement of such a psychology depends partly upon Russia and partly upon the United States and the Western part of Europe. In Russia one feel today, even on a casual visit, the beginning of a workingman's psychology. Workers are the people that fill the streets and live in the best houses, even though these houses are dilapidated; workers crowd (literally crowd) the museums and theatres, hold the high offices, do the public talking, travel in the trains.

The Soviet program is mainly psychological; can a people be trained to work effectively with the general prosperity as the motive and the fear of poverty and old age taken away? The present generation of lazy, indifferent and inefficient workers were trained under capitalism. Their psychology will change slowly. Leisure and taking away of the fear of poverty will mean to them loafing, laziness, and self-assertion; to a large extent, the tremendous strain of the transition period.

The Soviets have had after war, conquest after conquest and famine, and but three years of experiment. Can the Soviets conquer jealousy and envy on the part of the workers? Yes, they answer by giving them necessities. But how about luxuries? By raising a public opinion against luxuries. There is something like this now. Moscow has no well-dressed leisure class. But it is a hard job, and you and I, who have been trained to distrust human nature and believe in selfishness and lust, may easily believe a task impossible. Sometimes we seem to be right.

There is no question but that governments can carry on business. Every government does. Whether governmental industry compares (in efficiency) with private industry depends entirely upon what we call efficiency. And here it is and not elsewhere that the Russian experiment is astonishing and new, and of fateful importance to the future of

5

of civilization. What we call efficiency in America is judged primarily by the resultant profit to the rich and only secondarily by the results to the workers. The face of industrial Europe and America is set toward private wealth; that is, toward the people who have large income. We recognize the economic value of small incomes mainly as a means of profit for great incomes. Russia seeks another psychology. Russia is trying to make ~~this~~ the workingman the main object of industry. His well-being and his income are deliberately set as the chief ends of organized industry, directed by the State.

6

It is on its economic problem that Russia ~~in 1926,~~ must primarily be judged. Russia had established a socialistic state. The world had long been ~~veering~~ steering toward Socialism. We had made essays toward socialism; but when the Socialistic state appeared full-fledged, most of us called it by other names and refused to judge it by its socialism, but rather we insisted, on investigating of the ethics of the methods underlying its establishment.

What had Russia done in 1926, to establish a Socialistic State? First, it had nationalized the land. Every inch of land in Russia--the air above it and the resources beneath belong to the Russian State. Persons who wish to till the soil may have as much land as they can successfully till, with the labor of their own family; and with the death of the father, the children may have first chance at tillage of the same soil. ~~Preference as to kind and place of soil goes to the former users of any particular piece.~~ The mineral and oil rights may be farmed out by the government for a term of years, but the government retains ownership of mines and wells and the terms of the leases are limited. Improvement on the land-- houses on farms and homes of the dwellers belong to the builders if they cost less than about $15,000-- if more, their ownership goes to the state after forty-nine years.

7

Ten years later, in 1936, I rode across the Soviet Union on the Trans-Siberian railway from Moscow to Otpur, Manchuria. The trip of four thousand miles was slow and took ten days and nights. But it traversed main part of the Soviet Union. It went through cities, crossed

8)

the Urals and crossed lakes and rivers. The change in ten years was remarkable. This was no longer a people struggling for survival, it was a nation sure of itself. In Moscow the streets were widening and the city had crossed the river. Old buildings remained, but great new buildings were crowding them. The golden domes of churches had disappeared and tall office buildings were taking their place. Few priests were visable and few beggars. The folk were better dressed and food was much more plentiful. There were no unemployed and all children were in school, factories shops and libraries had multiplied and there was evidence of law and order everywhere. Industry was moving west and climbing the Urals. Military might was evident and we saw the massing of soldiers toward the East to meet the threat of Japan. Great dams, canals and water works were built. The peasant was in close cooperation and not in revolt against the factory worker, Here was a self-confident nation ready to fight for existence. The people of the nation did not have all they wanted or planned to have, but much more than ever before. They did not fear poverty or old age; ~~the children were being educated and they~~ looked toward a great future. ~~They~~ were content; not slaves, not ready for revolt.

Thirteen years later, in 1949, after the Peace Congress in Paris, twenty-five Americans were invited to attend a Peace Congress in the Soviet Union. I was the only one who accepted the invitation. In the Hall of the Nobles, Moscow, where the Russian aristocrats used to gamble, I met a cross-section of the Soviet people- workers, writers, officials, and visitors from neighboring lands. It was an inspiring body and I tried to convince them that most Americans did not desire war with them, but strove for peace. I saw the continued growth of Moscow, and the increased confidence of the Soviet Union in itself, and in Socialism as a path to a Commumist state. ~~I returned by way of Poland, and saw the evidences of its death and resurrection.~~

9)

Ten years passed. I was allowed to visit Europe until 1959, when I again saw the Soviet Union and spent five months in its borders. Its growth in size and building; in industry and trade; in science and education, was marvellous.

I am in the Hermitage. Around me is Leningrad. I look out upon the Neva and the grim prison with its three spires of gold, but above all, I have seen the hands of the old man in red, the woe of the world on the old man's face, and to the return of the prodigal son and blank face of his brother. These pictures hang in the Hermitage. This is a lovely city; that square before the Winter Palace, where an ideal of Czar shot down the praying peasants and started a revolution that killed his kind for ever. The Nevsky Prospect and its crowds. The sports arena for one hundred thousand people, the parks and parks; the houses always new houses, rows of houses, three rooms and bath at one hundred rubles a month. Never before in this world have so many people enjoyed the basic

In November of 1959, I rode into Moscaoward saw above the city the gre great Sickle and star which crowns the niversity and blesses the city. Later this omonosov State University, ember of the order of Lenin and of the Workers' Order of the Red Star, called me to its halls and made me honorary doctor of his torical science

We flew to Moscow and I was on Red Square at the great celebration with a half million spectators. A gaily uniformed major escorted me, to the hotel, and on the way we stopped and saluted Khruschev, and Khruschev raised his hat.

Next day off I went in my auto with Shirley to a Sanitarium. It is a great solemn place with tall pines and snow. We have servants for every wish, and all are as kind as can be. I have been here a month, and have had every probe and test possible. My heart has been measured a dozen times; my blood tested, my blood pressure taken and I have been poked inside and out.

10

Today I was granted an interview with Prime Minister Khruschev at my request. For about two hours I and my wife, Shirley Graham discussed with him the Peace movement in the United States and the Pan-African movement.

I told him of my indictment and acquital in 1951 of the charge of not registering as a foreign agent, because I secured signers for the Stockholm appeal. We discussed the tenth anniversary of the World Peace Council. I talked about African independence and unity, and of establishing in Moscow an Institute under the Academy of Sciences, to study African history and culture.

I said, Africa has just taken a decisive step at the conference at Accra toward independence, union and free cultural development. The first efforts of Africans will be in political lines and then for industrial progress and economic organization. Education will receive attention, but resources will be limited and teachers scarce. I believe that here the Soviet Union can be of great assistance to new Africa.

The Scientific study of Africans and their continent is necessary for the guidance of their education and the organization of their culture. This is one of the ways in which the progressive world can help its lagging parts and one in which there are fewest causes for friction and diversity of interest. I suggest therefore that the Soviet Academy of Sciences establish an Institute for the study of Pan-African history, sociology, ethnography, anthropology, and all cognate studies. This Institute of the Academy would aim at promotion of scientific research into all the activities, past and present of the peoples of Africa, together with a study of their physical, and biological environment.

This series of studies would be carried on with the central idea of the unity of the whole subject and the conviction that history is not separate from sociology or culture from biology, but that all research in such related fields seek the one end of unified scientific knowledge.

While this enterprise would start and center in the Soviet Union, its object would be the welfare and progress of Africa and from the first, it should seek cooperation wherever it could be found, and especially among Africans.

I told him of my indictment and acquital in 1951 of the charge of not registering as a foreign agent, because I secured signers for the Stockholm appeal. We discussed the tenth anniversary of the World Peace Council. I talked about African independence and unity, and of establishing in Moscow an Institute under the Academy of Sciences, to study African history and culture.

I said, Africa has just taken a decisive step at the conference at Accra toward independence, union and free cultural development. The first efforts of Africans will be in political lines and then for industrial progress and economic organization. Education will receive attention, but resources will be limited and teachers scarce. I believe that here the Soviet Union can be of great assistance to new Africa.

The Scientific study of Africans and their continent is necessary for the guidance of their education and the organization of their culture. This is one of the ways in which the progressive world can help its lagging parts and one in which there are fewest causes for friction and diversity of interest. I suggest therefore that the Soviet Academy of Sciences establish an Institute for the study of Pan-African history, sociology, ethnography, anthropology, and all cognate studies. This Institute of the Academy would aim at promotion of scientific research into all the activities, past and present of the peoples of Africa, together with a study of their physical, and biological environment.

This series of studies would be carried on with the central idea of the unity of the whole subject and the conviction that history is not separate from sociology or culture from biology, but that all research in such related fields seek the one end of unified scientific knowledge.

While this enterprise would start and center in the Soviet Union, its object would be the welfare and progress of Africa and from the first, it should seek cooperation wherever it could be found, and especially among Africans.

The Institute should by offer of scholarships to Africans, and by cooperation with African students and institutions of learning, try eventually to build within Africa, a center of centers of scientific study, which would lead in world study, and the promotion of world peace.

Realizing how in modern history, the exploitation and almost universal underestimation of Africans have led to wide denial of the very existence of their history and culture, it would be a first duty of this Institute to make known the history of the African peoples, and to distribute knowledge of this in libraries and museums; in text-books and university studies, and as common knowledge. No greater work for world peace can be conceived, no quicker way to convince mankind that no part of it must exist for the exploitation and comfort of the rest at any cost of suffering to black folk.

The Soviets are making a new people; a disciplined people. No, this is not a matter of police; few police are in evidence, and there is little giving of orders. Secret dred? I sense none. But let me illustrate: Out from my hotel window I look on two great squares; the furtherest is Red Square with the towers of the Kremlin walls and the brown tomb where Lenin and Stalin sleep their last long sleep. Across these squares yesterday a half million people marched, walked and danced; they ate and sang, they laughed and cheered. This morning when I arose and looked out, there was not a scrap of paper or sign of dirt. That meant work in the night I'm sure, but it meant much more than this: it meant that this half million people dropped no dirt and threw away no paper, and they did this not under orders, but because they felt these squares were theirs and they must not soil their own. These people feel a vested interest in this nation such as no American feels in the United States. Why? I do not know, and yet it may be because they are consulted about it. They are asked, continually asked; they sit and sit and talk and talk and vote and vote; if this is all a mirage, it is a perfect one. They believe it as I used to believe in the Spring Town Meeting in my town.

There is power rivalry and personal jealousy; all things in the Soviet Union are not perfect,

Mails miscarry, cables come a day late, styles are often funny, but the Soviet Union is great and growing greater and it belongs to this two hundred million folk about me seem to believe; I am strongly inclined to agree with them.

Over 1

Nowhere are public questions so throughly and exhaustively discussed. Russians sit and listen long to talks, lectures, expositions; they read books, magazines and newspapers, not just picture books. Each problem of existance is discussed in each village and factory. Comments, spoken and written, are welcomed, until every aspect, every opinion has been expressed and listened to, and the matter rises to higher echelons, and is discussed again. Gradually agreement is approached, until when the thrashed-out result reaches the All-Soviet height, there is usually but one opinion and one decision. This is a sifting of democracy which the West has lost. In America there is little political discussion. It is discouraged in every way by stopping meetings, refusing use of halls; closing columns of newspapers, refusing radio time, and police interference and jail. In Britain there is freer discussion, but it is limited by custom and prestige; and by aristocratic influence and the money and leisure of the dominant class. In France, parliamentary debate is directed by the powerful interests who work the puppets and pull the strings. In Italy, the Church stands always in the shadow, keeping watch above its own. The Church represents wealth, and wealth rules the Church.

Over 2

In the Soviet Union the overwhelming power of the working class as representing the nation is always decisive. Above this but representing it and expressing its thought and ideal, rises the real aristocracy of the Soviet Union, the writers and scientists. They get the highest wage, they enjoy such privileges as the law and public opinion allow. How free are they? Science is singularly free from religious dogma and vested interest. The writer has wide leeway and rich applause, but he is limited by the aims of Socialism and by the fear of outside attack which in the past has

to serve all and not a few.

(1) The world problem of mental service has not been settled. The question of life Careers and the decisions between what one wants to do + what one is fitted to do, and what ~~needs~~ offers are needed — these matters have not yet found final answers; but they are being frankly faced + experiments are making

(2) This is not astonishing nor unusual How many right answers to our problems are there?

nearly ruined the Soviet Union. But the recalcitrant writer, the idealists and dreamers disagree and variety of opinion has become reasuringly common and open. As the Soviet Union becomes stronger and more self-confident, and less sensitive to that western opinion which has so long ruled the world with a rod of gold, it will become freer. Never I hope so free as to betray the ideals of the land as French writers have betrayed France and as American writers today submitted to dictation.

For years most American leaders regarded the figures as to Russian progress as exaggerations or lies. The Teachers' Union begged me not to say in answer to a citation that the schools of Moscow were better than those of New York. Then cane "Sputnik". Then came the unanswerable proof of Soviet superiority in Science. But what I saw in the Soviet Union was more than triumph in physics, it was the growth of a nations soul; the confidence of a great people in its plans and future. And beyond that the realization around the world that the Seven year Plan was not boasting, but knowledge shared by 200,000,000 people. Around these millions were gathered eveb greater millions in China, Vietnam and Korea, who believed in Socialism and sought Communism.

Ex-President Conant of Harvard declared that the Communist Party would not allow promotion to higher schools by examination; presumably only by favor

There followed the startling figures of 6 Education in school + college

15

Is it possible to conduct a great modern government without autocratic leadership of the rich? The answer is: this is exactly what ~~Russia~~ the Soviet Union is doing today. But can she continue to do this? This is not a question of ethics or economics; it is a question of psychology. Can Russia continue to think of the State in terms of the workers? This can happen only if the Russian people believe and idealize the workingman as the chief of citizen. In America we do not. The ideal of every American is the millionaire-- or at least the man of "independent" means or income. We regard the laborers as the unfortunate part of the community and even liberal thought is directed toward "emancipating" the workingman by relieving him in part, if not entirely, of the necessity ~~of~~ for work. Russia, on the contrary, is seeking to make a nation believe that work, and work that is hard and in some respects ~~disagreeable~~ very disagreeable and to a large extent physical, is a necessity of human life at present and likely to be in any conceivable future world; that the people who do this work are the ones who should determine how the national income from their combined efforts should be distributed; in fine, that the workingman is the State; that he makes civilization possible and should determine what civilization is to be.

For this purpose he must be a workingman of skill and intelligence and to this ~~combined~~ Russian education is being organized. This is what the ~~Russian~~ Dictatorship of the Proletariat means. This dictatorship does not stop there. As the workingman is today neither skilled nor intelligent to any such extent as his responsibilities demand, there is within his ranks the Communist Party, directing the Proletariat toward their future ~~dictatorship~~ duties. This is nothing new. In the government "of the people", we have elaborate and many-sided arrangements for guiding the rulers. The test is, are we and Russia really preparing future rulers? Insofar as I could see in the Soviet Union ~~1926~~ in shop and school, in the press and on the radio, in books and lectures, in trade unions and National Congresses ~~Russia~~ men. Russia is. We are not.

16

But it is the organized private capital of America, England, France and Germany which is chiefly instrumental in preventing the realization of the Russian workingman's psychology. It has used every modern weapon to crush Russia. It sent against Russia every scoundrel who could lead a mob and has given him money, guns, and armies; and when Russia nearly committed suicide in crushing this civil war, modern industry began the industrial boycott, the refusal of capital and credit, which is being carried on today just as far as international jealousy and greed will allow. And can we wonder? If modern capital is owned by the rich and handled for their power and benefit, can the rich be expected to hand it over to their avowed and actual enemies ? On the contrary, if modern industry is really for the benefit of the people and if there is an effort to make the people the chief beneficiaries of industry, why is it that this same people is powerless today to help this experiment, or at least give it a clear way? On the other hand, so long as the most powerful nations in the world are determined that the Soviet Russia must fall, there can be but a minimum of free discussion and democratic difference of opinion in Russia.

There is world struggle then in and about Russia; but it is not simply an ethical problem, as to whether or not the Russian Revolution was morally right; that is a question, which only history will settle. It is not simply the economic question as to whether or not Russia can conduct industry on a national scale. She is doing it today and in so doing she differs only in quantity, not in quality from every other modern country. It is not a question merely of "dictatorship". We are all subject to this form of government.

The Russian question is: Can you make the worker and not the millionaire the center of modern power and culture? If you can, the Russian Revolution will sweep the world. One can stand on the streets of Moscow and Kiev and see clearly that Russia has struck at the citadels of the power that rules modern countries. Not manhood suffrage, women's suffrage, state regulation of industry, social reforms, nor religious and moral teaching in any modern country, have shorn organized wealth of its power as the Bolshevik Revolution has done in Russia.

Russia seems to me the only modern country where people are not more or less taught and encouraged to despise and look down on some group or race. I know countries where race and color prejudice show only slight manifestations, but no European country where race and color prejudice seems so absolutely absent. In Paris, I attract some attention; in London I meet elaborate blankness; anywhere in America I would get anything from curiosity to insult. In Moscow, I pass unheeded. Russians quite naturally ask me information; women sit beside me quite confidentially and unconsciously.

~~China in Tibet~~. In Tibet whole tribes were on the border in Czechuan. The landlords and slave drivers and the religious fanatics revolted against the Chinese and ~~[illegible]~~ Buddha as they deserved. Tibet has belonged to China for centuries. The Communists ~~[illegible]~~ broke the two ~~[illegible]~~ by roads and began reforms in land holding ~~[illegible]~~, schools and trade which never known before.

At Kunming we were at the head of the Burma Road and near the great Mekong river. Below lay Vietnam, ~~[illegible]~~ Laos Cambodia or THAILAND. The rest of Graham, whoremongers and gamblers at Saigon, backed by ~~[illegible]~~ American have broken the Geneva treaty which closed the French Indo-Chinese war and are attacking the Communists of Vietnam. That is called Communist aggression. It is the attempt of American bankers and the American ~~[illegible]~~ & Navy to install French colonial rule in ~~[illegible]~~ Southeast Asia

and wasting wealth and energy on the preparation for war, which is nothing less than criminal. Yet the United States dare not stop spending money for war. If she did her whole economy which is today based on preparation for war, would collapse. Therefore, we prepare for a Third World War; we spread our soldiers and arms over the earth and we bribe every nation we can to become our allies. We are taxing our citizens into poverty, crime and unemployment, and systematically distorting the truth about socialism.

[redacted]

along with ruthless will and drunken beauty. There is the eternal struggle and endless contradiction within a people who can never die, so long as men remember Ronsard, the Kings called Louis, the Napoleons and the Alexandre Dumas.

Many Africans and other people seek today to take a neutral stand between the great forces which seek to dominate the world. This is natural; a nation with old and desperate problems like India wants time to work at these problems and does not wish to be drawn into disputes and differences which do not seem immediately to concern her. A new nation like Ghana wants time to develop and settle her own pressing problems before facing problems which divide America and Russia.

Until this world trip of mine, which began last August and ended July 1st, and which has covered parts of Britain, Holland France, Czechoslovakia, Germany, the Soviet Union, China and Sweden, before this amazing trip, I would have agreed in the main with this attitude, but since this journey, I have slowly but firmly come to this conclusion: there is today in this world no neutral area, no attitude which can avoid or postpone decision as to capitalism and socialism. [redacted]

I knew the United States. It is my country and has long been the land of my fathers. I was born on its soil and educated in its schools. I have served my country to the best of my ability. I have never knowingly broken its laws or unjustly attacked its reputation. At the same time I have pointed out its injustices and crimes and blamed it, rightly as I believe, for its mistakes. Today the United States is the leading nation in the world, which apparently believes that war is the only way to settle present disputes and difficulties. For this reason it is spending fantastic sums of money, and

CHAPTER XVIII

I AWAIT DEATH

This is my ninetieth birthday and I await death. I am a little disturbed at its uncertainty, because for so many years I have been used to planing ahead. Always on my desk lies the calender of my own devsing with dailly and hourly taskes; with plans for the week and next week , the month and the sentinel of my main task for the year.. This year-part is now getting uncertain. But I'll get used to that. Otherwise I am reasonably content and although my strength warns me not to try to work so many hours as once I did, yey I work and work regularly and with some efficiency.

I have long faced the inevitability of death and not tried to dodge the thought. ~~In 1924 I began to write about it~~ 1918

fact.

On Being Black

Part I ~~The Ist~~ In the Morning Enlight

Part II at Eventide.

Part I L'allegro.

Part II Il Penseroso.

From then until now the wraith of Death has folowed me, slept with me and awakened me and accompanied my day. Only now it is more commonplace and reasonable. It is the end and without ends there can be no beginnings. Its ~~end-less-ness~~ finality we must not falsify. It is our ~~endless~~ great debt to the Soviet Union that it alone of nations dared stop that lying to children which so long disgraced our schools. We filled little minds with fairy tales of religious dogma which we never ourselves ~~xxxxxxxx~~ believed. We filled their ~~minds~~ thought with pictures of barbarous revenge called God which contradicted all sense of decency. We ~~told them~~ refuted them fairy tales of children without fathers, of death which was life, of secrifice which was ~~good~~ shrewd investment and ridiculous pictures of ~~Heaven and Hell~~ an endless future. The Soviets have stopped. They allow a child to grow up without religion lies and make his own decision about the world without scaring him into Hell or rewarding him with a silly Heaven.

We know that Death is the End of Life. Even when we profess to deny this we know that this hope is mere wishful thinking, pretense broidered with abject and cowardly Fear. Our endless egotism cannot conceive a world wuthout Us and yet we know that this will happen and the world ~~the~~ be happier for it. I have lived a good and full Life. I have finished my course. I do not want to live this life again. I am tired. I am through. For the souls who follow me, for that little boy born last Christmas day and his compeers I bequeath all that waits to be done. ~~From me only a fond goodbye. forever.~~

I have tasted its de ights and ~~thrilling~~ pleasures; I have known its suffering and despair

26-12-59

and ~~then~~ holy Time what a mess he's been in

[1958]

CHAPTER XVIII

I AWAIT DEATH

This is my ninetieth birthday and I await death. I am a little disturbed at its uncertainty, because for so many year I have been used to planning ahead. Always on my desk lies the calendar of my own devising with daily and hourly tasks; with plans for the week and next week, the month and months ahead and the sentinel of my main task for the year. This year-part is now getting uncertain. But I'll get used to that. Otherwise I am reasonably content and although my strength warns me not to try to work so many hours as once I did, yet I work and work regularly and with some efficiency.

36-12-62

I have long faced the inevitability of death and not tried to dodge the thought. In early manhood I wrote:

And I saw a mother, black and seared and iron-haired, who had her boy through college for men to jeer and discourage and tempted him till he sought women and whiskey and died. She crept on a winter's Sunday into a Cathedral of St. John The Divine and crouched there where a comfortable red and yellow angel sat sunning her ample limbs, "To Keep the Memory of Obadiah James Green," — a stock-gambler. And there she rested while the organ warbled the overture to Der Feischutz, and the choir asserted "My Jesus! As Thou wilt." "Come unto Me all ye that labor and are heavy laden and I will give you rest. For my yoke is easy and my burden light". And the window-angel moved a fat wing and murmured: "except Niggers!"

In that dark day when all friends gathered round shall sigh, He goes to that full dreadful home when earth shall away and these dim eyes shall to scenes all glorious shall they see on that morning round the wide, white throne a glorified Negro Problem. If so, Father of Mercies, send me to Hell.

At fifty, after a serious operation I wrote:

"Last year I looked death in the face and found its lineaments not unkind. But it was not my time. Yet in nature some time soon and in the fullness of days I shall

die, quietly, I trust, with my face turned South and eastward; and, dreaming or dreamless I shall, I am sure, enjoy death as I have enjoyed life."

At sixty years of age I wrote again:

"For long years we of the world gone wild have looked into the face of death and smiled. Through all our bitter tears we knew how beautiful it was to die for that which our souls called sufficient. Like all true beauty this thing of dying was so simple, so matter-of-fact. The boy clothed in his splendid youth stood before us and laughed in his own jolly way — went and was gone. Suddenly the world was full of the fragrance of sacrifice. We left our digging and burden-bearing; we turned from our scraping and twisting of things and words; we paused from our hurrying hither and thither and walking up and down, and asked in half-whisper: Death — is this Life? And is its beauty real or false?

36-12-63

"Here, then is beauty and ugliness, a wide vision of world-sacrifice, a fierce gleam of world-hate. Which is life and what is death and how shall we face so tantalizing a contradiction? Any explanation must necessarily be subtle and involved. No pert and easy word of encouragement, no merely dark despair, can lay hold of the roots of these things. And first and before all, we cannot forget that this world is beautiful. Grant all its ugliness and sin — the petty, horrible snarl of its putrid threads, which few have seen more near or more often than I — notwithstanding all this, the beauty of the world is not to be denied.

"And then — the Veil. It drops as drops the night on southern seas — vast, sudden, unanswering. There is Hate behind it, and Cruelty and Tears. As one peers through its intricate, unfathomable pattern of ancient, old, old design, one sees blood and guilt and misunderstanding. And yet it hangs there, this Veil, between then and now, between Pale and Colored and Black and White — between You and Me. Surely it is a thought-thing, tenuous, intangible; yet just as surely is it true and terrible and not in our little day may you and I lift it. We may feverishly unravel its edges and even climb slow with giant shears to where its ringed and gilded

top nestles close to the throne of Eternity. But as we work and climb we shall see through streaming eyes and hear with aching ear, lynching and murder, cheating and despising, degrading and lying, so flashed and fleshed through this vast hanging darkness that the Doer never sees the Deed and the Victim knows not the Victor and Each hates All in wild and bitter ignorance. Listen, O Isles, to these Voices from within the Veil, for they portray the most human hurt of the Twentieth Cycle of that poor Jesus who was called the Christ!

"There is something in the nature of Beauty that demands an end. Ugliness may be indefinite. It may trail off into gray endlessness. But Beauty must be complete — whether it be a field of poppies or a great life, — it must end, and the End is part and triumph of the Beauty. I know there are those who envisage a beauty eternal. But I cannot. I can dream of great and never-ending processions of beautiful things and visions and acts. But each must be complete or it cannot for me exist.

36-12-64

On the other hand, Ugliness to me is eternal, not in the essence but in its incompleteness; but its eternity does not daunt me, for its eternal unfulfilment is a cause of joy. There is in it nothing new or unexpected; it is the old evil stretching out and ever seeking the end it cannot find; it may coil and writhe and recur in endless battle to days without end, but it is the same human ill and bitter hurt. But Beauty is fulfilment. It satisfies. It is always new and strange. It is the reasonable thing. Its end is Death -- the sweet silence of perfection, the calm and balance of utter music. Therein is the triumph of Beauty.

So strong is the spell of beauty that there are those who, contradicting their own knowledge and experience, try to say that all is beauty. They are called optimists and they lie. All is not beauty. Ugliness and hate and ill are here with all their contradiction and illogic; they will always be here -- perhaps, God send, with lessened volume and force, but here and eternal, while beauty triumphs in its great completion -- Death. We cannot conjure the end of all ugliness in

eternal beauty, for beauty by its very being and definition has ~~in each definition~~ has in each definition its ends and limits; but while beauty lies implicit and revealed in its end, ugliness writhes on in darkness forever. So the ugliness of continual birth fulfils itself and conquers gloriously only in the beautiful end, Death.

At last to us all comes happiness, there in the Court of Peace, where the dead lie so still and calm and good. If we were not dead we would lie and listen to the flowers grow. We would hear the birds sing and see how the rain rises and blushes and burns and pales and dies in beauty. We would see Spring, summer, and the red riot of autumn, and then in winter, beneath the soft white snow, sleep and dream of dreams. But we know that being dead, our Happiness is a fine and finished thing and that ten, a hundred, and a thousand years, we shall lie at rest, unhurt in the Court of Peace.

36-12-65

From then until now the wraith of Death has followed me, slept with me and awakened me and accompanied my day. Only now it is more commonplace and reasonable. It is the end and without ends there can be no beginnings. Its finality we must not falsify. It is our great debt to the Soviet Union that it alone of nations dared stop that lying to children which so long disgraced our schools. We filled little minds with fairy tales of religious dogma which we ourselves never believed. We filled their thoughts with pictures of barbarous revenge called God which contradicted all their inner sense of decency. We repeated fairy tales of children without fathers, of death which was life, of sacrifice which was shrewd investment and of ridiculous pictures of an endless future. The Soviets have stopped this. They allow a child to grow up without religious lies and with mature mind make his own decision about the world without scaring him into Hell or rewarding him with a silly Heaven.

We know that Death is the End of Life. Even when we profess to deny this we know that this hope is mere wishful thinking, pretense broidered with abject and

and cowardly Fear. Our endless egotism cannot conceive a world without Us and yet we know that this will happen and the world be happier for it. I have lived a good and full Life. I have finished my course. I do not want to live this life again. I have tasted its delights and pleasures; I have known its pain, suffering and despair. I am tired. I am through. For the souls who follow me for that little boy born last Christmas day, my great grandson and his compeers I bequeath all that waits to be done and holy Time what a forever.

A VISTA OF NINETY YEARS

By W. E. B. Du Bois

36-12-66

This is the month of my ninetieth birthday. I have lived to an age of life which is increasingly distasteful to this nation. Unless by sixty a man has gained possession of enough to support himself, he faces the distinct possibility of starvation. He is liable to lose his job and to refusal if he seeks another. At seventy he is frowned upon by the Church and if he is foolish enough to survive until ninety, he is often regarded as a freak. This is because in the face of human experience the United States has discovered that Youth knows more than Age. When a man of 35 becomes president of a great institution of learning or United States Senator or head of a multi-million dollar corporation, a cry of triumph rings in the land. Why? To pretend that fifteen years bring of themselves more wisdom and understanding than fifty is a contradiction in terms. Given a fool, a hundred years will not make him wise; but given an idiot, he will not be wise at twenty. Youth is more courageous than age because it knows less. Age is wiser than youth because it knows more. This all mankind has affirmed from Egypt and China five thousand years ago to Britain and Germany today. Only the United States knows better. I would have been hailed with approval if I had died at fifty. At seventy-five my death was practically requested. If living does not give value, wisdom, and meaning to life, then there is no sense in living at all. If immature and inexperienced men rule the earth, then the earth deserves what it gets:

the repetition of age-old mistakes, and wild welcome for what men knew a thousand years ago was disaster.

I do not apologise for living long. High on the ramparts of this blistering hell of life, as it must appear to most men, I sit and see the Truth. I look it full in the face, and I will not lie about it, neither to myself nor to the world. I see my country as what Cedric Belfrage aptly characterizes as a "Frightened Giant" afraid of the Truth, afraid of Peace. I see a land which is degenerating and faces decadence unless it has sense enough to turn about and start back. It is no sin to fail. It is the habit of men. It is disaster to go on when you know you are going wrong. I judge this land not merely by statistics or reading lies agreed upon by historians. I judge by what I have seen, heard, and lived through for near a century.

36-12-67

There was a day when the world rightly called Americans honest even if crude; earning their living by hard work; telling the truth no matter whom it hurt; and going to war only in what they believed a just cause after nothing else seemed possible. Today we are lying, stealing, and killing. We call all this by finer names: Advertising, Free Enterprise, and national defense. But names in the end deceive no one; today we use science to help us deceive our fellows; we take wealth that we never earned and we are devoting all our energies to kill, maim and drive insane, men, women and children who dare refuse to do what we want done. No nation threatens us. We threaten the world. Our President says that Foster Dulles is the wisest man he knows. If Dulles is wise, God help our fools — the fools who rule us and are today running wild in order to shoot a football into the sky where Sputnik rolls in peace around the earth. And they know why we fail — these military masters of men — we haven't taught our children mathematics and physics. No, it is because we have not taught our children to read and write or to behave like human beings and not like hoodlums. Every child on my street is whooping it up with toy guns and big boys with real pistols. When Elvis Presley goes through the motions of copulation on the public stage it takes

the city police force to hold back teen-age children from hysteria. What are we doing about it? Half the Christian churches of New York are trying to ruin the free public schools in order to replace them by religious dogma, and the other half are too interested in Venezuelan oil to prevent the best center in Brooklyn from fighting youthful delinquency, or preventing a bishop from kicking William Howard Melish into the street and closing his church. Which of the hundreds of churches sitting half empty protests about this? They hire Billy Graham to replace the circus in Madison Square Garden.

All this must not be mentioned even if you know it and see it. America must never be criticized even by honest and sincere men. America must always be praised and extravagantly praised, or you lose your job or are ostracized or land in jail. Criticism is Treason, and treason or the hint of treason testified to by hired liars may be punished by shameful death. I saw Ethel Rosenberg lying beautiful in her coffin beside her mate. I tried to stammer futile words above her grave. But not over graves should we shout this failure of justice, but from the housetops of the world.

36-12-68

Honest men may and must criticize America. Describe how she has ruined her democracy, sold out her jury system, and led her seats of justice astray. The only question that may arise is whether this criticism is based on truth, not whether it has been openly expressed.

What is truth? What can it be when the President of the United States, guiding the nation, stands up in public and says: "The world also thinks of us as a land which has never enslaved anyone." Everyone who heard this knew it was not true. Yet here stands the successor of George Washington who bought, owned, and sold slaves; the successor of Abraham Lincoln who freed four million slaves after they had helped him win victory over the slave-holding South. And so far as I have seen, not a single periodical, not even a Negro weekly, has dared challenge or even criticize that extraordinary falsehood.

This is what I call decadence. It could not have happened fifty years ago. In the day of our fiercest controversy we have not dared thus publicly to silence opinion. I have lived through disagreement, vilification, and war and war again. But in all that time, I have never seen the right of human beings to think so challenged and denied as today.

The day after I was born, Andrew Johnson was impeached. He deserved punishment as a traitor to the poor Southern whites and poorer freedmen. Yet during his life, no one denied him the right to defend himself.

A quarter of a century ago, I tried to state and carry into realization unpopular ideas against a powerful opposition — in the white South, in the reactionary North, and even among my own people. I found my thought being misconstrued and I planned an organ of propaganda — The Crisis — where I would be free to say what I believed. This was no easy sailing. My magazine reached but a fraction of the nation. It was bitterly attacked and once the government suppressed it. But in the end I maintained a platform of radical thinking on the Negro question which influenced many minds. War and depression ended my independence of thought and forced me to return to teaching, but with the certainty that I had at least started a new line of belief and action.

36-12-69

As a result of my work and that of others, the Supreme Court began to restore democracy in the South and finally outlawed discrimination in public services based on color. This caused rebellion in the South which the nation is afraid to meet. The Negro stands bewildered and attempt is made by appointments to unimportant offices and trips abroad to bribe him into silence. His art and literature cease to function. Only the children like those at Little Rock stand and fight.

The Yale sophomore who replaced a periodical of brains by a book of pictures concealed in advertisements, proposed that America rule the world. This failed because we could not rule ourselves. But Texas to the rescue, as Johnson proposes that America

take over outer space. Somewhere beyond the Moon there must be sentient creatures rolling in inextinguishable laughter at the antics of our Earth.

We tax ourselves into poverty and crime so as to make the rich richer and bring more crime and poverty. We know the cause of this: it is to permit our rich business interests to stop socialism and to prevent the ideals of Communism from ever triumphing on earth. The aim is impossible. Socialism progresses and will progress. All we can do is to silence and jail its promoters. I believe in socialism. I seek a world where the ideals of Communism will triumph — to each according to his need; from each according to his ability. For this I will work as long as I live. And I still live.

36-12-70

THE SOULS OF BLACK FOLK

Handwritten and typewritten draft manuscript of "Of the Coming of John"

Carlisle street runs west ward from the centre of Johnstown, across a great black bridge, down a hill and up again, by little shops and meat-markets, past single-stoned homes, until suddenly it stops against a wide green lawn. It is a broad restful place, with two large buildings outlined against the west. When at evening the winds ~~came~~ swelling ~~rustling~~ from the east, and the great pall of the city's ~~smoke~~ smoke hangs wearily above the valley, then the red west glows like a dreamland down Carlisle street; and, at the tolling of the supper-bell, throws the passing forms of students in dark silhouette against the sky. Tall and black, they move slowly by, and seem in the sinister light & flit before the city like dim warning ghosts. Perhaps they were; for this is Wells's Institute, and these black students have few dealings with the

7-13-99

white city below.

And if you will notice, night after night, there is one dark form that ever hurries last and late toward the twinkling lights of Swain Hall, — for Jones is never on time. A long straggling fellow he is, brown and ~~[illegible]~~ hard-haired, who seems to be growing straight out of his clothes, and walks with a half-apologetic roll. He used perpetually to set the quiet dining-room into waves of merriment, as he stole to his place after the bell had tapped for prayers; he seemed so perfectly awkward. And yet one glance at his face made one forgive him much, — that broad good-natured smile in which lay no bit of art or artifice, but seemed just bubbling good-nature and genuine satisfaction with the world.

He came to us from Altamaha, away down there beneath the gnarled oaks ~~[illegible]~~

of South east Georgia, where the sea sings & the sands and the sands listen till they sink half-drowned beneath the waters, rising only here and then in long low islands. The white folk of ~~Altamaha~~ voted John a good boy, — fine plough-hand, good in the rice-fields, handy everywhere, and always good-natured and respectful. But they shook their heads when his mother wanted to send him off to school. "It 'ill spoil him, — ruin him," they said; and they talked as though they knew. But full half the Black folk followed him proudly to the station, and carried his queer little trunk and many bundles. And there they shook and shook hands, and the girls kissed him shyly, and the boys clapped him on the back. So the train came, and he pinched his little sister lovingly, and put his great arms about his mother's neck, and then was away with a puff and a roar into the great yellow world that flamed

41-9-432

and flared about the ~~dark and~~ doubtful pilgrim. Up the coast they hurried, past the squares and palmettos of Savannah, through the cotton-fields and through the weary night, & Millville, ~~Macon~~, and came with the morning & the noise and bustle of ~~Atlanta~~ Johnstown.

And they that stood behind, that morning in Darien, and watched the train as it noisily bore playmate and brother and son away & the world, had thereafter one ever-recurring word,—"When John comes." Then what parties were & be, and what speakings in the churches; what new furniture in the front room,—~~and~~ perhaps even a new front room; and there would be a new school house, with John as teacher; and then perhaps a big wedding; all this and more—when John comes.

41-4-433

¶ ~~#~~ But the white people shook their heads. ¶

At first he was coming at Christmas-time,—but the vacation proved too short; and then,

the next summer, - but times were hard and schooling costly, and so, instead, he worked (Johnstown ~~Atlanta~~). And so it drifted & the next summer, and the next, - till playmates scattered, and mother grew gray, and sister went up & the Judge's kitchen & work. And still the legend lingered, - "when John comes." Up at the Judge's they rather liked this refrain; for they too had a John - a fair-haired, frank-faced boy, who had played many a long summer's day & its close with his darker name sake. "Yes, sir! John is at Princeton, sir," said the broad-shouldered gray-haired Judge every morning as he ~~marched~~ down & the Post Office. "Showing the Yankees what a Southern gentleman can do," he added; and strode home again with his letters and papers. ## Up at the great pillared house they lingered long over the Princeton letter, - the Judge & his frail wife, his sister and

41-9-434

IP

that growing daughters. "It'll make a man of him," said the Judge. "College is the place." And then he asked the shy little waitress, "Well, Jennie, how's your John?" and added reflectively, "Too bad, too bad your mother sent him off,— it will spoil him." And the waitress wondered.

Thus in the fair = a way Southern village the world lay waiting, half consciously, the coming of two young men, and dreamed in an inarticulate way of new things that would be done and new thoughts that all would think. And yet it was singular that no one thought of two Johns,— for the black folk thought of one John, and he was black; and the white folk thought of another John, and he was white. And neither world thought the other world's thought, save with a vague

41-9-435

unrest.

Up in Johnstown, at the Institute, we were long puzzled at the case of John Jones. For a long time the clay seemed unfit for any sort of moulding. He was loud and boisterous, always laughing and singing, and never able to work consecutively at anything. He did not know how to study; he had no idea of thoroughness; and with his tardiness, carelessness, and appalling good humor, we were sore perplexed. One night we sat in faculty-meeting, worried and serious; for Jones was in trouble again. This last escapade was too much, and so we solemnly voted, "That Jones, on account of repeated disorder and inattention to work, be suspended for the rest of the term." It seemed to us that the first time life ever struck Jones as a really serious thing was when the Dean told him he must leave school. He stared at the gray-haired man

blankly, with great eyes. "Why, – why," he faltered; "but – I haven't graduated!" Then the dean slowly and clearly explained, ~~and recounted~~ reminding him of the tardiness and the carelessness, of the poor lessons and neglected work, of the noise and disorder, until the fellow hung his head in confusion. Then he said quickly, "But you won't tell mammy and Kister, – you won't write Mammy now, will you? For if you won't I'll go out into the city and work, and come back next term and show you some thing." So the dean promised faithfully, and John shouldered his little trunk, ~~and~~ giving neither word nor look to the giggling boys, and walked down the Carlisle ~~the Market~~ street to the great city, with sober eyes and a set and serious face.

41-9-437

Perhaps we imagined it, but somehow it seemed to us that the serious look that crept over his boyish face that afternoon never left it again. When he came back to us he went to work with all his

rugged strength. It was a hard struggle, for things did not come easily to him, — a few crowding memories of early life and teaching came to help him on his new way; but all the world toward which he strove was of his own building, and he builded slow and hard. As the light dawned lingeringly on his new creations, he sat rapt and silent before the vision, or wandered alone over the green campus peering through and beyond the world of men into a world of thought. And the thoughts at times puzzled him sorely; he could not see just why the circle was not square, and carried it out (56) spell decimal places, one midnight, — would have gone further, indeed, had not the matron rapped for lights out. He caught terrible colds lying on his back in the meadows of nights, trying to think out the solar system; he had grave doubts as to the ethics of the Fall of Rome, and strongly suspected the Germans of being thieves and rascals despite his text-books; he pondered

41-9-438

long over every new Greek work, & wondered why they meant that and why it could mean something else, and how it ~~seemed~~ must have felt & think all things in Greek. So he thought and puzzled along for himself, - passing heedlessed where others skipped merrily, and walking steadily through the difficulties where the rest stopped and surrendered.

Thus he grew in body and soul, and with him his clothes seemed to grow and arrange themselves; coat sleeves got longer, cuffs appeared, and collars got less soiled. Now and then his boots shone, and a new dignity crept into his walk. And we who saw daily a new thoughtfulness growing in his eyes, began to expect something of this plodding boy. Thus he passed out of the preparatory school into college, and we who watched him felt four more years of change, which almost transformed the tall grave man who bowed & as commencement morning. He had left his green thought-world and come back

41-9-439

& a world of motion and of men. He looked now for the first time sharply about him, and wondered he had seen so little before. He ~~felt~~ grew slowly & ~~feel~~ aware for the ~~first~~ first the Veil that lay between him and the white world; he first noticed now the oppression that had not seemed oppression before, differences that erst while seemed natural, restraints and slights that in his boyhood days had gone unnoticed or been greeted with a laugh. He felt angry now when men did not call him Mister, he clenched his hands at the "Jim Crow" cars, and chafed at the color-line that hemmed in him and his; a tinge of sarcasm crept into his speech, and a vague bitterness into his life; and he sat long hours wondering and planning a way around these crooked things. Daily he found himself shrinking from the choked and narrow life of his native town. And yet he always planned & go back to Altamaha,—

1-9-15

always planned to work there. Still, more and more as the day approached he hesitated with a nameless dread; and even the day after graduation he received with eagerness the offer of the Dean to send him North with the quartette during the summer vacation, to sing for the Institute. A breath of air before the plunge, he said to himself in half apology.

It was a bright September afternoon; and the streets of New York were brilliant with moving men. They reminded John of the sea, as he sat in the square and watched them, so changelessly changing, so bright and dark, so grave and gay. He scanned their rich and faultless clothes, the way they carried their hands, the shape of their hats; he peered into the hurrying carriages. Then, leaning back with a sigh, he said, "This is the World." The notion suddenly revived him to see where the world was going; so many of the richer and ~~brighter~~ brighter seemed

hurrying all one way. So when a tall light-haired young man and a little talkative lady came by, he rose half- hesitatingly and followed them. Up the street they went, past stores and gay shops, across a broad square, until with a hundred others they entered the high portal of a vast building. He was pushed toward the ticket-office with the others, and felt in his pocket for the new five-dollar bill he had hoarded. There seemed really no time for hesitation, so he drew it bravely out, passed it to the busy clerk, and received simply a ticket but no change. When at last he realized that he had paid five dollars to enter he knew not what, he stood stock-still amazed.

"Be careful," said a low voice behind him; "you must not lynch the colored gentleman simply because he's in your way," and a girl looked up

2hh-6-11

roguishly into the eyes of her fair-haired escort. A shade of annoyance passed over the escort's face. "You will not understand us at the South," he said, half-impatiently, as if continuing an argument. "With all your professions, one never sees in the North so cordial and intimate relations between white and black as are every-day occurrences with us. Why, I remember my closest play-fellow in boyhood was a little Negro named (after me), John, and surely no two, — well!"

The man stopped short and flushed to the roots of his hair, for there directly beside his reserved orchestra chairs sat the Negro he had stumbled over in the hall-way. He hesitated, and grew pale with anger, called the usher and gave him his card, with a few peremptory words, and slowly sat down. The lady deftly changed the subject.

All this John did not see, for he sat in

Feb 69
41-9-443

[p. 287 MISSING]

of all?) and if ~~He~~ he had called what right had ~~He~~ he to call when a world like this lay open before ~~men~~ men? ~~human souls~~.

¶ Then the movement changed, and fuller, mightier harmony swelled away. He looked thoughtfully across the hall, and wondered why the beautiful gray-haired woman looked so listless, and what the little man could be whispering about. He would not like to be listless and idle, he thought, for he felt with the music the movement of power within him. If he but had some master-work, some life-service, hard, — aye, bitter hard, but without the cringing and sickening servility, without the ~~shameless~~ cruel hurt that hardened his heart and soul. When at last a soft ~~light~~ sorrow crept across the violins, there came to him the vision of a far-off home, the great eyes of his sister, and the dark drawn face of his mother. And his heart sank below the waters, even as the sea-sand

4444-6-14

sinks by the shores of Altamaha, only to be lifted aloft again with that last ethereal wail of the swan that grieved and faded away into the sky.

¶ It left John sitting so silent and rapt that he did not for some time notice the usher tapping him lightly on the shoulder and saying politely, "Will you step this way, please, Sir?" He A little surprised, he arose quickly at the last tap, and turning to leave his seat looked full into the face of the fair-haired young man. For the first time the young man recognized his dark boyhood playmate, and John knew that it was the Judge's son. The white John started, lifted his hand, and then froze into his chair; the black John smiled lightly, then grimly, and followed the usher down the aisle. The manager was sorry, very, very sorry - but he explained that some mistake had been made in selling

S44-6-15

the gentleman a seat already disposed of; he would repaid the money, of course, and indeed felt the matter keenly, and so forth, and — before he had finished John was gone, walking hurriedly across the square and down the broad streets, and as he passed the park he buttoned his coat and said, "John Jones, You're a natural-born fool." Then he went to his lodgings and wrote a letter, and tore it up; he wrote another, and threw it in the fire. Then he seized a scrap of paper and wrote: "Dear Mother & Sister — I am coming — John."

41-9-446

"Perhaps," said John, as he settled himself on the train, "perhaps I am to blame myself in struggling against my manifest destiny simply because it looks hard and unpleasant. Here is my duty & Altamaha plain before me; & perhaps they'll let me help settle the Negro.

problems there, — perhaps they would. "I will go unto the King which is not according to the law, and if I perish, I perish." And then he mused and dreamed, and planned a life-work; and the train flew south.

Down in Altamaha, after seven long years, all the world knew John was coming. The homes were scrubbed and scoured, — above all, one; the gardens and yards had an unwonted trimness, and Jenny bought a new gingham. With some finesse and negotiation, all the dark Methodists and Presbyterians were induced to join in a monster welcome at the Baptist church; and as the day drew near, warm discussions arose on every corner as to the exact extent and nature of John's accomplishments. It was noontide on a gray and cloudy day when he came. The black town flocked to the depot, with a little of the white at the edges, — a happy throng, with "good

Mawnings;" and "Howdys", and laughing and joking and jostling. Mother sat yonder in the window watching; but Sister Jenny stood on the platform, nervously fingering her dress,— tall and lithe with soft brown skin and loving eyes peering from out tangled a wilderness of hair. John rose gloomily as the train stopped, for he was thinking of the Jim Crow car; he stepped to the platform, and paused. a little dingy station, a ~~jostling~~ black crowd gaudy and dirty, a half-mile of dilapidated ~~streets~~ shanties along a struggling ditch of mud. An overwhelming sense of the sordidness and narrowness of it all seized him; he looked in vain for his mother, kissed coldly the tall strange girl who called him brother, spoke a short day word here and there; then, lingering neither for handshaking nor gossip, started silently up the street, raising his hat merely to the last eager old aunty, and her open-mouthed astonishment. The people were distinctly

41-6-48

bewildered. This silent, cold man, — was this John? Where was his smile and hearty hand-grasp? "'Peared kind o' down in the mouf," said the Methodist preacher thoughtfully. "Seemed monstus stuck up," complained a Baptist sister. But the white postmaster from the edge of the crowd expressed the opinion of his folks plainly: "That dam nigger," said he, as he shouldered the mail and arranged his tobacco, "has gone north and got plum full o' fool ~~notts~~ notions;" but they won't work in Altamaha." And the crowd melted away.

The meeting of welcome at the Baptist Church was a failure. Rain spoiled the barecue, and thunder turned the milk in the ice-cream. When the speaking came at night, the house was crowded & overflowing. The three preachers had especially prepared themselves, but somehow John's manner seemed & threw a blanket over

4-9-44

everything,— he seemed so cold and preoccupied, and had so strange an air of restraint that the Methodist brother could not warm up to his theme and elicited not a single Amen; the Presbyterian prayer was but feebly responded to, & even the Baptist preacher, though he awakened faint enthusiasm, got so mixed up in his favorite sentence that he had to close it by stopping fully fifteen minutes sooner than he meant. The people moved uneasily in their seats as John rose & reply. He spoke slowly and methodically. This age, he said, demanded new ideas; we were far different from those men of the 17th & 18th centuries,— with broader ideas of human brotherhood and destiny. Then he spoke of the rise of charity and popular education, and particularly of the spread of wealth and work. The question was, then, he added, reflectively, looking at the low discolored ceiling, what part the Negroes of

spell out

11-9-45

this land
~~Dream~~ would take in the striving of the
new century. He sketched in vague out-
line the new academy ~~college~~ that
might rise among these hills, of the
charitable and philanthropic work that
might be organized, of money raised
for banks and factories. Finally he
urged unity, deprecated especially religious
and denominational bickering. "To-day,"
he said, with a smile, "the world
cares little whether a man be Baptist
or Methodist, or indeed a church man
at all, so long as he is good and true.
What difference does it make whether a
man be baptized in river or wash-bowl,
or not at all? Let's leave all that little-
ness, and look higher." Then, thinking
of nothing else, he slowly sat down.
A painful hush seized that crowded
mass. Little had they understood of what
he said, for he spoke an unknown tongue,
— save the last word about baptism; that

41-9-451

they knew, and they sat very still while the clock ticked (then) at last a low suppressed snarl came from the Amen corner, and an old bent man arose, walked over the seats and climbed straight up into the pulpit. He was wrinkled and black, with scant gray (and) tufted hair; his voice & hands shook as with palsy; but on his face lay the intense rapt look of the religious fanatic. He seized the bible with his rough huge hands; twice he raised it inarticulate, and then fairly burst into words, with rude & awful eloquence. He grieved, swayed, & bent; then rose aloft in perfect majesty, till the people moaned and wept, ~~swayed~~ wailed & shouted, and a wild shrieking arose from the corners where all the pent-up feeling of the hour gathered itself and rushed into the air. John never knew clearly what the old man said; he only felt himself held

254-6-11

up & scorn and seathing denunciation for trampling on the true Religion, and he realized with amazement that all unknowingly he had put rough rude hands on something this little world held sacred. He arose silently, and passed out into the night. Down toward the sea, ^ he went, in the pitiful star-light, half-conscious of the girl who followed timidly after him. When at last he stood upon the bluff, he turned & his little sister and looked upon her sorrowfully, remembering ~~half~~ ~~with sudden pain~~ ~~he shame~~, ^ how little thought he had ^ given her. He put his arm about her and let her passion of tears spend itself on his shoulder.

Long they stood together, peering over the gray grim water.

"John," She said, "does it make everyone — unhappy, when they study and know lots of things?"

He paused and smiled. "I am afraid it does," he said.

"And, John, are you glad you studied?"

41-9-453

"Yes," came the answer, slowly but positively. She watched the flickering lights upon the sea, and said thoughtfully:

"I wish I was unhappy, — and — and," putting both arms about his neck, "I think I am, a little, John."

It was several days later that John walked up to the Judge's house to ask for the privilege of teaching the Negro school. The Judge himself met him at the front door, and stared a little hard at him, and said brusquely, "Go 'round to the kitchen door, John, and wait." Sitting on the kitchen steps, John stared at the corn thoroughly perplexed. What on earth had come over him? Every step he made offended someone. He had come to save his people, and before he left the depot he had hurt them. He sought to teach them at the church, and had outraged their deepest feelings. He had schooled himself to be respectful to the Judge, and then blundered into his front door.

11-9-454

And all the time he had meant right, — and yet, and yet, somehow he found it so hard & strange & fit his old surroundings again, & to find his place in the world about him. And yet the could not remember that he used to have any difficulty in the past, when life was glad and gay. The world seemed smooth and easy then. Perhaps, — but his sister came to the kitchen door just then and said the judge awaited him.

The judge sat in the dining-room amid his morning's mail, and he did not ask John to sit down. He plunged squarely into the business. "You've come for the school, I suppose. Well, John, I want to speak to you plainly. You know I'm a friend to your people. I've helped you and your family, and would have done more if you had'nt got the notion of going off. Now I like the Colored people, and sympathize with all their reasonable aspirations; but

41-9-455

you and I both know, John, that in this country the Negro must remain subordinate, and can never expect & be the equal of White men. In their place, your people can be honest and respectful; and God knows, I'll do what I can & help them. But when they want & reverse nature, and rule White men, and marry white women, and sit in my parlor, then, by God! we'll hold them under if we have & lynch every Nigger in the land. Now, John, the question is, are you, with your education and Northern notions, going & accept the situation and teach the darkies & be faithful servants and laborers as your fathers were, — I knew your father, John, he belonged & my brother, and he was a good Nigger. Well — well, are you going & be like him, or are you going & try & put fool ideas of rising and equality into these folks head, and make them discontented and unhappy?"

41-9-454

Hal 65

"I am going & accept the situation, Judge Henderson,"

answered John, with a brevity that did not escape the keen old man. He hesitated a moment, and then said shortly, "Very well, — will try you a while. Good morning."

It was a full month after the opening of the Negro school that the other John came home, tall, frank and headstrong. A proud man was the judge, and it was a goodly sight to see the two swinging down Main Street together. And yet all did not go smoothly between them, for the younger man could not and did not veil his contempt for the little town, and plainly had his heart set on New York. Now the one cherished ambition of the Judge was to see his son mayor of Altamaha, representative to the legislature, and — who could say? — Governor of Georgia. So the argument often waxed hot between them. "Good heavens, father," the younger man would say, after dinner, as he lighted a cigar and stood by the fireplace; "you surely don't

41-9-457

The mother wept, the sisters sang. The whole white town was glad.

expect a young fellow like me to settle down permanently in this — this God-forgotten town with nothing but mud and Negroes?"
"I did," the Judge would answer, laconically; and on this particular day it seemed from the gathering crowd that he was about to add something more emphatic; but neighbors had already begun to drop in to admire his son, and the conversation drifted.

41-9-458

"Heah that John is livenin' things up at the darky school," volunteered the postmaster, after a pause.

"What now?" asked the Judge, sharply.

"Oh, nothin' in particular, — just his almighty air and uppish ways. B'lieve I did heah something about his givin' talks on the French Revolution, equality and such like. He's what I call a dangerous nigger."

"Have you heard him say anything out of the way?"

"Why, no, — but Sally, our girl, told my wife a lot of wt. Then, too, I don't need to hear: a nigger

what wont say Sir to a white man, or — "

¶ "Who is this John?" interrupted the son.

¶ "Why, its little black John, Peggy's son, — your old playfellow."

¶ The young man's ~~fa~~ face flushed angrily, and then he laughed.

¶ "Oh," said he, "it's the darky that tried to force himself into a seat beside the lady I was escorting — "

¶ But Judge Henderson wanted to hear no more. He had been nettled all day, and now at this he rose with a half-smothered oath, took his hat and cane and walked straight to the school-house

¶ For John, it had been a long hard pull to get things started in the rickety old shanty that sheltered his school. The Negroes were rent into factions for and against him, the parents were careless, the children irregular and dirty, and books pencils and slates largely missing. Nevertheless he struggled hopefully on, and seemed to see at last some glimmering of dawn. The attendance was larger and the children were a

11-6-15

shade cleaner this week. Even the booby class in reading showed a little comforting progress. So John settled himself with renewed patience this ~~morning~~ afternoon.

"Now, Mandy," he said, cheerfully, "that's better; but you must'nt chop your words up so: — 'If - the - man — goes.' Why, your little brother even wouldn't tell a story that way, now would he?"

"Naw, suh, he caint talk."

"All right; now let's try again: 'If the man —'"

"John!"

The whole school started in surprise, and the teacher half= arose, as the red angry face of the Judge appeared in the open doorway.

"John, this school is closed. You children can go home and get to work. The white people of Altamaha are not spending their money on black folks, to have their heads crammed with impudence and lies. Clear out! I'll lock the door myself."

41-9-460

~~The~~ Up at the great pillared house the tall young son wandered aimlessly about after his father's abrupt departure. In the house there was little to interest him; the books were old & stale, — the local newspaper flat, and the women had retired with headaches and sewing. He tried a nap; but it was too warm. So he ~~wandered~~ sauntered out into the fields, complaining disconsolately, "Good Lord! how long will this imprisonment last!" He was not a bad fellow, — just a little spoiled and self-indulgent, and as headstrong as his proud father. He seemed, a young man pleasant to look upon, ~~too debonair, I guess~~ as he sat on the stile that led from the fields & the pines idly swinging his legs (and smoking). "Why, there is'nt even a girl worth getting up a respectable flirtation with," he growled. ~~And~~ Just then his eye caught a tall willowy ~~little~~ figure hurrying toward him on the narrow path. He looked with interest at

41-9-461

41-9-462

At first, & then Aunt Ant a laugh as he said, "Well, I declare if it isn't Jenny, the little brown kitchen-maid! Why, I never noticed before what a trim little body she is before. Hello, Jenny! Why, you haven't kissed me since I came home," he said gaily. The young girl stared at him in surprise and confusion, ~~amazement~~ faltered something inarticulate, and attempted to pass. But a mischievous mood had seized the young idler, and he caught at her arm ~~again~~. Frightened, she slipped by; and half angry he turned and ran after her through the tall pines.

Yonder, toward the sea, at the end of the path, came John slowly, with his head down. He had turned wearily homeward from the school house; then, thinking to shield his mother from the blow, started to meet his sister as she came from work and break the news of his dismissal to her. "I'll go away," he said slowly;

...white city below.

And if you will notice, night after night, there is one dark form that ever hurries last and late toward the twinkling lights of Swain Hall, - for Jones is never on time. A long, straggling fellow he is, brown and hard-haired, who seems to be growing straight out of his clothes, and walks with a half-apologetic roll. He used perpetually to set the quiet dining-room into waves of merriment, as he stole to his place after the bell had tapped for prayers; he seemed so perfectly awkward. And yet one glance at his face made one forgive him much, - that broad good-natured smile in which lay no bit of art or artifice, but seemed just bubbling good-nature and genuine satisfaction with the world.

41-9-403

He came to us from Altamaha, away down there beneath the gnarled oaks of South-eastern Georgia, where the sea sings to the sands and the sands listen till they sink half-drowned beneath the waters, rising only here and there in long low islands. The white folk of Altamaha voted John a good boy, - fine plough-hand, hood in the rice-fields, handy everywhere, and always good-natured and respectful. But they shook their heads when his mother wanted to send him off to school. "It'll spoil him - ruin him," they sais; and they talked as though they knew. But full half the Black folk followed him proudly to the station, and carried his queer little trunk and many bundles. And there they shook and shook hands, and the girls kissed him shyly and the boys clapped him on the back. So the train came, and he pinched his little sister lovingly, and put his great arms about his mother's neck, and then was away with a puff and a roar into the great yellow world that flamed and flared about the doubtful pilgrim. Up the coast they hurried, past the squares and palmettos of

of Savannah, through the cotton-fields and through the weary night, to Millville, and came with the morning to the noise and bustle of Johnstown.

And they that stood behind, that morning in Darien, and watched the train as it noisily bore playmate and brother and son away to the world, had thereafter one ever-recurring word, -"When John comes." Then what parties there were to be, and what speakings in the churches; what new furniture in the front room, -perhaps a new front room; and there would be a new school-house, with John as teacher; and then perhaps a big wedding; all this and more - when John comes. But the white people shook their heads.

At first he was coming at Christmas-time,- but the vacation proved too short; and then, next summer,- but times were hard and schooling costly, and so, instead, he worked in Johnstown. And so it drifted to the next summer, and the next, - till playmates scattered, and mother grew gray, and sister went up to the Judge's kitchen to work. And still the legend lingered, - "when John comes."

Up at the Judge's they rather liked this refrain; for they too had a John - a fair-haired frank-faced boy, who had played many a long summer's day to its close with his darker name sake. "Yes,sir! John is at Princeton, sir," said the broad-shouldered gray-haired Judge every morning as he marched down to the post-office. "Showing the yankees what a Southern gentleman can do," he added; and strode home again with his letters and papers. Up at the great pillared house they lingered long over the Princeton letter, - the Judge and his frail wife, his sister and growing daughters. "It'll make a man of him," said the Judge. "College is the place." and then he asked the shy little waitress, "Well, Jennie, how's you John?" and added reflectively "Too bad, too bad your mother sent him off, - it will spoil him." And the waitress wondered.

1896-6-14

Thus in the far-away Southern village the world lay waiting, half-consciously, the coming of two young men, and dreamed in an inarticulate way of new things that would be done and new thoughts that all would think. And yet it was singular that noone thought of two Johns, - for the black folk thought of one John, and he was black; and the white folk thought of another John, and he was white. And neither world thought the other world's thought, save with a vague unrest.

Up in Johnstown, at the Institute, we were long puzzled at the case of John Jones. For a long time the clay seemed unfit for any sort of molding. He was loud and boisterous, always laughing and singing, and never able to work consecutively at anything. He did not know how to study; he had no idea of thoroughness; and with his tardiness, carelessness, and appalling good humor, we were sore perplexed. One night we sat in faculty-meeting, worried and serious; for John Jones was in trouble again. This last escapade wass too much, and so we solemnly voted, "That Jones, on account of repeated disorder and inattention to work, be suspended for the rest of the t erm"

It seemed to us that the first time life ever struck Jones as a really serious thing was when the Dean told him he must leave school. He stared at the grey-haired man blankly, with great eyes. "Why,- why," he faltered; "but - I haven't graduated!" Then the Dean slowly and clearly explained, reminding him of the tardiness and the carelessness, of the poor lessons and neglected work, of the noise and disorder, until the fellow hung his head in confusion. Then he said quickly, "But you won't tell mammy and sister, - you won't write mammy now, will you? For if you won't I'll go out into the city and work, and come back next term and show you something." So the dean promised faithfully, and John shouldered his little trunk, giving neither word nor look to the giggling boys, and walked down Carlisle

Street to the great city, with sober eyes and a set and serious face.

Perhaps we imagined it, but someway it seemed to us that the serious look that crept over his boyish face that afternoon never left it again. When he came back to us he went to work with all his rugged strength. It was a hard struggle, for things did not come easily to him,- few crowding memories of early life and teaching came to help him on his new way; but all the world toward which he strove was of his own building, and he builded slow and hard. As the light dawned lingeringly on his new creations, he sat rapt and silent before the vision, or wandered alone over the green campus peering through and beyond the world of men into a world of thought. And the thoughts at times puzzled him sorely; he could not see just why the circle was not square, and carried it out five-six decimal places one midnight, - would have gone further, indeed, had not the matron rapped for lights out. He caught terrible colds lying on his back in the meadows nights trying to think out the solar system; he had grave doubts as to the ethics of the Fall of Rome, and strongly suspected the Germans of being theives and rascals despite his text-books; he pondered long over every new Greek work, and wondered why this meant that and why it couldn't mean something else, and how it must have felt to think all things in Greek. So he thought and puzzled along for himself, - pausing perplexed where others skipped merrily, and walking steadily through the difficulties where the rest stopped and surrendered.

41-9-469

Thus he grew in body and soul, and with him his clothes seemed to grow and arrange themselves; coat sleeves got longer, cuffs appeared, and collars got less soiled. Now and then his boots shone, and a new dignity crept into his walk. And we who saw daily a new thoughtfulness growing in his eyes, began to expect something of this plodding boy, Thus he passed out of the preparatory school into college, and we who watched him felt four more years of change, which almost transformed the tal

most transformed the tall grave man who bowed to us commencement morning. He had left his queer thought-world and come back to a world of motion and of men. He looked now for the first time sharply about him, and wondered how he had seen so little before. He grew slowly to feel almost for the first the Veil that lay between him and the white world; he first noticed now the oppression that had not seemed oppression before, differences that erstwhile seemed natural, restraints and slights that in his boyhood days had gone unnoticed or been greeted with a laugh. He felt angry now when men did not call him Mister, he clenched his hands at the "Jim Crow"cars and chafed at the color line that hemmed in him and his. A tinge of sarcasm crept into his speech, and a vague bitterness into his life; and he sat long hours wondering and planning a way around these crooked things. Daily he found himself shrinking from the choked and narrow life of his native town and yet he always planned to go back to Altamaha, always planned to work there. Still, more and more as the day approached he hesitated with a nameless dread; and even to the day after graduation he seized with eagerness the offer of the Dean to send him North with the quartette during the summer vacation, to sing for the Institute. A breath of air before the plunge, he said to himself in half apology.

It was a bright September afternoon; and the streets of New York were brillian with moving men. They reminded John of the sea, as he sat in the square and watched them, so changelessly changing, so bright and dark, so grave and gay, He scanned their rich and faultless clothes, the way they carried their hands, the shape of their hats; he peered into the hurrying carriages. Then, leaning back with a sign, he said, "This is the World." The notion suddenly seized him to see wher the world was going; so many of the richer and brighter seemed hurrying all one way. So when a tall light-haired young man and a

little talkative lady came by, he rose half-hesitatingly and followed them. Up the street they went, past stores and gay shops, across a broad square, until with a hundred others they entered the high portal of a vast building.

He was pushed towared the ticket-office with the others, and felt in his pocket for the new five-dollar bill he had hoarded. There seemed realy no time for hesitation, so he drew it bravely out, passed it to the busy clerk, and received simply a ticket but no change. When he at last realized that he had paid five dollars to enter he knew not what, he stood stock-still amazed. "Be careful," said a low voice behind him; "you must not lynch the Colored gentlemean simply because he's in your way," and a girl looked up roguishly into the eyes of her fair-haired escory. A shade of annoyance passed over the escort's face. "You will not understand us in the South," he said, half impatiently, as if continuing an argument. "With all your professions, one never sees in the North so cordial and intimate relations between white and black as are every-day occurrences with us. Why, I remember my closest play-fellow in boyhood was a little Negro named after me and surely no two, - well!" The man stopped short and flushed to the roots of his hair, for there directly beside his reserved orchestra chairs sat the Negro he had stumbled over in the hall-way. He hesitated, and grew pale with anger, called th usher and gave him his card, with a few peremptory words, and slowly sat down. The lady deftly changed the subject.

All this John did not see for he sat in

...and if he had called what right had he to call when a world like this lay open before men?

Then the movement changed, and fuller, mightier harmony swelled away. He looked thoughtfully across the hall, and wondered why the

41-9-468

the beautiful gray-haired woman looked so listless, and what the little man could be whispering about. He would not like to be listless and idle, he thought, for he felt with the music the movement of power within him. If he but had some master-work, some life-service,- aye, bitter hard, but without the cringeing and sickening servility, without the cruel hurt that hardened his heart and soul. When a last a soft sorrow crept across the violins, their came to him the vision of a far-off home,- the great eyes of his sister, and the dark, drawn face of his mother. And his heart sank below the waters, even as the sea-sand sinks by the shores of Altamaha, only to be lifted aloft again with that last ethereal wail of the swan that quivered and faded away into the sky.

It left John sitting so silent and rapt that he did not for sometime notice the usher tapping him lightly on the shoulder and saying politely, "Will you step this way, please, Sir?" A little surprised, he arose quickly at the last tap, and turning to leave his seat looked full into the face of the fair-haired playmate, and John knew that it was the Judge's son. The white John started, lifted his hand, and then froze inot his chair; the black John smiled lightly, then grimly, and followed the usher down the aisle. The manager was sorry, very, very sorry,- but he explained that some mistake had been made in selling the gentleman a seat already disposed of; he would refund the money of course, and indeed felt the matter keenly, and so forth, and - before he had finished John was gone, walking hurriedly across the square and sown the broad streets, and as he passed the park he buttoned his coat and said, "John Jones, you're a natural-born fool." Then he went to his lodgings and wrote a letter, and tore it up; he wrote another, and threw it in the fire. Then he seized a scrap of paper and wrote;

41-9-469

"Dear Mother and Sister - I am coming - John."

"Perhaps," said John, as he settled himself on the train, "perhaps I am to blame myself in struggling against my manifest destiny simply because it looks hard and unpleasant. Here is my duty to Altamaha plain before me; perhaps they'll let me help settle the Negro problems there,- perhaps they Won't. I will go unto the King which is not according to the law, and if I perish, I perish." And then he mused and dreamed, and planned a life-work; and the train flew south.

Down in Altahama, after seven long years, all the world knew John was coming. The homes were scrubbed and scoured, - above all, one; the gardens and yards had an unwonted trimness, and Jenny bought a new gingham. With some finesse and negotiation, all the dark Methodists and Presbyterians were induced to join in a monster welcome at the Baptist church; and as the day drew near, warm discussions arose on ev ry corner as to the exact extent and nature od John's accomplishments. It was noontide on a gray and cloudy day when he came. The black town flocked to the depot, with a little of the white at the edges,- a happy throng, with a"good mawnings," and "Howdy", and laughing and joking and jostling. Mother sat yonder in the window watching; but sister Jenny stood on the platform, nervously fingering her dress,- tall and lithe with soft brown skin and loving eyes peering from out of a tangled wilderness of hair. John rose gloomily as the train stopped, for he was thinking of the Jim Crow car; he stepped to the platform, and paused; a little dingy station, a black crowd gaudy and dirty, a half-mile of dilapedated shanties along a straggling ditch of mud. An overwhelming sense of the sordidness and narrowness of it all seized him; he looked in vain for his mother, kissed coldly the tall strange girl who called him brother, spoke a short dry work here and there; then lingering neith r for hand-shaking nor gossip, started silently up the street, raising his hat merely to the last

4-9-4h

eager old aunty, to her open-mouthed astonishment. The peoples were distinctly bewildered. This silent, cold man, - was this John? Where was his smile and hearty hand-grasp? "'Peared kind o'down in the mouf," said the Methodist preacher thoughtfully. "Seemed monstrus stuck up,"complained a Baptist sister. But the white postmaster from the edge of the crowd expressed the opinion of his folks plainly; "That dam nigger," said he, "as he shouldered the mail and arranged his tobacco, "ha s gone north and hot plum full o' fool notions; but they won't work in Altamaha." And the crowd melted away.

The meeting of welcome at the Baptist Church was a failure. Rain spoiled the barbecue, and thunder turned the milk in the ice-cream. When the speaking came at night, the house was crowded to overflowing. The three preachers had especially prepared themselves, but somehow John's manner seemed to throw a blanket over everything,- he seemed so cold and preoccupied, and had so strange an air of restraint that the Methodist brother could not warm up to his theme and elicitednot a single Amen; the Presbyterian prayer was but feebly responded to, and even the Baptist preacher, though he wakened faint enthusiasm, got so mixed up in his favorite sentence that he had to close it by stopping fully fifteen minutes sooner than he meant. The people moved uneasily in their seats as John rose to reply. He spoke slowly and methodically. The age, he said, demanded new ideas; we were far different from those men of the seventeenth and eighteenth centuries, - with broader ideas of human brotherhood and destiny. Then he spoke of the rise of charity and popular education, and particularly of the spread of wealth and work The question was, then, he added, reflectively, looking at the low discolored ceiling, what part the Negroes of the land would take in the striving of the new century. He sketched in vague outling the new academy that might rise among these pones, of the charitiale and philanthropic work that might be organized, of money saved for banks and

business. Finally he urged unity, deprecated especially religious and denominational bickerings. "Today," he said, with a smile, "the world cares little whether a man be Baptist or Methodist, or indeed a church man at all, so long as he is good and true. What difference does it make whether a man be baptized in river or wash-bowl, or not at all? Let's leave all that littleness, and look higher." Then, thinking of nothing else, he slowly sat down. A painful hush seized that crowded mass. Little had they understood of what he said,- for he spoke an unknown tongue,- save the last word about baptism; that they knew, and they sat very still while the clock ticked. Then at last a low suppressed snarl came from the Amen corner, and an old bent man arose, walked over the seats and climbed straight up into the pulpit. He was wrinkled and black, with scant, gray and trifled hair; his voice and hands shook as with palsy; but on his face lay the intense rapt look of the religious fanatic. He seized the Bible with his rough, huge hands; twice he raised it inarticulate, and fairly burst into words with rude and awful eloquence. He quivered, swayed, and bent; then rose aloft in perfect majesty, till the people moaned and wept, wailed and shouted, and a wild shreiking arose from the corners where the pent-up feeling of the hours gathered itself and rushed into the air. John never knew clearly what the old man said; he only felt himself held up to scorn and scathing denunciation for trampling on the true Religion, and he realized with amazement that all unknowingly he had put rough rude hands on something this little world held sacred. He arose silently, and passed out into the night. Down toward the sea hewent in the fitful star-light, half-conscious of the girl who followed timidly after hom. When at last he stood upon the bluff, he turned to his little sister and looked upon her sorrowfully, remembering with sudden pain how little thought he had given her. He put his arm about her and let her passion of tears spend itself on his shoulders.

41-9-472

Long they stood together, peering over the grey, grim water.

"John," she said, "Does it make everyone unhappy when they study and know lots of things?"

He paused and smiled, "I am afraid it does," he said.

"And, John, are you glad tou studied?"

"Yes," came the answer, slowly but positively.

She watched the flickering lights upon the sea, and said thoughtfully; "I wish I was unhappy - and - and," putting both arms about his neck, "I think I am a little, John."

It was several days later that John walked up to the Judge's house to ask for the priviledge of teaching the Negro school. The Judge himself met him at the front door, stared a little hard at him and said brusquely, "Go 'round to the kitchen door, John, and wait." Sitting on the kitchen steps, John stared at the corn, thoroughly perplexed. What on earth had come over him? Every step he made offended someone. He had come to save his people, and before he left the depot he had hurt them. He sought to teach them at the church, and had outraged their deepest feelings. He had schooled himself to be respectful to the Judge, and then blundered into his front door. And all the time he had meant right, - and yet, and yet, somehow he found it so hard and strange to fit his old surroundings again, to find his place inthe world about him. He could not remember that he used to have any difficulty in the past, when life was glad and gay. The world seemed smooth and easy then. Perhaps,- but his sister came to the kitchen door just then and said the Judge wanted him.

41-9-473

The Judge sat in the dining-room amid his mornings's mail, and he did not ask John to sit down. He plunged squarely into the business. "You've come for the school, I suppose. Well, John, I want to speak to you plainly. You know I'm a friend to your people. I've helped you and your family, and would have done more if you hadn't got the notion of

going off. Now I like the Colored people, and sympathize with all their reasonable aspirationa; but you and I both know, John, that in this country the Negro must remain subordinate, and can never expect to be the equal of white men. In their place, your people can be honest and respectful; and God knows, I'll do what I can to help them. But when they want to reverse nature, and rule white men, and marry white women, and sit in my parlor, then, by God! We'll hold them under if we have to lynch every nigger in the land. Now, John, the question is, are you, with your education and northern notions, going to accept the situation and teach the darkies to be faithful servants and laborers as your father were,- I knew your father, John, he belonged to my brother, and he was a good nigger. Well-Well, are you going to be like him, or are you going to try to put fool ideas of rising and equality into these folks head, and make them discontented and unhappy?"

"I am going to accept the situation, Judge Henderson," answered John, with a brevity that did not escape the keen old man. He hesitated a moment, and then said shortly, "Very well,- we'll try you awhile. Good morning."

It was a full month after the opening of the Negro school that the other John came home, tall, frank, and head-strong. The mother wept, the sisters sang. The whole white town was glad. A proud man was the Judge, and it was a goodly sight to see the two swinging down Main Street together. And yet all did not go smoothly between them, for the younger man could not and did not veil his contempt for the little town, and plainly had his heart set on New York. Now the one cherished ambition of the Judge was to see his son, Mayor of Altamaha, representative to the legislature, and - who could say? - Governor of Georgia. So the argument often waxed hot between them. "Good heavens, father," the younger man would say, after dinner, as he lighted a cigar and stood by

the fireplace; "You surely don't expect a young fellow, like me, to settle down permanently in this - God-forsaken town with nothing but mud and Negroes?" "I did," the Judge would answer, laconically; and on this particular day it seemed from the gathering scowl that he was about to add something more emphatic; but neighbors had already begun to drop in to admire his son, and the conversation drifted.

"Heah that John is livenin' things up at the darky school," volunteered the postmaster, after a pause.

41-9-475

"What now?" asked the Judge sharply.

"Oh, nothin' in particular, - just his almighty air and uppish ways. B'lieve I did heah something about his givin' talks on the French Revolution, - equality, and such like. He's what I call a dangerous nigger."

"Have you heard him say anything out of the way?"

"Why no,- but Sally ,our girl, told my wife a lot of rot. Then, too, I don't need to hear; a nigger what won't say Sir to a white man, or-"

"Who is this John?" interrupted the son.

"Why its little black John, Peggy's son, - your old play-fellow."

The young man's face flushed angrily, and then he laughed.
"Oh,"said he, "Its the darky that tried to force himself into a seat beside the lady I was escorting -"

But Judge Henderson waited to hear no more. He had been nettled all day, and now at this he rose with a half-smothered oath, took his hat and cane and walked straight to the school house.

For John, it had been a long, hard pull to get things started in the rickety old shanty that sheltered his school. The Negroes were ren into factions for and against him, the parents were careless, the children irregular and dirty, and books, pencils, and slates largely missing. Nevertheless he struggled hopefully on, and seemed to see at last some glimmering of dawn. The attendance was larger and the children were a shade cleaner this week.

Even the booby class in reading showed a little comforting progress. So John settled himself with renewed patience this afternoon.

"Now," Mandy, " he said, cheerfully, "that's better; but you mustn't chop your words up so; - If- the- man- goes. Why your little brother even wouldn't tell a story that way, now would he?"

"Naw, suh, he caint talk."

"All right; now let's try again; If the man -".

"John!"

The whole school started in surprise, and the teacher half-arose, as the red angry face of the Judge appeared in the open doorway.

"John, this school is closed. You children can go home and get to work. The white people of Altamaha are not spending their money on black folds to have their heads crammed with impudence and lies. Clear out! I'll lock the door myself."

Up at the great pillared house the tall young son wandered aimlessly about after his father's abrupt departure. In the house there was little to interest him; the books were old and stale, - the local newspaper flat, and the women had retired with headaches and sewing. He tried a nap; but it was too warm. So he sauntered out into the fields, complaining disconsolately, "Good Lord! how long will this imprisonment last!" He was not a bad fellow, just a little spoiled and self-indulgent, and as headstrong as his proud father. He seemed a young man pleasant to ll look upon, as he sat on the stile that lead from the fields to the pines idly swinging his legs and somking. "Why, there isn't even a girl worth getting up a respectable flirtation with," he growled. Just then his eyes caught a tall willowy figure hurrying toward him on the narrow path. He looked with interest at first, then burst into a laugh as he said, "Well, I declare if it isn't Jenny, the little brown kitchen-maid! Why I never noticed before what a trim little body she is. Hello, Jenny! Why, you haven't kissed me since I came home," he said gaily. The young

41-9-476

girl stared at him in surprise and confusion, - faltered something inarticulate, and attempted to pass. But a mischievous mood had seized the young idler, and he caught at her arm. Frightened, she slipped by and half angr he turned and ran after her through the tall pines.

Yonder, toward the sea, at the end of the path, came John slowly, with his head down. He had turned wearily homeward from the schoolhouse; then, thinking to shield his mother from the blow, started to meet his sister as she came from work and break the news of his dismissal to her. "I'll go away," he said slow.y;

THE SOULS OF BLACK FOLK

Handwritten draft manuscript of "Of the Sorrow Songs"

Incomplete

The Sorrow Songs

"I walk through the church yard
"To lay this body down
"I know moon-rise, I know star-rise;
"I walk in the moonlight, I walk in the star-light;
"I'll lie in the grave and stretch out my arms,
"I'll go to judgment in the evening of the day
"And my soul and thy soul shall meet that day
"When I lay this body down."

Negro Song.

They that walked in darkness sang songs in the olden days — Sorrow Songs — for they were weary at heart. And so before each [illegible] that I have written I have set a phrase, a haunting echo of these weird old songs in which the souls of the black slave spoke to men. Ever since I was a child these songs have stirred me strangely. They came to me out of the South unknown to me, one by one, and yet at once I knew them as of me and of mine. Then in after years when I came to Nashville I saw the great temple builded of these songs towering over the pale city. To me

49-14-1

Jubilee Hall seemed ever made of the songs themselves and its bricks were red with the blood and dust of toil. Out of them rose for me morning noon and night bursts of wonderful melody, full of the voices of my brothers and sisters, full of the voices of the past.

Little of beauty has America given the world save rude grandeur God himself stamped on her bosom; but the human spirit in this new world has expressed itself in vigor and ingenuity as well as in beauty. And so by fateful chance the Negro folk song — the rhythmic cry of the slave — stands today not simply as the sole American music but as the most beautiful expression of human experience born this side the seas. It has been neglected it has been and is half-despised, and above all it has been persistently mistaken and misunderstood, but nevertheless it still remains as the singular spiritual heritage of the nation and the greatest gift of the Negro people.

49-14-2

Away back in the Thirties the ~~echo~~ melody of these slave songs first stirred the nation; but the melodies were soon half forgotten; Some passed into common songs. And then ~~origin~~ some was forgotten; others were caricatured on the "minstrel" stage and their memory died away. There came in war time came that singular Port Royal experiment after the capture of Hilton Head and perhaps for the first time ~~in many generations~~ the North met the southern slave face to face and hand to hand. The Sea Islands of the Carolinas, where they met, were filled with a black folk of ~~singularly~~ primitive type, touched and moulded less by the the world about them than any others outside the black belt. Their appearance was uncouth, their language funny and their singing stirred men with a singularly power. ~~A few~~ Thomas Wentworth Higginson hastened to tell of these songs in the pages of the Atlantic, and Miss McKim and others sang upon the world their ~~broader~~ rare beauty of these songs. But the world

Title "Near the lake where drooped the willow"

72	72	72	72
51	57	54	46
21	15	18	

listened only half credulously. until the Fisk Jubilee Singers sang the slave songs so deeply into the world's heart that they can never forget them again.

There was once a blacksmith's son born at Castor, New York, who in the changes of time taught school in Ohio and helped defend Cincinnati from Kirby Smith. Then he fought at Chancellorsville and Gettysburg and finally served in the Freedmen's Bureau at Nashville. Here he formed a Sunday school class of black children in 1866 and sang with them and taught them to sing. And then they begged him to sing & when once the glory of the Jubilee songs passed into the soul of George L. White he knew his life work was set. These Negroes sang to world as they had sung to him. So in 1871 the pilgrimage of the Fisk Jubilee singers began North & Cincinnati they rode. - 4 half clothed black boys & 5 girls (women), led by a man with a cane & a pistol. They stopped at Wilberforce, the oldest of Negro schools, where a black bishop blessed them. When they went, frozen cold & starving

shut out of hotels, and cheerfully cheered at, ever northward, and ever ~~and yet~~ the magic of their wonderful Melody, ~~yet~~ thrilling hearts until ~~was~~ a burst of applause in the congregational council at Oberlin revealed them to the world ~~whose voices the continent~~. They came to New York and Henry Ward Beecher danced and other and metropolitan dailies & welcome them, even through the Herald, cheered at his "Nigger minstrels". So their Songs conquered till they ~~any~~ across the land and across the sea, ~~many~~ before the Queen and Scotland and Ireland, Kaiser, in Holland and Cumberland. Seven years they sang and ~~they~~ brought back a hundred and fifty thousands of dollars to found Fisk University

Since that day they have been imitated — sometimes well as by the singers of Hampton and Atlanta, sometimes ill by struggling quartets. Caricature has swept against & shut the ground of the genuine identity, ~~of~~ and has filled the air with many debased melodies which vulgar ears cannot know from the real. But the true Negro folk song still lives in the hearts of those who have truly ~~they~~ sung, and in the heart of the Negro folk

49-14-5

What are these songs and what do they mean? I know little of music and can say nothing in technical phrase, but I know something of men & know how I know that these songs are the articulate message of the slave to the world. They tell in no uncertain days that life was joyous to the black slave, careless and happy, I can easily easily believe this of some, of many. But not all the past could though it rose from the dead can gainsay the heart-touching witness of these songs. They are the music of a an unhappy people, of the children of disappointment; they tell of death and suffering and unvoiced longing toward a truer world, of weird wanderings and hidden ways. The songs are indeed the siftings of centuries; and the music is, for more ancient than. The words and in it we can trace the dark and there the signs of development.

49-14-6

My grandfather's grandmother was served by an evil the black Dutch trader two centuries ago. And coming to the valleys of the Hudson and Housatonic, Black little, & lithe, she shimmered and shrank in the trivial with minds, and crooned a heathen melody to her child, thus:

(looked longingly at the hills and often)

49-14-7

The child sang it to his children and they to their children, and so two hundred years it has travelled down to us and we sing to our children knowing as little as our fathers what it words mean but know well the meaning of its music.

This was primitive African music, and it may be seen in larger form in ~~and~~ the strange chant in which ~~I hear a voice before~~ the coming of John ~~Herald's~~ "I walked through the Valley" — "you may bury me in the East, you may bury me in the West but I'll hear the Trumpet sound in that morning" — the voice of exile.

49-14-10

Ten master songs, more or less, one may black

Ten more songs more or less on my block
from this forest of melody — songs of undoubted
Negro origin and wide popular currency, and
songs peculiarly characteristic of the slave. One
of these I have just mentioned. Another whose
strains begin this book is: "Nobody knows the
trouble I've seen." When struck with a sudden
poverty the United States refused to fulfil its promises
of land to the ~~Sea-Islanders~~ freedmen, a brigadier-
general went down to the Sea Islands to carry the
news. An old woman on the outskirts of the
throng began singing this song; all the mass
joined with her, swaying. And the soldier wept.

The third song is the cradle song which
all men know — "Swing low, sweet chariot," whose
bars begin the "Passing of the First Born". Then there
is the song of the waters, "Roll, Jordan, Roll" — a mighty
chorus with minor cadences, which prefaces the
"Faith of the Fathers". There were many songs of
the fugitive, like that which opens The Wings of
Atalanta and like the familiar "Been a listening". The
seventh is a song of the End and the Beginning —
"My Lord what a morning, when the stars begin
to fall. A strain of this is placed before the Dawn of Free-

4-14-9

of death

The third song is the cradle song, which all men know — "Swing low, sweet chariot" — whose bars begin the life story of Alexander Cummell. Then there is the song of many waters — "Roll Jordan Roll", a mighty chorus with minor cadences. There were many songs of the fugitive like that which opens the Wings of Atalanta and the more familiar "Dear a' listening" The seventh is the the song of the End and the beginning — "My Lord what a morning! when the stars begin to fall"; a strain of this is placed before the Dawn of Freedom. The song of groping "My way's cloudy begins the Meaning of Progress; The ninth is the song of this chapter — "Wrestlin Jacob, the day is a-breaking" — a dream of hopeful strife. The last master song is the song of songs, "Steal away" — springing from the Faith of the Fathers

~~There are many~~

49-14-8

The song of groping, "My way's cloudy" begins the Meaning of Prayers; the ninth is the song of this chapter, "Wrestlin' Jacob, the day is a-breakin'" — a paean of hopeful strife. The last master song is the Song of songs: "Steal away."

There are many other of the Negro folk songs as sinking and characteristic as these, and as for instance the three elegies on the fourth eighth & ninth Chapters others I am sure could easily make a more representative selection on more scientific principles. There are two still other songs which seem to me a step removed from the more primitive types: these is the mare-like medley "Bright Sparkles", the phrase of which hails the Black Belt; the Easter carol: "Dust, Dust and Ashes"; the dirge, "My Mother's took her flight and gone home" and that burst of melody Bursting over the Passing of the 7th Born: "I hope my Mother will be there in that beautiful world on high." These represents a third step in the development of the slave song of which "You may bury me in the East" (Chapter XIII) is the finest, and songs like "March on", and "steal away" are the second. The first is African music, the second Afro-american, while the third is a blending of Negro music with the music heard in

4-9-14-11

the foster-land. The result is still distinctly Negro and the method of blending original, but the elements are both Negro and caucasian. One might go further and find a fourth step in this development where the songs of white Americans have been distinctly influenced by the slave songs or have incorporated whole phrases of Negro melody. Side by side, two growth this development has gone the debasements and imitations — the ~~assorted~~ Negro "minstrel" songs, many of the "gospel" hymns, and some of the contemporary "coon" songs — a mass of music in which the novice may easily lose himself and never find the real Negro melodies

49-14-12

In these songs, I have said, the slave spoke to the world. The message left us however is not clear and articulate. Words and music have lost each other and new and cant phrases of a deeply ~~undistinct~~ theology have displaced the older sentiment. Once in a while we catch a strange word of an unknown tongue as the "Mighty Myo" — which figures as a river of death More often slight words or mere doggerel are joined to music of singular sweetness. Purely secular

songs are few in number partly because many of them were turned into hymns by a change of words, partly because the frolics were ~~[illegible]~~ more seldom heard by the stranger and the music less often caught. Of all the songs however the music is drolmelly sorrowful. ~~Taken into their moods~~ The ten masterssongs I have mentioned tell in word and music of trouble and exile of strife and sorrow; they grope toward some unseen power and sigh for rest in the End

The words that are left to us are not without interest and cleaned of accident dross they conceal much of real poetry and meaning beneath conventional ideology and mannerism that sadly. Like all primitive folk the slave stood near to nature's heart. Life was a "rough and rolling sea" like the brown Atlantic of the sea islands; the "Wilderness" was the home of the ~~Unseen~~ God, and the "lonesome valley" led to the way of life. "Winter will soon be over" was the picture of life and death to a tropical imagination and about all the sombre weird thunder storms of the South awed and impressed the Negro; at times the melody seemed to them "mournful"; at

49-14-131

Comes imperious:

"My Lord calls me
"He calls me by the thunder
"The trumpet sounds it in my soul"

The monotonous toil and exposure is painted in these words: One sees the plowmen in the hot mid-furrow singing:

"Dere's no rain to wet you
"Dere's no sun to burn you
"O push along believer
"I want to go home"

The bowed and bent old man cries, with thrice repeated wail:

"O Lord, keep me from sinking down"

And he rebukes the devil of doubt who can whisper:

"Jesus is dead and God's gone away"

~~And~~ Yet the soul-hunger is there, the restlessness of the savage, the wail of the wanderer and the plaint is put in one little phrase:

49-14-14

Over their inner thoughts and their relations of the slaves
one with another the shadow of a veil of
fear ever hung so that we get but glimpses here
and there and also with them eloquent omissions
and silence. Mother and child are sung but
seldom Father; fugitive and weary wanderer
call for pity and affection but there is little
of wooing and wedding; the rocks and the mountains
are well known, but Home is unknown. Strange
blending of love and selflessness sings through the
refrain:

"Yonder's my ole Mudder
"Been waggin' at de hill so long
"Bout time she cross over
"Git home home-by"

49-14-15

Else where comes the cry of the "motherless" and
the "Farewell farewell my only child".

Love songs are scarce and fall with two
categories - the frivolous and light and the sad
Of deep successful love there is ominous silence
and in one of the oldest of the these there
is a depth of hushed and moaning:

a black woman sang of this song: "It can't be sung without a full heart and a troubled spirit." The same voice sings these thots sings in the German folk-song:

"Jetz Geh' i' ans brunele, trink' aber net"

Of death the Negro showed little fear but talk of it familiarly and even fondly and simply a crossing of the waters, perhaps – who knows? – back to his ancient forests again. Later days transformed his fatalism and amid the dust and dirt the hated song

Dust dust and ashes fly over my grave
But the Lord shall bear my spirit home

49-14-16

The things evidently borrowed from the surrounding world undergo characteristic change when they enter the mouth of the slave. Especially is this true of bible phrases. "Weep, O captive Daughter of Zion" is grimly turned into "Zion, weep-a-low" and the wheels of ~~the~~ Ezekiel are turned always in the negro dreamy of the slave, ~~and~~ and he says:

"There's a little wheel a'turning in-a-my heart"

As in olden time the words of these hymns were improvised by some leader musical of the religious band. The circumstances of the galley-slave forever, and the limitations of allowable the rythm of the songs

Thompson confined the poetry for the most part to simple ~~lines~~ or double lines and they seldom were expanded to quatrains or longer tales, although there are some few examples of sustained efforts, chiefly paraphrases of the bible.—

~~Dr Moses~~. Three short verses of verses ~~Scripture~~ have always attracted me — the one that heads this chapter: one line of which Thomas Wentworth Higginson has ~~pathetically~~ said: "Never it seems to me, since man first knew all suffered was his infinite longing for ~~rest~~ home uttered more plaintively" The second and third are descriptions of the Last Judgment: the one a late reformation with traces of ancient influence:

" O the stars in the elements are falling
" And the moon drips away into blood
" And the ransomed of the Lord are returning unto God
" Blessed be the name of the Lord"

and the other earlier & more barbaric picture from the Low countries:

" Michael haul the boat ashore
" Then you'll hear the horn they blow
" Then you'll hear the trumpet sound
" Trumpet sound the world around
" Trumpet sound for rich & poor
" Trumpet sound the Jubilee
" Trumpet sound for you & me."

49-14-14

Through all the sorrow of the Sorrow Songs there breathes a hope — a faith in the ultimate justice of the things. The minor cadences of despair ~~rise to not~~ change to ~~gradually~~ even to triumph and calm confidence. Sometimes it is faith in life, sometimes a faith in death, sometimes assurance of boundless justice in some fair world beyond ~~death~~. But whichever it is the meaning is always clear: that sometime somewhere men will judge men by their ~~souls~~ and not by their ~~skins~~, ~~and~~ Is such a hope justified? Do the Sorrow-songs sing true?

The silently growing assumption of this age is that the probation of races is past and that the backward races of today are of proven worthlessness and not worth the saving. Such an assumption is the arrogance of ~~our~~ a people unlearned in the humanity and ignorant of the deeds of men. A thousand years ago such an assumption, easily possible, would have made it difficult for the Teuton to have his right to life; two thousand years ago such dogmatism, readily welcome, would have scouted the idea of blond races ever leading

49-14-18

civilization. So woefully ~~slow~~ unlearned is sociological knowledge that the meaning of progress, the meaning of swift and slow drive human doing, and the limits of human perfectability are veiled unanswered question on the shores of science. Why should Aeschylus have sung 2000 years before Shakespeare was born? Why has civilization flourished in Europe and flickered flamed and died in Africa? So long as the world stands meekly dumb before such questions shall ~~a~~ this nation preclude its ignorance and unhallowed prejudices by denying freedom of opportunity ~~to~~ to those who brought the Sorrow Songs to the Seats of the Mighty?

Your country? How came it yours? Before the pilgrims landed we were here. Hear we have brought our three gifts and mingled them with yours: a gift of story and song — soft sorrow melody in an ill-harmonized and unmelodious land; the gift of swart and brawn to beat back the wilderness, conquer the soil and lay the foundations of this vast economy empire 500 years earlier than your weak hands

49-14-64

could have done it; the Hand a gift of the Spirit:
around us the history of this land has centred
for three a hundred years; out of the nations
heart we have called all that was ~~worst~~ least to Whittle
and outdone
^ all that was ~~best~~ worst; fire and blood, prayer and
sacrifice have hallowed over this people and they
have found peace only on the altars of the God
of Right. Nor has our gift of the Spirit been merely
passive. Actively we have women ourselves
with the very mark and sway of this nation; we
fought these battles, shared these sorrows, mingled
our blood
^ with theirs ~~blood~~, and ^ generation after generation have pleaded with a headstrong 49-14-20
careless people & despise not Justice, Mercy and
Truth lest the nation be smitten with a
curse. Our song our toil, our cheer and warning
have been given to this nation in blood-brotherhood.
Does not these gifts worth the giving? Is ~~that~~ not
this work and glory?

as was this human life and song? Would America have been America with out her Negro people?

Even so is the hope that sang in the songs of my fathers well sung. If somewhere in this whirl and chaos of things there dwells Eternal Good, powerful yet masterful, then anon in this good time America shall rend the Veil and the prisoned shall go free Free, free as the sunshine trickles down the morning with those huge rondures of space, free as yonder fresh young voices that come welling up to me from the caverns of buried centuries — swelling with song, instant with life, tremulous treble and darkening bass. My children, my little children are singing to the sunshine & thus they sing:

Let us cheer the weary traveller
Cheer the weary traveller, God
Let us cheer the weary sinner
Along the heavenly way.

THE SOULS OF BLACK FOLK

Handwritten draft manuscript of "The After-Thought"

The After-Thought

Hear my cry, O God the Reader; vouchsafe that this my book fall not still-born into the world-wilderness. O Let these spring. Gentle One, from out its leaves ~~[illegible]~~ vigor of ~~thought~~ and thoughtful deed & reap the harvest wonderful. O Let the ears of a guilty people tingle with truth, and seventy millions sigh for the righteousness which exalteth nations, in this drear day when human brotherhood is [illegible] mockery and a snare. O Thus in Thy good time may infinite reason turn the tangle straight, and ~~[illegible]~~ these crooked marks on a fragile leaf be not indeed

The End.

49-15-1

THE SOULS OF BLACK FOLK

Notes, possibly for this work

~~Sentimentals~~ Hampton

Dere my little soul is agwine to stand

I wonder where my Mother is gone?

My Lord what a morning when the stars
begin to fall.

My brethren don't get weary, Angels brought the
tidings down; don't get weary, I'm hunting
for a home.

Nobody knows the trouble I have seen
Way over Jordan, view the land
If you want to see Jesus go in the Wilderness.
Fare ye the East & fare ye the west – I know
the Other world's not like this.

Every low chariot to the East
Let God's children have some peace
West
Rest
North
Gib me the gold without the dross
South
sing & shout

When ye hear how mourner, when ye hear so
sorry – hear low down in the valley
for to pray

30-22-6

My Lord delivered Daniel why can't he deliver me.

The good old chariot passing by did jar the
Earth & shake the sky
— the Fore-wheel run by Love
the Hind wheel run by Faith
Slow back the powers of Hell
I heard such a Lumbering in the Sky
John saw the Holy Number
Setting on the golden altar

Ole sheep done know de road
De young lambs must find de way
Bright sparkles in the church yard give light
unto the Tomb
Bright summer spring's over Sweet flowers in their
bloom.

My mother once my mother twice, my mother
shall rejoice
In the heaven once in the heaven twice, my mother shall rejoice

O mother don't you love your darling child
I rock me in the cradle all the day
you may lay me down & sleep my mother dear

30-22-4

Judgement, Judgment, Judgment day is a rolling round

Dar's no more slave in the Kingdom Lord!

Here the lambs a crying — O shepherd feed my sheep.

Rise & shine & give God the Glory

My mother's in the word — most done travelling

I hope my mother will be there in that beautiful world on high

Heaven is shining, shining, Lord, heaven is shining full of love.

O walk together Children, don't you get weary.

There's a great camp Meeting in the Promised

O clap your hands children

O but your feet children

Good news: the Chariots a coming

Don't you view dat ship come sailin'
Dat ship is heavy loaded
She neither reels nor tollers
She's loaded with bright angels.
O how do you know they are angels
I know dem by der mourning

36-22-4

O Lamb — comes my Jesus
O how do you know it's Jesus
I know him by his shining
Hallelujah.

—

Going to Join the Holy number

—

Zion Meek-a-lon

—

[a picture of Judgment]
of the great gittin' up morning H 65

—

Sweet turtle dove, she cry so sweet
Muddy the water so deep, & me had
a little meeky in the morning
for to hear Gabriel's trumpet sound.

—

Winter winter winter'll soon be over children

—

O Lord, O my Lord, O my good Lord
Keep me from sinking down.

—

Been listening all the night long

—

Pine alley - Babylon a falling & see no more

—

Dust dust & ashes fly over on my grave
But the Lord shall bear my spirit home

36-22-3

I'm a rolling thro' an unfriendly world.

—

O when my way's cloudy
Go send them angels down.

—

We see all you do & hears all you say
my lord's a-riding all the time

—

There a little wheel a turning in my heart.

—

Seek & ye shall find, knock & the door shall be
opened, ask & it shall be given & the Love
come trickling down.

12-22-95

30-22-1 6

I'll be there in the morning, when the general
roll is called.

—

See four & twenty elders ~~bowing~~ on their knees
& will all rise together & wave the palm
tree
O Lord have mercy of you please.

—

There a wheel in a wheel

Yell Jesus done – done all I can
" " " " " "
" " " " " "
an' I can't do no mo'.

—

If you don't like your neighbor
Don't carry his name abroad
But take it in your forehead
And carry it to the Lord.

—

Sun don't set in the morning
Light shine round the world

—

Let the heaven light shine on me
For low is the way & the rubber bright world
O brother you must bow so low

—

Humble humble humble yourselves
gwine & live a-humble & the Lord.

—

Now is your time,
what yo' gwine & do when the Lamb burns
down

—

I've been toting de the hill so long.

30-22-10

O wrestlin Jacob, Jesus day is abreakin'
I will not let thee go.
(repeat)
O I hold my brother with a tremblin' hand
I would not let him go
I hold my sister &c
O Jacob do hang from a tremblin limb,
He would not let him go.
&c
De lord will bless my soul
O wrestling Jacob Jacob &c.

He has been with us Jesus
He is still with us Jesus
He will be with us Jesus,
Be with us to the end

Atlantic
1/x 685

Massa Jesus give me a little broom
for to sweep my heart clean

" We utter no new truth when we affirm
that whatever of nationality there is in the music
of America she owes to her dusky children
Century V 411

God got plenty a room
De foxes have a hole & dee birdes have a nest

Dew low May bow low Martha
For Jesus come & lock de door
& carry de keys away
Sail sail over yonder & view de promised land
For Jesus &c
Weep O may bow low Martha.
For Jesus
Sail sail my true believer
" " over yonder
May bow low, Martha bow low
For Jesus come & lock de door
And carry de keys away

I know moon-rise, I know star-rise
lay dis body down
I walk in the moonlyt I walk in the starlyt
& lay this body down
I'll lie in the grave & stretch out my arms
lay this &c
I go & the Judgment in the evening of the day
when I lay &c
& my soul & your soul will meet in the day
when I lay &c

THE SOULS OF BLACK FOLK

Draft prefaces and revisions for 1953 edition

To Prague 4

Book

PREFACE (To Souls of Black Folk

FIFTY YEARS AFTER

This book is not a Tract for the Times. It is a picture of conditions in the United States at the beginning of the 20th century; as they affected ~~xx~~ American Negroes, descendants of African slaves brought to America in the 16th Century and after.

I was born and educated in the United States, going through the public schools and Harvard University. I had had a glimpse of Europe, studying three semesters at the University of Berlin where I was a member of seminars under Adolph Wagner and Gustav Schmoller. I travelled in Germany, Austria-Hungary, France, Italy and England.

I had seen in Europe the activities of the Socialist Party and so had come to know something of Socialism. I knew of Karl Marx but had not read the "Communist Manifesto."

The world to which I returned to take up work was to an extent narrow and provincial. My life as I conceived it was to settle the so-called Negro Problem, that is, to find a place in American life for persons of Negro descent, without slavery or caste.

The essays which form the different chapters were written at different times and places between 1896 and 1903 but were finally brought together and put into book form while I was teaching at Atlanta University. This was a private institution carried on for the benefit of Negro students and taught mostly by white Americans from the North, with two or three colored teachers of which I was one. I was head of the Department of Economics and History and most of my time went to making a systematic study of American Negroes, taking up different aspects of the problem from time to time and then repeating study of the same subject in

1/30/16

ten year cycles.

Immersed, therefore, in this particular problem largely peculiar to the United States, I had as yet no broad vision of the development of the world at large. That was to come later as I began to see the connection between the problem of the black worker in America and of all workers of all parts of the world.

There are certain points of view expressed in this book which should be explained: for instance, in chapter 7, Jews are mentioned several times and some have got an impression of anti-Semitism. This at the time I stoutly denied; but as I read the passages again in the light of subsequent history, I see how I laid myself open to this possible misapprehension. What, of course, I meant to condemn was exploitation of black labor, [redacted] that it was in this country and at that time in part a matter of immigrant Jews, was incidental and not essential. [redacted] But this illustrates how easily one slips into unconscious condemnation of a whole group. So too, I had at the time no clear conception of the fundamental relations of Capitalism and Socialism.

The republication of this book a half century after it first appeared is of interest, then, to the world as showing how American slavery developed into serfdom, and what had been accomplished a generation after the slaves had been nominally emancipated by Abraham Lincoln . It is, then, from this historical and biographical point of view that the book may be of interest to readers in 1963.

Howard Fast - not read

FIFTY YEARS AFTER (Souls)

My first two books were the "Suppression of the African Slave Trade," my doctor's thesis, which in 1896 became the first volume of the Harvard Historical ~~Series~~ Studies, then came three years later "The Philadelphia Negro," published by the University of Pennsylvania. Both of these were attempted scientific studies with no great popular appeal, but they led to some magazine articles and McClure's magazine asked me for a study of the Black Belt, ~~which~~ This I made but ~~which~~ they did not accept it. Then from Chicago in 1901 came an inquiry for a book.

It was the time when the mid-west was seeking to become a literary and publishing center. The Dial had begun publishing poetry and other literature, and the Brownes, father and son, editors of A.C. McClurg & Co., asked me for a manuscript on some phase of the Negro Problem. I told them that I had nothing but outlined a plan for a major social study of the South along the line of the work I ~~was beginning~~ had begun at Atlanta University in 1898.

They intimated that they sought a more popular work along literary lines and inquired if I could not get together a sufficient number of essays to make a book. With some hesitation I assembled several articles I had already published, some unpublished essays and some which I had in mind. Re-writing and adapting these, I sent them to Chicago with some trepidation, being sure they did not measure up to what I wanted to do and could do with time. They were accepted and appeared as "The Souls of Black Folk" in 1903. I presume at least 100,000 copies were sold slowly in the twenty editions of the book issued up to 1940.

Reading them again a half century later, I think they fairly present my thought at the time and I am better satisfied with them on the whole than I was at first. Naturally they do not reflect entirely my present thought; but they outline a phase of my spiritual development. My social and economic

philosophy was then as I now see it immature, and my outlook on race provincial.

One matter illustrates this. At the time when I had made the study for McClure in South Georgia, I came across a considerable number of immigrants from Russia who had settled in the Black Belt and who together with southern and northern whites were exploiting the Negro workers with little mercy. I referred to these Jews and to the poor whites and Yankees several times in what became the fourth chapter of my book. Jacob Schiff, whom I knew slightly, wrote me later pointing out that my words conveyed an impression of anti-Semitism, as I seemed to be blaming religion or race for the deeds which these men were doing. I resented this strongly, denying that any race prejudice could possibly enter my thinking. Later Rabbi Stephen Wise repeated this charge and I promised to review my words and correct them in future editions if they seemed in error.

1/30/12

I never did this because as I re-read the bare facts which I had chronicled they were true. I could not conscientiously change them. Moreover, I certainly had no conscious desire to malign Jews, knowing only too well myself what race prejudice could do. I therefore continued to let the words stand as I had written them, and did not realize until the horrible massacre of German Jews, ~~proved~~ how even unconscious repetition of ~~the~~ folklore such as the current concept of Jews as more guilty of exploitation than others, had helped the Hitlers of the world.

In planning this reprint, therefore, my first impulse was to eliminate all these references to Jews. But this I finally realized would be historically inaccurate. I have therefore with some regret let the passages ~~re~~ stand as written, believing that other references to Jews in this very book and my evident personal indebtedness to Jewish culture will absolve me from

intentional
blame of unfairness. If it does not, the case but illustrates how easy it is inadvertently to give a totally wrong impression.

especially in race relations

FIFTY YEARS AFTER

Late in the Nineteenth Century, there developed in Chicago, a movement to build a literary and publishing center in the Mid-West. The Brownes, father and son, editors for A.C.Clurg and Company, began looking about for young and unknown authors. I had just published my two first books: a history of the Suppression of the African Slave Trade to America, which was published as the first volume of the new Harvard Historical Studies in 1896. My Philadelphia Negro was published by the University of Pennsylvania in 1899. I had also written a few essays which had been accepted by the Atlantic Monthly, the Dial and some other periodicals.

The McClurg editors wrote me about 1900, asking if I did not have material for a book which they could consider. I was at the time just embarking at Atlanta University, on what I hoped to make my life work; it was to be a broad and exhaustive study of the Negro Problem in the United States. I outlined this project to the editors, but they wanted naturally something more limited and aimed at a popular audience. I therefor undertook to assemble some of my published and unpublished essays, adding a few new ones.

They liked the proposed book and offered publication. I hesitated, because I was sure that with more time and thought I could do a better job; it was in so many respects incomplete and unsatisfactory. But finally I plucked up courage and sent the manuscript off, and fifty years ago, the Souls of Black Folk appeared. It was well received and for next generation ran into a number of small editions.

SEVERAL TIMES I planned to revise the book and bring it abreast of my own thought and answer criticisms. But I hesitated and finally decided to leave the book as first printed, as monument to what I thought and felt in 1903. I hoped in other books to set down changes of fact and reaction. In the present Jubilee edition, I have clung to this decision, and my thoughts of fifty years ago appear again as then written. Only in a few cases, have I made less than a half dozen alterations in word or phrase and then not to change my thought as previously set down, but to avoid any possible misunderstanding today of what I meant to say yesterday.

As I re-read ~~today~~ these messages of a half century ago, I sense two matters which are not so much omissions on my part as indications of what I then did not know or did not realize: one is the influence of Freud and his co-workers in their study of psychology; the other is the tremendous impact on the modern world of Karl Marx.

As a student of James,

Santayana and Royce, I was not unprepared for the revolution in psychology which the Twentieth Century has brought; but the Souls of Black Folk does not adequately allow for unconscious thought and the cake of custom in the growth and influence of race prejudice.

My college training did not altogether omit Karl Marx. He was mentioned at Harvard and taken into account at Berlin. It was not omission but lack of proper emphasis or comprehension among my teachers, of the revolution in thought and action which Marx meant. So perhaps I might end this retrospect simply by saying: I still think today as yesterday that the color line is a great problem of this century. But today I see more clearly than yesterday that back of the problem of race and color, lies a greater problem which both obscures and implements it: and that is the fact that so many civilized persons are willing to live in comfort even if the price of this is the poverty, ignorance and disease of the majority of their fellowmen; that to maintain this privilege, men have waged war until today war tends to become universal and continuous and the excuse for this war continues largely to be color and race

fence of the "stockade," as the county prison is called; the white folks say it is ever full of black criminals, - the black folks say that only colored boys are sent to jail, and they not because they are guilty, but because the State needs criminals to eke out its income by their forced labor.

Immigrants are heirs of the slave baron in Dougherty; and as we ride westward, by wide stretching corn-fields and stubby orchars of peach and pear, we see on all sides within the circle of dark forest a Land of Canaan. Here and there are tales of projects for money-getting, born in the swift days of Reconstruction, - "improvement" companies, wine companies, mills and factories; most failed, and foreigners fell heir. It is a beautiful land, this Dougherty, west of the Flint. The forests are wonderful, the solemn pines have disappeared, and this is the "Oakey Woods", with its wealth of hickories, beeches, oaks and palmettos. But a pall of debt hangs over the beautiful land; the merchants are in debt to the wholesalers, the planters are in debt to the merchants, the tenants owe the planters, and laborers bow and bend beneath the burden of it all. Here and there a man has raised his head above these murky waters. We pass one fenced stock-farm with grass and grazing cattle, that looked very homelike after endless corn and cotton. Here and there are black freeholders: there is the gaunt dull-black Jackson, with his hundred acres. "I says, 'Look up! If you don't look up and can't get up,'" remarks Jackson, Philosophically. And he's gotten up. Dark Carter's neat barns would do credit to New England. His master

35-9-75

helped him to get a start, but when the black man died last fall the master's sons immediately laid claim to the estate. "And them white folks will get it, too," said my yellow gossip.

I turn from these well-tended acres with a comfortable feeling that the Negro is rising. Even then, however, the fields, as we proceed, begin to redden and the trees disappear. Rows of old cabins appear filled with renters and laborers, - cheerless, bare, and dirty, for the most part, although here and there the very age and decay makes the scene picturesque. A young black fellow greets us. He is twenty-two, and just married. Until last year he had good luck renting; then cotton fell, and the sheriff seized and sold all he had. So he moved here, where the rent is higher, the land poorer, and the owner inflexible; he rents a forty-dollar mule for twenty dollars a year. Poor lad! - a slave at twenty-two. This plantation, owned now by a foreigner, was a part of the famous Bolton estate. After the war it was for many years worked by gangs of Negro convicts, - and black convicts then were even more plentiful than now; it was a way of making Negroes work, and the question of guilt was a minor one. Hard tales of cruelty and mistreatment of the chained freemen are told, but the county authorities were deaf until the free-labor market was nearly ruined by wholesale migration. Then they took the convicts from the plantations, but not until one of the fairest regions of the "Oakey Woods" had been ruined and ravished into a red waste, out of which only a Yankee or an immigrant could squeeze more blood from debt-cursed tenants.

35-9-76

tropical luxuriance of the southwest. Then, too, there are fewer signs of a romantic past, and more of systematic modern land-grabbing and money-getting. White people are more in evidence here, and farmer and hired labor replace to some extent the absentee landlord and rack-rented tenant. The crops have neither the luxuriance of the richer land nor the signs of neglect so often seen, and there were fences and meadows here and there. Most of this land was poor, and beneath the notice of the slave-baron, before the war. Since then his poor relations and foreign immigrants have seised it. The returns of the farmer are too small to allow much for wages, and yet he will not sell off small farms. There is the Negro Sanford; he has worked fourteen years as overseer on the Ladson place, and "paid out enough for fertilizers to have bought a farm," but the owner will not sell off a few acres.

Two children - a boy and a girl - are hoeing sturdily in the fields on the farm where Corliss works. He is smoothOfaced and brown, and is fencing up his pigs. He used to run a successful contton-gin, but the Cotton Seed Oil Trust has forced the price of ginning so low that he says it hardly pays him. He points out a stately old house over the way as the home of "Pa Willis." We eagerly ride over, for "Pa Willis" was the tall and powerful black Moses who led the Negroes for a generation, and led them well. He was a Baptist preacher, and when he died two thousand black people followed him to the grave; and now they preach his funeral sermon each year. His widow lives here, - a weasened, sharp-featured

35-9-77

to be thrown almost immediately into relentless and sharp competition with the best of modern workingmen under an economic system where every participant is fighting for himself, and too often utterly regardless of the rights or welfare of his neighbor.

For we must never forget that the economic system of the South to-day which has succeeded the old regime is not the same system as that of the old industrial North, of England, or of France, with their trades-unions, their restrictive laws, their written and unwritten commercial customs, and their long experience. It is, rather, a copy of that England of the early nineteenth century, before the factory acts, - the England that wrung pity from thinkers and fired the wrath of Carlyle. The rod of empire that passed from the hands of Southern gentlemen in 1865, partly by force, partly by their own petulance, has never returned to them. Rather it has passed to those men who have come to take charge of the industrial exploitation of the New South, - the sons of poor whites fired with a new thirst for wealth and power, thrifty and avaricious Yankees, and unscrupulous immigrants. Into the hands of these men the Southern laborers, white and black, have fallen; and this to their sorrow. For the laborers as such there is in these new captains of industry neither love nor hate, neither sympathy nor romance; it is a cold question of dollars and dividends. Under such a system all labor is bound to suffer. Even the white laborers are not yet intelligent, thrifty, and well trained enough to maintain themselves against the powerful inroads of organized

35-9-78

capital. The results among them, even, are long hours of toil, low wages, child labor, and lack of protection against usury and cheating. But among the black laborers all this is aggravated, first, by a race prejudice which varies from a doubt and distrust among the best element of whites to a frenzied hatred among the worst; and, secondly, it is aggravated, as I have said before, by the wretched economic heritage of the freedmen from slavery. With this training it is difficult for the freedman to learn to grasp the opportunities already opened to him, and the new opportunities are seldom given him, but go by favor to the whites.

Left by the best elements of the South with little protection or oversight, he has been made in law and custom the victim of the worst and most unscrupulous men in each community. The crop-lien system which is depopulating the fields of the South is not simply the result of shiftlessness on the part of Negroes, but is also the result of cunningly devised laws as to mortgages, liens, and misdemeanors, which can be made by conscienceless men to entrap and snare the unwary until escape is impossible, further toil a farce, and protest a crime. I have seen, in the Black Belt of Georgia, an ignorant, honest Negro buy and pay for a farm in installments three separate times, and then in the face of law and decency the enterprising American who sold it to him pocketed money and deed and left the black man landless, to labor on his own land at thirty cents a day. I have seen a black farmer fall in debt to a white storekeeper, and that storekeeper go to his farm and strip it of every single marketable article, - mules,

35-9-79

simple old servant who stood for the earlier religious age of submission and humility. With all his laziness and lack of many elements of true manhood, he was at least open-hearted, faithful, and sincere. Today he is gone, but who is to blame for his going? Is it not those very prsons who mourn for him? Is it not the tendency, born of Reconstruction and Reaction, to found a society on lawlessness and deception, to tamper with the moral fibre of a naturally honest and straightforward people until the whites threaten to become ungovernable tyrants and the blacks criminals and hypocrites? Deception is the natural defence of the weak against the strong, and the South used it for many years against its conquerors; to-day it must be prepared to see its black proletariat turn that same two-edged weapon against itself. And how natural this is! The death of Denmark Vesey and Nat Turner proved long since to the Negro the present hopelessness of physical defence. Political defence is becoming less and less available, and economic defence is still only partially effective. But there is a patent defence at hand, - the defence of deception and flattery, of cajoling and lying. It is the same defence which peasants of the Middle Age used and which left its stamp on their character for centuries. To-day the young Negro of the South who would succeed cannot be frank and outspoken, honest and self-assertive, but rather he is daily tempted to be silent and wary, politic and sly; he must flatter and be pleasant, endure petty insults with a smile, shut his eyes to wrong; in too many cases he sees positive personal advantage in deception

THE SOULS OF BLACK FOLK

The Souls of Black Folk

I

OF OUR SPIRITUAL STRIVINGS

O water, voice of my heart, crying in the sand,
All night long crying with a mournful cry,
As I lie and listen and cannot understand
The voice of my heart in my side or the voice of the sea;
O water crying for rest, is it I, is it I?
All night long the water is crying to me.

Unresting water, there shall never be rest
Till the last moon droop and the last tide fail,
And the fire of the end begin to burn in the west;
And the heart shall be weary, and wonder and cry like the sea,
All life long crying without avail,
As the water all night long is crying for me.

ARTHUR SYMONS.

II

OF THE DAWN OF FREEDOM

Careless seems the great Avenger;
History's lessons but record
One death-grapple in the darkness
'Twixt old systems and the Word;
Truth forever on the scaffold,
Wrong forever on the throne;
Yet that scaffold sways the future,
And behind the dim unknown
Standeth God within the shadow
Keeping watch above his own.

LOWELL.

OF MR. BOOKER T. WASHINGTON AND OTHERS

From birth till death enslaved; in word, in deed, unmanned!

. . . . . .

Hereditary bondsmen! Know ye not
Who would be free themselves must strike the blow?

BYRON

IV

OF THE MEANING OF PROGRESS

"Willst Du deine Macht verkünden,
"Wähle sie die frei von Sünden,
"Steh'n in Deinem ew'gen Haus!
"Deine Geister sende aus!
"Die Unsterblichen, die Reinen,
"Die nicht fühlen, die nicht weinen!
"Nicht die zarte Jungfrau wähle,
"Nicht der Hirtin weiche Seele!"

SCHILLER.

V

OF THE WINGS OF ATLANTA

O black boy of Atlanta!
But half was spoken;
The slave's chains and the master's
Alike are broken;
The one curse of the races
Held both in tether;
They are rising — all are rising —
The black and white together.

WHITTIER.

VI

OF THE TRAINING OF BLACK MEN

Why, if the Soul can fling the Dust aside,
And naked on the Air of Heaven ride,
Were 't not a Shame — were 't not a Shame for him
In this clay carcase crippled to abide?

OMAR KHAYYAM (FITZGERALD).

VII

OF THE BLACK BELT

I am black but comely, O ye daughters of Jerusalem,
As the tents of Kedar, as the curtains of Solomon.
Look not upon me because I am black,
Because the sun hath looked upon me:
My mother's children were angry with me;
They made me the keeper of the vineyards;
But mine own vineyard have I not kept.

THE SONG OF SOLOMON.

VIII

OF THE QUEST OF THE GOLDEN FLEECE

But the Brute said in his breast, "Till the mills I grind have ceased,
The riches shall be dust of dust, dry ashes be the feast!

"On the strong and cunning few
Cynic favors I will strew;
I will stuff their maw with overplus until their spirit dies;
From the patient and the low
I will take the joys they know;
They shall hunger after vanities and still an-hungered go.
Madness shall be on the people, ghastly jealousies arise;
Brother's blood shall cry on brother up the dead and empty skies.

WILLIAM VAUGHN MOODY.

OF THE FAITH OF THE FATHERS

Dim face of Beauty haunting all the world,
Fair face of Beauty all too fair to see,
Where the lost stars adown the heavens are hurled, —
There, there alone for thee
May white peace be.

. . . . . .

Beauty, sad face of Beauty, Mystery, Wonder,
What are these dreams to foolish babbling men
Who cry with little noises 'neath the thunder
Of Ages ground to sand,
To a little sand.

FIONA MACLEOD.

XI

OF THE PASSING OF THE FIRST-BORN

'O sister, sister, thy first-begotten,
The hands that cling and the feet that follow,
The voice of the child's blood crying yet,
Who hath remembered me? whohathforgotten?
Thou has forgotten, O summer swallow,
But the world shall end when I forget.

SWINBURNE.

XII

OF ALEXANDER CRUMMELK

Then from the Dawn it seemed there came, but faint
As from beyond the limit of the world,
Like the last echo born of a great cry,
Sounds, as if some fair city were one voice
Around a king returning from his wars.

TENNYSON.

XIII

OF THE COMING OF JOHN

What bring they 'neath the midnight,
Beside the River-sea?
They bring the human heart wherein
No nightly calm can be;
That droppeth never with the wind,
Nor drieth with the dew;
O calm it, God; Thy calm is broad
To cover spirits too.
The river floweth on.

[3] This pledge was renewed in 1640 see Bancroft I 312

to provide effectual regulations to prevent the importation of slaves into the United States; occasioned considerable debate. The gentlemen who opposed it, stated, that if the amendment could have any effect to abolish the African trade, they should, by no means, object to it being recommended; but they contended that the Constitution itself expressly provided against any alteration or amendment of this clause +++++. On the other hand, it was urged, that a traffic in the human species was so wicked in its nature and so inconsistent with the spirit of free government, that if the proposed amendment could not take place, it was proper for the Convention to recommend it as evincing their sense respecting so infamous a traffic." It was

FOREWORD

Since the glory of the West Indian Sugar Empire and the rule of the Cotton Kingdome, there has been consistent effort to rationalize Negro slavery by omitting Africa from world history; so that today it is almost universally assumed that history can be written without particular reference to Negroid peoples. I believe this to be scientifically unsound and also dangerous for logical social conclusions. Therefore I am seeking in this book to remind readers in this crisis of civilization, of how critical a part Africa has played in human history, past and present, and how impossible it is to forget this and rightly explain the present plight of mankind.

I feel now as though I were addressing a crowd of friends and enemies, who ask a bit breathlessly, whose and when is the testimony on which I rely for something that even resembles Authority? To which I return two answers: I am challenging Authority -- even Maspero, Sayce, Reisner, Breasted, and hundreds of other men of highest respectability, who did not attack but studiously ignored the Negro on the Nile and in the world and talked as though black folk were nonexistent, unimportant. They are part of the herd of writers of modern history who declare with Guernier "Seule de tous les continents L'Afrique n'a pas d' histoire!"

49-1-2

In fine, I have done in this book the sort of thing at which every scholar shudders. With meager preparation and all too general background of learning, I have essayed a task, which, to be adequate and complete, should be based upon the research of a lifetime! But I am faced with the dilemma, that either I do this now or leave it for others who have not had the tragedy of life which I have, forcing me to face a task for which they may have small stomach and little encouragement from the world round about. If, out of my almost inevitable mistakes and inaccuracies and false conclusions, I shall have at least clearly stated my main issue -- that black Africans are men in the same sense as white European and yellow Asiatics, and that history can easily prove this -- then I shall rest satisfied even under the stigma of an incomplete and, to many, inconclusive work.

Indeed, I strongly suspect that more and more history instead of pretending to be exact science will be developed as careful guess, laudable wish and "lies agreed upon". Thus only in part will our knowledge of the past be admittedly based on sound scientific evidence.

The bulk of this work was published in 1946 under the title: The World and Africa. In this edition the contents have been rearranged, to some extend rewritten, and certain recent matter added.

1. PHYSICAL AFRICA

Seers say that for full two thousand million years this world out of fiery mist has whirled about the sun in molten metal and viscous crusted ball. That crust, congealing and separating the solids from the liquids, rose and fell in bulging ridges above the boiling sea. Five times the mass of land called Africa emerged and disappeared beneath the oceans. At last, at least a thousand million years ago, a mass of rigid rock lifted its crystal back above the waters and remained. Primeval Africa stretched from the ramparts of Ethiopia to where the copper, diamonds, and gold of South Africa eventually were found. More land arose, and perhaps three hundred million years ago Africa was connected with South America, India, and Australia. As the ocean basins dropped, the eastern half of Africa was slowly raised into a broad, flat arch.

49-1-5

The eastern side of this arch gave way, forming the Indian Ocean, and when the roof of the arch fell in there appeared the great Rift valley. This enormous crack, extending six thousand miles from the Zambesi to Ethiopia and Syria, is said to be the only thing that Martians can descry as they look earthward of a starry night. All the great East African lakes lie in the main rift, and doubtless the Red Sea and the Sea of Galilee are also part of this vast phenomenon. Later, about ten million years ago, a second rift occurred, and rifting and tilting kept on until perhaps a hundred thousand years before our era.

Recurrent change came in geography and climate. Europe and Africa were united by land and separated. Lower Egypt was submerged, and the Mediterranean extended to Persia. Finally, what the geologists call the modern world emerged. In Egypt great rivers poured down the hills between the Red Sea, and the Nile found old and new valleys. The Sahara was crossed by a network of rivers, pouring into a vaster Lake Chad and uniting the Niger, the Congo, and the Nile.

1. PHYSICAL AFRICA

Seers say that for full two thousand million years this world out of fiery mist has whirled about the sun in molten metal and viscous crusted ball. That crust, congealing and separating the solids from the liquids, rose and fell in bulging ridges above the boiling sea. Five times the mass of land called Africa emerged and disappeared beneath the oceans. At last, at least a thousand million years ago, a mass of rigid rock lifted its crystal back above the waters and remained. Primeval Africa stretched from the ramparts of Ethiopia to where the copper, diamonds, and gold of South Africa eventually were found. More land arose, and perhaps three hundred million years ago Africa was connected with South America, India, and Australia. As the ocean basins dropped, the eastern half of Africa was slowly raised into a broad, flat arch.

The eastern side of this arch gave way, forming the Indian Ocean, and when the roof of the arch fell in there appeared the great Rift valley. This enormous crack, extending six thousand miles from the Zambesi to Ethiopia and Syria, is said to be the only thing that Martians can descry as they look earthward of a starry night. All the great East African lakes lie in the main rift, and doubtless the Red Sea and the Sea of Galilee are also part of this vast phenomenon. Later, about ten million years ago, a second rift occurred, and rifting and tilting kept on until perhaps a hundred thousand years before our era.

Recurrent change came in geography and climate. Europe and Africa were united by land and separated. Lower Egypt was submerged, and the Mediterranean extended to Persia. Finally, what the geologists call the modern world emerged. In Egypt great rivers poured down the hills between the Red Sea, and the Nile found old and new valleys. The Sahara was crossed by a network of rivers, pouring into a vaster Lake Chad and uniting the Niger, the Congo, and the Nile.

49-1-5

Gondwanaland, the ancient united continent of Africa, South America, and Asia, was divided into three parts by the new changes which caused the rift valleys. The radioactivity of the inner earth made the crust break apart. We can see by the map how Africa broke from South America and Europe from North America. Changes in climate were caused by the sun, the earth's inner heat, and by two main glacial periods in Africa. The rainfall varied, bringing periods of flood between the glaciers.

The continent of Africa in its final modern form has been described as a question mark, as an inverted saucer, as the center of the world's continents. Including Madagascar, it is three times the size of Europe, four times the size of the United States; and the whole of Europe, India, China, and the United States could be held within its borders. In actual measurement it is nearly square: five thousand miles long by fourthousand six hundred miles wide. But its northern half is by far the larger, with the southern half tapering off. In the middle the equator cuts across Africa, and the whole continent lies mainly within the tropics.

Of the physical aspects of Africa, its relatively unbroken coastline has had the greatest effect upon its history. Although Africa is about three times larger than Europe in area, the coastline of Europe is four thousand miles longer than that of Africa. In other words, Africa has almost no peninsulas, deep bays, or natural harbors. Its low and narrow coast, almost level, rises rapidly to a central plateau with a depression in the center. Thus the great rivers fall suddenly to the ocean, and their navigation is impeded by rapids and falls.

Its five areas include the original Great Plateau with an average elevation of over thirty-five hundred feet, where mountains crowned with snow rise from thirteen to twenty thousand feet. Over these open spaces have always roamed herds of wild animals -- elephants, rhinoceroses, and buffaloes.

49-1-6

The second area is the Great Depression, the basin of the Congo River draining nearly a million and a half square miles. Its average altitude is a thousand feet and it is the bed of a former inland sea. As Stanley described it: "Imagine the whole of France and the Iberian peninsula closely packed with trees varying from twenty to a hundred and eighty feet in height, whose crowns of foliage interlace and prevent any view of sky and sun, and each tree from a few inches to four feet in diameter." In this area lies the Belgian Congo and French Equatorial Africa, Liberia and the British West African colonies.

The fourth area is the Sahara, extending from the Atlantic to the Red Sea. It covers three and a half million square miles and is divided into desert and fertile islands. In the past the Sahara was fertile and had a large population. Its surface today is often a hundred feet below sea level. In the east is Egypt and the Egyptian Sudan. North Africa lies on the Mediterranean with Algeria and Tunisia, Libya and Egypt. There are sense in which it is true that "Africa begins at the Pyrenees," and also that "Europe ends at the borders of the Sahara."

49-1-4

2. ANIMAL AFRICA

Sixty million years ago vast reptiles and dinosaurs wandered over this continent. It became, as the years passed, a zoological garden with wild animals of all sorts. Finally there came domesticated cattle, sheep, and goats, and a tremendous development of insects. As Sir Harry Johnston well remarks, "Africa is the chief stronghold of the real Devil -- the reactionary forces of Nature hostile to the uprise of Humanity. Here Beelzebub, King of the Flies, marshals his vermiform and arthropod hosts -- insects, ticks, and nematode worms -- which more than in other continents (excepting Negroid Asia) convey to the skin, veins, intestines, and spinal marrow of men and other vertebrates the microorganisms which cause deadly, disfiguring, or debilitating diseases, or themselves create the morbid condition of the persecuted human being, beasts, bird, reptile, frog, or fish."

Africa is a beautiful land; not merely comely and pleasant, but haunted with swamp and jungle; sternly beautiful in its loveliness of terror, its depth of gloom, and fullness of color; its heaven-tearing peaks, its selver of endless sand, the might, width, and breadth of its rivers, depth of its lakes and height of its hot, blue heaven. There are myriads of living things, the voice of storm, the kiss of pestilence and pain, old and ever new, new and incredibly ancient.

3. The Great Apes

The anthropoid ape with the great brain who walked erect and used his hands as tools developed upon earth not less than half a million years ago. Traces of him have been found in Africa, Asia, and Europe and in the islands of the sea. Many types which developed have doubtless been lost, but one species has survived, driven hither and yon by cold and hunger, segregated from time by earthquake and glacier and united for defense against hunger and wild beasts.

49-1-8

Groups of this species must have inbred and developed sub-types over periods of tens of thousands of years. Of the sub-species thus developed, scientists have usually distinguished at least three, all of which were fertile in their cross-breeding with one another. In course of time they have given rise to many transitional groups and intermediary types, so that less than two-thirds of the living peoples of today can be decisively allotted to one or the other of the definite subspecies. These subspecies include the long-headed dark people with more or less crinkled hair whom we know as Negroids; the broad-headed yellow people with straight and wiry hair whom we call Mongoloids; and a type between these, possibly formed by their union, with bleached skins and intermediate hair, known as the Caucasoids.

No sooner had these variant types appeared in Central Africa, on the steppes of Asia, and in Europe than they merged again. The importance of these

types was not so much their physical differences and likenesses as their cultural development. As Frobenius says: "With vast and growing weight there begins to emerge today out of the microscopic spectacles of blind eyes, a new conception among living men of the unity of human culture." Inquiring search has made clear "here Greek, there old Mexican spirituality; here European economic development, there pictures of the glacial age; here Negro sculpture, there shamanism; here philosophy, there machines; here fairy tale, there politics."

4. HOMO SAPIENS

Was Africa the cradle of the human race? Did it witness man's first evolution from the anthropoid ape to Homo sapiens? We do not know. Charles Darwin thought that "it is somewhat more probable that our early progenitors lived on the African continent than elsewhere." Sir G. E. Smith agrees with this and says that Africa "may have been the area of characterization, or, to use a more homely phrase, the cradle, both of the anthropoid apes and the human family." From Africa, Negroids may have entered Asia and Europe. On the other hand, the human race originating in Asia or even in Europe may have invaded Africa and become Negroid by long segregation in a tropical climate. But all this is conjecture. Of the origin of the Negro race or of other human races, we know nothing. But we do know that human beings inhabited Africa during the Pleistocene period, which may have been half a million years ago.

"There was once an 'uninterrupted belt' of Negro culture from Central Europe to South Africa. 'These people,' says Griffith Taylor, 'must have been quite abundant in Europe toward the close of the Paleolithic Age. Boule quotes their skeletons from Brittany, Switzerland, Liguria, Lombardy, Illyria, and Bulgaria. They are universal through Africa and through Melanesia, while the Botocudos and the Lagoa Santa skulls of East Brazil show where similar folk penetrated to the New World.' Massey says: 'The one sole race that can be traced among the aborigines all over the earth or below it is the dark race of a dwarf, Negrito type.'"

49-1-9

It seems reasonable to suppose that Negroids originating in Africa or Asia appeared first as Negrillos. The Sahara at that time was probably covered with rivers and verdure and North Africa was in close touch with Mediterranean Europe. There came upon the Negrillos a wave of Negroids who were hunters and fishermen and used stone implements. The remains of an African stone age are scattered over a wide area with amazing abundance, and there is such a resemblance between implements found in Africa and those in Europe that we can apply, with a few differences, the same names. The sequence in culture in Europe resembles the sequence in Africa although they may not have been contemporary.

The most primitive type of stone implement was found in Uganda and is known as the pebble tool. The same pebble industry extended to Tanganyika and the Transvaal. This gave way to the hand-ax culture, which extended over North Africa, the Sahara, Equatorial Africa, West and South Africa. Superb hand axes and other tools are the evidence. Then the middle Paleolithic flake-tool culture spread over wide areas of Africa and is shown by perfect implements in South Africa and other places. The remains indicate a cave-dwelling people with a great variety of tools as well as beads and pottery.

49-1-10

During the Pleistocene period came a new Stone Age, with agriculture, domestic animals, pottery, and the grinding and polishing of stone tools. Evidence of this culture is found in Egypt and North Africa, the Sahara in West Africa, East and South Africa.

The Neolithic culture is of great significance. In Egypt it is found five thousand years before Christ. A thousand years later it changed from flint to copper. The Predynastic Egyptians who represented this culture were settled folk; they hunted and fished, and cultivated grain; made clothes and baskets, used copper, and were distinctly Negroid in physique. Probably they came from the

south, from what is now Nubia. Later there came to Egypt other people of the type corresponding to the modern Beja, who lived in settled communities and used copper and gold. This brown Negroid people, like the modern Beja, Galla, and Somali, mixed increasingly with Asiatic blood, but their culture was African and extended by unbroken thread up the Nile and beyond the Somali peninsula.

The first wave of Negroes were hunters and fishermen and used stone implements. They gradually became sedentary and cultivated the soil and must have developed early artistic aptitudes and strong religious feeling. They built the stone monuments discovered in Negro Africa and the raised stones and carved rocks of Gambia. They did not mix with the Negrillos nor did they dispossess them, but recognized their ancestral land rights and seized unoccupied land. Thousands of years after this first wave of Negro immigrants there came another Negroid migration. The newcomers pushed north and west, dispossessed the Negrillos, and drove them toward the central forests and the deserts. They mixed more with the Negrillos, developed agriculture, the use of cattle and domestic fowl. They invented the working of iron and the making of pottery. Also, those who advanced farthest toward the north mixed with the Mediterranean race in varying degrees, so that sometimes the resulting population seemed white mixed with Negro blood and in other cases blacks mixed with white blood. The languages were mixed in various ways. Thus we had the various Libyan and Egyptian populations. All this migration and mixture took place long before the epoch of the first Egyptian dynasty.

6. THE NEGRO RACE

The name "Negro" originally embraced a clear conception of ethnology -- the African with dark skin, so-called "woolly" hair, thick lips and nose; but it is one of the achievements of modern science to confine this type to a small district even in Africa. Gallas, Nubians, Hottentots, the Congo races, and the Bantus are not "genuine" Negroes from this view, and thus we find that the continent of Africa is peopled by races other than the "geniune" Negro.

49-1-11

Nothing then remains for the Negro in the "pure" sense of the word save, as Waitz says, "a tract of country extending over not more than ten or twelve degrees of latitude, which may be traced from the mouth of the Senegal River to Timbuktu." If we ask what justifies so narrow a limitation, "we find that the hideous Negro-type, which the fancy of observers once saw all over Africa, but which, as Livingstone says, is really to be seen only as a sign in front of tobacco-shops, has on closer inspection evaporated from almost all parts of Africa, to settle no one knows how in just this region. If we understand that an extreme case may have been taken for the genuine and pure form, even so we do not comprehend the ground of its geographical limitation and location. We are here in presence of a refinement of science which to an unprejudiced eye will hardly hold water."

Palgrave says: "As to faces, the peculiarities of the Negro countenance are well known in caricature; but a truer pattern may be seen by those who wish to study it any day among the statues of the Egyptian rooms in the British Museum: the large gentle eye, the full but not overprotruding lips, the rounded contour, and the good-natured, easy, sensuous expression. This is the genuine African model; one not often to be met with in European or American thoroughfares, where the plastic African too readily acquires the careful look and even the irregularity of the features that surrounded him; but which is common enough in the villages and fields where he dwells after his own fashion among his own people; most common of all in the tranquil seclusion and congenial climate of Surinam plantation. There you may find, also, a type neither Asiatic nor European, but distinctly African; with much of independence and vigour in the male physiognomy and something that approaches, if it does not quite reach, beauty in the female. Rameses and his queen were cast in no other mould."

What are the peoples who from vague prehistory emerged as the Africans of today? The answer has been bedeviled by the assumption that there was in Africa a "true" Negro and that this pure aboriginal race was mixed with a mythical "Hamitic race"

49-1-12

which came apparently from neither Europe, Asia, nor Africa, but constituted itself as a "white element" in Negro Africa. We may dismiss this "Hamitic" race as a quite unnecessary assumption and describe the present African somewhat as follows:

5. THE PEOPLE OF AFRICA

At period as early as three thousand years before Christ the people of the North African coastal plains were practically identical with the early Egyptians and present two types: long-headed Negroid people and broad-headed Asiatics. Among the Berber types today are tall and medium long-headed people with broad faces, swarthy skin, and dark eyes. They have many Negroid characteristics, especially toward the south. Beside these there are short, broad-headed people.

These Berbers are the ones who correspond to the ancient Egyptians and who have close relationship to the Neolithic inhabitants of France. Among them today the Negro element is widely represented. It is in every part of Mauritania, where the reigning family itself is clearly of Negro descent. A large strain of Negro blood may also be found in Algeria.

In East Africa we have the Massai, Nandi, Suk, and others, tall, slender, and long-headed. In the case of the Massai the nose is thinner and the color tinged with reddish-brown. The Bari people are tall and the Lutoko very tall. Then there are the Nilotics in the Nile valley, extending south of Khartoum to Lake Kioga. Physically, as in the case of the Shilluk and Dinka, they are tall, very black, long-headed people, often with well-shaped features, thin lips, and high-bridged noses. The Nuba, tall, long-headed men, live in the hills of Kordofan. East of Kordofan are the Fung, with many tribes and with much Asiatic blood; and also broad-headed tribes like the Bongo and the Asande, a mixed people of reddish color with long heads.

On the other side of Africa, the lower and middle portion of the Senegal River forms a dividing line between West African types of Negroes and the Negroes of the Sudan. South of the river are the Jolofs and the Serers. With these are the

49-1-120

Senegalese, including the Tukolor and Mandingo tribes. They are dolichocephalic with broad and narrow noses. They are rather tall, some of them very tall, and their skin is very dark. The Mandingo, or Mandi, are among the most important groups of French Senegal and live between the Atlantic and Upper Niger. They are tall and slender with fine features, beards, and rather lighter skin than that of neighboring Negroes.

Among the most interesting of the West African people south of the Sudan are the Fulani, stretching from the Upper Niger to the Senegal River. They are Negroids, perhaps with Asiatic blood. They are straight-haired, straight-nosed, thin-lipped and long-headed, with slender physiques and reddish-brown color. The Songhay are tall and long-headed with well-formed noses and coppery-brown color. The people of Kanem and the Bagirmi cluster around Lake Chad. They are broad-nosed and dolichocephalic and resemble the Negroes on the Nile. In the east and South Africa are the Wachagga and the Fang and especially the Swahili, mixed people whose language dominates East Africa. They have all possible degrees of physical characteristics from Arabic to Negro. In South Africa there are the Bushmen, short, yellow, with closely-curled hair. Beside them live the Hottentots, probably Bushmen with Bantu admixture and later with white Dutch admixture which gave rise to the so-called "coloured" people.

The Negroes in the neighborhood of the Gulf of Guinea can be differentiated at present chiefly by their languages, which have been called Sudanic. Three great stocks prevail: the Twi, Ga, and Ewe. Belonging to these are the Ashanti, moderately tall men, long-headed with some broad heads; the Dahomey, tall, long-headed, and black; the Yoruba, including the peoples of Benin and Ibo, dark brown or black, closely curled hair, moderate dolichocephaly, and broad-nosed. Their lips are thick and sometimes everted, and there is a considerable amount of prognathism. The Kru, hereditary sailors, are typically Negroid with fine physiques. The Haussa of the Central Sudan are very black and long-headed but not prognathic and with thin noses.

46-1-13

Finally there are the Bantu, who are a congeries of peoples, belonging predominantly to Central and South Africa and occupying the southern two-thirds of black Africa. The Bantu are defined on purely linguistic criteria. The term "Bantu" primarily implies that the tribes included speak languages characterized by a division of nouns into classes distinguished by their prefixes (usually twelve to fifteen), absence of sex-gender in the grammar, and the existence of alliterative concord, the prefix of each class (noun-class) being repeated in some form or another in all words agreeing with any noun of that class in the sentence. It is the reappearance of the prefix in every word in agreement with the noun that gives the alliterative effect.

The southern Bantu outnumber all other groups of South Africa and are about four times as numerous as the Whites. They are divided into a large number of tribal units, each with its own distinctive name. In social organization and religious system they show broad resemblances to one another, but in details of history there are a number of important differences which permit of their being classified into four groups:

1. The Shona peoples of Southern Rhodesia and of Portuguese East Africa.
2. The Zulu-Xosa, chiefly in the coastal region south and east of the Drakensberg Mountains.
3. The Suto-Chwana occupy the greater portion of the high plateau north of the Orange River.
4. The Herero-Ovambo, in the northern half of Southwest Africa and in southern Angola.

In skin color the range is from the black of the Amaswazi to the yellowish-brown of some of the Bechuana. The prevalent color is a dark chocolate, with a reddish ground tint. The hair is uniformly short and woolly. The head is generally low and broad with a well-formed bridge and narrow nostrils. The face is moderately prognathous, the forehead prominent, cheekbones high, lips fleshy. The Negro facial type predominates in all groups, but side by side with it in the Zulu and

49-1-14

the Thonga sections are relatively long, narrow faces, thin lips, and high noses.

The inhabitants of Natal and Zululand, divided originally into more than a hundred small separate tribes, are all now collectively known as "Zulus," a name derived from one of the tribes which, under the domination of Chaka, absorbed and conquered most of the others and so formed the Zulu nation which played so important a part in the political history of South Africa during the nineteenth century.

Tribes vary in size, some having from a few hundred to a couple of thousand members. Others are much larger, for example, the Bakwena, 11,000; the Batawana, 17,500; the Bamagwato, 60,000; the Ovandonga, 65,000; the Ovakwanyama, 55,000; the Amaswazi, again, number 110,000; while the Basuto, by far the largest of all and might be called a nation, number nearly half a million.

The area of the western Bantu includes the Cameroons (French), Rio Muni (Spanish), the Gaboon (French), French Equatoria, the Congo (Belgian), Angola (Portuguese), and Rhodesia, with the fraction of Portuguese East Africa north of Zambesi. This vast area is the true "Heart of Africa," the tropical rain forest of the Congo. Johnston enumerated over one hundred and fifty tribes in this area who spoke Bantu or semi-Bantu tongues. The southern limit of the western Bantu is vague; the formation of the Lunda empire, the Yagga raids, and the subsequent encroachments of the Bajokwe (Kioko) have played havoc with tribal organization. The Bateke occupy a vast region on the right bank of the Congo which is now largely peopled by the Fang, who in their various expeditions and conquests have left their mark on most tribes north of the Ogowe River. Finally, in the midst of Africa are the Negrillos or pygmies, small men with reddish-brown or dark skin and brachicepahalic heads.

49-1-15

pp. 98 - 114

Civilization has flowed down to man along the valley of great rivers where the soil was fertile and man need not fear hunger, and where the waters carried him to other peoples who were thinking of problems of human life and solving them in varied ways. Some say that human culture started in the valley of the Yangtze and of the Hoang Ho. Some say it came up from Black Africa; some that it came west from the Euphrates; but it had begun more than four thousand years before Christ.

The development in Mesopotamia in the valley of the Tigris-Euphrates, which flows into the Persian Gulf and thence to the Indian Ocean, is striking. Before the year four thousand B.C. there is evidence that Negroid Davidians and Mongoloid Sumerians ruled in southern Asia, in Asia Minor, and in the valley of the Tigris-Euphrates. Negroids followed them under Sargon, and Sargon boasted that "he commanded the black heads and ruled them."

49-1-16

§ 1. THE NILE VALLEY

But it was in the valley of the Nile that the most significant continuous human culture arose, significant not necessarily because it was absolutely the oldest or the best, but because it led to that European civilization of which the world boasts today and regards in many ways as the greatest and last word in human culture.

Despite this, it is one of the astonishing results of the written history of Africa, that almost unanimously in the nineteenth century Egypt was not regarded as part of Africa. Its history and culture was separated from that of the other inhabitants of Africa; it was even asserted that Egypt was in reality Asiatic, and indeed Arnold Toynbee's Study of History definitely regarded Egyptian civilization as "white," or European! The Egyptians, however, regarded themselves as African. The Greeks looked upon Egypt as part of Africa not only

geographically but culturally, and every fact of history and anthropology proves that the Egyptians were an African people varying no more from other African peoples than groups like the Scandinavians vary from other Europeans, or groups like the Japanses from other Asiatics. There can be but one adequate explanation of this vagary of nineteenth-century science: it was due to the slave trade and Negro slavery. It was due to the fact that the rise and support of capitalism called for rationalization based upon degrading and discrediting the Negroid peoples. It is especially significant that the science of Egyptology arose and flourished at the very time that the cotton kingdom reached its greatest power on the foundation of American Negro slavery. We may then without further ado ignore this verdict of history, widespread as it is, and treat Egyptian history as an integral part of African history.

The Negroids came as hunters and fishermen. Probably they came up from Nubia. They began to settle down and till the soil. They were the Tasians, five thousand and more years ago; the people of the Fayum and the Marimde, the Badarians, settled folk, who hunted and fished but also cultivated crops. They made cloth from flax and skins, wove baskets, fashioned pottery, and ground ax heads and vessels. They had copper and varied tools of flint capable of working timber. Ivory was used for tools.

The Nile valley may be said to have invented agriculture. It was so obvious a way to make an easy living under pleasant conditions. Fresh rich soil rolled in each year, and the waters that brought it kept it moist and fertile. Irrigation became a prime necessity, and flood control. The use of near-by building materials -- wood, brick, and stone -- became natural; fibers were woven into cloth; architecture followed in the attempt to honor the dead with buildings which the dry climate preserved.

Tools were invented. The first tools were stone, the eolith and the stone ax. Then came metals; copper, especially from Nubia, and then iron. Boats and ships

49-1-14

sailed the river and the seas. The list of things which Egypt learned and handed down to us from that far day is enormous: the art of shaving, the use of wigs, the wearing of kilts and sandals, the invention of musical instruments, chairs, beds, cushions, and jewelry. The burial customs discovered in Europe came without reasonable doubt from Africa, brought by African invaders. Later the improvements made by the Egyptians were imitated in Sicily and Italy. Egyptian culture was in this way the forerunner of Greece.

In the meantime, other people, Mongoloids, filtered in from Asia. As the years passed a fixed type of Egyptian began to develop. In Egypt were all the requirements for the first long experiement in civilization in ancient times: a well-watered valley, deserts and mountains on the outskirts to keep back the enemy and the beast; a favorable warm climate and a chance for contact with foreigners which could be regulated so as to keep out the invader and trade with him in goods and ideas. The civilization of Egypt began with their invention of fixing a calendar, 4241 B.C.

The predynastic Egyptian was short, scarcely over sixty-four inches, dolichocephalic, with a nasal index of about 50, all characteristics of a group of people known as Beja, a black people who inhabit the eastern desert of Egypt, the Red Sea province of the Anglo-Egyptian Sudan, and extend through the Italian colony of Eritrea to Abyssinia. The Beja are divisible into four groups, one of which is the "Fuzzy-Wuzzy" of the British soldier. They are the least modified of the Beja tribes and are the modern representatives of the old predynastic Egyptian stock.

In Egypt there is evidence of a gradual modification in the population from the beginning of dynastic times, so that by the Pyramid period Egyptians were of heavier build, with broader skulls and faces and heavier jaws. These are the people portrayed in such magnificent works of art of the Pyramid period as the sphinxes of Gizeh and the Louvre, and they are no doubt representative of a considerable part of

49-1-18

the population of the Ancient Kingdom. They were the creators of the finest statuary, wall paintings, and sculptures in low relief to which Egypt attained, and the consciously archaistic Egyptians of the Twenty-sixth Dynasty endeavored to imitate their work as representing the highest development of national art. This applies to Upper Egypt. We have no knowledge of what was happening in the delta through dynastic and predynastic times; the remains are hidden under great masses of alluvial deposits.

The type described persisted and probably increased in number through dynastic times, and it is that of the fellahin of the present day. The modern Egyptian, with a stature of about sixty-six inches, shows no great variation between Upper and Lower Egypt. He is long-headed. Moreover, in passing southward, it has been pointed out that the eye and skin color darken, that the proportion of unusually broad noses increases, and spiral and crisp hair become more frequent.

The history of civilization which began in Egypt was not so much a matter of dynasties and dates. It was an attempt to settle certain problems of living together -- of government, defense, religion, family, property, science, and art. What we must remember is that in these seven lines of human endeavor, it was African Egypt that made the beginning and set the pace.

In some respects what they did has not been greatly improved upon even down to the twentieth century. In a primitive tribe, government was the family. But the valley of the Nile had to expand, rebuild, and implement this. It devised a ruler, a ruling family, and a ruling caste. It put them permanently upon a throne which became so old and stable that no man remembered when there was not an Egypt, and when there had been another world worth knowing. This government had to be built up from the family and clan, and this was accomplished through religion.

The Egyptian religion came naturally from the primitive animism of the African forest and progressed to the worship of Ra, the sun god, giver of life and beauty to the Nile valley which was the world. Opposite Ra was Osiris, god of waters and

49-1-19

fertility, and his sister and wife Isis, the black woman. Thus from earliest times women in Egypt had singular prominence and power. The gods reflected the physical facts of the valley. The Greeks called the Egyptians "the most religious of men." There developed an oligarchy of gods and a priesthood which became a center of scientific knowledge; the laws of nature were studied and mathematical formulas devised.

The work of the nation had to be organized, the toil of planting and reaping, irrigation, burden-bearing. Work was organized so that the great mass of the laborers toiled under the whip but toiled according to plan. From their toil arose the concept of property, of wealth to be used by king and priest and noble. Power became concentrated in the hands of the Pharaoh, who headed the clans and nomes. There was a long prehistoric period when many kings fought for supremacy in the valley, but at last there came concentration and unity which existed for an extraordinary length of time.

49-1-20

Egypt did not remain a tyranny; an oligarchy of priests and nobles eventually took power from the Pharaoh. Then in time a popular revolution emancipated the masses. The people of Egypt were not enslaved. They have been described as a "submissive lighthearted race content with little, singing at their toil, working with taste and patience." This was the result of an unusually favorable economic organization. There was no need of starvation, exposure, or want. There was plenty in the valley if the river flow was controlled.

The first duty of government was this control of the river, which led to the power of the king, to the science of the priest, to the independence of the laborer. Egypt under the Eighteenth Dynasty, 1500 B.C., has been called the first human example of state socialism, which was developed to an astonishing degree. Nor was the Egyptian formal and conventionalized. From a stiff traditional art in the earliest days, he developed individuality in expression. His spirit inquired into fresh

knowledge in this land where knowledge as "old as the world." The art of hieroglyphic writing was complete at the dawn of history, 3500 B.C., and it lasted three millenniums, until in the fourth century B.C., it was replaced by Coptic and Greek.

It would be interesting to know what the Egyptians, earliest of civilized men, thought of the matter of race and color. Of race in the modern sesne they seemed to have had no conception. On their monuments they depicted peoples by the color of their skin and their hair. The hair was treated in many ways: sometimes it was straight and Mongoloid; perhaps more often it was curled and Negroid. Now and then it was curly and hidden by wigs. The Egyptians painted themselves usually as brown, sometimes dark brown, sometimes reddish-brown. Other folk, both Egyptians and non-Egyptians, were painted as yellow. Often brown Egyptians were coupled with yellow women, either signifying less exposure to the sun or intermarriage with Mongoloids and whites. A few were painted as white, referring to some parts of North Africa and Europe.

49-1-21

9r. THE EGYPTIANS

Gradually, of course, the Egyptians became a separate inbred people with characteristics quite different from their neighbors. They were brown in color and painted themselves as such, but they recognized other colors and sorts of men. They were in continuous contact with the blacks to the south. Now and then they enslaved the blacks as they did the whites to the west and the yellow people to the east. But in the main their intercourse with the blacks consisted of trading and fighting with a people against whom they must defend themselves fiercely, but upon whom they depended for trade and for immigrants. Continually, black faces appear as Egyptian citizens. Herodotus in the fifth century B.C. described the Egyptians as "black with curly hair." "The more we learn of Nubia and the Sudan," wrote Dr. D. Randall-MacIver, "the more evident does it appear that what was most characteristic in the predynastic culture of Egypt is due to intercourse with the interior of Africa and the immediate

influence of that permanent Negro element which has been present in the population of southern Egypt from remotest times to our own day."

Sir Flinders Petrie, in the same vein, wrote that it was remarkable how renewed vitality came to Egypt from the south.

For the period extending from the Sixth to the Eighteenth Dynasty, of the specimens studied about 20 percent of the males and 15 per cent of the females are grouped wiht the Negroes. For both periods there was a goodly per cent of specimens, the "intermediates," that show some Negroid traits, but in the "intermediates" the Negro features were not sufficiently numerous or distinct enough to warrant such skeletons being classed with the Negroes. In the United States all these would be legally Negroes.

Before the First Dynasty there must have been a long series of rulers who came out of the south, conquered the people, and consolidated their powers. Upper Egypt historically always had precedence over Lower Egypt, and the First Dynasty came from the direction of the heart of Africa. Eight kings are known in this dynasty, during which there was gradual advance in use of writing. Memphis was established as capital, and the eastern borders of the valley firmly conquered.

The First Dynasty appears to have moved up from Punt. The Third Dynasty, which led to the Fourth, shows a strongly Ethiopian face in Sa Nekht; the Twelfth Dynasty we can trace to a Galla origin; the Eighteenth Dynasty was Ethiopian paled by marriage; the Twenty-fifth Dynasty was from distant Meroe.

Among the Pharaohs of the earlier dynasties whose statues or recovered bones show them to have been deeply tinged with Negro blood are King Den of the First Dynasty, King Khasekhemui of the Second Dynasty.

In the Fourth Dynasty was erected the well-known statue of the Sphinx with the lion's body and Negro head entirely carved in native rock. It must have been carved

49-1-22

out of the rocky knoll of a hill. In this dynasty too there was the artistic attempt of man to rival nature. Vast buildings were placed before a background of hills or on a natural height. An artificial hill was built on which some great work of man was placed. Vast masses were used in construction. The sculptor sought to rival and even surpass nature. The painter used coloring and tints.

In the Fifth Dynasty the power of the priests was evidently growing, and religious foundations appear and with it a decline in the boldness of assertion of the earlier architecture. In the Sixth Dynasty came some of the great raids upon the Libyans to the east of Egypt. Tens of thousands of soldiers, Negroes particularly from the Sudan, beat this part of the land into subjection. Then the Pharaoh's army turned south and west and went through Nubia to force into subjection Negroes who were pressing northward upon the Egyptian state. Trading expeditions were sent to Punt. This was a time of active foreign conquest and exploration. One of the kings brought back to Egypt a dwarf from the Sudan.

The Seventh and Eighth Dynasties form an early intermediate period. The power of the kings at Memphis seems to have fallen into decay, perhaps through foreign invasion in the delta. During the Ninth and Tenth dynasties the invading race spread their rule over Upper Egypt. The Middle Kingdom began with the Eleventh Dynasty, when the Princes of Thebes became independent again. The ruler, Usertesen I, is pictured as triumphing over Asiatic and Negro. Evidently the defense of the kingdom from invaders became a serious problem when Egypt grew great and rich. A new vigor came into the administration with Amenemhat, who fought the Nubians and the Asiatics. The history of Sanehat (Sinuhi) is illustrative of the time. Because of the death of his father, he fled to Syria, where he became a ruler. "It gives a very curious view of the relation of Egypt to Syria at the beginning of the Twelfth Dynasty. A fugitive Egyptian was superior to the Syrians, and by his education and ability might rise to high power, much like some English adventurer in Central Africa at the present time."

49-1-23

One king of the Twelfth Dynasty, Usertesen III, was especially triumphant over the Negroes who were threatening Egypt from the south, and this Pharaoh set up a boundary across which the Nubians must not come. To celebrate this clash between the Negroid Egyptian and the Central African, we have the first specimen of Egyptian poetry extant...

From the Thirteenth to the Seventeenth Cynasties there comes a period which is obscure. During this time Egypt was conquered by the Hyksos kings, who were probably from the Arabian desert; but whether at the beginning or at the end of this period we are not certain. At the end of the kings of the Thirteenth Dynasty comes Ra-Nehesi, the king's eldest son, who is clearly called a Negro. This shows, of course, the development that had taken place in Egypt during two thousand years. There had grown up an Egyptian mulatto race differentiated in color and other physical characteristics from the Central Africans. So much so that the great triumph of Egypt was the conquest over these Africans.

The redemption of Egypt from the Hyksos came in the Eighteenth Dynasty through an Ethiopian power. The hyksos held Egypt perhaps five hundred years; then came Aahmes of the Thebaid. With Aahmes was associated the black Queen Nofritari, or Nefertari.

The stream of Egyptian history in the day of its proudest triumphs now merges into that of Ethiopia, the Land of the Blacks; in such wise that Ethiopian history is seen to be the main current of Negro culture, from the Mountains of the Moon to the Mediterranean, blossoming on the lower Nile, but never severed from the Great Lakes of Inner Africa.

49-1-24

pp. 115 - 147

ETHIOPIA

In Greek legend, Ethiopia, "land of the burnt faces," lay either side of the Red Sea in Africa and Asia and was inhabited by black folk. Eventually the blacks mixed with yellow Asiatics. After the fifth and fourth centuries B.C. the term Ethiopia was used usually to designate regions in Africa corresponding to what we now know as Nubia or the Egyptian Sudan. The Sudan was known to the Egyptians and Hebrews as Kash or Cush. In Hebrew folklore the descendants of Ham "were Cush and Egypt."

If efforts have been made to separate the history of Egypt from Africa and the Negro race, a similar determination with regard to Ethiopia is even more contradictory. Science for years tried to separate men into great groups called races; at first the object was to explain human history by human differences. The scientific basis of race difference, however, appeared increasingly difficult as observation and measurement became more accurate. Three, five, twenty races were differentiated, until at last it was evident that mankind would not fit accurately into any scientific delimitation of racial categories; no matter what criteria were used, most men fell into intermediate classes or had individual peculiarities. The theory of absolutely definite racial groups was therefore abandoned, and "pure" racial types came to be regarded as merely theoretical abstractions which never or very rarely existed.

On the other hand, individual variations among men were extraordinary and intriguing; and group differences in physique and cultural habits were equally interesting. It would therefore be helpful to science if the broad hypothetical division of men into three or five great groups in accord with physique and culture were provisionally maintained to facilitate, but certainly not to obstruct, further study. This was the scientific status of the race theory early in the twentieth century, and in accord with this we spoke of three "races" -- Caucasoid, Negroid, and Mongoloid -- as comprising mankind, knowing well that no scientifically accurate definition of these races

could be made which would not leave most of mankind outside the limits.

There was, however, persistent exception to this general agreement; under Caucasoid were included men of widely different physique inhabiting Europe; the term Mongoloid was even more vague and indefinite and nearly fell into disuse. But the term "Negro," as a definite and scientific race designation, persisted, and its use was defended with bitter determination by men who otherwise ranked as leading scientists. Despite the fact that the number of human beings corresponding to the current definition of the word "Negro" was narrowed again and again in space and number to a small remnant even in Africa, nevertheless in the usage of many distinguished writers there really emerged from their thinking two groups of men: Human Beings and Negroes. And the thesis of this book is that this extraordinary result came from the African slave trade to America in the eighteenth century and the capitalistic industry built on it in the nineteenth. The facts referred to are illustrated by the treatment of Ethiopia in archaeology, anthropology, and history. The contradictions concerning this land and people would be ludicrous if the results were not so tragic.

49-1-26

If we follow inherent probability, ancient testimony, and legend, this would seem to have been the history of northeast Africa:

In Ethiopia the sunrise of human culture took place, spreading down into the Nile valley.

Ethiopia, land of the blacks, was thus the cradle of Egyptian civilization.

Beyond Ethiopia, in Central and South Africa, lay the gold of Ophir and the rich trade of Punt on which the prosperity of Egypt largely depended.

Egypt brought slaves from black Africa as she did from Europe and Asia. But she also brought citizens and leaders from black Africa.

When Egypt conquered Asia, she used black soldiers to a wide extent.

When Asia overwhelmed Egypt, Egypt sought refuge in Ethiopia as a child returns to its mother, and Ethiopia then for centuries dominated Egypt and successfully invaded Asia.

Neither Greece, Rome, nor Islam succeeded in conquering Ethiopia, although they pushed her back and shut her up in East and Central Africa, and hindered all contact between her peoples and the world until the day of colonial imperialism.

But this interpretation of Negro history contradicts the theory of the natural and eternal inferiority of black folk, which rendered them natural slaves and a cheap la bor force for nineteenth-century industry. Those who depended on slavery and colonialism for living and luxury naturally, and often without conscious intent, sought eagerly for a science and history which would deny this interpretation of African history. They came gradually to declare vehemently that Egypt began her culture in the delta region, and Ethiopia was a far-off frontier and slave mart; that Punt and Ophir were in extreme East Africa or Asia; that the Asiatic conquest of Egypt marked her decline and the feeble efforts of Ethiopia showed an era of decadence; that even if Ethiopia showed some imitative culture, this was not due to black folk, since the Ethiopians were not Negroes!

The attitude of scientists toward these questions has thus been colored almost entirely by their attitude toward modern Negro slavery. The Frenchman Volney called the civilization of the Nile valley Negro after his visit. But such a barrage of denial from later men met him that he withdrew his earlier conclusions, not because of further investigation, but because of scientific public opinion in the nineteenth century. Reisner unearthed a civilization of black folk in Ethiopia, but hastened to declare that they were not Negroes! Reisner was born in sight of Negro slavery in America and never forgot it. Flora Shaw wrote of the blackest men of the Sudan and their brilliant civilization, but warned her readers that they were not Negroes!

So here in Ethiopia, "Land of the Blacks," country of the "Burnt Faces," we are continually faced with the silly paradox that these black folk were not Negroes. What then are Negroes? Who are Africans? Why has the whole history of Ethiopia been

49-1-27

neglected or ascribed to white "Hamites"? And why does every historian and encyclopedist, whenever he writes of the civilization of the upper Nile, feel compelled to reiterate that these black people were "not Negroes"?

Again, the mixture of blood among the three races is always referred to as an explanation of the advance among Negroes and the retrogression among whites. Is this scientific? A "white" or Asiatic aristocracy is repeatedly adduced as accounting for the rise of the Sudan, the government of Uganda, the industry of the Bushongo, and even the art of the Ashanti. Nothing is ever said of the influence of Negro blood in Europe and Asia, yet distinct Negroid features can be seen today all over Europe. When a black Jew boasts to his fellow religionists "I am black, but comely, O ye daughters of Jerusalem," he is supposed to be tanned; when Syria and Arabia show in hair and color their Negro blood, this is completely ignored and their culture called "white." When Buddha appears all over Asia portrayed as black and curly-haired, science makes little effort to investigate or explain.

There was and is wide mingling of the blood of all races in Africa, but this is consistent with the general thesis that Africa is predominantly the land of Negroes and Negroid peoples, just as Europe is a land of Caucasoids and Asia of Mongoloids. We may give up entirely, if we wish, the whole attempt to delimit races, but we cannot, if we are sane, divide the world into whites, yellows, and blacks, and then call blacks white.

As in the case of Egypt, I shall hereafter assume that the Ethiopians were Negroids and shall try to let the facts prove their contribution to civilization.

In the eyes of the Greeks a thousand years B.C. and even in the age of Pericles, black Africans were considered equal to though different from Greeks, and superior to European and Asiatic barbarians. Significant indeed was the attitude of the early Greeks toward Africa. It was to them a land of ideals. Here in legend their gods retired to rest and recuperate. In the dawn of Greek literature, in the Illiad, we

49-1-28

hear of the gods feasting among the "blameless Ethiopians."

According to mythology, the Greek people themselves came into being as the result of miscegenation. Zeus, the father of the Gods, mates with the fair Greek maiden Io, and has a mulatto son, Epaphus, who is born in Egypt. Aeschylus says of this union, "And thou shall bring forth black Epaphus, thus named from the manner of Zeus' engendering. . . . Fifth in descent from him fifty maidens shall return to Argos [Greece], not of their choice but fleeing marriage with their cousin kin. Also, "Call this the work of Zeus, and that his race sprang from Epaphus, and thou shalt hit the truth."

Two of the most illustrious writers of Greece were called Negroes -- Aesop and Sappho. Planudes asserts this; Zundel, Champfleury, and others think that the woolly-haired Negro" on the coins of Delphos was Aesop. Ovid makes it clear that the ancients did not consider Sappho white. She is compared with Andromeda, daughter of Cepheus, black king of Ethiopia. Ovid says: "Andromede patriae fusca colore suae." In Epistle XV of the Heroides of Ovid (translated by Ridley), Sappho says to Phaon, "I am small of stature but I have a name that fills all lands. I myself have produced this extended renown for my name. If I am not fair, Andromeda, the daughter of Cepheus, was swarthy though the complexion of her country was pleasing to Perseus. White pigeons, too, are often mated with spotted ones and the black turtledove is often beloved by a bird that is green."

49-1-29

Paul Lacroix says of Sappho: "Although Plato graces her with the epithet of beautiful and although Athenaeus is persuaded of her beauty on the authority of Plato, it is more probable that Maximus of Tyre who paints her for us as little and black is in conformity with more authentic tradition."

Pope's translation of Ovid reads: "Brown as I am, an Ethiopian dame."

Another Negro is mentioned in the Homeric legends, Eurybiates. Homer speaks of his "woolly hair" and "sable skin" and compares him with Ulysses, greatest of the heroes:

" Eurybiates in whose large soul alone
Ulysses viewed an image of his own."

The Ethiopian Tithonus of Greek legend has been identified with Dedun, the Negro god of the Second Cataract.

"Of all the classical countries Ethiopia was the most romantic and the most remote. It was situated, according to the Greeks, on the extreme limits of the world; its inhabitants were the most just of men, and Jupiter dined with them twice a year. They bathed in the waters of a violet-scented spring, which endowed them with long life, noble bodies, and glossy skins. They chained their prisoners with golden fetters; they had bows which none but themselves could bend. It is certain that Ethiopia took its place among the powers of the ancient world. It is mentioned in the Jewish records and in the Assyrian cuneiform inscriptions."

In Africa were great and powerful kingdoms. When Greek poets enumerated the kingdoms of the earth, it was not only natural but inevitable to mention Memnon, King of Ethiopia, as leader of one of the great armies that besieged Troy. When a writer like Herodotus, father of history, wanted to visit the world, he went as naturally to Egypt as Americans go to London and Paris. Nor was he surprised to find the Egyptians, as he described them, "black and curly-haired."

49-1-30

Herodotus says that the names of nearly all the Greek gods are derived from Egypt, and certainly the Greeks continually turned toward Egypt for cultural inspiration and scientific information. Homer openly borrowed from Egypt his story of Ulysses, and the islands of forgetfulness were based on Egyptian stories.

The Ethiopians are closely linked with the rising and setting of the sun. Memnon, the son of Eos, says Hesiod, is their king. Aeschylus describes the Ethiopians as dark and living near the springs of the sun. Arctinus of Melitus writes of Memnon celebrating his participation on the side of the Trojans and his victory over Antilochus, the son of Nestor, and his eventual death at the hands of Achilles. In a myth of the fifth century B.C., Andromeda was pictured as the black daughter of Cepheus and Cassiopeia, rulers of Ethiopia. She was bound to a rock and saved by Perseus on

his return from his battle with the Medusa. Both Sophocles and Euripides wrote plays Andromeda, and Perseus, Memnon, and Andromeda were worshiped as heroes in Africa and Ethiopia.

The culture of Egypt went out across the Mediterranean, lighting fires in Crete, inspiring Asia from southern Arabia to Syria and western Asia Minor. In Cretan art Negro heads appeared, and in the late Minoan Age, at the time of the expansion overseas, a black Minoan captain led Negro troops. Doubtless Minoans made use of black regiments in their final conquest of Greece, and from vases dated the latter part of the sixth century B.C. it seems clear that Ethiopians entered Greece even before the time of Xerxes. Herodotus tells that in the army of Xerxes there were Ethiopians clothed in leopard and lion skins and armed with bows and arrows. He distinguishes between oriental Ethiopians and western Ethiopians; both were black, but the hair of the former was straighter than the close curled-hair of the latter and they spoke different languages.

Herodotus reduced the races of Ethiopia to four: two native and two foreign; the native were the Ethiopians and the Libyans, and the foreign, the Phoenicians and the Greeks. Among the Libyans, Herodotus and the Egyptians distinguished between Negroids and the Mongoloids: the Negroids came from the south and the Mongoloids from the east. They had mingled in various ways so that one reads of black Getuli and white Ethiopians. The Periplus of Scilex records four Libyan populations, and Diodorus Siculus speaks of three Libyan tribes of which one is Negroid. Thus the Negroid peoples of Africa were represented in neighboring Asia and in North Africa, as well as in the valley of the Nile and Central and West Africa.

Greek culture affected Africa at an early period, and Africa in turn affected Europe. According to Frazer: "It is no longer possible to regard the rule of succession to the priesthood of Diana at Aricia as exceptional; it clearly exemplifies a widespread institution, of which the most numerous and the most similar cases have thus far been found in Africa. How far the facts point to an early influence of Africa

49 - 1 - 31

on Italy, or even to the existence of an African population in southern Europe, I do not presume to say."

It is admitted today that pre-Greek peoples assembled a considerable body of notable scientific knowledge. Individuals approached their problems with logical powers of deduction and methods of systematization. Two thousand years before Christ an Egyptian physician had made the heart the center of the human system, measured the pulse, and had written down his observations and advice.

In art no race was so interesting to the artists of Greece and Rome as the black man. Other races in the classical world were pictured far less often in Hellenistic and Roman times; the Negro was rendered with fidelity during the most idealistic period of Greek art and with full appreciation of his type of beauty. Appearing at the earliest time, the Negro type continued to be popular throughout the whole period of Greek classical art. The myths of Hercules and of Busirus are painted on a vase dating from the sixth century B.C. Hercules is represented as black and curly haired; the Egyptians of Busirus are represented as both black and yellow, and a bodyguard of five Ethiopians are marching to the defense of Busirus.

49-1-32

There was close and fairly frequent connection between Europe and Africa. In prehistoric times the continents were connected by land. They were separated by no obstacles which hinder migration. The large number of islands scattered through the Mediterranean served as bridges, and peninsulas stretched out from Europe toward Africa. African colonists passed over to Greece by way of the islands beginning with Crete. From Numidia they crossed into Sicily, Italy, and southern France; by Gibraltar into Spain. There is evidence of Negro blood in Asia Minor as far as the Black Sea and the Caucasus Mountains.

The history of early Egypt was that of a duel between Ethiopia and Egypt, that is, between the ancient African cultures of the Upper Nile and the settled Egyptian

culture entrenched in the Nile valley. Over this long stretch of Egyptian history, biological as well as cultural differences appeared. The Egyptians became a settled race-type, brown and yellow in color, with a splendidly developed civilization.

The Ethiopians, on the other hand, were more purely Negroid, brown and black of skin and curly-haired. They were divided into various kingdoms and tribes and were continually raiding Egypt or defending themselves from Egypt, chiefly for the advantages of trade. They eventually became traders and middlemen between Egypt and Central and South-central Africa, and indirectly between Egypt and India. Their own development was in a way changed and directed by the fact that their leaders of ambition and ability were continually drawn off into the Egyptian civilization and rose in many cases to be leaders in Egypt. As Egypt expanded the Ethiopians were pushed back from the First to the Second, Third, and Fourth Cataracts.

49-1-33

During the middle kingdom of Egypt an independent Ethiopian culture developed, centered at Napata and Meroe, which carried on widespread trade in gold, ivory, precious stones, wood, and handicrafts. When at the end of this time the Asiatic Hyksos overthrew Egypt, Ethiopia became a refuge for the conquered Egyptians both physically and culturally. Noble Egyptian families migrated to Ethiopia and intermarried, and one such family formed the great Eighteenth Dynasty which rescued Egypt, and the son of a Pharaoh took the title of Royal Son of Kush. When, however, the Libyans in the Twenty-first Dynasty overthrew Egypt, the Ethiopians organized independently, and from 750 B.C. to A.D. 355 there are records of seventy-six rulers of Ethiopia.

With the Eighteenth Dynasty came the New Empire, and we are on firm historical grounds as to dates. It came to power in 1580 B.C. and lasted until 1345. Its center of power was Thebes, three hundred miles from Memphis and four hundred miles south of the Mediterranean. It was less than one hundred miles from the First Cataract, the legendary southern boundary of Egypt. The power of Aahmes was probably reinforced by his marriage with an Ethiopian princess, Nefertari, or Nofritari, who was invariably

painted black in Egyptian art and yet who was, as Petrie says, "the most venerated figure of Egyptian history."

Her statue in the Turin Museum represents her as having black skin. She is also painted black standing before Amenothes in the Deir el Medineh tomb, now in the Berlin Museum. This queen with a black skin has therefore been regarded as a Negress, the daughter of an Ethiopian Pharaoh, or at any rate the daughter of a chief of some Nubian tribe; it was thought that Aahmes must have married her to secure the help of the Negro tribes in his wars, and that it was owing to this alliance that he succeeded in expelling the Hyksos.

Naturally the legend of this black queen has caused heart-failure among white Egyptologists; they have called her "Libyan"; and Libya was certainly partly Negroid in race; but since the Libyans have usually been counted "white," why was the Libyan Nofritari black?

Nofritari reigned for a time conjointed with Amenothes, and we know that her rule was a prosperous one and that she was revered by her subjects. The remembrance of Nofritari always remained distinct in their minds, and her cult spread until it became a kind of popular religion.

49-1-34

118. EGYPT RETURNS TO ETHIOPIA

Aahmes reigned from 1580 B.C. to 1577 B.C., and his son, Amenophis I, from 1577 B.C. to 1536 B.C. Amenophis I finally conquered an Ethiopian Kingdom named Kerma, which had been threatening Egypt since the Twelfth Dynasty, or about 1785 B.C. Then came by marriage Tuthmosis I, the conqueror of Syria and the valley of the Euphrates, where the Egyptians probably for the first time in their history saw mountains covered with snow. Tuthmosis I pushed Egyptian domination beyond the Third Cataract. After Tuthmosis I came his son Tuthmosis II, who reigned conjointly with his half-sister Hatshepsut for two or three years, then associated upon the throne a son by a concubine, Tuthmosis III. After the death of Tuthmosis II, Hatshepsut assumed full power and was the acknowledged ruler of Egypt. The temple of Deir el Bahri, "Sublime of

the Sublime," designed by Tuthmosis II was completed by her in 1500 B.C., and it represented her expedition to Punt. The king and queen of Punt are represented as of the modern Hottentot type, and the queen with the characteristic steatopygia. After Hatshepsut's death Tuthmosis III came into full power.

His granite head in the British Museum has distinct Negro features. He extended Egyptian power east and south. He conquered Syria in seventeen campaigns and crossed the Euphrates. He fought in Libya and in Ethiopia. His reign was without doubt, as Petrie said, "one of the grandest and most eventful in Egyptian history." He repressed robbery and injustice, did much building and adorning of temples with the labor of his captives; and by taking the children of subdued kings in Asia as hostages to Egypt, established his empire on a sound basis perhaps for the first time in history. His empire extended from Napata to the Euphrates. The Assyrians and Babylonians sent their daughters to him in marriage, and the descendants of Syrian rulers, conquered by his father and educated in Egypt, rules as slaves of the Pharaoh. Tribute poured into Egypt. He reigned thirty-six years until the Hittites from the north and the Khabiri from the east began to press down upon Syria. His son Amenophis II, whom he had associated on his throne, reigned twenty-six years, leaving his throne to Tuthmosis IV.

This monarch married a black woman, Mutemua. Their son, Amenophis III, succeeded about 1400 B.C. He built the temple of Luxor at Karnak. He inherited his mother's Negroid features and married the brilliant Taia. It is possible that the Greeks derived the name of "Memnon, king of the Ethiopians," from this Pharaoh. J. G. Wilkinson says of Amenophis III: "The features of this monarch cannot fail to strike everyone who examines the portraits of Egyptian kings as having more in common with the Negro than those of any other Pharaoh." Anna Graves says: "Amenophis, or Amenhotep, III (1411-1375 B.C.) was evidently what, south of Mason and Dixon would be called a 'colored

49-1-34
49-1-35

man,' and his chief queen Taia must have had much more Negro blood than her husband. Indeed, judging from her portrait bust in the Berlin Gallery. . . she may have been very nearly pure Nubian. Their son, Amenophis, or Amenhotep, IV (1375-1358 B.C.), who later took the name Akhnaton, or Akhenaton, though less Negroid than his mother was more of the mulatto type than his father, and the portrait bust of his daughters show them all to be beautiful quadroons, though perhaps octoroons. And this mulatto Pharaoh, Akhenaton, was not only the most interesting Pharaoh in all the long lines of the many dynasties; but he was in many ways one of the most remarkable human beings who ever lived."

It was this ruler who brought profound revolution in the religion of Egypt, changed it to an imperial monotheism, and introduced a philosophical worship of the powers of nature.

The founder of the Nineteenth Dynasty, Rameses I, and his son, Seti I, became great builders of temples at Karnak and elsewhere. Then came the long reign of sixty-seven years of Rameses II, the Conqueror, who built monuments all over Egypt and Nubia and fought against the Libyans, Syrians, and Hittites. His conquests eventually exhausted the nation, which became prey to the Libyans and the peoples pressing down from the delta.

49-1-36

THE HEBREWS AND ETHIOPIA

It was around 2500 B.C. that the Hebrew nation had begun to arise. It became enslaved in Egypt, perhaps in the times of Rameses I. Its history touched Ethiopia at many points, and Jews showed the blacks the highest respect.

The writer of the Song of Solomon defended the color of the Ethiopians:

I am black but comely, O ye daughters of Jerusalem!

Jewish writers pictured Ethiopia as one of the most powerful countries of their day, equal in strength to Egypt, Persia, Assyria, and Babylon:

struggle against Sennacherib. Repeatedly the Jews made alliance with the Ethiopians.

And he heard say concerning Tirhakah king of Ethiopia, He is come forth to make war with thee. And when he heard it, he sent messengers to Hezekiah. . . .

He was assured that with this mighty ally the God of Israel would overthrow the Assyrians.

Taharqa joined battle against Sennacherib in accordance with the treaty made with Hezekiah. Sennacherib's army was destroyed miraculously, as the Jews believed, and Taharqa recovered the cities of Palestine which had formerly belonged to Egypt.

Rameses III represented the decadence of Egypt and concentration of land ownership in the hands of the priests. The end of this dynasty came in 1100 B.C., and from then on Egypt declined. First there were the Libyan dynasties in the delta from 1100 to 945. The Twenty-second and Twenty-third Dynasties had rival princes fighting among themselves and seeking to re-establish their control over Egypt. But in the meantime Ethiopia arose, and the Ethiopian, Piankhi, became head of the Twenty-fifth Dynasty, 712 B.C.

When the New Empire began to decline, a governor-general rebelled and the kingdom of Ethiopia was established. It was a dominion composed of brown men and black men, shepherds and savages, Egyptians and Negroes, ruled over by a king and a college of priests. It was enriched by annual excursions into the black country, and by the caravan trade in ivory, gold dust, and gum. It also received East Indian goods and Arabian produce through its ports on the Red Sea. Meroe, its capital, attained the reputation of a great city; it possessed temples and pyramids like those of Egypt, only on a smaller scale. The Ethiopian empire, in its best days, comprised the modern Egyptian provinces of Kordofan and Senaar, with the mountain kingdom of Abyssinia as it existed under Théodore.

49-1-37

The first capital of the Sudan was Napata. Here Amenophis II of the Eighteenth Dynasty brought one of the rebellious princes of northern Syria, and, after putting him to death, hung his body on the alls of the city as a warning to the Sudanese tribes. How much older than the Eighteenth Dynasty Napata may have been is uncertain.

As long as the Sudan continued as part of the Egyptian empire, it was ruled by Egyptian viceroys. The name and worship of Ammon, the god of Thebes, were carried southward, and it is possible that Napata, of which Ammon became the supreme divinty, was under Theban priests. When the Libyan Shishak usurped the throne of the Pharaohs in the tenth century B.C., the descendants of the Theban priets-kings of the Twenty-first Dynasty are believed to have retreated to Napata and there established a theocratic monarchy. The decline of the Bubastite dynasty enabled one of these, Pianhki, to assert once more the claim of his family to the throne of Egypt, and to overrun the valley of the Nile almost as far as the Mediterranean. He led the Ethiopians against the Libyans and overthrew them; and he made Egypt a dependency of Ethiopia. The heir to the throne was called "Prince of Egypt." At his death in 710 B.C., Shabaka became king of the two lands. Herodotus said that he abolished capital punishment in Egypt. Kashto, Sahbatok, Taharqa, and Tanut-Amon, succeeded Piankhi and founded the Ethiopian dynasty which goerned Egypt from 715 B.C. onward, until they were driven back to Ethiopia by the Assyrians.

49-1-38

The history of western Asia and Asia Minor during this period is difficult to summarize, but in earliest times we find Sumerians in the Tigris-Euphrates area, evidently Mongoloids. They attempted development there similar to the development in the Nile valley. Then out of Arabia began to stream a series of peoples. The Babylonians appeared more than three thousand years B.C. In the eighth century before Christ the Hittites moved eastward from Asia and threatened Egyptian power until Rameses II defeated them at Kadesh. Then from the mountain lands northeast of the Euphrates the

Assyrians came down, "like a wolf on the fold." They overthrew Nineveh in 612 B.C. and themselves bowed before the Scythians and the Medes. A new Babylonian imperialism followed, and then came Cyrus, the Persian. In the sixth century B.C. Sardis fell, and soon the cry "Babylon is fallen, is fallen," went throughout the East.

Asia precipitated itself upon Africa. Egyptian civilization fell before the Mongoloid intruder. The Nile valley was swept by vast forces just as the renewed Ethiopian kingdom came to power. It was the heyday of Negro imperialism. Black Africa was still pressing up from the center of the continent, as it had for thousands of years. Yellow Asia was bearing down on Egypt in flood after flood of differing oncoming peoples. Phoenicia was inspiring Carthage and beginning North African development, which pressed on western Egypt. In the center of these forces the Egyptian empire, incredibly ancient, had fallen, first before the Hyksos, and then later before other eastern Asiatic tribes. Ethiopia had restored her, but the situation in the closed valley of the Nile did not invite or encourage expansion in face of the increased might of armed enemies. Ethiopian imperialism, therefore, while striking and effective, lasted but two centuries. 13

TAHARQA RULES THE WORLD

The Assyrians defeated the forces of Egypt and drove back the Ethiopians until at last, from 688 B.C. to 663 B.C., came the greatest of the Ethiopian kings, Taharqa.

His reign was an era of prosperity and cultural advancement. Weigall called his reign "that astonishing epoch of nigger domination"; and Randall-MacIver said: "It seems amazing that an African Negro should have been able with any sort of justification to style himself Emperor of the World." Taharqa ascended the throne in 688 B.C. at the age of about forty-two. For fifteen years he fostered the economic, cultural, and religious life of Ethiopia and Egypt. The trade of the country increased, and there was money to repair the ancient temples and build new ones. Taharqa established friendly alliances with western Asia and Assyria. The Hebrew Bible chronicles this in

49-1-39

the downfall of Sennacherib, and notes Ethiopia's trade.

Taharqa's building at Karnak was planned as one of the most striking in the ancient world. The temple built at Thebes had a relief representing the four courts of the four quarters of the Nilotic world: Dedun, the great God of Ethiopia, represents the south; Sopd, the eastern desert; Sedek, the western desert; and Horus, the north. According to Petrie: "This shows how southern was the center of thought when the whole of Egypt is reckoned as the north. Some writers say that Taharqa led expeditions as far as the Strait of Gibraltar."

Eventually the Assyrians were too strong for Taharqa and he had to give up Egypt and retire into Ethiopia and the "night of death." Tanutamen, his successor, held back the Assyrian storm for awhile, but Ethiopian and Egyptian strength were eventually dashed to pieces. Egyptian temples were wrecked, and the conqueror, Ashurbanipal, declared: "I captured Thebes like a flood. . . ." 14 ASIA ATTACKS ~~INVADES~~ AFRICA

Aspeluta, a full-blooded Negro, ruled probably from 593 B.C. to 567 B.C. In 524 B.C. Cambyses, the Persian, having conquered Egypt, tried to invade Nubia, but was defeated and his fleet destroyed. Horsiatef (c. 372-361 B.C.) made nine expeditions against the warlike tribes south of Meroe, which was attacked unsuccessfully by the Rehrehsa under their chief Arua. One successor was Nastasen (c. 328-308 B.C.), who removed the capital from Mapata to Meroe, although Napata continued to be the religious capital and the Ethiopian kings were still crowned on its golden throne. Nastasen was saluted king by the priests of Ammon from both Meroe and Napata. He called himself king of To-Kenset (or Nubia, including Dongola), and of the city of Alut. Alut was an alternative name of Neroe.

Meroe, between the Atbara River and the Blue Nile, was founded later than Napata, probably around the eighth century B.C. The site of the town was well chosen. It stood on the bank of the Nile, between the Fifth and Sixth Cataracts, and at the end of a valley which extended for many miles into the interior. During the rainy season

49-1-40

the valley afforded an easy road for caravans coming across the Atbara from the Red Sea. The city of Meroe was the natural outlet on the Nile of the more northern prehistoric trade route from the East. Immediately to the north of it were hills containing the extensive quarries where stones used in the construction of its buildings were worked. Northward there was navigation down the Nile to Berber, where the desert road to Napata left the river.

This history of Ethiopia means that out of the south for many thousands of years migrations streamed northward for settlement and for trade, to furnish soldiers for the armies of the Pharaohs and to reach a better climate and opportunities for defense. Down toward the hot center of Africa human culture had to fight the insects and disease and found no natural barriers to protect them against oncomers. There were probably movements south and west from the Great Lakes, but the lure of Egypt attracted the larger streams, and, as Chamberlain has said, this migration was at once advantageous and detrimental to Central Africa. It continually siphoned off the able and the adventurous into the great opportunities of Egypt. Egypt profited and grew on these new resources of inspiration. Individual Negroes became Egyptians and occupied high places, but left their own southern brethren the poorer from this continuous loss of ability and strength.

Books were written about Ethiopia by Dalion, Aristocreon, Basilis, Bion, and Simonides the Younger, the last of whom resided for five years in Meroe. As early as rel B.C. the trade of Egypt was well known in Athens. Sails and papyrus rolls came from Egypt and ivory from Libya. The slaves were usually not from Africa but from Asia.

15 ~~17~~. GREECE INVADES AFRICA

It was natural that Alexander, seeking to conquer the world, should bring his conquest to a triumphant end by overthrowing Egypt and establishing there his capital, Alexandria. Alexander had Negroes in his armies. One of the most illustrious was Clitus, his best beloved, whome he made King of Bactria and commander of his cavalry. Clitus' mother, Dropsica, was Alexander's nurse, and Clitus is mentioned by Plutarch and others as Clitus Niger, that is, "Clitus the Negro."

49-1-41

In Rome the spread of the ~~spread of the~~ plantation system after the Second Punic War led to the wide use of slaves, but these slaves were from Greece and from Spain.

There are legends of the visit of Alexander the Great to Candace, Queen of of Meroe. Fabulous perhaps, but they show her fame. It is said that Candace would not let Alexander enter Ethiopia and warned him not scorn her people because they were black, for they were whiter in soul than his white folk. "She sent him gold, maidens, parrots, sphinxes, and crowns of emeralds and pearls. She ruled eighty tribes, who were ready to punish those who attacked her." The Ptolemies were in contact with the Abyssinians. The earliest Ptolemies were white; but as time went on they changed more and more toward the Negroid. "The Negro strain in Alexander II is apparent, and still more so in Ptolemy XIII, the flute-playing father of the most celebrated of the Cleopatras. Ptolemy's mother was a slave. Cleopatra herself is known through tradition as having been of a tawny, or mulatto color."

49-1-42

~~14~~ 15. EUROPE AND AFRICA

The duel between Europe and Africa came with the Punic Wars: the first from 264 to 241 B.C.; the second from 218 to 201 B.C.; and the final one from 149 to 146 B.C. These years started as efforts to defend Italy against migration and conquest from Africa, where Mongoloids and Negroids with some infiltrating of Europeans had built the city of Carthage. Within this city all races were represented, and Carthage secured a stronghold in Sicily which the first Punic War was fought to break.

The Second Punic War began with the invasion of Spain by Carthage and the eruption of the Carthaginian army into Italy. Hannibal and his African troops must have brought a strong Negro strain into the Roman population. For thirteen years they dominated the Italina penisula from Naples to the Alps. Quite possibly this was the first world fight across the color line although, naturally, the world was not then conscious of mere skin color and did not emphasize it.

Among the Carthaginian troops were the dark Numidians streaming down across the desert which then had only begun to separate Central from North Africa. Curiously enough, on at least some of the coins, minted while Hannibal ruled in Italy, was the figure of what we call a full-blooded Negro king on the obverse and an African elephant on the reverse. Was this a picture of Hannibal himself which would be according to Roman custom, or was it a picture of the character of most of his troops? Do the dark features of modern Italy come from this and other infiltration of Negro blood? The mere fact that the color line is not specifically mentioned or emphasized in the history of the Punic Wars means nothing. The world did not then regard it of paramount importance as it does today.

49-1-43

It was during the next fifty years that the cry raised by Cato the Elder, "Carthage must be destroyed," spread through Rome, making common cause with the black rebel, Massinissa. The Romans attacked again and Carthage fell. Fifty thousand Carthaginians were sold into slavery. Massinissa died in 143 B.C. and was succeeded by his son Micipsa, and his grandson Jugurtha. It was Jugurtha who called Rome "a city for sale and doomed to perish as soon as it finds a purchaser." The war was renewed in Africa, but finally Fugurtha fell into an ambush and was carried as a prisoner to Rome. He and his two sons figured in the triumphs of Marius. He was murdered in prison beneath the capitol.

In Numidia, Rome found itself opposed by the Negroid king Cyphax. Under Diocletian, Numidia was separated from Afrida and became one of the seven provinces of the continent. It reached under Constantine a high degree of civilization, but was overthrown by the Vandals in A.D. 428 and again by the Arabs in the eighth century.

On the death of Cleopatra, Egypt became a province of the Roman Empire and Augustus sent a prefect there. The power of Ethiopia had already declined before black invaders from the west. The prefect Gallus summoned these chiefs and granted them their independence under the power of Rome in A.D. 29. After his death the blacks revolted and advanced northward. The Romans sent a great army of ten thousand infantry and eight hundred cavalry to suppress thirty thousand rebels. The Romans were victorious and advanced on the Ethiopians at Napata, where a Candace, "A masculine woman with one eye" was reigning. She is probably the "Candace" mentioned in Acts 8:27:...

In this era there was born in the Egypto-Syrian area, with its Mongoloid and Negroid elements, a social reformer called Jesus Christ. Nordics who have never accepted his doctrine of submission to evil, repudiation of riches, and love for mankind, have usually limned him as Caucasoid. He was probably a swarthy Syrian Jew, with hooked nose and curled hair; perhaps he even inherited Ethiopian blood. He probably looked like that Jew at whom Hitler stared in Vienna: "One day when I was walking through the

49-1-44

inner city, I suddenly came upon a being clad in a long caftan, with black curls." From that day dates his active anti-Semitism. Jesus tried to make men better, simpler, truer; he did not succeed. He was charged with blasphemy and treason, and hanged on nails until he was dead. Around legends of his person and ideals have been built creeds, churches, inquisitions, and dreams. Finally there arose the organized and institutionalized Christian Church.

In A.D. 330 the Eastern Roman Empire was established at Constantinople. It became Greek rather than Roman, and Christian even before Rome was Christian. This empire had strong connections with Africa: it traded not only with the valley of the Nile but even with the West Coast of Africa. As Mommsen said: "It was through Africa that Christianity became the religion of the world. Tertullian and Cyprian were from Carthage; Arnobius from Sicca Veneria; Lactantius, and probably in like manner Minucius Felix, in spite of their Latin names, were natives of Africa, and not less so, Augustine. In Africa the Church found its most zealous confessors of the faith and its most gifted defenders."

Origen, Athanasius, and Saint Cyril were from the Nile valley. At the head of the Catholic Hierarchy at Rome, three popes were African by birth: Victor I (187-198), who defended the Roman date for Easter; Miltiades (311-314), who was pope when the Emperor entered Rome as a Christian; and Gelasius I (492-496), who defended the rights of the papacy against the state.

The Africa here referred to was the Africa above the Sahara Desert; there, as we have seen, Negroid blood was widespread, and in the valley of the Nile the Coptic Church, representing black Africa more directly, was organized. The patriarchate had a hundred bishoprics in the fourth century. In 330 Saint Athanasius, bishop of Alexandria, consecrated Fromentius as Bishop of Ethiopia.

On the highlands of Ethiopia, Negroid and Mongoloid peoples had united to found

49-1-45

a center of trade and government more than a thousand years before Christ. From this Axumite Kingdom came the legend of the Queen of Sheba. As early as 1800 B.C. the descendants of Jokdan, seafaring Arabs, had conquered the shores of the Red Sea opposite Abyssinia and founded Yemen. It was along this route that Pharaoh Necho's expedition went around Africa from east to west. The Periplus of the Erythraean Sea, dated from A.D. 60 to 80, shows the increasing commerce around this eastern horn to Africa.

Abyssinia for a time controlled both its own country and Yemen, and King Kaleb conquered Yemen in 525 and held it fifty years. Eventually the Abyssinians were expelled from Arabia and shut themselves up on their highlands where, as Gibbon said, "encompassed by the enemies of their religion, the Ethiopians slept for nearly a thousand years forgetful of the world by whom they were forgotten." Throughout the Middle Ages the legend of this Christian kingdom under Prester John persisted. At one time the Abyssinians established themselves at Meroe, but were driven back by the Nubians who had made league with Rome.

Finally in A.D. 450 the Nubians under Silko embraced Christianity and made old Dongola their capital. This city replaced Napata and Meroe, and by the twelfth century had churches and brick dwellings.

In A.D. 525 there was considerable trade between Abyssinia and Central Africa. Spices and gold were imported in return for cattle, salt, and iron.

Thus the flood of Mohammedanism as it pressed up the Nile valley was held back for two centuries by a solid Christian phalanx in Abyssinia and Nubia. For years the dream of the Europeans was to make contact and alliance with the forces of Prester John and the other African Christians. It was not until 1270 that Saladin crushed the Nubians and annexed Nubia. The Christian kingdom of the Nubians finally fell in the sixteenth century.

49-1-46

17. AFRICA IN ASIA

The connection between Asia and Africa has always been close. There was probably actual land connection in prehistoric times, and the black race appears in both continentsiin the earliest records, making it doubtful which continent is the point of origin. Certainly the Negroid people of Asia have played a leading part in her history. The blacks of Melanesia have scoured the seas, and Charles Tauber makes them inventors of one of the world's first written languages: thus "this greatest of all human inventions was made by aborigines whose descendants today rank among the lowest, the proto-Australians."

The ethnic history of India would seem to be first a pre-historic substratum of Negrillos or black dwarfs; then the pre-Dravidians, a taller, larger type of Negro; then the Dravidians, Negroes with some mixture of Mongoloid and later of Caucasoid stocks. The Dravidian Negroes laid the bases of Indian culture thousands of years before the Christian era. On these descended through Afghanistan an Asiatic or Eastern Europaan element, usually called Aryan.

The culture of the black Dravidians underlies the whole culture of India, whose greatest religious leader is often limned as black and curly-haired. According to Massey: "It is certain that the Black Buddha of India was imaged in the Negroid type. In the black Negro God, whether called Buddha or SutNahsi, we have a datum. They carry their color in the proof of their origin. The people who first fashioned and worshipped the divine image in the Negroid mould of humanity must, according to all knowledge of human nature, have been Negroes themselves. For blackness is not merely mystical, the features and hair of Buddha belong to the black race and Nahsi is the Negro name. The genetrix represented as the Dea Multimammia, the Diana of Ephesus, is found as a black figure, nor is the hue mystical only, for the features are Negroid as were those of the black Isis in Egypt."

49-1-44

Of the thirty apostles who took Buddhism to China, ten are represented as yellow, ten borwn, and ten black. The Indian blacks, mingling with the straight-haired yellow Mongoloids, tended to have straighter hair long with their dark color than Africans, although this was not true in the case of the island Negroes.

According to Balfour: "Ethnologists are of the opinion that Africa has had an important influence in the colonization of Southern Asia, of India, and of the Easter Islands in time prior to authentic history or tradition. The marked African features of some of the people in the extreme south of the Peninsula of India, the Negro and Negrito riaces of the Andamans and Great Nicobar, the Semang, Bila, and Jakun of the Malay Peninsula, and the Negrito and Negro, Papuan and Malagasi races of the islands of the Indian Archipelago, Australia, and Polynesia, indicate the extent which characterizes their colonization.... The spiral-haired Negro race seem to have preceded the lank-haired brown race....When we consider the position if India between the two great Negro provinces, that on the west being still mainly Negro, even in most of its improved races, and that on the east preserving the ancient Negro basis in points so near India as the Andamans and Kedah, it becomes highly probable that the African element in the population of the Peninsula has been transmitted from an arbhaic period before the Semitic, Turanian, and Iranian races entered India and when the Indian Ocean had Negro tribes along its northern as well as its eastern and western shores....Perhaps all the original population of southern Arabia, and even of the Semitic lands, generally was once African."

Widney has said: "They (the Negroes) once occupied a much wider territory and wielded a vastly greatly influence upon earth than they do now. They are found chiefly in Africa, yet traces of them are to be found through the Islands of Malaysia, remnants, no doubt, of that more numerous black population which seems to have occupied tropical Asia before the days of the Semites, the Mongols, and the Brahminic Aryan. Back in the centuries which are scarcely historic, where history gives only vague hintings, are traces of a widespread, primitive civilization, crude, imperfect,

49-1-48

garish, barbaric, yet ruling the world from its seats of power in the valley of the Ganges, the Euphrates, and the Nile, and it was of the Black races. The first Babylon seems to have been of a Negroid race. It was in the days before the Semite was known in either land. The Black seems to have built up a great empire, such as it was, by the waters of the Ganges before Mongol or Aryan. Way down under the mud and slime of the beginnings.... is the Negroid contribution to the fair superstructure of modern civilization."

The Asiatic and African blacks were strewn along a straight path between tropical Asia and tropical Africa, and there was much racial intermingling between Africa and western Asia. In Arabia particularly the Mongoloids and Negroids mingled from earliest times. The Mongoloids invaded North Africa in prehistoric times, and their union with the Negroids formed the Libyans. Later there was considerable commerce and contact between the Phoenicians of North Africa, especially Carthage, and the black peoples of the Sudan.

49-1-49

18. ASIATIC AFRICANS ~~and THE SUSIANS~~

Speaking of the mixture that went on in this area between Elamite black and Aryan white, Dieulafoy has said: "The Greeks themselves seemed to have known these two Susian races, the Negroes of the plains and the Scythian whites of the mountains. Have not their old poets given to the direct descendants of the Susian, Memnon, the legendary hero who perished under the walls of Troy, a Negro father, Tithon, and a white, mountain woman as mother -- Kissia? Do they not also say that Memnon commanded an army of black and white regiments? 'Memnon went to the succor of Priam with ten thousand Susians and ten thousand Ethiopians.'. . . I shall attempt to show to what distant antiquity belongs the establishment of the Negritos upon the left bank of the Tigris and the elements constituting the Susian monarchy. . . .Towards 2300 B.C., the plains of the Tigris and AnzanSusinka were ruled by a dynasty of Negro kings.

"The coming of this dynasty of Medes corresponded perhaps to the arrival in the south of an immense Scythian invasion. Pushed back by the black Susians after having

taken possession of the mountains, the whites poured into the plains of the Tigris and remained master of the country until the time when Kudur Nakhunta subdued Chaldea and founded AnzanSusinka. He added to the territory of the blacks -- Nime, Jussi, Habardip -- all the mountainous districts once inhabited by the whites of the Scythian race."

Herodotus, who visited this region in the fifth century B. C., mentioned the dark skins of the people. He called them Ethiopians, but said their hair was straighter than those of the western Ethiopians, who had woolly hair. The Elamites, however, seemed rather to have belonged to the more Negroid stock of the west; their hair, as seen on the monuments, is short and woolly. " The Elamites," said Sir Harry Johnston, "appear to have been a Negroid people with kinky hair and to have transmitted this racial type to the Jews and Syrians. There is curliness of the hair, together with a Negro eye and full lips in the protraiture of Assyria which conveys the idea of an evident Negro element in Babylonia. Quite probably the very ancient Negro invasion of Mediterranean Europe (of which the skeletons of the Alpes Maritimes are vestiges) came from Syria and Asia Minor on its way to Central and Western Europe."

49-1-50

17. THE ARABS

Professor Toynbee also says, "The primitive Arabs who were the ruling element of the Omayyad Caliphate called themselves 'the swarthy people' with a connotation of racial superiority, and their Persian and Turkish subjects, 'the ruddy people,' with a connotation of racial inferiority, that is to say, they drew the distinction that we draw between blonds and brunets but reversed the value."

Carthage especially traded with the Sudan for gold dust, ostrich feathers, and ivory in exchange for textiles, cloth, copper, and beads. Often the Carthaginians settled among the Negroes and the Negroes among them. As a result the horse became known in the Sudan, textiles were made from cotton, and gold was gathered and worked. The glass industry was born and spread. The Libyans, or Berbers, were descendants from the populations of North Africa which consisted of an Asiatic element that came in prehistoric times and mixed with the Negroids. From these mixed races came the Sudan stone houses and the cemented wells and the spread of cattle-raising and gardening.

The whole population becomes darker and darker toward the south, until it merges into the blacks of the Sudan. The divisions, especially the political units -- Tripoli, Tunisia, Algeria, and Morocco -- have no anthropological significance and do not correspond to any ethnic division. There are many striking groups: the Negroid Tuareg, or people of the Veil; the Tibu, or rock people, Negroids with mixed Mongoloid or Caucasoid blood; the dark Fulani, scattered all over North Africa from the Upper Niger to the Senegal and forming often the dominant political pwer in the lands toward the coast.

20 ~~18~~. ISLAM

Mohammedanism arose in the Arabian deserts, starting from Mecca which was in that part of the world which the Greeks called Ethiopia and regarded as part of the African Ethiopia. It must from earliest time have had a large population of Negroids.

The two greatest colored figures in the history of Islam are Bilai-Habesh (Bilal of Ethiopia) and Tarik-bin-Ziad: "Bilal-i-Habesh was Mohammed's liberated slave and closest friend to whom he gave precedence over himself in Paradise. The Prophet liberated all his slaves, and they were all well-known figures in the early Islamic history. He adopted as his own son another Negro, Zayd bin Harith, his third convert, who rose to be one of his greatest generals. Later, to show his regard for Zayd, he took one of Zayd's wives, the beautiful Zainab, as his own. But Bilal stands out in greatest relief. Apart from his services in the cause of Islam, it was through him that the Moslems decided to use the human voice instead of bells to call the Moslems to prayer. He had evidently a marvelous voice and was the first who called for prayers in Islam.

"Tarik-bin-Ziad also was a slave and became a great general in Islam and was the conqueror of Spain as the commander of the Moorish Army which invaded Spain. Jebel-u-Tarik (the mount of Tarik), that is Gibraltar, is named after him. One of the greatest Turkish classics is called 'Tarik-bin-Ziad' and has him as its hero. It was written by Abdul-Hak-Hamid, our greatest poet (alive though 84) and equals any tragedy of Corneille. I do hope that some time the biographies of these great figures will be written in English."

49-1-51

The Arabs brought the new religion of Mohammed into North Africa. During the seventh century they did not migrate in great numbers. Spain was conquered not by Arabs, but by armies of Berbers and Negroids led by Arabs. Later, in the eleventh century, another wave of Arabs came, but the number was never large and their prestige came from their religion and their language, which became a lingua franca for the peoples north and south of the Sahara. The total substitution of Arabian for Berber or Negro blood was small.

Anyone who has traveled in the Sudan knows that most of the "Arabs" he has met are dark-skinned, sometimes practically black, often have Negroid features, and hair that may be almost Negro in quality. It is then obvious that in Africa the term "Arab" is applied to any people professing Islam, however much race mixture has occurred, so that while the term has a cultural value it is of little ethnic significance and is often misleading.

The Arabs were too nearly akin to Negroes to draw an absolute color line. Antar, one of the great pre-Islamic poets of Arabia, was the son of a black woman; and one of the great poets at the court of Harun-al-Rashid was black. In the twelfth century a learned Negro poet resided at Seville.

49-1-52

NEGROES IN SPAIN

The Mohammedans crossed the Pyrenees in A.D. 719 and met Charles Martel at Poitiers; repulsed, the invaders turned back and settled in Spain. The conflict for the control of the Mohammedan world eventually left Spain in anarchy. A prince of the Omayyads arrived in 758. This Abdurahman, after thirty years of fighting, founded an independent government which became the Caliphate of Cordova. His power was based on his army of Negro and white Christian slaves. He established a magnificent court and restored order, and his son gave protection to writers and thinkers.

Eventually rule passed into the hands of a mulatto, Almanzor, who kept order with his army of Berbers and Negroes, making fifty invasions into Christian territory. He died in 1002, and in a few years the Caliphate declined and the Christians began to reconquer the country. The Mohammedans looked to Africa for refuge.

In the eleventh century there was quite a large Arab immigration. The Berbers and some Negroes by that time had adopted the Arab tonue and the Mohammedan religion, and Mohammedanism had spread slowly southward across the Sahara.

The invasions of the eleventh century were launched in 1048 by the Vizier of Egypt under the colored Caliph Mustansir. Each man was provided with a camel and given a gold piece, the only condition being that he must settle in the west. In two years they pillaged Cyrenaica and Tripoli and captured Kairwan. The invaders for the most part settled in Tripoli and Tunis, while their companions pressed on westward into Morocco. This exemplifieds the process of arabization in North Africa, and it was to a large extent a reflex from the invasion that had most to do with the arabization of the Nile valley. It is thus responsible for much of the present-day distribution of the "Arab" tribes of the Sudan.

We know that in 850 four hundred black East Africans had been enrolled in the army of Abu'l Abbas, ruler of Bagdad, and that they rose in revolt with a Negro, called "Lord of the Blacks," at their head. In 869 the Persian adventurer, Al Kabith, summoned the black slaves to revolt, and they flocked to his side in tens of thousands. In 871 they captured Basra and for fourteen years dominated the Euphrates delta. When Masudi visited this country fourteen years later, he was told that this conquest by famine and sword had killed at least a million people.

RENAISSANCE IN EUROPE

The rebirth of civilization in Europe began in the fifteenth century. At this time African and Asiatic civilizations far outstripped that of Europe. In the black Sudan nations, civilizations had risen and fallen even earlier. Melle, which flourished in the thirteenth and fourteenth centuries, fell before the empire of the Songhay, which in the fifteenth century became a vast, organized government two-thirds the size of the United States, with trade and commerce and cultural connections, through its University of Sankoré, with Spain, Italy, and the Eastern Roman Empire. The city-states and Atlantic culture of the West Coast of Africa had fought back triple pressure from the Sudan, the Arabs in the Nile valley, and the emigrating Bantu sweeping down on the kingdoms of the Congo.

It was here that the rape of Africa began and transformed the world. There can be little doubt but that in the fourteenth century the level of culture in black Africa south of the Sudan was equal to that of Europe and was so recognized. There is even less doubt but that Negroid influence in the valley of the Nile was a main influence in Egypt's development from 2100 to 1600 B.C.; while in East, South, and West Africa human culture had from 1600 B.C. to A.D. 1500 its monuments of a vigorous past and a growing future. What changed all this? What killed the Sudanese empires, brought anarchy into the valley of the Nile, decimated the thick populations of East and Central Africa, and pressed the culture of West Africa beneath the ruthless heel of the rising European culture?

In Europe during the thirteenth and fourteenth centuries there began to appear national integration of culture patterns, with no little inspiration from the East and from Africa. There followed in the fifteenth and sixteenth centuries increased freedom of thought and impatience with dogma; and in the seventeenth, came scientific inquiry and the beginning of a demand for democratic control of government.

44-1-54

But from 1400 to 1800 also came discovery, trade, and the beginnings of a new enslavement of labor. In the eighteenth century these developments leaped into opposition. The slavery of labor expanded enormously in the New World, concurrent with a new development of trade, industry, and wealth in the Old. These trends met head on with a revolutionary demand for democracy and social freedom in Europe. The clash of ideals was revealed in the nineteenth century by freedom for exploitation of slaves in America and a consequent reaction against the demands of European labor led by Napoleon and British Capital. Let us follow the details of this story.

23 ~~21~~. AMERICA

The importance of the discovery of America was not the treasure of precious metals it provided, but the new and widening market and source of supply it offered European manufacturers by the exchange of tobacco, sugar, and cotton for manufactured goods. Its first effect was to raise the mercantile system to glory and splendor. World trade increased enormously. The seventeenth and eighteenth centuries were the centuries of trade, and eventually, by the rise of capitalism, the nineteenth century became the century of production.

49-1-55

During the Middle Ages there had been little direct commerce between Europe and West Africa. Arabs, Berbers, and eventually Negroids like the Mandingos became intermediaries for the trade between Europe and the Sudan. Rumors filtered through the Moroccan ports regarding the Kingdom of Ghana, the Niger, "the western Nile," and the black peoples round about. The Arabs bought gold from the Negroes and sold it to the Jewish merchants in Majorca.

The demand of Europe in the fifteenth century was for new and shorter paths to the East, to the spices, silks, and other luxurious articles of the East. In this quest Spain found silver in the New World, and Portugal triumphed when she found gold in Africa. The Portuguese trade monopoly with Africa and thence to India extended over half a century. She developed an empire of tremendous wealth.

Portugal

The object of Prince Henry (1394-1460) of Portugal was mainly trade to India. At the same time he hoped by union with Prester John of Ethiopia to evangelize the Negroes of all Africa and make common cause against the Mohammedans. Henry heard of the gold for which the Carthaginians had bartered at Timbuktu. Having seized Ceuta, he began to explore, and after nineteen years his seamen rounded Cape Bojador.

24. THE SLAVE TRADE FROM AFRICA TO EUROPE

In 1441 Goncalves brought to Lisbon the first cargo of slaves and gold. Very shortly a flourishing trade in gold, slaves, ostrich feathers, amber, and gum opened up between Portugal and black Africa. The Portuguese tried to conceal this trade from the rest of Europe. They did not actually find the black kingdom of Ghana, but they called the coast which did discover "Guinea," after mysterious Ghana. They heard of the empire of Melle at Timbuktu but did not actually reach it. They had commerce with the kingdom of the Jolofs and with other coast tribes. Eventually they reached the Gold Coast, or as they called it, "the Mine," where gold could be had in large quantities. They found that these Negroes were great traders who brought the gold from the interior when they could persuade the coast tribes who lived by fishing to let the gold bearers through. Eventually they came in contact with the kingdom of Benin and a mighty interior empire whose sovereign was the Ogani.

For fifty years, from 1480 to 1530, the Portuguese had a monopoly of the Guinea trade and reaped huge proftis, seldom less than 50 per cent and sometimes as high as 800 per cent. Between 1450 and 1458 ten or twelve ships a year were sent to Guinea, and the amount of gold dust reached a value of over two million dollars a year, and after 1471 rapidly exceeded this.

Next to the trade in gold came the highly important importation of labor into Portugal. By the middle of the fifteenth century nearly a thousand blacks had been imported. A century later a vast majority of the inhabitants of the southernmost province were Negroids, and even up as far as Lisbon, Negroes outnumbered the whites. The two races intermingled, resulting in the Negroid characteristics of the Portuguese nation even today.

95-1-56 49-64

~~16. THE SLAVE TRADE AND AFRICA~~

25. THE AFRICAN SLAVE TRADE SPREADS

The Guinea trade was at first mainly in gold, pepper, and other commodities, with some trading in slaves which went to Europe. In the sixteenth century, however, it began to change, and slaves began to be sent to South America. This was not at first a large trade and did not compete with legitimate commerce; but it grew, and by 1540 reached ten thousand slaves a year. The reason for this was not far to seek. Between 1480 and 1578 the peoples of Guinea enjoyed a vigorous life with economic independence based on foreign trade. Gold, ivory, and pepper were valuable as exports before the discovery of America and continued long afterward. But by the middle of the sixteenth century there was trouble in West Africa. A vast migration of black people, the Limbas, moved slowly westward from Central Africa. They were a part of the migration of the Bantu moving down from the Mohammedan invasion of the Nile Valley and the empire-building of the black kingdoms of the Sudan. They destroyed villages, massacred the inhabitants, and were soon in fierce competition with the Souzas, who possessed the most formidable native army in West Africa at that time. Migration and native wars lasted for a generation. This meant that the cheap labor of captives became available on the West Coast and opened the way for the beginning of the American slave trade. With this slave trade came trouble, not simply among native tribes but also between the Portuguese and the natives.

After 1530 the Portuguese empire in Guinea was a vast commercial enterprise, but the overhead charges, caused by difficulties with the natives and the beginning of European competition, equaled and began to exceed production. The first threat to Portuguese dominance in Guinea came from the French. By the Treaty of Crespy in 1544 the right of Frenchmen to trade in the Indies, east and west, was proposed but not ratified. French trade began to multiply after 1553; relations between Portugal and France became strained on account of the French pirates and privateers. The monopoly of the Portuguese in West Africa practically ended in 1553. The French Huguenots forced themselves into the Guinea trade after 1571, under the inspiration of Admiral

Coligny. British merchants during the reign of Queen Mary became interested. Queen Elizabeth fought the monopoly claims of Portugal and Spain and herself participated in the Guinea trade. 26 ~~24~~. THE BRITISH SLAVE TRADE

Between 1559 and 1561 the British explorer, Martin Frobisher, took part in piracy and trade. From 1561 to 1571 the British trade increased over the French and there was direct traffic between England and Africa. "The first Englishman of note to engage in the traffic was the celebrated John Hawkins, afterwards knighted by Elizabeth and appointed Treasurer to the Navy. Froude calls him 'a peculiarly characteristic figure,' and he certainly presents that blending of piracy and piety, rascality and religion, so common in the days of Elizabeth and not altogether unknown in ours. Hawkins appears to have had his eye for a long time on the slave trade as a very lucrative business, and as the Spaniards claimed a practical monopoly, patriotic feeling -- the desire to bread down the Spanish claim -- went, as is again not unusual, with profit. At any rate, after a reconnoitering trip, Hawkins returned to England and fitted out an expedition of five vessels, to which were later added another three. In this venture, the Earl of Leicester, the Earl of Pembroke, and others took shares. So did Queen Elizabeth. She lent the ship Jesus, and Hawkins drew up rules for his men, the two first of which ran: 'Serve God daily,' and 'Love one another.' The piety of the expedition was beyond reproach. So was its practice, as we read that finding the natives of Cape Verde to be of 'a nature very gentle and loving,' and 'more civil than any others,' Hawkins prepared to kidnap a number of them. After sailing for some time, 'burning and spoiling,' he landed in the Spanish American settlements and compelled the colonists to purchase the slaves at his own price. Quite fittingly, Hawkins was granted a coat of arms consisting of 'a demi-Moor in his proper colours, bound and captive,' as a token of the new trade he had opened to Englishmen."

49-158

Meantime disaster overtook the Portuguese. King Sebastian attacked the Moors in North Africa and was killed. His death in 1578 changed the position of Guinea. Within two years Portugal had passed under the domination of Spain, and West Africa with some resistance submitted to Spain. Philip II of Spain (1527-1598) was able to defend to some extend his African empire, but eventually Spain was cut off from Africa by papal decree. Then came Portugal's annexation to Spain in 1581 and the loss of Spanish maritime power by the destruction of the Armada in 1588, which was a death blow to the commercial empire of Spain and Portugal.

The Protestants of England, the Huguenots of France, and the Calvinists of Holland started mortal struggle for Guinea. Eagerly the Dutch took over the Portuguese islands and settlements and formed in 1602 the East India Company.

With the seventeenth century the battle of commerce was on. The Dutch and the British fought to a finish in the Atlantic to dominate the Atlantic trade. The Portuguese, British, and Dutch fought in India. Between them they killed the trade of the German Hanseatic League and overthrew the economic dominance of Spain. Cromwell seized Jamaica as a center of British slavery and the slave trade. In Africa the kingdoms of the black Sudan moved east and displaced the Nilotic Negroes. From among these, peoples like those of the Fang and the Bambara kingdoms between the Nile and the West Coast pressed farther down upon the withdrawing Bantu.

In the seventeenth century the African slave trade to America expanded. It was not yet however a trade which made the word synonymous with Negro or black: during these years the Mohammedan rulers of Egypt were buying white slaves by the tens of thousands in Europe and Asia and bringing them to Syria, Palestine, and the Valley of the Nile. In the west, however, the character of world trade began subtly to change. While the theory of mercantilism still prevailed in academic circles and commerce continued to pour African gold into Europe, and while the Negroes and Arabs sent gold to India to bedeck the gorgeous moguls, in practical commerce the importation of gold from Africa and silver from Peru was losing its dominant attraction.

49-1-59

What was needed was human labor; labor to raise food in Spain and Portugal; labor to raise sugar and tobacco in the West Indies and North America.

The labor situation in Europe at the time made slave labor in America peculiarly profitable. The working population of Europe in the sixteenth and seventeenth centuries was limited. The devastation of the Thirty Years' War and the demand for labor and services on the feudal estates made any large-scale exportation of labor to America unthinkable. On the other hand, sugar, cotton, and tobacco were suitable to mass production on the plantations with conventional standards of work, simple tools, and comparatively small outlay for clothing and food. The organized slave gang was more profitable on the land than the peasant proprietor. The new capitalism as a method of production and trade began to supplant the farmer and merchant at home in Europe.

27 ~~25~~. CROMWELL, THE SLAVE TRADER

In 1660 the upheaval of Civil War in England was at an end, and England was ready to embark on the slave trade for the benefit of her sugar and tobacco colonies. The British increased the import of slaves to America, raised sugar, indigo, and cotton, and began to bring these goods to England for processing. They then exported some of these processed foods to Africa to buy more slaves. Trade began to change from a gambler's search for treasure to investment for permanent income; and this income consisted of goods for sale which were in practice found more valuable than treasure for hoarding. To perfect this arrangement slaves and more slaves must be had.

49-1-60

At the same time, the conscience of the world began to writhe. "Modern slavery was created by Christians, it was continued by Christians, it was in some respects more barbarous than anything the world had yet seen, and its worst features were to be witnessed in countries that were most ostentatious in their parade of Christianity. It is this that provides the final and unanswerable indictment of the Christian Church." There had been the splendor of the Catholic Church under Alexander VI and Leo X, and then the revolt led by Luther, the Reformation. Thus was the growing consciousness of

the dignity of the human soul brought face to face with slavery and a new slave trade. Gradually it was rationalized widely as a method of rescuing the heathen from perdition and saving his soul. However, this rationalization meant nothing when it conflicted with the profits of trade; and planters particularly, stoutly refused to release converts, and innumerable Christians often would not allow conversion. The profits of this new aspect of trade meant investment and the capitalist system.

Investment called for labor, and cheap labor, if the profit was to be high; but labor was beginning to be conscious and to revolt. This was the meaning of the Peasant War in Germany in the sixteenth century. But there was revolt and revolutionary thought not only in Europe; indeed it may be insisted that the revolt of labor against its modern degradation began in America rather than in Europe. This was the meaning of five slave revolts among the blacks in America and the beginning of the fateful dynasty of maroons, or free Negroes, hiding in organized rebellion in the mountains of Cuba, Jamaica, and Haiti, in Mexico and Brazil. In the seventeenth century, with the increased importation of slaves, there were nine revolts, leading to pitched war in Jamaica and Barbados and Haiti and to the independent state of Palmares in Brazil.

49 - 1 - 61

Nevertheless, England had the bit in her teeth. "Royal adventurers trading to Africa" in 1667 had among them members of the royal family, three dukes, eight earls, seven lords, and twenty-seven knights. With the end of the civil war in England, British merchants crowded upon the landholding aristocracy for an increased share in the profits of industry. While the British were fighting ostensibly for dynastic disputes in Europe, they were really, in the War of Spanish Succession and in the Seven Years' War, fighting for profit through world trade and especially the slave trade. In 1713 they gained, by the coveted Treaty of Asiento, the right to monopolize the slave trade from Africa to the Spanish colonies. In that century they beat

Holland to her knees and started her economic decline. They overthrew the Portuguese in India, and finally, by the middle of the century, overcame their last rival in India, the French. In the eighteenth century they raised the slave trade to the greatest single body of trade on earth.

26. THE ASSIENTO

The Royal African Company transported an average of five thousand slaves a year between 1680 and 1686; but the newly rich middle-class merchants were clamoring for free trade in human flesh. Eventually the Royal African Company was powerless against the competition of free merchant traders, and a new organization was established in 1750 called the "Company of Merchants trading to Africa."

In the first nine years of this "free trade," Bristol alone shipped 160,950 Negroes to the sugar plantations. In 1760, 146 ships sailed from British ports to Africa with a capacity of 36,000 slaves. In 1771 there were 190 ships and 47,000 slaves. The British colonies between 1680 and 1786 imported over two million slaves. By the middle of the eighteenth century Bristol owned 237 slave trade vessels, London, 147, and Liverpool, 89.

Liverpool's first slave vessel sailed for Africa in 1709. In 1730 it had 15 ships in the trade and in 1771, 105. The slave trade brought Liverpool in the late eighteenth century a clear profit of £300,000 a year. A fortunate slave trade voyage made a profit of £8,000, and even a poor cargo would make £5,000. It was not uncommon in Liverpool and Bristol for the slave traders to make 100 percent profit. The proportion of slave ships to the total shipping of England was one in one hundred in 1709 and one-third in 1771. The slave traders were strong in both the House of Lords and the House of Commons, and a British coin, the guinea, originated in the African trade of the eighteenth century.

27. THE STRUGGLE FOR INDIA

In the midst of this, a tremendous treasure from India poured into England. The Battle of Plassey gave India to the British Empire for plunder on a scale seldom seen

49-1-61a

before or since. The enormous extent of robbery of the Indians by British civil servants has been abundantly proved. Howitt referred to "the scenes and transactions in our great Indian empire -- that splendid empire which has poured out such floods of wealth into this country; in which such princely presents of diamonds and gold have been heaped on our adventurers; from the gleanings of which so many happy families in England 'live at home at ease' and in the enjoyment of every earthly luxury and refinement. For every palace built by returned Indian nabobs in England; for every investment by fortunate adventurers in India stock; for every cup of wine and delicious viand tasted by the families of Indian growth amongst us, how many of these Indians themselves are now picking berries in the wild jungles, sweltering at the thankless plough only to suffer fresh extortions, or snatching with the bony fingers of famine, the bloated grains from the manure of the high-ways of their native country!"

49-1-68

The directors of the East India Company themselves admitted: "We have the strongest sense of the deplorable state to which our affairs were on the point of being reduced, from the corruption and rapacity of our servants, and the universal depravity of manners throughout the settlement. The general relaxation of all discipline and obedience, both military and civil, was hastily tending to a dissolution of all government. Our letter to the Select Committee expresses our sentiments of what has been obtained by way of donations; and to that we must add, that we think the vast fortunes acquired in the inland trade have been obtained by a scene of the most tyrannic and oppressive conduct that was ever known in any age or country!"

However this wealth was obtained and however pious the regret at the methods of its rape, there can be no doubt as to what became of it. Its owners in the main were not royal spendthrifts, nor aristocratic dilettantes; and even if some were, their financial advisers put their funds largely into the safe investment of West Indian slavery and the African slave trade. Thus an enormous amount of free capital seeking

safe investment and permanent income poured into the banks, companies, and new corporations. The powerful British institutions of the stock exchange was born.

30 39. KARL MARX EXPLAINS

It was Karl Marx who made the great unanswerable charge of the sources of capitalism in African slavery: "The discovery of gold and silver in America, the extirpation, enslavement, and entombment in mines of the aboriginal population, the beginning of the conquest and looting of the East Indies, the turning of Africa into a warren for the commercial hunting of black-skins, signalized the rosy dawn of the era of capitalist production. These idyllic proceedings are the chief momenta of primitive accumulation. On their heels treads the commercial war of the European nations, with the globe for a theatre. It begins with the revolt of the Netherlands from Spain, assumes giant dimensions in England's anti-Jacobin war, and is still going on in the opium wars against China. . . ."

"With the development of capitalist production during the manufacturing period, the public opinion of Europe had lost the last remnant of shame and conscience. The nations bragged cynically of every infamy that served them as a means of capitalistic accumulation. Read, e.g., the naive Annals of Commerce of the worthy A. Anderson. Here it is trumpeted forth as a triumph of English statecraft that at the peace of Utrecht, England extorted from the Spaniards by the Asiento Treaty the privilege of being allowed to ply the Negro trade, until then only carried on between Africa and the English West Indies, between Africa and Spanish America as well. England thereby acquired the right of supplying Spanish America until 1743 with four thousand eight hundred Negroes yearly. This threw, at the same time, an official cloak over British smuggling. Liverpool waxed fat on the slave trade. This was its method of primitive accumulation. And, even to the present day, Liverpool 'respectability' is the Pindar of the slave trade which . . . has coincided with that spirit of bold adventure which has characterised the trade of Liverpool and rapidly carried it to its present state of prosperity; has occasioned vast employ-

49-1-63

ment for shipping and sailors, and greatly augmented the demand for the manufactures of the country.' Liverpool employed in the slave trade, in 1730, 15 ships; in 1751, 53; in 1760, 74; in 1770, 96; and in 1792, 132."

"Tantae molis erat, to establish the 'eternal laws of Nature' of the capitalist mode of production, to complete the process of separation between labourers and conditions of labour, to transform at one pole the social means of production and subsistence into capital, at the opposite pole, the mass of the population into wage-labourers, into 'free labouring poor,' that artificial product of modern society. If money, according to Augier, 'comes into the world with a congenital blood-stain on one cheek,' capital comes dripping from head to foot, from every pore, with blood and dirt."

31 ~~30.~~ ENGLAND FATTENS ON SLAVERY

The method by which slavery and capital investment were developed by Great Britain can be clearly followed: the "triangular trade" flourished. It depended first mainly upon sugar and tobacco and later on cotton. The processing of these materials turned England into a manufacturing country, and the focusing of the attention of technicians upon methods of manufacture brought an astonishing series of inventions in the latter part of the eighteenth century. The Negroes were purchased with British manufactures and transported to the plantations. There they produced sugar, cotton, indigo, tobacco, and other products. The processing of these created new industries in England; while the needs of the Negroes and their owners provided a wider market for British industry. New England agriculture, and the Newfoundland fisheries.

By 1750 there was hardly a manufacturing town in England which was not connected with the colonial trade. The profits provided one of the main streams of that capital which financed the Industrial Revolution. The West Indian islands became the center of the British Empire and of immense importance to the grandeur of England. It was the Negro slaves who made these sugar colonies the most precious colonies ever re-

49-1-64

corded in the annals of imperialism. Experts called them "the fundamental prop and support" of the Empire. The British Empire was regarded as a "magnificent superstructure of American commerce and naval power on an African foundation."

William Wood said that the slave trade was the "spring and parent whence the others flow." Postlethwayt described the slave trade as "the first principle and foundation of all the rest, the mainspring of the machine which sets every wheel in motion."

The triangular trade made an enormous contribution to Britain's industrial development. The profits fertilized the productive system of the country. The slate industry in Wales was revolutionized by a plantation owner. The British West Indies interest was back of the vast railway development. Cotton responded to new inventions. Between 1709 and 1787 the tonnage of British shipping in foreign trade increased four-fold. The British nobility benefited largely from the West Indian trade. The Lascelles were from Barbados, and one of their descendants is now brother-in-law of the King of England. The Earl of Chatham considered the sugar colonies as "the landed interest of this kingdom." West Indian investors bought seats in Parliament. The poetry of both Browning and Barrett with all its depth and beauty grew straight out of West Indian slavery.

While a profit of seven shillings per head per annum was sufficient to enrich a country, it was declared that each white man in the colonies brought a profit of over seven poimds. Sir Dalby Thomas declared that every person employed on the sugar plantation was a hundred and thirty times more valuable to England than one at home. Professor Pitman has estimated that in 1775 British West Indies plantations represented a valuation of fifty million pounds sterling, and the sugar planters themselves put the figure at seventy millions in 1788. In 1798 Pitt assessed the annual income from West Indian plantations at four million pounds as compared with one million from the rest of the world. As Adam Smith wrote in Wealth of Nations:

49-1-65

"The profits of a sugar plantation in any of our West Indian colonies are generally much greater than those of any other cultivation that is known either in Europe or America." According to Davenant, "Britain's total trade at the end of the seventeenth century brought a profit of £2,000,000. The plantation trade accounted for £600,000; re-export of plantation goods, £120,000; European, African, and Levant trade, £600,000; East India trade £500,000; re-export of East India goods, £180,000."

The Napoleonic wars widened the trade empire of Great Britain and extended the market for her manufactures. After twenty-two years of fighting, British merchants surpassed in wealth the landed aristocracy, and the Reform Bill of 1832 reflected this economic fact. 32 ~~31.~~ SLAVE REVOLT AND REVOLUTION

We may pause here to enumerate a series of events which have been too often looked upon as separate and unconnected. They are as follows:

1500-1600: The revolt of slaves in the West Indies

1655-1738: War between the British and the Maroons

1750: British free trade in human flesh

1757: The loot of India begins

1774: American association against the slave trade

1775: The American Revolution

1789: The French Revolution

1791-1798: Revolt of Toussaint L'Ouverture

1792-1815: Reaction in France and the rise and fall of Napoleon

1800-1900: Capitalism and the factory system in England

1807: Abolition of the British slave trade

1830: The Cotton Kingdom

1833-1838: British abolition of slavery

1846: Repeal of the British Corn Laws; free trade

1863: Emancipation in America

1884: Imperial colonialism.

49-1-66

The slave revolts were the beginnings of the revolutionary struggle for the uplift of the laboring masses in the modern world. They have been minimized in extent because of the propaganda in favor of slavery and the feeling that the knowledge of slave revolt would hurt the system. In the eighteenth century there were fifteen such revolts: in Portuguese and Dutch South Africa, in the French colonies, in the British possessions, in Cuba and little islands like St. Lucia. There were pitched battles and treaties between the British and the black Maroons and finally there was a rebellion in Haiti which changed the face of the world and drove England out of the slave trade.

These revolts show that the docility of Negro slaves in America is a myth. They fall into two groups: those before the French Revolution and those after. The revolt of Maroons in Jamaica and Cuba and the Bush Negroes in South America and the repeated attempts in Haiti frightened the slaveholders and threatened the stability of the whole system. In Jamaica the Maroons "continued to distress the island for upwards of forty years, during which time forty-four acts of assembly were passed, and at least £240,000 expended for their suppression." The governor of Barbados wrote: "The public mind is ever tremblingly aware to the dangers of insurrection," and the statute books all over the slave territory testified to this fact.

49-1-64

53 THE AMERICAN REVOLUTION

The event that opposed the slave trade and slavery was the American Revolution. Not only did the colonists achieve their independence through the help of slaves and the promise of their freedom, and with the co-operation in money and men from Haiti, but they represented actual working classes rather than exploiters of labor. Finally, the French Revolution burst forth as a war against privilege based on birth and demanded freedom, especially economic freedom to trade and to enter industry without coercion.

The result was that the slave trade met distinct opposition based on humanitarian grounds; but this opposition would have been powerless to stop the trade if

it had not been evident that the trade itself as a source of profit was threatened. The revolt of America confirmed the superiority of the French sugar colonies. Between 1783 and 1789 the progress of San Domingo had been amazing. At the end of the eighteenth century the British sugar planters lost their supremacy to the French colonies. French colonial exports amounted to eight millions pounds while British colonial exports amounted to five million pounds.

When the American colonies won their independence, the Caribbean ceased to be a British sea and investments began to be transferred from the West to the East Indies. In 1783 Prime Minister William Pitt showed increased interest in India and encouraged Wilberforce to propose the abolition of the slave trade.

34-35 THE FRENCH REVOLUTION

Then came the French Revolution and eventually the revolt of Haiti. The British made every effort to seize control of this famous French sugar colony. They tried both force of arms and bribery, but at last were compelled to recognize the independence of Toussaint L'Ouverture, whom they tried to divorce from allegiance to the French.

49-1-68

Nevertheless, with Haiti out of the world market, the British could have retained their hold upon the sugar industry had it not been for the increased cultivation of sugar in Spanish and Portuguese colonies. So long as these colonies could obtain cheap slaves, they threatened and even destroyed the investment in slave labor already made by British capital. Looked upon as machines or "real estate," as slaves legally were, the investment in Negro labor was being undermined so long as cheaper Negro labor could be had from Africa.

To keep the prices of slaves from falling, the slave trade had to be limited or stopped. Otherwise the whole slavery investment would totter, and that is what England faced after the revolution of Toussaint. Early in the nineteenth century, therefore, she began to change, and back of philanthropists like Sharpe and Wilberforce came the unexpected support of opportunist politicians like Pitt.

Moreover, capitalism was far enough developed to produce sufficient free finance capital to effect a transfer of investment from one field to another without such losses as would cripple the system. Losses there had to be, but they were part of the anarchy of business methods, which by large-scale gambling and periodic crises rushed blindly to newer and larger fields of profit. Eventually Negro slavery and the slave trade were abandoned in favor of colonial imperialism, and the England which in the eighteenth century established modern slavery in America on a vast scale, appeared in the nineteenth century as the official emancipator of slaves and founder of a method of control of human labor and material which proved more profitable than slavery.

For a long time the fiction of the slave trade as a method of conversion to Christianity had ceased to salve the conscience of honest-thinking men. Slavery and the slave trade were pouring such treasure into England, building her cities, railways, and manufactures, and making her so powerful a country that the defense of the system was fierce. England became mistress of the seas. The empire sang "Hail Britannia, Britannia Rules the Waves."

Before the American Revolution, English public opinion accepted the view of the slavetrader: "Tho' to traffic in human creatures, may at first sight appear barbarous, inhuman, and unnatural; yet the traders herein have as much to plead in their own excuse, as can be said for some other branches of trade. . . In a word, from this trade proceed benefits, far outweighing all, either real or pretended mischiefs and inconveniences."

The cruelty and inhumanity of the slave trade was a horrible fact. A committee of the House of Commons described the "Middle Passage": "The Negroes were chained to each other hand and foot, and stowed so close that they were not allowed above a foot and a half for each in breadth. Thus rammed together like herrings in a barrel, they contracted putrid and fatal disorders; so that they who came to inspect them in a

49-1-44

morning had occasionally to pick dead slaves out of their rows, and to unchain their carcasses from the bodies of their wretched fellow-sufferers to whom they had been fastened." "During the hearing of a case for insurance, the following facts were brought out. A slave-ship, with four hundred and forty-two slaves, was bound from Guinea to Jamaica. Sixty of the slaves died from overcrowding. The captain, being short of water, threw ninety-six more overboard. Afterwards, twenty-six more were drowned. Ten drownded themselves in despair. Yet the ship reached port before the water was exhausted."

The revolt against the ~~Protestants~~ slave-trade began to appear among the Methodists, Baptists, and Quakers. Methodism condoned slavery but was sensitive to and alarmed over the slave trade. The Baptists, beginning in England in 1600, developed into an extremely democratic organization which appealed to workers and even to slaves; and the general philosophical and economic enlightenment of the eighteenth century brought men of learning and artists into a distinct anti-slavery movement.

49-1-71

35 ~~34~~ ABOLITION OF THE SLAVE TRADE

The slave trade was abolished by England in 1807, and England undertook to make the rest of the world outlaw it too. The United States, Portugal, and Spain gave only lip service to this program, and the slave trade continued up to the middle of the nineteenth century although to a lessening extent.

With the stopping of the slave trade it was evident that investment in labor was different from investment in land, material, and machines; that labor, no matter how much it was degraded, had initiative and made demands. Revolt of the working classes, following the incentive of Haiti, spread. The spectacular and astonishing triumph of revolution in Haiti threatened the whole slave system of the West Indies and even of continental America. It was this revolt more than any other single thing that spelled doom not only of the African slave trade but of slavery in America as a basis of an industrial system. The revolt encouraged the abolition movement in the United States and in Brazil; it flamed in practically every island of the West Indies.

Unless the slave worker could be pacified, income based on slave labor would be destroyed. The result was that in 1833 England abolished slavery.

The Napoleonic wars did not ruin England; on the contrary together with the African slave trade, Negro slavery, and the loot of India, they made the British government the most powerful in the world; they ruined England's industrial rivals; they left her in control of the chief sources of raw materials by colonial ownership and with the ready cash to outbid rivals; her vast store of finance capital enabled her to manufacture machinery and wait a generation for repayment; British knowledge of science and technique enabled the country to make the best machines and tools and render the whole world creditor for their purchase; Britain ruled the seas and thus monopolized transport. Even when in the earlier mad rush for profit on the new capitalism, she reduced her own labor to slavery in the factory system and faced revolution, she proved the only land able eventually to raise wages and yet maintain high profit by shifting the burden of pauperized toil to the colonies and dominated peoples; and at the same time, although author and chief supporter of modern slavery, Great Britain could hold up her head and, by suppressing a slavery now becoming unprofitable, lead world philanthropy as the great emancipator of the slave.

49-1-78

But even as this role rejoiced her greater souls, the British Empire became the victim of the worst legacy of Negro slavery: the doctrine of race superiority and the color line, which in a later century made civilized man commit suicide in a mad attempt to hold the vast majority of the earth's peoples in thrall to the white race -- a goal to which they still cling today, hidden away behind nationalism and power politics.

This was not a rake's progress of malevolence; it was a bitter struggle between Good and Evil -- between fine and noble souls and conscienceless desire for luxury,

power, and indulgence. The forces of Evil were continually reinforced by the vast power which slavery and the exploitation of men put into the hands of the betrayers of labor, making them the envied of the earth, until nations became willing to destroy the earth in order to gain it. Suppose that at any point in this Descent to Hell, Right had received help and reinforcement? Suppose that a free America had welcomed a free Haiti into a world that insisted on freedom for Africa and Asia? But no; slavery dominated the "free" republic of the west for half a century, with the slave cotton kingdom as foundation stone for British manufactures, while Great Britain seized land and labor in all the dark world. Suppose that England had freed and educated Africa, emancipated India, and joined hands with Japan to uplift China, instead of making ignorance compulsory for the majority of men even in England, in order to build up the most "comfortable" and envied aristocracy on earth? Suppose the technique and science of the nineteenth century had been used to raise the many instead of to enrich the few?

A dream? Perhaps, but even an unrealized dream would be better than the present nightmare.

49-1-73

~~35~~ 36. THE NEW CAPITALISM

The new era of capitalism dawned, springing from Calvinism: thrift, industry, honesty as the best policy, along with interest and profit. Capitalism passed into high capitalism at different periods in different nations: In England in 1846, when English capitalism needed no protective tariff, it smashed the agriculturists in Parliament and forced the adoption of free trade; in the United States invested capital passed the value of the land about 1850. The Revolution of 1848 in France revealed the power of organized labor as well as the power of capitalism, which later triumphed. In Germany capitalism began its full sway after World War I.

In the British Parliament, after the passage of the Reform Bill in 1832, capitalism was paramount. The plantation trade had formerly meant everything; but

in the new capitalist system, plantation slavery had little place. Britain's mechanized might was still, however, making the whole world her footstool. She was clothing the world, exporting men and machines, and had become the world's banker. British capital, like British production, was thinking in world terms. "Between 1815 and 1830 at least fifty million pounds had been invested more or less permanently in the securities of the most stable European governments, more than twenty million had been invested in one form or another in Latin America, and five or six millions had very quietly found their way to the United States." But no new capital went to the West Indies.

This then was the history of the slave trade, of that extraordinary movement which made investment in human flesh the first experiment in organized modern capitalism; which indeed made capitalism possible. It accompanied the beginnings of democracy in the modern world, but that beginning was hindered and almost stopped by the result which black slavery had on Africa itself.

449 - 1 - 44

~~36.~~ 37 IVORY

In Africa a new and supplementary means of control, developed by means of the Arab trade in ivory, led to exploration and eventual annexation under the pretense of attacking slavery. In this whole story of the so-called "Arab slave trade" the truth has been strangely twisted. Arab slave raiding was in the beginning, and largely to the end, a secondary result of the British and American slavery and slave trade and specifically was based on American demand for ivory. The Arabs had by the nineteenth century driven back the Portuguese opposite Zanzibar and had developed two profitable products of trade: ivory and slaves.

Ivory has a long history. Homer repeatedly mentions it. Ivory has been found in the ruins of Nineveh and in the days of Tuthmosis III; cargoes of ivory and ebony in addition to gold came down the Nile. In Kings and Chronicles we learn of the great throne of ivory which Solomon built and hear that once every three years ships

came to Israel with gold and silver, ivory, apes, and peacocks. Ezekiel laments the ruin of Tyre with its boxwood benches inlaid with ivory. In Greece the statue by Phidias of Jupiter Olympus, one of the seven wonders of the world, was made of ivory, marble, and gold. The seats of the Roman senators were made of ivory, and large quantities of ivory poured into Rome from Africa.

By the beginning of the Christian era the trade in ivory had decreased. The herds of elephants had disappeared, and there was no organized method of gathering the ivory or of brining it to market. Moreover, it was not until the Renaissance, in the fifteenth century, that renewed demand made search for it profitable. The Portuguese, both on the West Coast of Africa and in Mozambique, began to export it. They were so prodigal that the considerable store which the natives had collected was almost exhausted by the middle of the seventeenth century.

The Dutch began to collect ivory in South Africa, and there and in Central Africa a steady supply kept pace with the demand. By the middle of the nineteenth century, however, there came a new demand from the west. The ivory had long been carried by the slaves to the coast or down the Nile, and then instead of the bearers being returned, they were sold. Most of the ivory in the seventeenth, eighteenth, and the beginning of the nineteenth centuries went to Arabia, Persia, and India, and the slaves to the same parts of the world as soldiers and servants. The trade was small, and while the slave trade was a disrupting influence it did not transfer any large number of persons.

Ivory from about 1840 became increasingly valuable. Its gathering called for fire-arms and transport. Europe and America furnished the arms in vast quantity. Negro porters bore the white gold over vast distances on their heads, and the traders doubled their profit by selling these Negroes into slavery in the Middle East and America. The result was an industry with huge profits, which called to service the

49-145

most vicious elements of the Nile Valley with its social disintegration of centuries, aided by the efforts of Mohammed Ali, the ally of white colonial aggression.

It also called white soldiers of fortune like Selous and Lugard, who slaughtered the herds of half-human elephants in cold blood. It called the explorers who followed the hunters and slave traders. After the explorers came the missionaries. Both pointed out that the ivory-slave business was killing the goose that might lay even more golden eggs, if instead of killing valuable labor, this labor and materials were subject to political control of Europe and the abundant capital seeking investment. The missionaries like Livingstone saw in this not only a means of saving bodies and souls of human beings, but als thrift and good business, which in the folklore of early capitalism were the inevitable elements divinely conjoined for modern civilization.

The rising demand in England and America for the suppression of the slave trade in East Africa was not pure philanthropy. It was that "philanthropy and 5 per cent" which was the transition from the century of human slavery in America to the century of the transfer of capital from sugar plantations to colonial imperialism in Africa and Asia. The main end of both enterprises was profit to the owner and exploiter, mainly at the expense of poverty, ignorance, and pain for the slave and native subject.

About the middle third of the nineteenth century the situation changed abruptly. The demand for ivory increased. In America, ivory working was an early industry, especially in New England on the banks of the Connecticut, where ivory has been cut since 1820. It was processed for carving, for cutlery, billiard balls, and miniatures, and for piano keys. At Deep River and Ivoryton and Buffalo the keyboards for all the pianos in America, Canada, and Australia were made. Because of increased demand, European and American traders set up establishments for buying ivory in Zanzibar; in the thirties and forties prices increased. Arabs began to ask for

49-1-76

arms in order to shoot elephants and coerce the natives. Increased exports of ivory to Europe and America and of slaves to Arabia and the Persian Gulf, called for increased imports of weapons and ammunition. The Germans sent thirteen thousand muskets in one year. The British and Portuguese sent thousands of the old Sepoy guns from India. The French supplied a single-barrel light weapon. American blasting powder came in ten- and twenty-five-pound kegs. German cavalry sabers came and cases of percussion caps. Arabs borrowed from Indian usurers at 60 to 80 per cent, and set out for the haunts of elephants.

~~36 - 37.~~ EXPLORATION AND DISCOVERY IN AFRICA

Curiously enough it was this ivory trade that stimulated and guided travel and discovery in Central Africa. Explorers followed the ivory traders, who were the true discoveres. Burton, Speke, Livingstone, Stanley, and Cameron started from the Arab capital of Zanzibar. They followed the lines of traffic set by the Arab ivory traders. Petherick, the British ivory trader, preceded Schweinfurth, and the countries he explored were opened up by the ivory trade. Livingstone found the ivory traders on the Upper Congo. Cameron left Zanzibar in 1873 and was the first European to cross Africa from east to west along the ivory traders' routes. Stanley made his second expedition, 1874-1877, and was helped by Tippoo-Tib, the great Negro slave trader who had also helped Livingstone. The last of the great expeditions was Stanley's, in 1887-1889, when he rescued Emin Pasha and his Negro wife.

It was in this way that knowledge of the technique of the slave trade and its meaning came to Europe at a time when the slave trade from Africa to America had been largely suppressed. We had a series of first-hand descriptions of this trade.

Ivory became in the last half of the nineteenth century the scourge of Central Africa. The complete story of bloodshed and cruelty will never be known. Thousands of miles of fertile country were turned into wilderness and ruin. Hundreds of thousands of elephants were slain and thousands of human beings. It has been estimated that not more than one in five of the captives bearing the ivory ever reached

49-1-44

the ocean. Starved and weakened by disease and the strain of marching, they lined the long paths with their dead.

"Picture, if you can, a territory nearly as large as the whole of our United States east of the Mississippi River and Illinois, terrorized and overrun in all directions with hundreds of roving bands of plundering murderers armed with invincible weapons of oppression, a land of blood and might, the nights filled with flame and destruction, the days weary with the marching of the coffles and the blood of the despairing, hopeless slaves. And this for years, for decades.

Henry M. Stanley wrote: "Every tusk, piece, and scrap in the possession of an Arab trader has been steeped and dyed in blood. Every pound weight has cost the life of a man, woman, or child, for every five pounds a hut has been burned, for every two tusks a whole village has been destroyed, every twenty tusks have been obtained at the price of a district with all its people, villages, and plantations. It is simply incredible that, because ivory is required . . . populations, tribes, and nations should be utterly destroyed."

Hamed bin Muhammed, a Negro, better known as Tippoo-Tib, was one of the greatest of slave traders. He eventually became sultan and overlord of the country of Kassongo in the very middle of Central Africa, which he made a center of ivory collecting and slave hunting. He had a thousand muzzle-loading guns. And it was not until 1905 that he died.

The credit for suppressing the slave-ivory trade must go to Livingstone who inspired it, to Kirk of East Africa who helped carry it through, and to Bargarsh, the Negroid Arab, who actually suppressed the Zanzibar trade. But these three men represent the curious interests involved: Livingstone was a humanitarian who thought that trade and commerce was the best and natural way to improve the condition of man. He would be horrified to see South Africa and Rhodesia today and realize the plight into which the natives have been forced by European trade and industrialism. Kirk

49-1-48

was a British imperialist who foresaw the colonial era. He was no philanthropist desirous of the development and rise of the blacks. What he wanted was to expand the power of England, and he believed that could be done best by suppressing the slave trade and slave labor under the Arabs and increasing colonial ownership and serf labor under Great Britain. The Arab sultan Bargarsh was persuaded that colonial alliance with Great Britain would protect his future power and income.

The effect upon Europe was curious. European and American commerce was stimulated. The missionaries, still believing in the expanding trade of the eighteenth century, coupled commerce with missionary effort and did not see the inherent contradiction between them. The result was that the missionary and the merchant worked side by side and hand in hand. It was Livingstone who declared that he was bringing commerce and missionary effort to the natives.

Commercial companies, like the African Lakes Company, exploited and administered territories and equipped the elephant hunters. They supplied the rifles and sent the hunters, reserving the right to buy the ivory at a set price. It was thus that Sir Alfred Sharp and Lord Lugard began life as professional ivory hunters. The coming of American, British, French, German and Portuguese traders in the middle of the nineteenth century furnished the artillery for the worst period in this ivory-slave trade under the Arabs. At its height thirty thousand slaves were exported annually through Zanzibar, leaving more than a hundred thousand who had died on the way to the sea.

~~38.~~ THE NEW BRITISH CONSCIENCE

Then that extraordinary transformation took place in British public policy. The stopping of the expansion of the Arab slave trade in East and Central Africa became a means of building up the British Empire. All that Britain had done in establishing the new modern slavery in America was forgotten in her effort to suppress the ivory-slave trade in Africa, and that effort was only the other side of her building up of a great African colonial territory which she proposed to exploit

49-179

by the use of cheap native labor, the sale of African raw materials, and the opening of markets for her merchandise. Slavery and the slave trade became transformed into anti-slavery and colonialism, and all with the same determination and demand to increase the profit of investment.

It all became a characteristic drama of capitalistic exploitation, where the right hand knew nothing of what the left hand did, yet rhymed its grip with uncanny timeliness; where the investor neither knew, nor inquired, nor greatly cared about the sources of his profits; where the enslaved or dead or half-paid worker never saw nor dreamed of the value of his work (now owned by others); where neither the society darling nor the great artist saw blood on the piano keys; where the clubman, boasting of great game hunting, heard above the click of his smooth, lovely, resilient billiard balls no echo of the wild shrieks of pain from kindly, half-human beasts as fifty to seventy-five thousand each year were slaughtered in cold, cruel, lingering horror of living death; sending their teeth to adorn civilization on the bowed heads and chained feet of thirty thousand black slaves, leaving behind more than a hundred thousand corpses in broken, flaming homes.

49-1-80

Quite naturally all this ivory trade centered in London. In Mincing Lane the ivory of the world was bought and sold from the time of the eighteen twenties, when the slave cotton kingdom began to pour profit from American plantations into New York and Manchester. The annual imports of ivory into London rose as follows:

1788-1798:	100 tons a year
1827:	60 tons
1845-1849:	294 tons
1870-1874:	627 tons
1880-1884:	514 tons

This meant the death of seventy-five thousand elephants a year in the heyday of the trade. An enthusiastic elephant hunter described the death of one elephant. They had killed her child. "She turned with a shriek of rage and made a furious charge. She charged three or four times. She often stood still and covered with blood faced the men as she received fresh wounds. At last with a short struggle she staggered around and sank down kneeling and dead." Far away over miles and years, on lovely keys chipped from her curving tusks, men played the Moonlight Sonata. Neither for the keys nor the music was the death of the elephant actually necessary.

It was this London market that supplied raw material to be made into billiard balls and piano keys and lovely little ornaments to Ivoryton, Connecticut, and also contrived through the veiled, devious ways of high finance banking to supply Arab and Negro slave raiders with powder and guns and to buy their ivory at prices which were fabulous to them. Behind the slave raiders came the explorers, who pointed out the vast resources of Africa and the possibilities of African labor; behind the explorers came the missionaries, who cried out bitterly against slavery but said nothing and knew less of the white sources of their power in London and Buffalo.

49-1-81

40 ~~50~~. BRITISH COLONIAL IMPERIALISM IN AFRICA

Gradually the picture changed: the captains of industry saw new opportunity for capital. They could wrench the profits of ivory from the Arabs and Negroes; they could wheel England and world religion back of imperial seizure of Africa from the Cape of Good Hope to Cairo, with not only petty profit from ivory, but vaster profits from spices, gold, diamonds, and copper; they could replace wasteful slavery with local black labor paid at wages from one-half to nine-tenths cheaper than white labor in Europe and America and make white labor like it because all this could be done to the glory of God and the superiority of the white race. And it was done.

So colonial imperialism was born. And so some of its leaders illustrated in their own individual lives its development; there was Frederick C. Selous, who began

as an elephant hunter and then annexed the peoples and minerals of Mashonaland to the British Empire; there was Frederick D. Lugard, who first fought in India, Burma, and the Sudan; then as a big game hunter in East Africa, where, armed by the African Lakes Company, he murdered elephants in great numbers and became a part of the ivory-slave trade complex. Next he appeared in East Africa as a free-lance fighter against Arabs and Mohammedans and in defense of Christian missions; he reappeared as agent of the British East Africa Company and annexed Uganda to Britain. Thereupon he was recognized as a great champion of imperial England and went to West Africa to help subdue the falling remnants of Sudanese culture. Here he shrewdly realized that conquest of these peoples could most easily be accomplished if their tribalgovernment were left undisturbed, while Britain controlled trade and foreign relations. Having thus invented "indirect rule," he became a British governor in West Africa. Eventually he retired, lived in England on a pension paid by black West Africa, was regarded as the greatest authority on Africa, and died in honor as a noble British lord.

49-1-82

CULTURAL CLASH IN AFRICA

What effect did all this have upon the dark natives of Africa? In the past we have dwelt upon physical suffering, the loss of life, and the devastation of the land, but we have not thought of the larger and deeper social disintegration. First of all, not only was the way opened from the Sahara to the Cape of Good Hope for marauding masses of Bantu warriors, but this great and long-continued movement became organized for aggression and conquest. We hear of the fierce onslaughts of wild tribes like the Yaggas, but we must also remember that there came a new sort of organization. Negro life could not settle down for political organization and empire building. It could not wait for the development of herdsmen and agriculture. It must hurry on to safer places and sheltered land and loot. "It was sorrowfully recognized that the degradation of the Negro peoples of the nearer African interior was the direct result

of European slave-dealing. The savagery of Dahomey and Benin was the survival of the ferocity by which native chiefs, a century earlier, had supplied the demands of English and Dutch traders for victims for the plantations."

This movement culminated in the magnificent and utterly ruthless army of a Chaka in the nineteenth century, which almost successfully battled machine guns with assagais. Then too on the West Coast came transformation: the city-states with their intricate social organization and carefully planned industry and beautiful art were pushed back and overwhelmed by newer, stronger military states, like that of Dahomey in the seventeenth century; and the Ashanti earlier had never gained in the line of peaceful industry and art as much as the new gains which they made as intermediaries of the slave traders.

The East African slave trade under Negroes like Tippoo-Tib became organized. The commercial ends and profits sought by Europe were subtly introduced into and shared by an Africa that had been foreign to this kind of life. The mild domestic slavery of the African tribes and of the Arabs and Persians, which did not preclude the sone of slave becoming a king, a statesman, or a poet, was changed into chattel slavery with hard labor and cruel tasks. The continued development of African civilization, forecast in the fourteenth and fifteenth centuries by that in the Sudan, was prevented and turned backward into chaos, flight, and death.

Decadence could be seen on the West Coast, in the shadow of fabled Atlantis, where there emerged in curious juxtaposition the blood sacrifice of the Benin juju together with the beautiful bronzes of the Benin sculptors. The great kingdoms and empires of the Sudan which fell at the battle of Tenkadibou not only suffered the incubus of a horde of Berber invaders as they moved east and became the Sudanese kingdoms of Kanem and Bornu and the realm of the Fung; they approached the valley of the Nile and came into fierce combat with some of the worst manifestations of Mohammedanism.

44-1-83

Pushing farther south, the Bantu herdsmen threw themselves upon the Congo and Zimbabwe. There came to Africa an end of industry, especially industry guided by taste and art. Cheap European goods pushed in and threw the native products out of competition. Rum and gin displaced the milder native drinks. The beautiful patterned cloth, brocades, and velvets disappeared before their cheap imitations in Manchester calicos. Methods of work were lost and forgotten.

With all this went the fall and disruption of the family, the deliberate attack upon the ancient African clan by missionaries. The invading investors who wanted cheap labor at the gold mines, the diamond mines, the copper and tin mines, the oil forests and cocoa fileds, followed the missionaries. The authority of the family was broken up; the authority and tradition of the clan disappeared; the power of the chief was transmuted into the rule of the white district commissioner. The old religion was help up to ridicule, the old culture and ethical standards were degraded or disappeared, and gradually all over Africa spread the inferiority complex, the fear of color, the worship of white skin, the imitation of white ways of doing and thinking, whether good, bad, or indifferent. By the end of the nineteenth century the degradation of Africa was as complete as organized human means could make it. Chieftains, representing a thousand years of striving human culture, were decked out in second-hand London top-hats, while Europe snickered.

Frobenius says in his Civilisation Africaine: "When they /the first European navigators of the end of the Middle Ages_7 arrived in the Gulf of Guinea and landed at Vaida, the captains were astonished to find streets well cared for, bordered for several leagues in length by two rows of trees; for many days they passed through a country of magnificent fields, a country inhabited by men clad in brilliant costumes, the stuff of which they had woven themselves! More to the South in the Kingdom of Congo, a swarming crowd dressed in silk and velvet; great states well

449-1-84

ordered, and even to the smallest details, powerful sovereigns, rich industries -- civilized to the marrow of their bones. And the condition of the countries on the eastern coast -- Mozambique, for example -- was quite the same.

"What was revealed by the navigators of the fifteenth to the seventeenth centuries furnishes an absolute proof that Negro Africa, which extended south of the desert zone of the Sahara, was in full efflorescence, in all the splendour of harmonious and well-formed civilizations, an efflorescence which the European conquistadors annihilated as far as they progressed. For the new country of America needed slaves, and Africa had them to offer, hundreds, thousands, whole cargoes of slaves. However, the slave trade was never an affair which meant a perfectly easy conscience, and it exacted a justification; hence one made of the Negro a half-animal, an article of merchandise. And in the same way the notion of fetish (Portuguese feticeiro) was invented as a symbol of African religion. As for me, I have seen in no part of Africa the Negroes worship a fetish. The idea of the 'barbarous Negro' is a European invention which has consequently prevailed in Europe until the beginning of this century."

49-1-85

~~pp. 148 - 163~~

85

~~42~~ EUROPE AS MASTER OF THE WORLD

It has long been the belief of modern men that the history of Europe covers the essential history of civilization, with unimportant exceptions; that the progress of the white race has been along the one natural, normal path to the highest possible human culture. Even in its collapse today, the dominant opinion is that this is but an unfortunate halting on the way; the same march must and will be resumed after a breathing space for recovery.

On the other hand, we know that the history of modern Europe is very short; scarcely a moment of time as compared with that of eternal Egypt. The British Empire is not more than two hundred and fifty years old; France in her present stature dates back three hundred years; the United States was born only a hundred and seventy years ago; and Germany less than one hundred years. When, therefore, we compare modern Europe with the great empires which have died, it is not far different in length of days from the empires of Persia, Assyria, the Hittites, and Babylon. Ethiopia led the world longer than England has.

49-1-86

It is surely a wider world of infinitely more peoples that Europe has ruled; but does this reveal eternal length of rule and inherent superiority in European manhood, or merely the temporary possession of a miraculously greater brute force? Mechanical power, not deep human emotion nor creative genius nor ethical concepts of justice, has made Europe ruler of the world. Man for man, the modern world marks no advance over the ancient; but man for gun, hand for electricity, muscle for atomic fission, these show what our culture means and how the machine has conquered and holds modern mankind in thrall. What in our civilization is distinctly British or American? Nothing. Science was built on Africa and Religion on Asia.

Was there no other way for the advance of mankind? Were there no other cultural patterns, ways of action, goals of progress, which might and may lead man to something finer and higher? Africa saw the stars of God; Asia saw the soul of man; Europe saw and sees only man's body, which it feeds and polishes until it is fat, gross, and cruel.

43 WEST AFRICA

Let us turn to West Africa, where man tried a different way for a thousand years. First we face the query: how do we know what man did in West Africa, since black Africa has no written history? This brings the curious assumption that lack of written record means lack of matter and deed worth recording. The deeds of men that have been clearly and accurately written down are as pinpoints to the oceans of human experience. To recall that experience we must rely on written record, varying from direct narrative to indirect allusion and confirmation; we must rely also on memory -- the memory of contemporary onlookers, of those who heard their word, of those who over a lapse of years interpreted it and handed it on; we must rely on the mute but powerful testimony of habits, customs, and ideals, which echo and reflect vast stretches of past time. Finally, we agree upon as true history and actual fact any interpretation of past action which we today believe and want to belive is true. The relation of this last historical truth to real truth may vary from fact to falsehood.

Climate, with sun and ice, gave Europe opportunity to expand vastly the Asiatic and African invention of written records. Heat and rain made written record in West Africa almost impossible, and forced that land to rely on the memories of men, developed over the centuries to a marvelous system of folklore and tradition. But back of both methods lay real human history recorded in cultural patterns, industry, religion, and art.

One of the extraordinary developments of civilization in Africa was on the West Coast around the great Gulf of Guinea. Frobenius has fancifully called this "Atlantis" and regards it as possibly a development of the culture of that fabled island in the Atlantic. Whatever its origin, there grew up on the West Coast of Africa a peculiarly African state. How far back its development extends, no man knows. We have a fairly authentic history from the seventeenth century on, creditable but discontinuous reports in the sixteenth and fifteenth, and before that only customs, tradition, and legend.

49-1-87

On a coast protected from inland by mountain, forest, and desert, and on the west by the ocean, there grew up an agricultural culture centering in the village. On this was developed in time, industry and art. Industry discovered division of labor between cities; each town had its own peculiar industry and then traded its surplus with the other towns. The towns were united in a loose confederacy with councils and chiefs.

Six hundred years before Christ, Phoenicians traded on the West Coast of Africa and a century later the Carthaginians. From prehistoric times this coast was peopled by the black West African type of Negro. The center of their culture lay above the Bight of Benin, along the slave coast, and reached east and north. It can be traced in stone monuments, architecture, works of art, and especially patterns of culture.

The fabrication of cloth and tools was widespread and leisurely, as befitted a tropical sun. For there was here the fierce fight with the mosquito, just as in the Congo, and east there was the duel with the tsetse fly; and this battle with malaria, sleeping-sickness, and a dozen enemies of man was as much a part of the struggle for life and happiness as any of man's activities. Despite this, not only the making of cloth, the fashioning of garments, and the welding of iron reached a high developement but there grew up also art, primitive but of exceptional power, which has influenced the modern world and deserves to be called one of the three or four original art forms of this earth. Agriculture and fishing, manufacturing and pottery, the welding and processing of metal, the development of painting and art, characterize this Negro culture.

In Ashanti weaving was done with simple tools, calling for great skill, and resulted in cloth artistically beautiful. There was wood-carving, divided into many separate branches; carvers made fetishes and drums and figures which were individual and original. "Regarded in the light of certain modern aesthetic tendencies, they possess an individuality and peculiar merit which astonish many people who see them

49-1-88

for the first time. Love and appreciation of what is artistic and beautiful are attributes which cannot be said to be the prerogative of all of us. In Ashanti, however, such traits seem to be possessed by what we should call 'the uneducated masses.' There is hardly any object capable of artistic treatment which is not made the medium for some ornamental design which gives aesthetic delight to the African's mind and eye; such as stools, spoons, combs, wooden plates, calabashes, doors, sticks, staves of office, canoes, wari boards, knives, mortars, drums, ivory tusks, pots, pipes, weights and scales, metal work of every description, walls of temples and dwellings, and textiles of every kind. Even the tools and appliances used to obtain these effects, the forge itself, the shuttle, the mesher used for making nets, are ornamental, being decorated with artistic effects, which, however crude, are never vulgar and inartistic."

The true West African showed great skill in plastic art; he carved ivory and wood, and the bronzes of Benin are among the most noteworthy remains of artistic effort in the world. When the state was seized by the British in 1897, they found carved elephant tusks, bronzes cast by the cire-perdue process, including the well-known bronze head of a Negress, now in the British Museum, a masterpiece of art.

A bronze head was discovered by Frobenius in Nigeria in 1910-1912. In this remarkable figure we have what is perhaps the finest known example of African achievement in the realm of the plastic arts. In the words of its discoverer, "the setting of the lips, the shape of the ears, the contour of the face, all prove, if separately examined, the peffection of a work of true art which the whole of it obviously is.... It is cast in what we call the 'cire perdue', or the hollow cast, and is very finely chased, indeed like the best Roman examples."

Considerations growing out of the study of this and terra-cotta specimens, supplemented by many other findings reported by previous investigators, led Frobenius to the daring conclusion that this art belongs to the old order of Central African civilization whose beginnings go back perhaps to the second millennium before Christ.

49-1-89

He was also of the opinion that there is sufficient evidence to warrant the assumption that there were important links between this ancient culture and some of those famous and widely heralded civilizations which flourished along the banks of the Nile and in the Mediterranean Basin in the Classical and pre-Classical Ages.

The oldest art is that of pottery, of which there are endless remains in West Africa. Traces of pottery-making go back certainly five hundred years and possibly a thousand years on the West Coast. It is done chiefly by women and is a hereditary craft handed down from mother to daughter.

IRON

It may well be that the West Coast Negroes first gave to civilization the art of welding iron which spread over all Africa and then eventually into Europe and Asia. It is of course possible that iron welding was discovered on other continents independently of Africa, but no continent had so wide a use of iron in earliest times.

49-1-90

According to Boas: "It seems likely that at times when the European was still satisfied with rude stone tools, the African had invented or adopted the art of smelting iron. Consider for a moment what this invention has meant for the advance of the human race. As long as the hammer, knife, drill, the spade, and the hoe had to be chipped out of stone, or had to be made of shell or hard wood, effective industrial work was not impossible, but difficult. A great progress was made when copper found in large nuggets was hammered out into tools and later on shaped by melting; and when bronze was introduced; but the true advancement of industrial life did not begin until the hard iron was discovered. It seems not unlikely that the people who made the marvelous discovery of reducing iron ores by smelting were the African Negroes. Neither ancient Europe, nor ancient western Asia, nor ancient China knew iron, and everything points to its introduction from Africa. At the time of the great African discoveries toward the end of the past century, blacksmiths were found all over Africa from north to south and from east to west. With his simple bellows and a charcoal fire he reduced

the ore that is found in many parts of the continent and forged implements of great usefulness and beauty."

Torday has argued: "I feel convinced by certain arguments that seem to prove to my satisfaction that we are indebted to the Negro for the very keystone of our modern civilization and that we owe him the discovery of iron." Togoland is perhaps the oldest and most famous iron-working area in Africa.

According to Reclus, "The smelting and working of iron, most useful of all metallurgic discoveries, has been attributed to the Negroes as well as to the Chalybes of Asia Minor; and the Bongos of the White Nile, as well as some other African tribes, have constructed furnaces of a very ingenious type. Their smelters and forgers are, for the most part, satisfied with rude and primitive implements, in the use of which they, however, display marvellous skill. The Fangs of the Ogowe basin produce excellent iron, whose quality is scarcely equalled by Europeans themselves. In most of the native tribes the smiths constitute a special caste, much respected and even dreaded for their reputed knowledge of the magic arts."

45 ART

Concerning West African art in general, Sir Michael Sadler said: "West Africa has made its own characteristic contribution to the artistic treasures of the world. " Sir William Rothenstein added: "I know nothing of the culture which produced these noble pieces, nor what influences, native or alien, inspired them. I know only that they are superb works of art, worthy to be set beside the best examples of sculpture of any period." According to J.J. Sweeney, the American critic: "As a sculptural tradition, African art has had no rival."

Professor Roger Fry, distinguished British art critic, said: "We have the habit of thinking that the power to create expressive plastic form is one of the greatest of human achievements, and the names of great sculptures are handed down from generation to generation, so that it seems unfair to be forced to admit that certain nameless

49-1-90
49-1-91

savages have possessed this power not only in a higher degree than we at this moment, but than we as a nation have ever possessed it. And yet that is where I find myself. I have to admit that some of these things are great sculpture, greater, I think, than anything we produced even in the Middle Ages. Certainly they have the special qualities of sculpture in a higher degree. They have indeed complete plastic freedom; that is to say, these African artists really conceive form in three dimensions. Now this is rare in sculpture."

In drum and strings African music reached a high degree of originality and perfection. The development of the drum language by intricate rhythms enabled the natives not only to lead in dance and ceremony, but to telegraph all over the continent with a swiftness and precision hardly rivaled by the electric telegraph. Von Hornbostel said of African music, particularly in Togo: "The African Negroes are uncommonly gifted for music, probably, on an average, more so than the white race. This is clear not only from the high development of African music, especially as regards polyphony and rhythm, but a very curious fact, unparalleled, perhaps, in history, makes it even more evident; namely, the fact that Negro slaves in America and their descendants, abandoning their original music style, have adapted themselves to that of their white masters and produced a new kind of folk music in that style. Presumably no other people would have accomplished this. In fact, the plantation songs and spirituals and also the blues and ragtimes which have launched or helped to launch our modern dance music, are the only remarkable kinds of music brought forth in America by immigrants."

49-1-92

Professor von Luschan considered the craftsmanship of Benin workers equal to the best that was ever produced by Cellini. Yet at the time they were creating, "in 1550, not a single peasant's house in Scandinavia had a window; and as late as 1773 Dr. Johnson and Boswell entered during their tour of the Hebrides, hovel which 'for a window had only a small hole, which was stopped with a piece of turf, that was taken

out occasionally to let in light.' In Berlin at the time of the Great Elector (1681), many houses in the capital had pigsties immediately below the front windows."

~~46~~ CLOTH

Frobenius wrote of West African cultures: "What these old captains recounted, these chiefs of expeditions -- Delbes, Marchais, Pigafetta, and all the others, what they recounted is true. It can be verified. In the old Royal Kunstkammer of Dresden, in the Weydemann collection of Ulm, in many another 'cabinet of curiosities' of Europe, we still find West African collections dating from this epoch. Marvellous plush velvets of an extreme softness, made of the tenderest leaves of a certain kind of banana plant; stuffs soft and supple, brilliant and delicate, like silks, woven with the fibre of a raffia, well prepared; powerful javelins with points encrusted with copper in the most elegant fashion; bows so graceful in form and so beautifully ornamented that they would do honor to any museum of arms whatsoever; calabashes decorated with the greatest taste; sculpture in ivory and wood of which the work shows a very great deal of application and style.

49-1-93

"And all that came from the countries of the African periphery, delivered over after that to slave merchants. . . .

"But when the pioneers of the last century pierced this zone of 'European civilization' and the wall of protection which had, for the time being raised behind it -- the wall of protection of the Negro still 'intact' -- they found everywhere the same marvels which the captains had found on the coast.

"In 1906 when I penetrated into the territory of Kassai-Sankuru, I found still, villages of which the principal streets were bordered on each side, for leagues with rows of palm trees, and of which the houses, decorated each one in charming fashion, were works of art as well.

"No man who did not carry sumptuous arms of iron ore of of copper, with inlaid blades and handles covered with serpent skin. Everywhere velvets and silken stuffs.

Each cup, each pipe, each spoon was an object of art perfectly worthy to be compared to the creations of the Roman European style. But all this was only the particularly tender and iridescent bloom which adorns a ripe and marvellous fruit; the gestures, the manners, the moral code of the entire people, from the little child to the old man, although they remained within absolutely natural limits, were imprinted with dignity and grace, in the families of the princes and the rich as in the vassals and slaves. I know of no northern people who can be compared with these primitives for unity of civilization. Alas these last 'Happy Isles'! They, also, were submerged by the tidal wave of European civilization. And the peaceful beauty was carried away by the floods.

"But many men had this experience: the explorers who life the savage and warrior plateau of the East and the South and the North to descend into the plains of the Congo, of Lake Victoria, of the Ubangi: men such as Speke and Grant, Livingstone, Cameron, Stanley, Schweinfurth, Junker, de Brazza -- all of them -- made the same statements: they came from countries dominated by the rigid laws of the African Ares, and from then on they penetrated into the countries where peace reigned, and joy in adornment and beauty; countries of old civilizations, of ancient styles, of harmonious styles."

49 - 1 - 94

47. RELIGION

All this industry in West Africa was developed around the Africans' ideas of religion: the worship of souls of trees and plants of animals; the use of the fetish; the belief in fairies and monsters. Along with this went training for medicine men and chiefs, and careful rules for birth, marriages, and funerals.

Of religion Frobenius said: "There is, among the deities possessed by all the other dark-skinned African nations combined, not one who can equal Shango, the West African Yoruban God of Thunder, in significance. This country's first royal ruler sprang, as its people believe, from his loins. His posterity still have the right to give the country its kings.

"Myth relates that Shango was born of the All-Mother, Yemaya. Powerful, warlike, and mighty, he was as great a God as was ever created in the minds of a nation striving for self-expression. He was the Hurler of Thunderbolts, Lord of the Strom; a God who burns down cities and rends trees. He is cruel and savage, yet splendid and beneficent.

"The floods which he pours give life to the soil and gladden the fields. Mankind fears him, yet loves him. Terrified by his wrath, they pray for his presence. They picture him riding a ram. They represent him with his hands full of thunderbolts, surrounded by his wives, the Lakes and the Rivers. He lives in a palace of brass, which is dazzlingly bright, and whenc lightning shoots forth. He has a mighty 'medicine' which he takes through his mouth, and fire comes out when he opens it."

The architecture of the West Coast was strikingly integrated with climate, physiography, and culture. The lovely buildings of Benin and Ashanti have been described. A traveler in 1835 described the palace of a chief in Togoland: "Glele's palace was enormous -- it had housed in its time more than two thousand people -- but the greater part is falling into ruins. . . . This palace is by far the largest and most elaborate piece of Negro architecture I have seen; it was with that of Great Benin I imagine the most important in West Africa."

49-1-95

In 1787 the Chevalier de Boufflers, writing to the Comtesse de Sabran, spoke of his enthusiastic admiration of the beauty and cleanness of the townships in the Senegal.

The climate and physical surroundings conditioned much of this human development. There was lacking here the stone and dry climate which made it easy to preserve records in the Nile valley. Material on the West Coast disappeared before the dampness and the hosts of insects. This made the art of memory recording, of tradition handed down, of unusual importance, and here it was developed to an astonishing extent. The population invented systems of writing of which at least two on the Guinea Coast and the Cameroons have come down to our day. There were probably others. Thus alphabets which were never invented in Europe came to the world through Asia and Africa.

The whole culture complex of the African West Coast is native and original. It is a picture of the development of human institutions unique in the history of mankind, and we can only lament that we know so little of it and have studied it so imperfectly. This body of culture grew up strong and self-contained upon the West Coast and met in time the sudden impact of two outer forces: Islam from the north and Christianity from the west.

"West Africans are still today in the period of integral collectivism, known to our ancestors before the Middle Ages, while we have arrived at individualism. The question which presents itself is to know whether indeed we have made definitive progress in this line, since many of our thinkers, of the so-called advance guard, demand, as a benefit, the return to collectivism, although of a somewhat different form. This proves that the peoples of Negro Africa have not marched at the same rate of speed as the peoples of Europe, but in nowise proves that the former are inferior to the latter. Who knows, indeed, whether the latter have not gone too fast?"

49-1-96

49. NOTABLE STATES

Among the groups which showed striking intellectual development were the Abron, whose state dates from the fifteenth century; the Akan people, including the Ashanti, whose known history goes back beyond 1600. In addition there were the Ewe, Yoruba, people of Benin, Dahomey, and Nubia. Benin was among the oldest of the states and has a legendary history going back to A.D. 880 or perhaps earlier. It was a carefully organized state with a remarkable native culture. It was with Benin that the Portuguese made contact in the fifteenth century and traded in slaves and other produce. The people of Yoruba, with a notable culture, moved westward as the kingdoms of the Sudan began to expand, and attacked Dahomey.

Dahomey has a known history that dates from before the sixteenth century; it had a well-organized state with farmers and artisans, but they became middlemen in the slave trade. In the nineteenth century they made a treaty with the French, but finally war broke out and the country became a French protectorate.

The Ashanti played a notable part in West Africa. They conquered the Fanti people and fought six wars with England between 1803 and 1874; they were finally subdued in 1894. Their king, Osai Tutu Quamina, was a man of intelligence and character who would have made advantageous contact between whites and Negroes if he had been treated fairly. But the English during these days were wavering between two ideas: between the suppression of the slave trade to America and emancipation of the slaves in the West Indies, and the newer idea of reducing West Africa to colonial status. For a time they hesitated, even setting up the Negro state of Sierra Leone to be ruled by free slaves, and co-operating with the similar American experiment in Liberia. Finally, however, when the clear meaning of colonial imperialism began to be understood, they turned to definite conquest. The Fanti people who had helped the English conquer the Ashanti attempted to organize their relation to England by a federation, but the constitution that they adopted was regarded as treasonable and those who drafted it were put in jail, although afterward released by the Home Secretary.

49-1-97

50 ~~40.~~ CHANGES IN WEST AFRICA

The whole European situation was changing in the late nineteenth century. The Franco-Prussian war had been fought, Germany was a great power, and England was consolidating a wide colonial empire. The native culture on the West Coast underwent various consecutive changes. The powerful states of earlier days had been pressed back by the developments in the Sudan and even in the Nile valley. They found prosperity and encouragement in the new trade to the West, which developed and degenerated into man-hunting; most of the black kingdoms on the coast became intermediaries. The slaves and prisoners captured during the internal wars became no longer incidents of these wars, but the wars became deliberate efforts to gather slaves for trade and export.

The character of culture on the slave coasts slowly changed; an element of cruelty crept into states like Benin and Dahomey, although other states, like that

of the Yoruba, seem to have resisted to some extent. But the ancient culture of the Atlantic coast was ruined by the trade in slaves, by the importation of gin, and by the European trade; European goods drove out native art and artistic industry.

Of all this West African cultural development our knowledge is fragmentary and incomplete, jumbled up with the African slave trade. There has been no systematic, general study of the history of humanity on this coast. Nearly all has disappeared in the frantic effort to paint Negroes as apes fit only for slavery and then to forget the whole discreditable episode, wipe it out of history, and emphasize the glory and philanthropy of Europe. The invaluable art treasure which Britain stole from Benin has never been properly classified or exhibited, but lies in the British Museum.

Yet on the West Coast was perhaps the greatest attempt in human history before the twentieth century to build a culture based on peace and beauty, to establish a communism of industry and of distribution of goods and services according to human need. It was crucified by greed, and its very memory blasphemed by the modern historical method.

49-1-98

There can be no doubt but that the level of culture among the masses of Negroes in West Africa in the fifteenth century was higher than that of northern Europe, by any standard of measurement -- homes, clothes, artistic creation and appreciation, political organization and religious consistency. "Throughout the whole of the Middle Ages, West Africa had a more solid politico-social organization, attained a greater degree of internal cohesion and was more conscious of the social function of science than Europe." What stopped and degraded this development? The slave trade; that modern change from regarding wealth as being for the benefit of human beings, to that of regarding human beings as wealth. This utter reversal of attitude which marked the day of a new barter in human flesh did not die with the slave, but persists and dominates the thought of Europe today and during the fatal era when Europe by force ruled mankind.

198

5' 50. THE PARIS EXPOSITION OF 1900

At the beginning of the twentieth century, when I was but ten years out of college, I visited the Paris Exposition of 1900. It was one of the finest, perhaps the very finest, of world expositions, and it typified what the European world wanted to think of itself and its future. Wealth and Science were the outstanding matters of emphasis: there was the new and splendid Pont Alexandre crossing the Seine, named for the Czar of Russia; there was an amazing exhibit of Russian industry at Jaroslav; and I had brought with me, as excuse for coming, a little display showing the development of Negroes in the United States, which gained a Grand Prize. All about me was an extraordinary display of wealth, luxury, and industrial technique, striking evidence of a Europe triumphant over the world and the center of science and art, power and human freedom.

It was easy to see what the great countries of Europe thought of themselves: France stood pre-eminently for art, for taste in building, technique, and pure expression; Germany stood for science and government; England for wealth and power with a high level of comfort; and America for freedom of human initiative.

There was even in this French exposition a certain dominance of the British Empire idea. The British paper promise-to-pay was actually worth more to the traveler than gold. British industry was unrivaled in efficient technique. British investments were the safest; and Great Britain was the widest and most successful administrator of colonies. Every kind of tribute was paid to her; she was the acknowledged leader in such various things as men's cloth and clothing, public manners, the rate of public expenditure -- and all this showed in the deference a British subject could demand everywhere throughout the world.

Then came five crashing events in quick succession. First, in 1905, at Saint Petersburg, the shooting down in cold blood of Russian workingmen in the first organized attempt of the twentieth century to achieve relief; and by that murderous volley the Czar killed the faith of working Russia in the Little White Father. He revealed that Russian industry was paying 50 per cent and more in profits to Germans and other investors, while the workers starved. The Czar himself thus sowed the seeds of revolution.

66-1-99

Second, in 1911 a German warship sailed into Agadir, North Africa, and demanded in the name of the Emperor that the German Reich be consulted concerning the future of Morocco. I remember how the incident startled London. I was there at the time, attending the First Races Congress.

THE RACES CONGRESS

It is a meeting now forgotten, but it might have been of world significance. Its advice might have changed the course of history had not World War I followed so fast. Meeting at the University of London was probably the largest representation of the groups of the world known as races and subraces; they were consulting together under the leadership of science and ethics for a future world which would be peaceful, without race prejudice; and which would be cooperative, especially in the social sciences. Among the speakers were world leaders -- Giuseppe Sergi, Franz Boas, John A. Hobson, Felix Adler, Sir Sidney Olivier, and Wu Ting-fang. A hymn to the peoples was read:

So sit we all as one
So, gloomed in tall and stone-swathed groves,
The Buddha walks with Christ!
And Al-Koran and Bible both be holy!

Almighty Word!
In this Thine awful sanctuary,
First and flame-haunted City of the Widened World,
Assoil us, Lord of Lands and Seas!

We are but weak and wayward men,
Distraught alike with hatred and vainglory;
Prone to despise the Soul that breathes within --
High-visioned hordes that lie and steal and kill,
Sinning the sin each separate heart disclaims,
Clambering upon our riven, writhing selves,
Besieging Heaven by trampling men to Hell!

We be blood-guilty! Lo, our hands be red!
Let no man blame the other in this sin!
But here - here in the white Silence of the Dawn,
Before the Womb of Time,
With bowed hearts all flame and shame,
We face the birth-pangs of a world:
We hear the stifled cry of Nations all but born --
The wail of women ravished of their stunted brood!
We see the nakedness of Toil, the poverty of Wealth,
We know the Anarchy of Empire, and doleful Death of Life!
And hearing, seeing, knowing all, we cry:

Save us, World-Spirit, from our lesser selves!
Grant us that war and hatred cease,
Reveal our souls in every race and hue!
Help us, O Human God, in this Thy Truce,
To make Humanity divine!

49-1-100

There were a few startling incidents. I remember with what puzzled attention we heard Felix Von Luschan, the great anthropologist of the University of Berlin, annihilate the thesis of race inferiority and then in the same breath end his paper with these words: "Nations will come and go, but racial and national antagonism will remain; and this is well, for mankind would become like a herd of sheep if we were to lose our national ambition and cease to look with pride and delight, not only on our industries and science, but also on our splendid soldiers and our glorious ironclads. Let small-minded people whine about the horrid cost of dreadnoughts; as long as every nation in Europe spends, year after year, much more money on wine, beer, and brandy than on her army and navy, there is no reason to dread our impoverishment by militarism. Si vis pacem, para bellum; and in reality there is no doubt that we shall be the better able to avoid war, the better we care for our armor. A nation is free only in so far as her own internal affairs are concerned. She has to respect the right of other nations as well as to defend her own, and her vital interests she will, if necessary, defend with blood and iron."

49-1-101

We were aghast. Did German science defend war? We were hardly reassured when in printing this speech the editor appended the following note: "To prevent the last few paragraphs from being misinterpreted, Professor von Luschan authorizes us to state that he regards the desire for a war between Germany and England as 'insane or dastardly.'

But it was in vain. In 1914 came World War I; in 1929 came the depression; in 1939 came World War II. The cost of these wars and crises in property and human life is almost beyond belief; the cost in the destruction of youth and of faith in the world and mankind is incalculable. Why did these things happen?

53 52. GERMANY AND WILHELM II

We may begin with the fact that in 1888 there came to the throne of Germany a young, vigorous German emperor of British descent. Wilhelm II had utter faith in the future of Germany. As a student I used to see him often on the Unter den Linden.

Time and again we students swung to the curb, and through the central arch of the Brandenburg Gate came the tossing of plumes and the prancing of horses, and splendid with shining armor and blare of trumpet there rode Wilhelm, by the Grace of God, King of Prussia and German Emperor.

Back of Wilhelm's faith in Germany lay deep envy of the power of Britain. In his soul strove unceasingly the ambition of Bismarck of Prussia and the aristocratic imperialism of his mother, a daughter of Queen Victoria. The French-British Entente Cordiale of the new century was faced by a German demand for "a place in the sun," a right to extract from colonial and semicolonial areas a share of the wealth which was going to Britain. When Germany invaded Belgium, and with that invasion brought war with England, it must be remembered that by that same token Germany was invading the Belgian Congo and laying claim to the ownership of Central Africa.

54 58. WORLD WAR I

World War I then was a war over spheres of influence in Asia and colonies in Africa, and in that war, curiously enough, both Asia and Africa were called upon to support Europe. Senegalese troops, for example, saved France and Europe from the first armed German onslaught. They were the shock troops brought to be slaughtered in thousands by the climate and cannon of Europe. The man who brought the African troops to the succor of France was Blaise Diagne. He was a tall, thin Negro, nervous with energy, more patriotic in his devotion to France than many of the French. He was deputy from Senegal in the French Parliament and had been selected as the man to whom the chiefs of French West Africa would render implicit obedience. Raised to cabinet rank, he was made the official representative of the French in West Africa. The white governor who found himself subordinated to this Negro resigned in disgust, but Diagne went down the West Coast in triumph and sent a hundred thousand black soldiers to France at this critical time.

One must not forget that incident on the fields of Flanders which has been so quickly forgotten. Against the banked artillery of the magnificent German Army were sent untrained and poorly armed Senegalese. They marched at command in unwavering

49-1-102

ranks, raising the war cry in a dozen different Sudanese tongues. When the artillery belched they shivered, but never faltered. They marched straight into death; the war cries became fainter and fainter and dropped into silence as not a single black man was left living on that field.

I was in Paris just after the armistice in 1918, and it was to Diagne that I went to ask for the privilege of calling a Pan-African Congress in Paris during the Versailles Peace Conference.

The idea of one Africa to unite the thought and ideals of all native peoples of the dark continent belongs to the twentieth century and stems naturally from the West Indies and the United States. Here various groups of Africans, quite separate in origin, became so united in experience and so exposed to the impact of new cultures that they began to think of Africa as one idea and one land. Thus late in the eighteenth century when a separate Negro Church was formed in Philadelphia it called itself "African"; and there were various "African" societies in many parts of the United States.

49-1-103

PAN-AFRICA

It was not however, until 1900 that a black West Indian barrister, practicing in London, called together a Pan-African Conference. This meeting attracted attention, put the word "Pan-African" in the dictionaries for the first time, and has some thirty delegates, mainly from England and the West Indies, with a few colored North Americans. The conference was welcomed by the Lord Bishop of London and a promise was obtained from Queen Victoria, through Joseph Chamberlain, not to "overlook the interests and welfare of the native races."

This meeting had no deep roots in Africa itself, and the movement and the idea died for a generation. Then came World War I, and among North American Negroes at its close there was determined agitation for the rights of Negroes throughout the world, and particularly in Africa. Meetings were held and a petition was sent to President Wilson. By indirection I secured passage on the Creel press boat, the

Orizaba, and landed in France in December 1918. I went with the idea of calling a Pan-African Congress, and to try to impress upon the members of the Peace Conference sitting at Versailles the importance of Africa in the future world. I was without credentials or influence. I tried to get a conference with President Wilson but got only as far as Colonel House, who was sympathetic, but noncommittal. The Chicago Tribune of January 19, 1919, in a dispatch from Paris dated December 30, 1918, said:

"An Ethiopian Utopia, to be fashioned out of the German colonies, is the latest dream of leaders of the Negro race who are here at the invitation of the United States government as part of the extensive entourage of the American peace delegation. ...

"The Negro leaders are not agreed upon any definite plan, but Dr. DuBois has mapped out a scheme which he has presented in the form of a memorandum to President Wilson. It is quite Utopian, and it has less than a Chinaman's chance of getting anywhere in the Peace Conference, but it is nevertheless interesting. As "self-determination" is one of the words to conjure with in Paris nowadays, the Negro leaders are seeking to have it applied, if possible, in a measure to their race in Africa.

"Dr. DuBois sets forth that while the principle of self-determination cannot be applied to uncivilized peoples, yet the educated blacks should have some voice in the disposition of the German colonies. He maintains that in settling what is to be done with the German colonies the Peace Conference might consider the wishes of the intelligent Negroes in the colonies themselves, the Negroes of the United States, and South Africa, and the West Indies, the Negro governments of Abyssinia, Liberia, and Haiti, the educated Negroes in French West Africa and Equatorial Africa and in British Uganda, Nigeria, Basutoland, Swaziland, Sierra Leone, Gold Coast, Gambia, and Bechuanaland, and in the Union of South Africa.

49-1-104

Dr. DuBois' dream is that the Peace Conference could form an internationalized Africa, to have as its basis the former German colonies, with their 1,000,000 square miles and 12,500,000 population.

"To this," his plan reads, "could be added by negotiation the 800,000 square miles and 9,000,000 inhabitants of Portuguese Africa. It is not impossible that Belgium could be persuaded to add to such a state the 900,000 square miles and 9,000,000 natives of the Congo, making an international Africa with over 2,500,000 square miles of land and over 20,000,000 people.

"This Africa for the Africans could be under the guidance of international organization. The governing international commission should represent not simply governments, but modern culture, science, commerce, social reform, and religious philanthropy. It must represent not simply the white world, but the civilized Negro world.

"We can, if we will, inaugurate on the dark continent a last great crusade for humanity. With Africa redeemed, Asia would be safe and Europe indeed triumphant."

55. FIRST PAN-AFRICAN CONGRESS

Members of the American delegation and associated experts assured me that no congress on this matter could be held in Paris because France was still under martial law; but the ace that I had up my sleeve was Blaise Diagne, the black deputy from Senegal and Commissaire-Général in charge of recruiting native African troops. I went to Diagne and sold him the idea of a Pan-African Congress. He consulted Clemenceau, and the matter was held up two wet, discouraging months. Finally we received permission to hold the Congress in Paris. "Don't advertise it," said Clemenceau, "but go ahead." Walter Lippmann wrote me in his crabbed hand, February 20, 1919: "I am very much interested in your organization of the Pan-African conference, and glad that Clemenceau has made it possible. Will you send me whatever reports you may have on the work?"

49-1-105

American newspaper correspondents wrote home: "Officials here are puzzled by the news from Paris that plans are going forward there for a Pan-African conference. Acting Secretary Polk said today the State Department had been officially advised by the French government that no such conference would be held. It was announced recently that no passports would be issued for American delegates desiring to attend the meeting." But at the very time that Polk was assuring American Negroes that no Congress would be held, the Congress actually assembled in Paris.

This Congress represented Africa partially. Of the fifty-seven delegates from fifteen countries, nine were African countries with twelve delegates. Of the remaining delegates, sixteen were from the United States, and twenty-one from the West Indies. Most of these delegates did not come to France for this meeting but happened to be residing there, mainly for reasons connected with the war. America and the colonial powers had refused to issue special visas.

The Congress influenced the Peace Conference. The New York Evening Globe of February 22, 1919, described it as "the first assembly of the kind in history, and has for its object the drafting of an appeal to the Peace Conference to give the Negro race of Africa a chance to develop unhindered by other races. Seated at long green tables in the council room today, were Negroes in the trim uniform of American Army officers, other American colored men in frock coats or business suits, polished French Negroes who hold public office, Senegalese who sit in the French Chamber of Deputies. . . ."

The Congress specifically asked that the German colonies be turned over to an international organization instead of being handled by the various colonial powers. Out of this idea came the Mandates Commission.

The resolutions of the Congress asked in part:

A. That the Allied and Associated Powers establish a code of law for the international protection of the natives of Africa, similar to the proposed international code for labor.

49-1-106

B. That the League of Nations establish a permanent Bureau charged with the special duty of overseeing the application of these laws to the political, social, and economic welfare of the natives.

C. The Negroes of the world demand that hereafter the natives of Africa and the peoples of African descent be governed according to the following principles:

1. The land: the land and its natural resources shall be held in trust for the natives and at all times they shall have effective ownership of as much land as they can profitably develop.

2. Capital: the investment of capital and granting of concessions shall be so regulated as to prevent the exploitation of the natives and the exhaustion of the natural wealth of the country. Concessions shall always be limited in time and subject to State control. The growing social needs of the natives must be regarded and the profits taxed for social and material benefit of the natives.

3. Labor: slavery and corporal punishment shall be abolished and forced labor except in punishment for crime; and the general conditions of labor shall be prescribed and regulated by the State.

4. Education: it shall be the right of every native child to learn to read and write his own language, and the language of the trustee nation, at public expense, and to be given technical instruction in some branch of industry. The State shall also educate as large a number of natives as possible in higher technical and cultural training and maintain a corps of native teachers.

5. The State: the natives of Africa must have the right to participate in the government as fast as their development permits, in conformity with the principle that the government exists for the natives, and not the natives for the government. They shall at once be allowed to participate in local and tribal government, according to ancient usage, and this

49-1-107

> participation shall gradually extend, as education and experience proceed, to the higher offices of State; to the end that, in time, Africa be ruled by consent of the Africans. . . .Whenever it is proven that African natives are not receiving just treatment at the hands of any State or that any State deliberately excludes its civilized citizens or subjects of Negro descent from its body politic and cultural, it shall be the duty of the League of Nations to bring the matter to the notice of the civilized World.

The New York Herald of February 24, 1919, said: "There is nothing unreasonable in the program drafted at the Pan-African Congress which was held in Paris last week. It calls upon the Allied and Associated Powers to draw up an international code of law for the protection of the nations of Africa, and to create, as a section of the League of Nations, a permanent bureau to insure observance of such laws and thus further the racial, political, and economic interests of the natives."

We were, of course, but weak and ineffective amateurs chipping at a hard conglomeration of problems about to explode in chaos. At least we were groping for light.

Not only Africa but Asia took active part in World War I on the side of the Allies. India saw for the first time a prospect of autonomy within the British Empire. Japan wanted to be recognized as the equal of white European nations, and the Chinese Republic started on its new path to modern civilization. Peace dawned, and the war came to be known as "the War to End War." But in vain, for this war had not ended the idea of European world domination. Rather it had loosened the seams of imperialism.

In Africa, Negro troops had conquered German colonies, and now British West Africa demanded a share in government. In the very midst of war came labor revolt in Russia, which Europe and North America tried to repress, but they did not succeed.

49-1-108

The First Pan-African Congress stirred the Africans. Especially the intelligentsia of West Africa began to organize and state their demands. They did not want to appear as a part of the Pan-African Congress or even as following up what it had done. Nevertheless, their inspiration came from the meeting. A national congress of British West Africa met in 1920 and made a statement of democratic aims which deserves wider knowledge than it had has. I quote parts of the statement:

MEMORANDUM of the case of the National Congress of British West Africa for a Memorial based upon the Resolutions to be presented to His Majesty the King Emperor in Council through the Right Honourable the Secretary of State for the Colonies, March 1920.

"In presenting the case for the franchise for the different colonies composing British West Africa, namely, the Gambia, Sierra Leone, the Gold Coast, and Nigeria, it is important to remember that each of these colonies is at present governed under the Crown Colony System. By that is meant that the power of selecting members for the legislative councils is in the Governor of each colony and not dependable upon the will of the people through an elective system.

"For a long time in the history of each of these colonies the anomaly of the nomination of members of the legislative council by the Governors and not by the people electing their own representatives has struck the inhabitants of each community, and now and again representations have been made with a view to remedying the disability... Before the rise of the Conference it resolved itself into the National Congress of British West Africa as a permanent official body for the purpose of representing constitutionally British West African need, political and otherwise. At each of the sessions an opportunity was given for the full discussion of the particular subjects under consideration, and upon the same being fully debated, resolutions arising out of the discussions were passes...

"The first submission with respect to this particular resolution is that in the demand for the franchise by the people of British West Africa it is not to be supposed that they are asking to be allowed to copy a foreign institution. On the contrary, it is important to notice that the principle of electing representatives to local councils

49-1-109

and bodies is inherent in all the systems of British West Africa. According to African institutions, every member of a community belongs to a given family with its duly accredited head, who represents that family in the village council, naturally composed of of the heads of the several families. Similarly, in a district council the different representatives of each village or town would be appointed by the different villages and towns, and so with the Provincial Council until, by the same process, we arrive at the Supreme Council, namely, the State Council, presided over by the Paramount Chief.

"Again, according to the African System no Headman, Chief, or Paramount Ruler has any inherent right to exercise jurisdiction unless he is duly elected by the people to so represent them. This, coupled with the facts in the preceding paragraph stated, makes the African system essentially a democratic one, and the appointment to political office depends entirely upon the election and the will of the people.

From the foregoing it is obvious that a system by which the Governor of a Crown Colony nominates whm he thinks proper to represent the people is considered by them as a great anomaly and constitutes a grievance and a disability which they now request should be remedied. Hence the constitutional agitation in the past, as in the present, for a change in the constitution of British West Africa so as to enable the people in the future to elect their own representatives to the Legislative Councils of the different colonies...

"...Legislation to be effectual, must be with the Chiefs in a representative legislative assembly. Any important measure affecting the people must be passed with the consent and the direct co-operation of the Chiefs themselves.

If the policy of the Government had been based upon this principle there would be no need today for this work. What the country requires most urgently today is a National Assembly wherein all sections of the community will be adequately represented. That is the fundamental element of progress, the reform at which all right-thinking men must directly aim."...

Britain after delay yielded to this demand in characteristic fashion: it gave

49-1-110

Negroes partial elective representation in the governor, who retained large power of legislation. British industry sat directly on the Council and in England continued to name West African governors and dictate colonial policies.

57 BETWEEN WARS

In the interval between World War I and World War II, India's determined opposition to British rule increased under the leadership of Gandhi, who sought to substitute peaceful non-co-operation for war. The answer was the massacre of Amritsar. In America organized industry rose in its might to realize fantastic profits through domination of world industry. It fought labor unions and tried to nullify democracy by the power of wealth and capital. In the very midst of this, the magnificent structure of capitalistic industry collapsed in every part of the world. Make no mistake, war did not cause the Great Depression; it was the reasons behind the depression that caused war and will cause it again.

The world tried to meet depression and unemployment and to compose differences between capital and labor. Faced by the threat of Russian Communism, Italy, which with Spain was the most poverty-stricken country in Western Europe, seized control of the nation and of industry with the object of ruling it through an oligarchy, eliminating all democratic control. This was the answer of capitalists to the growing and threatening political power of the workers. Hitler followed, opposing the Socialist state of Weimar, with its unemployment and political chaos, with a new state and a new nationalism. The industrial leaders surrendered their power into his hands; the army followed suit; unemployment disappeared, and Hitler diverted the

49-1-111

nation with visions of vengeance to be achieved through a new state ruled by German supermen. Simultaneously, Japan, having been rebuffed by England and America in her plea for racial equality before the League of Nations, saw an opportunity in this new order to displace Europe in the control of Asia.

Then came rumblings of World War II. The Axis wooed first England and France and then Russia. Britain made every offer of appeasement. Ethiopia was thrown to the dogs of a new Italian imperialism in Africa. Everything was offered to Hitler but the balance of power in Europe and the surrender of colonies. America, hesitating, was ready to fight for private industry against Nazism and to defend Anglo-American investment in colonies and quasi-colonial areas.

Hitler would not be appeased. So war began. Hell broke loose. Six million Jews were murdered in Germany through a propaganda which tied the small shopkeepers back of Hitler and placed unreasoning race prejudice back of war. France feared to trust colonial Africa. De Gaulle and the black Governor Eboué, with co-operation from England and France, could have established a new black France in Africa and shortened the war; but France yielded to Germany. England resisted doggedly. Russia yielded and joined hands with Germany, but not for long.

The real battle then began; the battle of the Nazi-Fascist oligarchy against the dictatorship of the proletariat. Germany determined first to crush Russia and then with Russian resources to destroy the British Empire. Japan aroused Asia, and by attacking America thus furnished the one reason, based on race prejudice, which brought America immediately into the war. India protested, China starved and struggled, the horrible world war with uncounted cost in property, life, and youth came to an end, and with it came the discovery of the use of atomic energy.

It was significant that the man who invented the phrase "White Man's Burden" and who was its most persistent propagandist, also wrote its epitaph:

[redacted]

We are face to face with the greatest tragedy that has ever overtaken the world. The collapse of Europe is to us the more astounding because of the boundless faith which we have had in European civilization. We have long believed without argument or reflection that the cultural status of the people of Europe and of North America represented not only the best civilization which the world had ever known, but also a goal of human effort destined to go on from triumph to triumph until the perfect accomplishment was reached. Our present nervous breakdown, nameless fear, and often despair, comes from the sudden facing of this faith with calamity.

In such a case, what we need above all is calm appraisal of the situation, the application of cold common sense. What in reality is the nature of the catastrophe? To what pattern of human culture does it apply? And, finally, why did it happen? In this search for reasons we must seek not simply current facts or facts within the memory of living men, but we must also, and especially in this case, seek lessons from history. It is perhaps the greatest indictment that can be brought against history as a science and against its teachers that we are usually indisposed to refer to history for the settlement of pressing problems. We realize that history is too often what we want it to be and what we are determined men shall believe rather than a grim record of what has taken place in the past.

Manifestly the present plight of the world is a direct outgrowth of the past, and I have made bold to add to the many books on the subject of our present problems because I believe that certain suppressions in the historical record current in our day will lead to a tragic failure in assessing causes. More particularly, I believe that the habit, long fostered, of forgetting and detracting from the thought and acts of the people of Africa, is not only a direct cause of our present plight, but will continue to cause trouble until we face the facts. I shall try not to exaggerate this thread of African history in the world development, but I shall insist equally that it be not ignored.

449-1-113

113

Few people realize what Africa and her children have done to win the World Wars. In the first, the Senegalese saved France at the first onslaught of the Germans; black soldiers of Africa conquered the German colonies; American Negroes rushed the critical supplies to Europe which turned the tide of victory.

In World War II thousands of Africans fought in Europe, Burma, India, and Africa; they formed a large part of Montgomery's Eighth Army in the decisive North African campaign; an American Negro physician contrived the banks of blood plasma which saved tens of thousands of lives; Negroes built thousands of miles of strategic road under direct enemy fire; Negroes handled three-fourths of the ammunition in the European Theatre of Operations and fired much of it. Negro fighting troops took part in the invasion of Normandy, in the invasion of Italy, and as flught squadrons and hospital corps. In American eight Negro scientists were engaged in the research on the atomic bomb.

49-1-114

pp. 16-43

68 ~~57~~. COLLAPSE OF EUROPE

114

What are the real causes back of the collapse of Europe in the twentieth century? What was the real European imperialism pictured in the Paris Exposition of 1900? France did not stand purely for art. There was much imitation, convention, suppression, and sale of genius; and France wanted wealth and power at any price. Germany did not stand solely for science. I remember when the German professor at whose home I was staying in 1890 expressed his contempt for the rising businessmen. He had heard them conversing as he drank in a Bierstube at Eisenach beneath the shade of Luther's Wartburg. Their conversation, he sneered, was lauter Geschäft! He did not realize that a new Germany was rising which wanted German science for one main purpose -- wealth and power. America wanted freedom, but freedom to get rich by any method short of anarchy; and freedom to get rid of the democracy which allowed laborers to dictate to managers and investors.

All these centers of civilization envied England the wealth and power built upon her imperial colonial system. One looking at European imperialism in 1900 therefore should have looked first at the depressed peoples. One would have found them also among the laboring classes in Europe and America, living in slums behind a façade of democracy, nourished on a false education which lauded the triumphs of the industrial undertaker, made the millionaire the hero of modern life, and taught youth that success was wealth. The slums of England emphasized class differences; slum dwellers and British aristocracy spoke different tongues, had different manners and ideals. The goal of human life was illustrated in the nineteenth-century English novel: the aristocrat of independent income surrounded by a herd of obsequious and carefully trained servants. Even today the British butler is a personage in the literary world.

49-1-115

Out of this emerged the doctrine of the Superior Race: the theory that a minority of the people of Europe are by birth and natural gift the rulers of mankind; rulers of their own suppressed labor classes and, without doubt, heaven-sent rulers of yellow, brown, and black people.

This way of thinking gave rise to many paradoxes, and it was characteristic of the era that men did not face paradoxes with any plan to solve them. There was the religious paradox: the contradiction between the Golden Rule and the use of force to keep human beings in their appointed places; the doctrine of the White Man's Burden and the conversion of the heathen, the assumption of the absolute necessity of poverty for the majority of men in order to save civilization for the minority, for that aristocracy of mankind which was at the same time the chief beneficiary of culture.

59 Democracy Fails

There was the frustration of democracy: lip service was paid to the idea of the rule of the people; but at the same time the mass of people were kept so poor, and through their poverty so diseased and ignorant, that they could not carry on successfully a modern state or modern industry. There was the paradox of peace: I remember before World War I stopping in at the Hotel Astor to hear Andrew Carnegie tlak to his peace society. War had begun between Italy and Turkey, but, said Mr. Carnegie blandly, we are not talking about peace among unimportant people; we are talking about peace among the great states of the world. I walked out. Here I knew lay tragedy, and the events proved it; for the great states went to war in jealousy over the ownership of the little people.

60 Peace Movement

The paradox of the peace movement of the nineteenth century is a baffling comment on European civilization. There was not a single year during the nineteenth century when the world was not at war. Chiefly, but not entirely, these wars were waged to subjugate colonial peoples. They were carried on by Europeans, and at least one hundred and fifty separate wars can be counted during the heyday of the

49-1-116

peace movement. What the peace movement really meant was peace in Europe and between Europeans, while for the conquest of the world and because of the suspicion which they held toward each other, every nation maintained a standing army which steadily grew in cost and menace.

One of the chief causes which thus distorted the development of Europe was the African slave trade, and we have tried to rewrite its history and meaning and to make it occupy a much less important place in the world's history than it deserves.

The result of the African slave trade and slavery on the European mind and culture was to degrade the position of labor and the respect for humanity as such. Not, God knows, that the ancient world honored labor. With exceptions here and there, it despised, enslaved, and crucified human toil. But there were counter currents, and with the Renaissance in Europe -- that new light with which Asia and Africa illumined the Dark Ages of Europe -- came new hope for mankind. A new religion of personal sacrifice had been building on five hundred years of the self-effacement of Buddha before the birth of Christ, and the equalitarianism of Mohammed which followed six hundred years after Christ's birth. A new world, seeking birth in Europe, was also being discovered beyond the sunset.

With this new world came fatally the African slave trade and Negro slavery in the Americas. There were new cruelties, new hatreds of human beings, and new degradations of human labor. The temptation to degrade human labor was made vaster and deeper by the incredible accumulation of wealth based on slave labor, by the boundless growth of greed, and by world-wide organization for new agricultural crops, new techniques in industry, and world-wide trade.

Just as Europe lurched forward to a new realization of beauty, a new freedom of thought and religious belief, a new demand by laborers to choose their work and enjoy its fruit, uncurbed greed rose to seize and monopolize the uncounted treasure of the fruit of labor. Labor was degraded, humanity was despised, the theory of "race" arose.

There came a new doctrine of universal labor: mankind were of two sorts -- the superior and the inferior; the inferior toiled for the superior; and the superior were the real men, the inferior half men or less. Among the white lords of creation there were "lower classes" resembling the inferior darker folk. Where possible they were to be raised to equality with the master class. But no equality was possible or desirable for "darkies." In line with this conviction, the Christian Church, Catholic and Protestant, at first damned the heathen blacks with the "curse of Canaan," then held out hope of freedom through "conversion," and finally acquiesced in a permanent status of human slavery.

Despite the fact that the nineteenth century saw an upsurge in the power of laboring classes and a fight toward economic equality and political democracy, this movement and battle was made fiercer and less successful and lagged far behind the accumulation of wealth, because in popular opinion labor was fundamentally degrading and the just burden of inferior peoples. Luxury and plenty for the few and poverty for the many was looked upon as inevitable in the course of nature. In addition to this, it went without saying that the white people of Europe had a right to live upon the labor and property of the colored peoples of the world.

49-1-118

E2. The Word "Negro"

In order to establish the righteousness of this point of view, science and religion, government and industry, were wheeled into line. The word "Negro" was used for the first time in the world's history to tie color to race and blackness to slavery and degradation. The white race was pictured as "pure" and superior; the black race as dirty, stupid, and inevitably inferior; the yellow race as sharing, in deception and cowardice, much of this color inferiority; while mixture of races was considered the prime cause of degradation and failure in civilization. Everything great, everything fine, everything really successful in human culture, was white.

In order to prove this, even black people in India and Africa were labeled as "white" if they showed any trace of progress; and, on the other hand, any progress by colored people was attributed to some intermixture, ancient or modern, of white blood or some influence of white civilization.

This logical contradiction influenced and misled science. The same person declared that mulattoes were inferior and warned against miscegenation, and yet attributed the pre-eminence of a Dumas, a Frederick Douglass, a Booker Washington, to their white blood.

63 History is Distorted

A system at first conscious and then unconscious of lying about history and distorting it to the disadvantage of the Negroids became so widespread that the history of Africa ceased to be taught, the color of Memnon was forgotten, and every effort was made in archaeology, history, and biography, in biology, and sociology, to prove the all but universal assumption that the color line had a scientific basis.

Without the winking of an eye, printing, gunpowder, the smelting of iron, the beginnings of social organization, not to mention political life and democracy, were attributed exclusively to the white race and to Nordic Europe. Religion sighed with relief when it could base its denial of the ethics of Christ and the brotherhood of men upon the science of Darwin, Gobineau, and Reisner.

It was bad enough in all conscience to have the consequences of this thought, these scientific conclusions and ethical sanctions, fall upon colored people the world over; but in the end it was even worse when one considers what this attitude did to the European worker. His aim and ideal was distorted. He did not wish to become efficient but rich. He began to want not comfort for all men, but power over other men for himself. He did not love humanity and he hated "niggers." When our High Commissioner after the Spanish War appealed to America on behalf of "our little brown brother," the white workers replied,

"He may be a brother of William H. Taft,
But he ain't no brother of mine."

Following the early Christian communism and sense of human brotherhood which began to grow in the Dark Ages and to blossom in the Renaissance there came to white workers in England, France, and Germany, the iron law of wages, the population

49-1-119

doctrines of Malthus, and the bitter fight against the early trade unions. The first efforts at education, and particularly the trend toward political democracy, aroused an antagonism of which the French Revolution did not dream. It was this bitter fight that exacerbated the class struggle and resulted in the first furious expression of Communism and the attempt at revolution. The unity of apprentice and master, the Christian sympathy between rich and poor, the communism of medieval charity, all were thrust into the new strait jacket of thought: poverty was the result of sloth and crime; wealth was the reward of virtue and work. The degraded yellow and black peoples were in the places which the world of necessity assigned to the inferior; and toward these lower ranks the working classes of all countries tended to sink save as they were raised and supported by the rich, the investors, the captains of industry.

In some parts of the world, notably in the Southern states of America, the argument went further than this: frank slavery of black folk was a better economic system than factory exploitation of whites. It was the natural arrangement of industry. It ought to be extended, certainly where colored people were in the majority. For half a century before 1861, the bolder minds of the South dreamed of a slave empire embracing the American tropics and extending eventually around the world. White their thought did not go to a final appraisement of white laboring classes, they certainly had in mind that these classes must rise or fall; must be forced into the class of employers with political power, or, like the poor whites of the South, be pushed down beside or even below the working slaves.

This philosophy had sympathizers in Europe. Without doubt, a large majority of influential public opinion in England, and possibly in both France and Germany, favored the South at the outbreak of the Civil War and sternly set its face against allowing any maudlin sympathy with "darkies," half monkeys and half men, in the stern fight for the extension of European domination of the world. Widespread insensibility to cruelty and suffering spread in the white world, and to guard against

too much emotional sympathy with the distressed, every effort was made to keep women and children and the more sensitive men deceived as to what was going on, not only in the slums of white countries, but also all over Asia, Africa, and the islands of the sea. Elaborate writing, disguised as interpretation, and the testimony of so-called "experts," made it impossible for charming people in Europe to realize what their comforts and luxuries cost in sweat, blood, death, and despair, not only in the remoter parts of the world, but even on their own doorsteps.

63. A gracious Culture

A gracious culture was built up; a delicately poised literature treated the little intellectual problems of the rich and well-born, discussed small matters of manners and convention, and omitted the weightier ones of law, mercy, justice, and truth. Even the evidence of the eyes and senses was denied by the mere weight of reiteration. The race that produced the ugly features of a Darwin or a Winston Churchill was always "beautiful," while a Toussaint and a Menelik were ugly because they were black.

The concept of the European "gentleman" was evolved: a man well bred and of meticulous grooming, of knightly sportsmanship and invincible courage even in the face of death; but one who did not hesitate to use machine guns against assagais and to cheat "niggers"; an ideal of sportsmanship which reflected the Golden Rule and yet contradicted it -- not only in business and in industry within white countries, but all over Asia and Africa -- by indulging in lying, murder, theft, rape, deception, and degradation, of the same sort and kind which has left the world aghast at the accounts of what the Nazis did in Poland and Russia.

There was no Nazi atrocity -- concentration camps, wholesale maiming and murder, defilement of women or ghastly blasphemy or childhood -- which the Christian civilization of Europe had not long been practicing against colored folk in all parts of the world in the name of and for the defense of a Superior Race born to rule the world.

68 The Superior Race

Together with the idea of a Superior Race there grew up in Europe and America an astonishing ideal of wealth and luxury: the man of "independent" income who did not have to "work for a living," who could indulge his whims and fantasies, who was free from all compulsion either of ethics or hunger, became the hero of novels, of drama and of fairy tale. This wealth was built, in Africa especially, upon diamonds and gold, copper and tin, ivory and mahogany, palm oil and cocoa, seeds extracted and grown, beaten out of the blood-stained bodies of the natives, transported to Europe, processed by wage slaves who were not receiving, and as Ricardo assured them they could never receive, enough to become educated and healthy human beings, and then distributed among prostitutes and gamblers as well as among well-bred followers of art, literature, and drama.

Cities were built, ugly and horrible, with regions for the culture of crime, disease, and suffering, but characterized in popular myth and blindness by wide and beautiful avenues where the rich and fortunate lived, laughed, and drank tea. National heroes were created by lopping off their sins and canonizing their virtues, so that Gladstone had no connection with slavery, Chinese Gordon did not get drunk, William Pitt was a great patriot and not an international thief. Education was so arranged that the young learned not necessarily the truth, but that aspect and interpretation of the truth which the rulers of the world wished them to know and follow.

In other words, we had progress by poverty in the face of accumulating wealth, and that poverty was not simply the poverty of the slaves of Africa and the peons of Asia, but the poverty of the mass of workers in England, France, Germany, and the United States. Art, in building, painting, and literature, became cynical and decadent. Literature became realistic and therefore pessimistic. Religion became organized in social clubs where well-bred people met in luxurious churches and gave alms to the poor. On Sunday they listened to sermons -- "Blessed are the meek"; "Do unto others even as you would that others do unto you"; "If thine enemy smite thee, turn the other cheek"; "It is more blessed to give than to receive" -- listened

49-1-122

and acted as though they had read, as in very truth they ought to have read -- "Might is right"; Do others before they do you"; "Kill your enemies or be killed"; "Make profits by any methods and at any cost so long as you can escape the lenient law." This is a fair picture of the decadence of that Europe which led human civilization during the nineteenth century and looked unmoved on the writhing of Asia and of Africa.

67 Sex

Nothing has been more puzzling than the European attitude toward sex. With professed reverence for female chastity, white folk have brought paid prostitution to its highest development; their lauding of motherhood has accompanied a lessening of births through late marriage and contraception, and this has stopped the growth of population in France and threatened it in all Europe. Indeed, along with the present rate of divorce, the future of the whole white race is problematical. Finally, the treatment of colored women by white men has been a world-wide disgrace. American planters, including some of the highest personages in the nation, left broods of colored children who were sometimes sold into slavery.

49-1-123

It would be unfair to paint the total modern picture of Europe as decadent. There have been souls that revolted and voices that cried aloud. Men arraigned poverty, ignorance, and disease as unnecessary. The public school and the ballot fought for uplift and freedom. Suffrage for women and laborers and freedom for the Negro were extended. But this forward-looking vision had but partial and limited success. Race tyranny, aristocratic pretense, monopolized wealth, still continued to prevail and triumphed widely. The Church fled uptown to escape the poor and black. Jesus laughed -- and wept.

The dawn of the twentieth century found white Europe master of the world and the white peoples almost universally recognized as the rulers for whose benefit the rest of the world existed. Never before in the history of civilization had self-worship of a people's accomplishment attained the heights that the worship of white Europe by Europeans reached.

~~201~~ 123 ~~+++~~ 123

68. Europe

Our poets in the "Foremost Ranks of Time," became dithyrambic: "Better fifty years of Europe than a cycle of Cathay!" In home and school the legend grew of this strong, masterful giant with mighty intellect, clear brain, and unrivaled moral stamina, who was conducting the world to the last heights of human culture. Yet within less than half a century this magnificent self-worshiping structure had crashed to the earth.

Why was this? It was from no lack of power. The power of white Europe and North America was unquestionable. Their science dominated the scientific thought of the world. The only writing called literature was that of English and French writers, of Germans and Italians, with some recognition of writers in Spain and the United States. The Christian religion, as represented by the Catholic Church and the leading Protestant denominations, was the only system of belief recognized as real religion. Mohammedans, Buddhists, Shintoists, and others were all considered heathen.

49-1-124

The most tremendous expression of power was economic; the powerful industrial organization and integration of modern industry in management and work, in trade and manufacture, was concentrated in England, France, Germany, and the United States. All Asia and Eastern Europe was an appendage; all Africa, China, India, and the islands of the sea, Central and South America and the Caribbean area were dominated by Europe, while Scandinavia, Holland, and Belgium were silent copartners in this domination.

The domination showed itself in its final form in political power either through direct rulership, as in the case of colonies, or indirect economic power backed by military pressure exercised over the backward nations. It was rather definitely assumed in the latter part of the nineteenth century that this economic domination was but a passing phase which in time would lead to colonial absorption.

Particularly was this true with regard to Asia. India was already a part of the British Empire, and Burma. Indonesia was Dutch and Indo-China, French. The

future of China depended upon how Europe would divide the land among the British Empire and the Germans, American trade, Italy, France, and Russia. It was a matter simply of time and agreement. General consent had long since decided that China should no longer rule itself.

With regard to the South American countries there was the determination that they must obey the economic rule of the European and North American system. The world looked forward to political and economic domination by Europe and North America and to a more or less complete approach to colonial status for the rest of the earth. Africa of course must remain in absolute thrall, save its white immigrants, who would rule the blacks. 69 Mulatto Problem

The reason for this world mastery by Europe was rationalized as the natural and inborn superiority of white peoples, showing itself not only in the loftiest of religions, but in a technical mastery of the forces of nature -- all this in contrast to the low mentality and natural immorality of the darker races living in lovely lands, "Where every prospect pleases, and only Man is vile!" -- as the high-minded Christians sang piously. But they forgot or never were told just how white superiority wielded its power or accomplished this dominion. There were exceptions, of course, but for the most part they went unheard. Howitt, for instance, wrote from personal knowledge as well as research on the colonial question and described some phases of the pressure of Europe on the rest of the world in the centuries preceding the nineteenth. Speaking of the Indians of America, Howitt said: "All the murders and desolation of the most pitiless tyrants that ever diverted themselves with the pangs and convulsions of their fellow creatures, fall infinitely short of the bloody enormities committed by the Spanish nation in the conquest of the New World, a conquest on a low estimate, effected by the murder of ten millions of the species! After reading these accounts, who can help forming an indignant wish that the hand of Heaven, by some miraculous interposition, had swept these European tyrants from the face of the earth, who like so many beasts of prey, roamed round the world only to desolate and destroy; and more

49-1-125

remorseless than the fiercest savage, thirsted for human blood without having the impulse of natural appetite to plead in their defence!"

Howitt then turned to England in India: "Unfortunately, we all know what human nature is. Unfortunately, the power, the wealth, and the patronage brought home to them by the very violation of their own wishes and maxims were of such an overwhelming and seducing nature that it was in vain to resist them. Nay, in such colours does the modern philosophy of conquest and diplomacy disguise the worst transactions between one state and another, that it is not for plain men very readily to penetrate to the naked enormity beneath."

"But if there ever was one system more Machiavelian -- more appropriative of the shew of justice where the basest injustice was attempted -- more cold, cruel, haughty, and unrelenting than another -- it is the system by which the government of the different states of India has been wrested from the hands of their respective princes and collected into the grasp of the British power."

49-1-126

We may turn now to the conquest of Africa. The Portuguese, Dutch, and British decimated the West Coast with the slave trade. The Arabs depopulated the East Coast. For centuries the native Bantu, unable to penetrate the close-knit city-states of the Gulf of Guinea, had slowly been moving south, seeking pasture for their herds and protecting their culture from the encroachment of the empire-building in the black Sudan.

In the nineteenth century black folk and white -- Hottentot, Bushman and Bantu, French, Dutch, and British -- met at the Cape miscalled "Good Hope." There ensued a devil's dance seldom paralleled in human history. The Dutch murdered, raped, and enslaved the Hottentots and Bushmen; the French were driven away or died out; the British stole the land of the Dutch and their slaves and the Dutch fled inland. The incoming Bantu, led by Chaka, the great Zulu chieftain, fell on both Dutch and English with a military genius unique in history.

The black Bantu had almost won the wars when a mulatto native discovered diamonds. Then English and Dutch laid bare that cache of gold, the largest in the world, which the ocean thrust above the dark waters of the south five million years ago. Enough; the greed of white Europe, backed by the British Navy, fought with frenzied determination, world-wide organization, and every trick of trade, until the blacks were either dead or reduced to the most degrading wage bondage in the modern world; and the Dutch became vassals of England, to be repaid by the land and labor of eight million blacks.

Frankel, the complacent servant of capitalists and their defender, has written: "The wealth accruing from the production of diamonds in South Africa has probably been greater than that which has ever been obtained from any other commodity in the same time anywhere in the world."

This was but a side enterprise of Britain. By means of its long leadership in the African slave trade to America, Great Britain in the nineteenth century began to seize control of land and labor all over Africa. Slowly the British pushed into the West and East coasts. They overthrew Benin and Ashanti. A British governor of Ashanti later admitted: "The earliest beginnings, which had their inception in the dark days of the slave trade, cannot but hold many things that modern Englishmen must recall with minled shame and horror. The reader will find much to deplore in the public and private acts of many of the white men who, in their time, made history on the Coast; and some deeds were done which must forever remain among the most bitter and humiliating memories of every Britisher who loves his country and is jealous of its fair name."

The French conquered Dahomey and the remains of the Mandingo, Haussa, and other kingdoms. The British pitted Christianity against Islam in East Africa and let them fight it out until at last Uganda became a British protectorate.

In Abyssinia the natives drove back British, Egyptians, and Italians, and the Mahdi with his black Mohammedan hordes came in from the west and drove England and Egypt out of the Sudan. The threat of the French and their possible alliance with Abyssinia brought the British back with machine guns.

It is said that Kitchener's warfare against the followers of the Mahdi was so brutal that even the British Tories were revolted. His own brother-in-law said of him: "Well, if you do not bring down a curse on the British Empire for what you have been doing there is no truth in Christianity." His desecration of the Mahdi's tomb even Winston Churchill called a "foul deed." And when Kitchener found that even the promoters of the inexcusable war could not swallow this last, he tried to put the blame of the desecration onto Gordon's nephew by making absolutely false accusations. Everywhere is this sordid tale of deception, force, murder, and final subjection. We need hardly recall the Opium War in China, which the British, followed by the Americans and French, made excuse for further aggression.

The singular thing about this European movement of aggression and dominance was the rationalization for it. Missionary effort during the nineteenth and early twentieth century was widespread. Millions of pounds and dollars went into the "conversion of the heathen" to Christianity and the education of the natives. Some few efforts, as in Liberia and Sierra Leone, were made early in the nineteenth century to establish independent Negro countries, but this was before it was realized that political domination was necessary to full exploitation.

Slowly the Sudan from the Atlantic to the Nile was conquered. Slowly Egypt itself and the Egyptian Sudan passed under the control of Europe. The resistance of Nubia and Ethiopia was almost in vain down into the twentieth century. West Africa fought brilliantly and continuously. But in all this development the idea persisted in European minds that no matter what the cost in cruelty, lying, and blood, the triumph of Europe was to the glory of God and the untrammeled power of

the only people on earth who deserved to rule; that the right and justice of their rule was proved by their own success and particularly by their great cities, their enormous technical mastery over the power of nature, their gigantic manufacture of goods and systems of transportation over the world. Production for production's sake, without inquiry as to how the wealth and services were distributed, was the watchword of the day.

For years the British imperial government avoided direct responsibility for colonial exploitation. It was all at first "free enterprise" and "individual initiative." When the sandal of murder and loot could no longer be ignored, exploitation became socialized with imperialism. Thus, for a century or more the West India Company, the Niger Company, the South and East Africa Companies, robbed and murdered as they pleased with no public accounting. At length, when these companies had stolen, killed, and cheated to such an extent that the facts could not be suppressed, governments themselves came into control, curbing the more outrageous excesses and rationalizing the whole system.

49-1-129

Science was called to help. Students of Africa, especially since the ivory-sugar-cotton-Negro complex of the nineteenth century, became hag-ridden by the obsession that nothing civilized is Negroid and every evidence of high culture in Africa must be white or at least yellow. The very vocabulary of civilization expressed this idea; the Spanish word "Negro," from being a descriptive adjective, was raised to the substantive name of a race and then deprived of its capital letter.

Then came efforts to bring harmony and co-operation and unity -- among the exploiters. A newspaper correspondent who had received world-wide publicity because of his travels in Africa was hired by the shrewd and unscrupulous Leopold II of Belgium to establish an international country in central Africa "to peacefully conquer and subdue it, to remold it in harmony with modern ideas into National States, within whose limits the European merchant shall go hand in hand with the dark African

trader, and justice and law and order shall prevail, and murder and lawlessness and the cruel barter of slaves shall be overcome."

Thus arose the Congo Free State, and by balancing the secret designs of German, French, and British against each other, this state became the worst center of African exploitation and started the partition of Africa among European powers. It was designed to form a pattern for similar partition of Asia and the South Sea Islands. The Berlin Congress and Conference followed. The products of Africa began to be shared and distributed around the world. The dependence of civilized life upon products from the ends of the world tied the everyday citizen more and more firmly to the exploitation of each colonial area: tea and coffee, diamonds and gold, ivory and copper, vegetable oils, nuts and dates, pepper and spices, olives and cocoa, rubber, hemp, silk, fibers of all sorts, rare metals, valuable lumber, fruit, sugar. All these things and a hundred others became necessary to modern life, and modern life thus was built around colonial ownership and exploitation.

The cost of this exploitation was enormous. The colonial system caused ten times more deaths than actual war. In the first twenty-five years of the nineteenth century famines in India starved a million men, and famine was bound up with exploitation. Widespread monopoly of land to deprive all men of primary sources of support was carried out either through direct ownership or indirect mortgage and exorbitant interest. Disease could not be checked: tuberculosis in the mines of South Africa, syphilis in all colonial regions, cholera, leprosy, malaria.

7478 Dorothy Quilting

One of the worst things that happened was the complete and deliberate breaking-down of cultural patterns among the suppressed peoples. "Europe was staggered at the Leopoldian atrocities, and they were terrible indeed; but what we, who were behind the scenes, felt most keenly was the fact that the real catastrophe in the Congo was desolation and murder in the larger sense. The invasion of family life, the ruthless destruction of every social barrier, the shattering of every tribal law, the intro-

49-1-130

duction of criminal practices which struck the chiefs of the people dumb with horror -- in a word, a veritable avalanche of filth and immorality overwhelmed the Congo tribes."

The moral humiliation forced on proud black people was illustrated in the British conquest of Ashanti. The reigning Asantahene had never been conquered. His armies had repeatedly driven back the British, but the British finally triumphed after five wars by breaking their word and overwhelming him by numbers and superior weapons. They promised him peace and honor, but they demanded a public act of submission.

"The scene was a most striking one. The heavy masses of foliage, that solid square of red coats and glistening bayonets, the artillery drawn up ready for any emergency, the black bodies of the Native Levies, resting on their long guns in the background, while inside the square the Ashantis sat as if turned to stone, as Mother and Son, whose word was a matter of life and death, and whose slightest move constituted a command which all obeyed, were thus forced to humble themselves in sight of the assembled thousands."

49-1-131

Perhaps the worst thing about the colonial system was the contradiction which arose and had to arise in Europe with regard to the whole situation. Extreme poverty in colonies was a main cause of wealth and luxury in Europe. The results of this poverty were disease, ignorance, and crime. Yet these had to be represented as natural characteristics of backward peoples. Education for colonial people must inevitably mean unrest and revolt; education, therefore, had to be limited and used to inculcate obedience and servility lest the whole colonial system be overthrown.

Ability, self-assertion, resentment, among colonial peoples must be represented as irrational efforts of "agitators" -- folk trying to attain that for which they were not by nature fitted. To prove the unfitness of most human beings for self-rule and self-expression, every device of science was used: evolution was made to prove that Negroes and Asiatics were less developed human beings than whites; history was so written as to make all civilization the development of white people; economics

was so taught as to make all wealth due mainly to the technical accomplishment of white folks supplemented only by the brute toil of colored peoples; brain weights and intelligence tests were used and distorted to prove the superiority of white folk. The result was complete domination of the world by Europe and North America and a culmination and tempo of civilization singularly satisfactory to the majority of writers and thinkers at the beginning of the twentieth century. But it was a result that was hollow, contradictory, and fatal, as the next few years quickly showed.

The proof of this came first from the colonial peoples themselves. Almost unnoticed, certainly unlistened to, there came from the colonial world reiterated protest, prayers, and appeals against the suppression of human beings, against the exclusion of the majority of mankind from the vaunted progress of the world. The world knows of such protests from the National Congress of India, but little has been written of the protests of Africa. For instance, on the Gold Coast, British West Africa, in 1871, some of the kings and chiefs and a number of educated natives met at Mankesim and drew up a constitution for self-government.

75 FANTI FEDERATION

This was the co-called Fanti Federation, and in punishment for daring to propose such a movement for the government of an African British colony, the participants were promptly thrown in jail and charged with treason.

49-1-132

This attitude toward native rights and initiative has continued right down to our day. In 1945 the colored people of South Africa, speaking for eight million Negroes, Indians, and mixed groups, sent out this declaration to the proposed United Nations:

The non-European is debarred from education. He is denied access to the professions and skilled trades; he is denied the right to buy land and property; he is denied the right to trade or to serve in the army -- except as a stretcher-bearer or servant; he is prohibited from entering places of entertainment and culture. But still more, he is not allowed to live in the towns. And if it was a crime in Nazi Germany for an "Aryan" to mix with or marry a non-Aryan, it is equally a criminal offence in South Africa for a member of the Herrenvolk to mix with or marry with the slave race

....

. . . . In the majority of instances there is a separate law for Europeans and a separate law for non-Europeans; in those rare cases where one Act legislates for both, there are separate clauses discriminating against the non-Europeans. While it is true that there are no Buchenwald concentration camps in South Africa, it is equally true that the prisons of South Africa are full to overflowing with non-Europeans whose criminality lies solely in the fact that they are unable to pay the poll-tax, a special, racial tax imposed upon them. But this law does not apply to the Aryan; for him there is a different law which makes the nonpayment of taxes not a criminal, but a civil, offence for which he cannot be imprisoned.

76 Morals of Europe

This does not say that all European civilization is oppression, theft, and hypocrisy; there has been evidence of selfless religious faith; of philanthropic effort for social uplift; of individual honesty and sacrifice. But this, far from answering the indictment I have made, shows even more clearly the moral plight of present European culture and what capitalistic investment and imperialism have done to it.

Because of the stretch in time and space between the deed and the result, between the work and the product, it is not only usually impossible for the worker to know the consumer; or the investor, the source of his profit, but also it is often made impossible by law to inquire into the facts. Moral judgment of the industrial process is therefore difficult, and the crime is more often a matter of ignorance rather than of deliberate murder and theft; but ignorance is a colossal crime in itself. When a culture consents to any economic result, no matter how monstrous its cause, rather than demand the facts concerning work, wages, and the conditions of life whose results make the life of the consumer comfortable, pleasant, and even luxurious, it is an indication of a collapsing civilization.

49-1-132

49-1-133

In 1945 Jan Smuts, Prime Minister of South Africa, who had once declared that every white man in South Africa believes in the suppression of the Negro except those who are "mad, quite mad," stood before the assembled peoples of the world and pleaded for an article on "human rights" in the United Nations Charter. Nothing so vividly illustrates the twisted contradiction of thought in the minds of white men. What brought it about? What caused this paradox? I believe that the trade in human beings between Africa and America, which flourished between the Renaissance and the American Civil War, is the prime and effective cause of the contradictions in European civilization and the illogic in modern thought and the collapse of human culture.

49-1-134

~~pp. 226 - 260~~

In Greek mythology Andromeda was the black daughter of Cepheus, King of Ethiopa and of Cassiopeia,

> That starr'd Ethiop Queen that strove
> To set her beauty's praise
> Above the sea nymphs and their powers offended.

It is said that Poseidon, angry at this black woman's affront to the Nereids, threatened to flood the land and send a sea monster. The Egyptian oracle of Ammon foretold that only the sacrifice of Andromeda to the monster could stay destruction. Thus Andromeda was chained and exposed on a headland facing the sea; Perseus, forefather of the Asiatic Persians of Iran, returning from the slaying of Gorgon, freed Andromeda and married her. After her death she reigned among the stars, her arms extended and chained, together with Cassiopeia and Perseus; and anyone may see them shining upon a beautiful night.

It might be asked what hs this or any fairy tale to do with a world stricken, starving, and half-insane; or with the relations of Africa to Europe and America? Very little perhaps; and yet we must remember that this folk tale was part of the culture complex of the Mediterranean area where there was no color bar and no name for race; and where, at least in theory, the world was a fight between civilization and barbarism. Perhaps then in some way this legend may guide us in the present and the future. What in truth is going to be the future of black folk? Are they going to die out gradually, with only traces ot their blood to remind the world of their former existence? Are they going to be permanently segregated from the world in Africa or elsewhere, leaving the white world free of its fear and repulsion? Or in some slow or fast intermingling of peoples will all colors of mankind merge into some indistinguishable unity? None of these solutions seems practicable or imminent for many a long day. And, after all, none would really solve the basic problem of the relations of peoples; for even if extremes of human differences vanish, there will always remain differences, and around them the problems of human living-together.

49-1-135

Facing then the present problem, may we not frankly ask: Does the world need Africa? What has Africa to offer Europe, Asia, and America? Does Africa need the world? Certainly in the past the world has needed and used the Negro race: in Egypt and Ethiopia, and even in Asia; in the first building of the Christian Church and in the encouragement and transmission of thought and science from the East to the West that is known as the Renaissance; and especially in the sixteenth, seventeenth, eighteenth, and nineteenth centuries, the Negro race has been the foundation upon which the capitalist system has been reared, the Industrial Revolution carried through, and imperial colonialism established. AFRICA AMERICA

If we confine ourselves to America we cannot forget that America was built on Africa. From being a mere stopping place between Europe and Asia or a chance treasure house of gold, America became through African labor the center of the sugar empire and the cotton kingdom and an integral part of that world industry and trade which caused the Industrial Revolution and the reign of capitalism.

Through the nineteenth century America, on the strength of its black labor as well as white, grew in wealth and importance. It became the greatest experiment in modern democracy, seeking to embrace eventually not simply the white but the black worker. Today not only is the Negro an important part of the world of labor and art in all the Americas, but beyond this the trade of America is built in large degree upon the products raised by Africans and their children the world over.

But beyond America and in the main states of the modern world the cold economic fact is that Africa, its labor and products, are of prime importance. Of the typical products of Africa, cotton, one of the oldest there, is still valuable, and cotton cloth was exported from Africa long before it was woven in England. Sisal, hemp, and other fiber plants and flax are indigenous to Africa. The vast demand for vegetable oil has resulted in the oil industry, especially in West Africa. Palm oil is used for margarine, soap, lubrication, "olive oil," and for other industrial purposes. Thus the oil palm of West Africa is a valuable product and supplies palm kernels which are

49-1-136

exported from the whole West Coast. The ground nut and cocoa-nut also produce oils. The cocoanut palm is found all over the continent north of the Tropic of Capricorn and also south of the date-palm line.

The shea-nut tree grows where the oil palm does not, and its fat is used for food, soap-making, and butter. The cocoa industry of West Africa now supplies two-thirds of the cocoa of the world. Kola nuts are also exported. In the Mediterranean area practically all grains cultivated in Europe can be grown. Coffee is native to Africa and is named after the province of Kaffa, Abyssinia. It grows also in Liberia. The greater part of tropical Africa produces some kind of rubber. Nearly all the cloves are gotten from Zanzibar and Pemba. Fruits are grown and exported from nearly every part of Africa, from the bananas andmangoes in the tropics to the wine grapes of the north and south. The date palm flourishes throughout North Africa. Large areas of the continent are suitable for cattle and sheep raising, although flies and diseases keep them out of other districts.

Gold is widely distributed in Africa and has been worked from prehistoric ages on the West Coast, the Nubian desert, Central and South Africa. A third of the world's supply of gold in the world today is mined on the Witwatersrand. Diamonds are found in three districts of South Africa and in the Belgian Congo. They are of immense value. There are coal-bearing areas in South Africa. Iron has been worked from an early age, and on the Gold Coast, manganese is being developed.

There are four great copper-producing areas, principally in Rhodesia and the Belgian Congo, and also in the Northern Transvaal. Lead, graphite, and zinc are widely distributed. Phosphates occur in the North. Mineral oil has been discovered in Egypt near the Red Sea. Soda is largely an African product. Maize is cultivated in many regions. Tobacco is a crop of South Africa. Sugar is grown in Egypt, Mozambique, and Natal. And there is much valuable timber all over the continent.

49-1-157

Besides supplying these materials Africa is one of the largest reservoirs of human labor, not only of common labor, but of semi-skilled and increasing numbers of skilled laborers. For the most part these laborers are unorganized and without political power, and consequently they form the cheapest labor available, save in Asia.

On account of this wealth of labor and material, not only in the past but between the two world wars, capital has poured into Africa. In addition to primary sources of wealth -- mining, agriculture, timber -- industrialization has begun, and in the post-war period larger and larger investments of the accumulated profits of industry will seek new investments in this industrial paradise, where there are few laws to limit labor, even of women or children, and where profits are lightly taxed.

It has been argued with regard to this matter of profit in colonial regions that the profit has not been large and therefore is not the main object of colonial enterprise. This is especially the carefully worked out thesis of Lord Hailey's "African Survey." The survey follows an old pattern of British imperialism. A colonial official with the facts of the situation under his control writes a history of the condition and past of his region. It is usually done judiciously, and with much historical research, but it is, and in the nature of the case, has to be, a special plea for the defense of imperialism. And it omits consistently the point of view of the native and any body of fact which weighs against European aggression. Sometimes, as in Claridge's History of Ashanti, frank criticism of Great Britain creeps in; but for the most part, as in the works by Johnston, Lugard, and others the story is heavily weighted on the side of the imperialists.

It is of especial importance that the assertion of huge profits from cheap and half-slave labor and low price of materials should be answered. Consequently, Lord Hailey's co-workers point out that the "average" rate of profit from investment in Africa during the last century has amounted to little more than 4 per cent. Why is it, one asks on reading this, that profits are always reckoned as a percentage of some fixed sum while wages and salaries are counted in bulk?

It is, of course, as all men know, because the rate of income depends entirely upon the capital sum fixed as its base, and the fixing of the estimated amount of this capital sum is practically always in the hands and the control of the investors. Practically, then, the investors can fix their rate of profit at any sum simply by estimating at their own figure the amount of capital invested.

81 ~~cc~~. INVESTMENT

What is "investment" and how can we measure it? If ten dollars' worth of poisonous synthetic gin is exported to Africa, as it has been by the tens of thousands of gallons, and if there it buys labor and materials, which, when processed, are worth a hundred dollars, what is the value of the investment on which the rate of profit is based? If in the days of Cecil Rhodes lands stolen from the natives were mined with cheap half-slave labor and brought gold and diamonds worth a million dollars to London, at figure should this mine be "capitalized"? At the figure paid for its acquisition and cost of carrying on, or the figure the shares sold for in the stock market? In the great centers of capital investment, the legal right to determine the value of capital is today to some extent limited, but it was not limited in the wild gambling which accompanied the development of gold and diamond mining in South Africa, nor in the returns to trade in West Africa during the seventeenth, eighteenth, and nineteenth centuries. No matter, then, how vast a profit is made in Africa, and that it has been vast there cannot be the slightest doubt; it can be always made to look modest by watering the actual investment or putting a high estimate on good will. The only reason back of colonial imperialism is a rate of profit which the spread of democracy and trade unions has curtailed in Europe and North America.

The actual value of capital goods at the time of their investment in Africa, as compared with the realized value of the labor and material taken from Africa by investors and other claimants, legal and illegal, would if known, without shadow of doubt prove the enormous theft which Europe has perpetrated on peoples deliberately made helpless before greed and aggression. In the face of fact, statements like that of Lord Hailey as to the meager profits of African exploitation must be reinterpreted.

49--139

82. ~~81.~~ SECOND PAN-AFRICAN CONGRESS

~~In the first chapter~~ I have told of the Pan-African Congress which met in Paris after World War I. Similar efforts of Africans and peoples of African descent to unite in mutual exchange of culture and co-operation for social betterment have been made since the idea was established in 1919.

49 - 1 - 140

We went to work in 1921 to assemble a more authentic Pan-African Congress and movement. We corresponded with Negroes in all parts of Africa and in other parts of the world and finally arranged for a congress to meet in London, Brussels, and Paris in August and September. Of the one hundred and thirteen delegates to this Congress, forty-one were from Africa, thirty-five from the United States, twenty-four represented Negroes living in Europe, and seven were from the West Indies. They came for the most part, but not in all cases, as individuals and more seldom as the representatives of organizations or groups.

The Pan-African movement thus began to represent a growth and development; but it immediately ran into difficulties. First of all, there was the natural reaction to war and the determination on the part of certain elements in England, Belgium, and elsewhere, to recoup their war losses by intensified colonial exploitation. They were suspicious of native movements of any sort.

49-1-141

~~83~~ The Garvey Movement

Then, too, there came simultaneously another movement, stemming from the West Indies. This was a peoples' movement rather than a movement of the intellectuals. It was led by Marcus Garvey and it represented a poorly conceived but intensely earnest determination to unite the Negroes of the world, especially in commercial enterprise. It used all of the natinnalist and racial paraphernalia of popular agitation, and its strength lay in its backing by the masses of West Indians and by increasing numbers of American Negroes. Its weakness lay in its demagogic leadership, poor finance, intemperate propaganda, and the natural apprehension it aroused among the colonial powers.

The London meetings of the Congress of 1921 were preceded by a conference with the International Department of the English Labor party, where the question of the relation of white and colored labor was discussed. Beatrice Webb, Leonard Woolf, Mr. Gillies, Norman Leyes, and others were present. Otlet and La Fontaine, the Belgian leaders of internationalism, welcomed the Congress warmly to Belgium, but strong opposition was encountered. The movement was confounded by the press and others as a part of, if

not the real "Garvey Movement." The Brussels Neptune wrote June 14:

"(Announcement has been made ...of a Pan-African Congress organized at the instigation of the National Association for the Advancement of Colored People of New York. It is interesting to note that this association is directed by personages who it is said in the United States have received remuneration from Moscow (Bolsheviks). The association has already organized its propaganda in the lower Congo, and we must not be astonished if some day it causes grave difficulties in the Negro village of Kinshasa composed of all the ne'er-do-wells of the various tribes of the Colony aside from some hundreds of laborers."

84 The Second Pan African Congress in Brussels

Nevertheless, meetings of interest and enthusiasm were held. The Congress assembled in the marvelous Palais Mondial. There were many more white than colored people, and it was not long before we realized that their interest was deeper, more immediately significant than that of the white people we had found elsewhere. Many of Belgium's economic and material interests center in Africa in the Belgian Congo. Any interference with the natives might result in an interference with the sources from which so many Belgian capitalists draw their prosperity.

49-1-142

Resolutions passed without dissent at the meeting in London contained a statement concerning Belgium, criticizing her colonial regime, although giving her credit for plans of reform for the future. This aroused bitter opposition in Brussels, and an attempt was made to substitute an innocuous statement concerning good will and investigation, which Diagne of France, as the presiding officer, declared adopted in the face of a clear majority in opposition.

85 The Second Pan African Congress in Paris

At the Paris meeting the original London resolutions, with some minor corrections, were adopted. They were in part:

To the World: The absolute equality of races, physical, political and social is the founding stone of world and human advancement. No one denies great differences of

gift, capacity and attainment among individuals of all races, but the voice of Science, Religion, and practical Politics is one in denying the God-appointed existence of super-races or of races naturally and inevitably and eternally inferior.

That in the vast range of time, one group should in its industrial technique, or social organization, or spiritual vision, lag a few hundred years behind another, or forge fitfully ahead, or come to differ decidedly in thought, deed, and ideal, is proof of the essential richness and variety of human nature, rather than proof of the co-existence of demi-gods and apes in human form. The doctrine of racial equality does not interfere with individual liberty; rather it fulfills it. And of all the various criteria of which masses of men have in the past been prejudged and classified, that of the color of the skin and texture of the hair, is surely the most adventitious and idiotic....

49-1-143

The beginning of wisdom in interracial contact is the establishment of political institutions among suppressed peoples. The habit of democracy must be made to encircle the earth. Despite the attempts to prove that its practice is the secret and divine gift of the few, no habit is more natural or more widely spread among primitive people, or more easily capable of development among masses. Local self-government with a minimum of help and oversight can be established tomorrow in Asia, in Africa, America, and the isles of the sea. It will in many instances need general control and guidance, but it will fail only when that guidance seeks ignorantly and consciously its own selfish ends and not the people's liberty and good.

Surely in the twentieth century of the Prince of Peace, in the millennium of Mohammed, and in the mightiest Age of Human Reason, there can be found in the civilized world enough of altruism, learning, and benevolence to develop native institutions, whose one aim is not profit and power for the few....

What then do those demand who see these evils of the color line and racial discrimination, and who believe in the divine right of suppressed and backward people to

learn and aspire and be free? The Negro race through their thinking intelligentsia demand:

I. The recognition of civilized men as civilized despite their race or color.

II. Local self-government for backward groups, deliberately rising as experience and knowledge grow to complete self-governemnt under the limitation of a self-governed world.

III. Education in self-knowledge, in scientific truth, and in industrial technique, undivorced from the art of beauty.

IV. Freedom in their own religion and social customs and with the right to be different and nonconformist.

V. Co-operation with the rest of the world in government, industry, and art on the bases of Justice, Freedom, and Peace.

VI. The return to Negroes of their land and its natural fruits and defense against the unrestrained greed of invested capital.

VII. The establishment under the League of Nations of an international institution for study of the Negro problems.

VIII. The establishment of an international section of the Labor Bureau of the League of Nations, charged with the protection of native labor. . . .

In some such words and thoughts as these we seek to express our will and ideal, and the end of our untiring effort. To our aid we call all men of the earth who love justice and mercy. Out of the depths we have cried unto the deaf and dumb masters of the world. Out of the depths we cry to our own sleeping souls. The answer is written in the stars.

The whole press of Europe took notice of these meetings and more especially of the ideas behind the meeting. Gradually they began to distinguish between the Pan-African Movement and the Garvey agitation. They praised and criticized. Sir Harry Johnston wrote: "This is the weakness of all the otherwise grand efforts

49-1-144

of the Coloured People in the United States to pass on their own elevation and education and political significance to the Coloured Peoples of Africa: they know so little about real Africa."

Even Punch gibed good-naturedly: " 'A PAN-AFRICAN MANIFESTO' 'NO ETERNALLY INFERIOR RACES' (headlines in The Times) No, but in the opinion of our coloured brothers, some infernally superior ones!"

The Second Pan-African Congress sent me with a committee to interview the officials of the League of Nations in Geneva. I talked with Rappard who headed the Mandates Commission; I saw the first meeting of the Assembly, and I had an interesting interview with Albert Thomas, head of the International Labor Office. Working with Bellegarde of Haiti, a member of the Assembly, we brought the status of Africa to the attention of the League. The League published our petition as an official document saying in part: 86, League of Nations

49-1-145

The Second Pan-African Congress wishes to suggest that the spirit of the world moves toward self-government as the ultimate aim of all men and nations and that consequently the madated areas, being peopled as they are so largely by black folk, have a right to ask that a man of Negro descent, properly fitted in character and training, be appointed a member of the Mandates Commission as soon as a vacany occurs.

The Second Pan-African Congress desires most earnestly and emphatically to ask the good offices and careful attention of the League of Nations to the condition of civilized persons of Negro descent throughout the world. Consciously and subconsciously there is in the world today a widespread and growing feeling that it is permissible to treat civilized men as uncivilized if they are colored and more especially of Negro descent. The result of this attitude and many consequent laws, customs, and conventions, is that a bitter feeling of resentment, personal insult and despair, is widespread in the world among those very persons whose rise is the hope of the Negro race.

We are fully aware that the League of Nations has little, if any, direct power to adjust these matters, but it has the vast moral power of public world opinion and

of a body conceived to promote Peace and Justice among men. For this reason we ask and urge that the League of Nations take a firm stand on the absolute equality of races and that it suggest to the Colonial Powers connected with the League of Nations to form an International Institute for the study of the Negro problem, and for the evolution and protection of the Negro race.

We sought to have these meetings result in a permanent organization. A secretariat was set up in Paris and functioned for a couple of years, but was not successful. The Third Pan-African Congress was called for 1923, but the Paris Secretary postponed it. We persevered and finally without proper notice or preparation met in London and Lisbon late in the year. The London session was small. It was addressed by Harold Laski and Lord Olivier and attended by H. G. Wells; Ramsay MacDonald was kept from attending only by the pending election, but wrote: "Anything I can do to advance the cause of your people on your recommendation, I shall always do gladly."

49-1-146

ET 2 Pan-African Congress in Lisbon

The meeting of an adjourned session of this Congress in Lisbon the same year was more successfu. Eleven countries were represented there, including Portuguese Africa. The Liga Africana was in charge. "The great association of Portuguese Negroes with headquarters at Lisbon, which is called the Liga Africana, is an actual federation of all the indigenous associations scattered throughout the five provinces of Portuguese Africa and represents several million individuals....This Liga Africana which functions at Lisbon, in the very heart of Portugal so to speak, has a commission from all the other native organizations and knows how to express to the government in no ambiguous terms but in dignified manner all that should be said to avoid injustice or to bring about the repeal of harsh laws. That is why the Liga Africana of Lisbon is the director of the Portuguese African movement; but only in the good sense of the word, without making any appeal to violence and without leaving constitutional limits."

Two former colonial ministers spoke, and the following demands were made for Africans:

1. A voice in their own government.

2. The right of access to the land and its resources.

3. Trial by juries of their peers under established forms of law.

4. Free elementary education for all; broad training in modern industrial techniques; and higher training of selected talent.
5. The development of Africa for the benefit of Africans, and not merely for the profit of Europeans.
6. The abolition of the slave trade and of the liquor traffic.
7. World disarmament and the abolition of war; but failing this, and as long as white folk bear arms against black folk, the right of blacks to bear arms in their own defense.
8. The organization of commerce and industry so as to make the main objects of capital and labor the welfare of the many rather than the enriching of the few. . . .

In fine, we ask in all the world, that black folk be treated as men. We can see no other road to Peace and Progress. What more paradoxical figure today fronts the world than the official head of a great South African state striving blindly to build Peace and Good Will in Europe by standing on the necks and hearts of millions of black Africans.

8. The Pan-African Idea Spreads

So far, the Pan-African idea was still American rather than African, but it was growing and it expressed a real demand for examination of the African situation and a plan of treatment, from the native African point of view. With the object of moving the center of this agitation nearer African centers of population, I planned a Fourth Pan-African Congress in the West Indies in 1925. My idea was to charter a ship and sail down the Caribbean, stopping for meetings in Jamaica, Haiti, Cuba, and the French islands. But here I reckoned without my steamship lines. At first the French Line replied that they could "easily manage the trip"; but eventually no accommodations could be found on any line except at the prohibitive price of fifty thousand dollars. I suspect that colonial powers spiked this plan.

Two years later, in 1927, American Negro women revived the Congress idea, and a Fourth Pan-African Congress was held in New York. Thirteen countires were represented, but direct African participation lagged. There were two hundred and eight

delegates from twenty-two American states and ten foreign countires. Africa was sparsely represented by representatives from the Gold Coast, Sierra Leone, Liberia, and Nigeria. Chief Amoah III of the Gold Coast, and anthropologists like Herskovits, then of Columbia, Mensching of Germany, and John Vandercook were on the program. The resolutions stressed six points:

Negroes everywhere need:

1. A voice in their own government.
2. Native rights to the land and its natural resources.
3. Modern education for all children.
4. The development of Africa for the Africans and not merely for the profit of Europeans.
5. The reorganization of commerce and industry so as to make the main object of capital and labor the welfare of the many rather than the enriching of the few.
6. The treatment of civilized men as civilized despite difference of birth, race, or color.

49-1-148

The Pan-African Movement had lost ground since 1921. In 1929 to remedy this we made a desperate effort to hold a Fifth Pan-African Congress on the continent of Africa itself; we selected Tunis because of its accessibility. Elaborate preparations were begun. It looked as though at last the movement was going to be geographically African. But two insuperable difficulties intervened: first, the French government very politely but firmly informed us that the Congress could take place at Marseilles or any French city, but not in Africa; and second, there came the Great Depression.

The Pan-African idea died apparently until twenty years afterward, in the midst of World War II, when it leaped to life again in an astonishing manner. At the Trade Union Conference in London in 1944 to plan for world organization of labor, representativesfrom black labor appeared from the Gold Coast, Libya, British Guiana, Ethiopia, and Sierra Leone. ~~Among these, aided by colored persons resident in London,~~

89 THE WAR OF AFRICAN LIBERATION

The Second World War miraculously brought the darker world to life. First, in order to settle the rivalry as to who was to own and rule the darker peoples. Great Britain, France, the United States and the Soviet Union were fighting against Germany and Italy. There was at first apparently no question, certainly in Great Britain and the United States, but that dark labor in the future as in the past was to be used for the benefit of white folk from the simple fact that the dark people had no other reason for being. But the darker peoples themselves had to be brought in to settle the question, and subtly the basic reasoning changed. Inida, after a long struggle that began before the war became a free and independent country and this broke the back of the British Empire. Africa was sued by the Allies: in the attack on North Africa; in conquering and retaining German Africa; in cooperation for the holding of West Africa; and in the use of African troops in Asia. Especially in the case of the Soviet Union the war was fought on a tremendous scale which never for a moment conceived its end to be the use or domination of colored labor.

49-1-149

There met in Paris in 1945 the World Federation of Trade Unions, and at this meeting for the first time the colored unions of Africa came face to face with the white union members of western Europe. There was immediately voiced an unexpected demand for equality which took the West by surprise. The British unions had always spoken for the African unions and regarded the African unions as under their control. Indeed they knew that the relatively high British wage depended on low African wage and on general African submission and white control. The American unions, in large part, had excluded Negroes from membership, and highly skilled Americans shared in the profits of exploited black serfs. Now black unions from Africa and from the West Indies especially, spoke up independently and even truculently for themselves.

90 BLACK AFRICAN UNIONS

A battle ensued which with the help and insistence of the socialist unions of the Soviet Union and eastern Europe recognized the independence of the black union leaders, and immediately the ground was laid for the great division of the unions of the world into the socialist labor unions and the capitalist labor unions.

Meantime the African and West Indian unions united in a call to reassemble the Pan-African Congresses. The fourth Congress had been held in London and in Lisbon in 1924. The second world war prevented any further meetings. Now at the request of colored men in London, Lanchasire, Liverpool and Manchester, there came a spontaneous call for the assembling of another Pan-African Congress in 1945 when the World Federation of Trade Unions would hold their meeting in Paris.

After consultation and correspondence with trade union, co-operative, and other progressive organizations in the West Indies, West Africa, South and East Africa, a formal invitation for the conference was issued. Most of these bodies not only approved and endorsed the agenda, but pledged themselves to send delegates. In cases where either the time was too short or the difficulties of transport too great to be overcome at such short notice, the organizations gave mandates to the natives of the territories concerned who were traveling to Paris to attend the World Trade Union Conference. George Padmore invited Dr. Du Bois to summon a fifth Pan-African Congress. It was hard to find a time or place for meeting in Paris or London, but finally a group of colored men including Africans, and with the cooperation of the city government, invited the fifth Pan-African Congress to meet in Manchester, England, in 1945.

49-1-150

9/ FIFTH PAN-AFRICAN CONGRESS

The Fifth Pan-African Congress met October 15 to 21 in Manchester, England, with some two hundred delegates representing East and South Africa and the West Indies. Its significance lay in the fact that it took a step toward a broader movement and a real effort of the peoples of Africa and the descendants of Africa the world over to start a great march toward democracy for black folk.

This meeting proved of world-wide importance. George Padmore organized it; its secretaries were Kwame Nkrumah and Jomo Kenyatta, and in attendance were Wallace Johnson from Liberia and some 200 labor union leaders from Africa; and even Asiatics like Subasinghe of Ceylon. Here a new Africa was born. Nkrumah returned to Africa, where, after repudication at the hands of leaders of his own people and imprisonment by the British, he became in 1948 the recognized head of an independent province of the British Commonwealth. The British, seeing the inevitable, soon admitted Nigeria as a province of the Commonwealth and under terms which left them a chance to wield great influence in this the largest colony of the British Empire.

9₂ AFRICA CHANGES

All Africa began to change. In Uganda fundamental changes began revolving about the question as to whether the leading state of Buganda, under its kings and chiefs, should be the sole power or whether the whole state should be independent and under a new constitution, under bourgeois rule. In Kenya, where the best land had been monopolized by the British under outrageous conditions and the mass of the people crowded into swamps, a bloody revolution under the Mau-Mau organization was started and suppressed with wide imprisonment and executions. Jomo Kenyatta was arrested as being its chief instigator. Today the slow but sure political triumph of the Negro population is developing under Tom Mboya and other leaders.

49-1-151

of Russia, Great Britain, and the United States in order to build a new world which includes black Africa. We may yet live to see Pan-Africa as a real movement.

This Fifth Pan-African Congress placed great hope on the British Labour movemment and its sudden induction as the government of the British Empire. But the Congress had put before it a curious example of how organized labor may handles colonial problems. There came before us literally a Man of Sorrows: black, with a deeply-lined face. Gershon Ashie-Nikoi was in desperate earnest. He shouted repeatedly: "we must be free! We will be free' He said that he represented three hundred thousand cocoa farmers on the Gold Coast and Nigeria; the new Labor Secretary of State and Colonies. He had been refused audience because Mr. Hall declared that the committee was not "official"; which meant that it was not appointed in accordance with the procedure of the colonial governments, and was not composed of the representatives which these governments had officially chosen.

49-1-152

93 The Fabian Society

The committee secured a hearing before the Colonial Section of the Fabian Society, which acts as a sort of Brain Trust to advise the Labour government on colonial affairs. Among them were many people of importance: Mr. Creech-Jones, the Under-Secretary of State for the Colonies, Miss Rita Hinden, Lord Farringdon, the Secretary of the Aborigines Protection Society, and others. They listened indifferently. The representatives of the farmers therefore brought their case to the Pan-African Congress and laid it before us. The Committee had been sent to London at the expense of the farmers, and had established a permanent office in Arundel Street. They were prepared for a long, hard fight, and the Pan-African Congress pledged help.

94 Cocoa

It will repay us to glance briefly at this tale of the cocoa crop as illustrating the methods of modern colonial exploitation and its results even under a liberal administration. The world consumption of cocoa has increased from 77,000 tons in 1895 to 700,000 tons at present. Formerly three-fourths of the cocoa was raised in South America. Now two-thirds is raised in West Africa.

This development of a new industry has an interesting history. A black laborer, Tetteh Quarsie, in 1879 brought cocoa beans from Spanish Africa and distributed them among his friends on the Gold Coast, British West Africa. In 1891, eighty pounds of cocoa were raised by West African farmers. By 1936 this crop on the Gold Coast alone had been increased to 250,000 tons. It was purely an indigenous enterprise of black peasant farmers. The deeply laid plan to transfer the raising of cocoa from Spanish Africa to plantations in British West Africa, developed by the Cadbury-instituted "boycott," went astray, and the black peasnats took over the job. On their own little farms, averaging about two and one-half acres, they increased crops and made cocoa and chocolate in wide demand throughout the civilized world. Their fathers in Ashanti and Benin had fought Britain for centuries to retain ownership of this land.

For cocoa and chocolate today consumers pay annually at least $500,000,000. Out of each dollar, of this less than three cents goes to the cocoa farmer; and this is another instnace of the squeezing of agriculture by trade and manufacture.

Since the cocoa in West Africa is not raised on plantations as it is in the West Indies and South America, the problem of the traders and manufacturers is to make profit by beating down the sale price and by manipulation of the world market. For this reason the price to cocoa farmers has varied from $44 per ton during the depression, to $188 per ton during the time of scarcity in 1927, and about $60 a ton today.

Ostensibly for correcting this price fluctuation, but really for controlling the price, the British buyers on the Gold Coast have for many years tried to come into agreement so as to make one price and one bid for all the cocoa offered. There are thirteen main buyers: the British Unilevers, Cadbury and Fry, buying for themselves and the Lyons' Teahouses; and others.

Finally in 1937 these firms came to a buying agreement. The cocoa farmers desperately resisted. They staged a boycott for eight months, reducing the sale of cocoa from 250,000 tons to 50,000 tons. The buyers resisted. They applied pressure on the Colonial Office in London, and without showing it the text of the "buying agreement," induced it to advise the natives that the proposal was for their benefit

49-1-152

and to accept it. The colonial governor, also without sight of the agreement, immediately followed this directive from London and strongly "advised" acquiescencey by the natives. The natives still refused. Mr. Cadbury then went to the Gold Coast and talked to the chiefs and farmers. They demanded to see a copy of the agreement. He "regretted" that he had not brought a copy with him. Finally the British government capitulated and sent a Royal Commission to the Coast, under Mr. Nowell. This Commission secured a copy of the agreement, but made public only a part. After careful investigation, they recommended that the buying agreement be terminated and that cooperative enterprise be instituted with representation of the African farmers.

Before this plan could be implemented however, the war broke out and the Government proposed to take charge of the cocoa crop, set prices, and sell it for the farmers. They promised to bear any losses and to distribute any profit among the farmers. This was satisfactory to the farmers, although they protested at the low price per ton which the government set in order to guard itself against loss.

The African colonial governments are virtually ruled by investors in England. Investors not only dictate the choice of governors, but these governors have the sole right of legislation under the Colonial Office in London. They are "advised" by councils on which business interests are directly represented. Recently local natives have been elected to such councils; but even so the real power still restsin in the hands of the governor.

Government conduct of industry in West Africa, is therefore conducted by London investors. The whole economy of the colony is rigged by outside business interests. Instead of a tax on imports to encourage local effort, the Gold Coast, for instance, claps an <u>export</u> duty on cocoa of $3.75 a ton; and during the war it added a surtax of $4.58, making a total tax of $8.43 on a ton of cocoa, for which the cocoa farmer has at times during this war received as little as $37 a ton; and on the average not more than $52 from 1939 to 1943. At the same time, English exporters of goods to Africa need pay no import tax. As a result the cost of imported

49-1-154

goods skyrocketed during the war, so that cotton print which sold before the war for $2.50 rose to $18. Khaki from $.60 to $3.20, and sheet iron from $1.00 to $20. "The result of this situation is that today many of the farmers have been completely impoverished and paralyzed economically." (Speech of Ashie-Nikoi.)

However, the whole picture changed in the minds of the Negro farmers when the Labor party came to power and took over the Colonial Office. Perhaps they were overoptimistic, but they were certainly justified in some degree by the results of government operation during World War II. Instead of the anticipated losses, the government in five years of operation, netted the neat profit of $25,000,000. Indeed, if they had previously built proper storage facilities on the Gold Coast, instead of compelling farmers to sell and rush the crop immediately to Europe, regardless of prices or conditions of the market; and if they had ever encouraged simple processing operations, which would have saved freight and increased local employment; if such policies had been followed, much cocoa could have been saved from spoiling, and some 150,000 tons need not have been burned. The net profit might have been doubled.

The Labor party came to power, and, to the indignation of the black cocoa farmers, proposed to put <u>all</u> West African produce under control of a board sitting in England with representation of the manufacturers of cocoa and other materials and with no representation of the farmers! In addition, instead of returning the profits of the cocoa pool to the farmers as promised, the government now proposed to use it "for their benefit," including the hiring of a number of English "experts" at high salaries to protect the cocoa trees from disease. The farmers protested bitterly and demanded:

1. That since the war is over, the recommendations of the Nowell Commission be implemented, and that the Imperial Government now make good the promises made to the African farmers.
2. That the price of $160 per ton should be paid farmers, and should be set for the 1945-1946 season.

3. That the profits from cocoa control since 1939, amounting as it probably will to $25,000,000, be turned over to the farmers' own existing organizations as capital for the establishment of co-operative agricultural banks in British West Africa.

4. That the operations of the West African Produce Control Board be installed, and effective co-operation, under the control of the farmers' own organizations, be established.

5. That the present quota allocation of the crop to special buyers be abolished, and that the farmers be free to market their crop collectively to their own accredited agencies.

6. That the present restrictions of exports and imports be removed in order to allow the West African farmers to trade with the United Kingdom and other countries through their own agencies.

7. That an International Council on cocoa should be planned, in order to adopt a comprehensive approach to all problems of cocoa as an important world commodity.

8. That the Ordinances of British West Africa with regard to co-operation be changed so as to correspond to practices in the United Kingdom.

46-1-152

And the farmers concluded:

This delegation of Gold Coast and Nigerian farmers are of the opinion that there are enough men and women of good will in the Imperial Government of Britain who might bring economic justice to bear on these pressing problems, and thus might prevent the occurrence of a tragic economic upheaval, the consequences of which, unfortunately, might affect the peaceful life of innocent people in all parts of the world and not only in West Africa and Britain.

If this is not statesmanship, which eventually must be listened to, I am greatly mistaken. It seems to me to point a path toward the emancipation of the world's colonial populations and the beginning of democracy among the majority of the people of the world, for which we have fought two devastating world wars, without yet seeing the light.

Singularly enough, there is another "Pan-African" movement. I thought of it as I sat at the San Francisco Conference and heard Jan Smuts plead for an article on "human rights" in the preamble of the Charter of the United Nations. It was an astonishing paradoz. The "Pan-African" movement which he represents is a union of the white minority in Kenya, Rhodesia, and the Union of South Africa, to rule the African continent in the interest of investors and exploiters. This plan has been incubating since 1921, but was discouraged by the British Colonial Office. Smuts was now pushing it again, and the white legislatures in Africa asked for it. The San Francisco trusteeship left a door open for this sort of thing.

49 - 1 - 157

The cocoa situation in West Africa is only one example of what colonial imperialism means to the people involved. Turning from this to our own country, we may ask what is America, and what duty and opportunity has it toward Africa and the peoples of African descent who live within her borders? It is a great working nation, vast, marvelously organized, and rich. We grow and mine materials; we process and manufacture them; we trade them, we transport them, we buy and sell them. Bound up with this, there is not only the planning for this work, but also the hard digging, lifting, and cleaning, and the services of parents, and friends, professional men and servants. With all this we produce goods and homes, buildings and roads, light and heat, tools and machines, and all manner of transport from railways and automobiles to airplanes.

Of course, the basic question here is: for whom is all this work done? How are the goods and services divided among consumers? Here we realize that all the facts are not known in America, just as they are partially unknown in other parts of the world. The distribution of wealth and of human services is a more or less closely guarded secret. We have some general ideas and they are disconcerting: we know that the lowest and hardest work and the work least honored is, despite its necessity, the lowest paid. We know that men do not get rich according to ability or according to the degree in which they serve the public. There is something, of course, of recognition of talent, but it is confined to certain sorts of talent and it is not sufficient to keep down dissatisfaction. The demand of the twentieth century in America, just as the demand of the eighteenth and nineteenth centuries in Europe, is that the distribution of wealth be more logical and ethical.

Men have tried to avoid action to achieve this by arguing that the distribution of goods and services is a matter of "natural" law. We know better than that today; we know, especially in America, that planning of work does go on on wide scale and that it involves personal decisions and is based today on autocratic will and not on democratic methods. Managers and groups have power to plan industry and divide its results: groups carrying on organized industry, like General Motors and General Electric and the British Unilevers -- these groups own machines, materials, and in-

49-1-158

ventions which enable them to reap large profits by marvelous and striking organization. Imports and exports depend upon the decisions of captains of industry. Monopoly of natural resources and the ownership of land play a tremendous part. Economic rent that comes with time and with growth of population, city sites, the shores of the ocean, the places suited for business and pleasure, all is controlled and distributed by individual or group decision. We know that the control of credit, the foreseeing of need for materials and machines, and supplying capital to those who can use it most profitably, is in itself a field of tremendous planning and prophecy. We know that the government must come in and help this planning where individual initiative lacks power, and that the field of government in industry is growing and must grow.

What now are the results of this planning and why do these results make Americans dissatisfied? We still have poverty, not nearly as much as many other parts of the world, but most Americans do not receive an income large enough to allow them to live in health and decency. This leads not only to envy but to cheating and stealing, to the kind of competitive struggles which begin as strikes and end as riots. It leads to widespread loss of belief in hard work and increased reliance on chance, so that gambling on horse races is today one of our greatest businesses. All this encourages or compels the postponing of marriage and limiting of children.

Poverty makes for ignorance; not simply illiteracy which is still serious among us, but for inexperience, the neglect of the lessons of history, reliance on selfish prejudices and conventions. Poverty leads to disease; it lets us spend more for war than for the perfectly possible extirpation of tuberculosis, the lessening of cancer, and the physical welfare of children. Poverty, ignorance, and disease are back of most of our crime, and to this is added a curious lack of ethical guidance. Churches tend to teach dogma rather than what is right and wrong; and the funny strips exalt craftiness and laugh at suffering.

In contrast to all this comes the reign of luxury, conspicuous expenditure, the flaunting of diamonds and furs; the demand for great estates and servants, while round about is sickness, starvation, and insanity. We grow used to luxury and display that we know is built upon wealth and work stolen from suffering mankind. We demand

49-1-159

profit for investment even at the expense of public welfare. Thus the great business organizations of the United States struck and drove a hard bargain in blood and pain to increase profits during World War II; America invests in colonies -- British, Dutch, and French; and colonies are slums used to make a profit from materials and cheap labor. We continually set before us the successful rich man as more typical of what America means than the student or the philanthropist or the unselfish man of small income and simple tastes.

It is this kind of thing which makes for our continued spiritual slavery. We demand Freedom; but thousands upon thousands are toiling discontentedly at work which they hate, when more careful and thoughtful planning could make work much more agreeable by a more efficient distribution according to ability and taste. We curb thought and discussion because we are afraid that those who are powerful and comfortable under present conditions may be disturbed in their present control of the world. Our news is distorted and our newspapers prostituted by those who own and use them for profit and propaganda. Our "free press" is a series of tight little principalities which channel public opinion with prejudiced headlines and screened news.

49-1-1-60

Our training for careers and opening of opportunity for the working masses has been hailed as the greatest in history. There can be no doubt but that more individuals have had opportunity to rise from repression and obscurity in American than in Europe. But even here we have not done anywhere near what we might, and today in many respects are regressing toward race and class discrimination and special privileges for the rich. Only the Jews among us, as a class, carefully select and support talent and genius among the young; the Negroes are following this example as far as their resources and knowledge allow. It is for this reason that jealousy of the gifted Jew and ambitious Negro is closing doors of opportunity in their faces. This led to the massacre of Jews in Germany.

In America the only path to preferment and promotion left open and beckoning, is that which industry thinks will make profit. The opening of other paths is left

160

to the rare chance that genius in literature or art be coupled with "push," which means the boldness and crudity for self-advertising from which delicate souls shrink.

When by chance or benevolence a boy "makes good," we grant him a profession. If he studies law he can gain a large salary when he becomes a tool by which great corporations evade those laws which try to curb monopoly and distribute wealth more equitably. Large numbers of such lawyers become lawmakers, and they enact laws which can be circumvented. Others are raised to the bench, where they are above law and highly honored. They in many cases protect welath and monopoly and "make examples" of the poor. The greatest work of Franklin Roosevelt was to start cleansing the Supreme Court of the accumulated refuse of reaction to economic democracy. Living men may yet see a Supreme Court with the guts and common decency to throw out the window the whole body of legal color-caste in the South and elsewhere as both unconstitutional and uncivilized. At the other end of the scale our labor unions are so monopolizing skills by limited apprenticeship and secret ritual that much "industrial" training is a farce.

49-1-161

Science is becoming increasingly not the work of free universities but the property of organizations for private profit and directed to their objects. Education both in school and out is encouraging that economic illiteracy which keeps the mass of American people from knowing and inquiring just how work is done. To the support of all this comes the theater and the movies and other forms of arts, serving the idea that private profit rather than social welfare is the end and aim of man.

Is there any wonder that the result is widespread Fear? We are afraid of unemployment and loss of work; we are suspicious of other men, other races, and other nations; not because we are the poorest and most wretched, but just because here in America we have tasted the possibility of comfort and happiness. Perhaps all this is best shown by certain paradoxes in our daily life, thought, and action. We Americans boast and strut when we have every cause to be meek and humble. We seek happiness ~~thru~~ and escape through drunkenness and night clubs. We couple our religion

+54 1615

with hate, saying, "God so loved the world," aand boasting how much we hate our enemies; we turn the other cheek to make bombs. We want peace and make war. We want truth and curb research. We produce our own wealth and steal it from others.

We Americans have invented an apt phrase to enrich the English language -- "So what!" It expresses a singular complex: a great statesman comes from Britain and tells us that he wants a world of free states and democracy -- and admits in the same breath that his Britain admits nine-tenths of the subjects to neither freedom nor democracy. So what? We see standing before the United Nations at San Francisco a prime minister elected by two million whites asking for recognition of "humanity" -- and in the same voice tells the world that anyone who regards the eight million natives of South Africa as human in the same sense as white folk is "mad, quite made." We have a Secretary of State who arraigns Russia for lack of democracy while he represents South Carolina, where the majority of the people have never had a chance to vote. So what?

FB House Senate

But perhaps our subtlest and most complete contradiction and paradox comes in our attitude toward servants. We know that personal services between mother and child, friend and relative, is the highest form of human effort; but we treat that same personal service when it is done for pay as the lowest form of work, paid least and subject to special forms of personal insult.

49-1-162

What can we do about all this? It is not a matter of law, it is a matter of the human heart. We know what must be done; industry must be carried on not primarily for private profit but for public welfare. We must progressively approach the time when no person shall have cake while any person is deprived of bread. We must increase production and income by the use of the great natural powers which science has placed in our hands: electricity which is being kept from the masses by organized effort in the valley of the Missouri and in the valley of the St. Lawrence, just as once monopoly fought it in vain in the valley of the Tennessee and still fights it at Boulder Dam. We know that automobiles could be built to last ten years at little greater cost than those which last two years, if the object was transportation and not gain. We must have schools that teach truth, despite what some people

are afraid to learn. We must use new inventions like the radio for real information rather than for quack advertising, and the cinema for instruction as well as entertainment. We must have a press that is free and not monopolized by business and hate. We must have socialized medicine, following the great example being set today by Britain and going far beyond it as we ought to.

This increase of production for public welfare can only be brought about by careful intelligent planning and thorough democratic methods. The workers of the world must have voice not only on conditions of work but also as to what kinds of goods shall be produced and what methods of production used. Industry ruled by monarchs and oligarchies cannot continue in a democratic world.

Moreover, this increased production must be more equitably and justly distributed among the workers and among all citizens. Distribution of wealth and services by plan, emphasizing ability and deserts, and especially the public weal; and guarding mankind from ignorance and disease must be a primary object of civilization. "To each according to need, from each according to ability." Here again this can be accomplished only by widespread and intelligent democracy. It cannot continue to be a matter of personal wish and whim and of monopolized power; it must be the result of intelligent experience, public opinion working according to enacted law.

49-1-163

Democracy is not privilege -- it is opportunity. Just as far as any part of a nation or of the world is excluded from a share in democratic power and self-expression, just so far the world will always be in danger of war and collapse. If this nation could not exist half slave and half free, then the world in which this nation plays a larger and larger part also cannot be half slave and half free, but must recognize world democracy.

How can we accomplish this? We can do it by releasing black Andromeda, and by that act release ourselves. We can rise above the insult of the color line in denying work to able people and in helping hold colonies in thrall; and we can invoke in a real democracy a reservoir of all human ability and dream and with free vote of intelligent men.

The sin of capitalism is secrecy: the deliberate concealing of the character, methods, and result of efforts to satisfy human wants. When men choose and understand their work and see its results and can sell their toil in open market to those who want and use it, there is opportunity for ethical judgment, public justice, and commonweal. But when the nature of work, its methods and results are hidden behind legal barriers so that a man knows neither what he is doing nor what the results of his toil will be, or who will enjoy it, or why nor whence nor how his income is made, nor at shoe hurt or wela; then the opportunity for human degradation is limited not only by the evil possibilities of the lowest of men; murder and theft may enuse with no chance to fix the guilt. Not mass production but mass concealment is the sin of the capitalistic system. This is the meaning of African slavery and this is the virus it poured into the veins of modern culture and fatally poisoned it. Once all the facts of the industrial process are known, then if a man eats, he should work; and if he does not work he should not eat, unless the free, intelligent judgment of his fellows declares that his existence at public expense is for the public weal. This and this alone is Democracy.

49-1-164

Who are we who call ourselves intelligent, and yet in dire dearth of air and light leave millions of acres of the roofs of New York and a thousand other cities to a black and dirty desert of chimneys and ugliness? The horror which today stops the hearts of men at the mere thought of atomic energy is knowledge of the secrecy which today conceals its use and bids fair to veil its inhuman force tomorrow in the hands of the most ruthless of mankind. The iron curtain was not invented by Russia; it hung between Europe and Africa half a thousand years. When the producer is so separated from the consumer in time and space that a mutual knowledge and understanding is impossible, then to regard the industrial process as "individual enterprise" or the result as "private initiative" is stupid. It is a social process, and if not socially controlled sinks to anarchy with every possible crime of irresponsible greed. Such was the African slave trade, and such is the capitalistic system it brought to full flower.

Men made cotton cloth and sold sugar; but between the two they stole, killed, and raped human beings, forced them to toil for a bare subsistence, made rum and synthetic gin, herded white labor into unsanitary factories, bought the results of their work under threat of hunger which forced down their wage, and sold the sguar at monopoly prices to consumers who must pay or go without. A process of incredible ingenuity for supplying human wants became in its realization a series of brutal crimes.

There are people, and wise people, who have said that this can never be accomplished under the present organization of the world for business, industry, and profit; that in order to accomplish this we must establish stern dictatorship of a few who hold to this idea of the commonweal. This is the theory of Communism. There are many who dislike the idea; there are some who fear and hate it for obvious reasons. But to these there is one clear answer: accomplish the end which every honest human being must desire by means other than Communism, and Communism need not be feared. On the other hand, if a world of ultimate democracy, reaching across the color line and abolishing race discrimination, can only be accomplished by the method laid down by Karl Marx, then that method deserves to be triumphant no matter what we think or do.

Here in America we must learn to be proud of the things of which we are ashamed, and ashamed of things of which we are proud. American should be proud of the fact that she is a nation with increasing democracy composed of the most unlikely peoples and groups on earth; that out of criminals, paupers, and slaves she has built this land of promise. We should be ashamed that despite this known historical fact, we are trying to build up class and race differences and refusing to carry out the democratic methods which we profess, because we deal with people too stupid, diseased, and criminal to make our onw democracy work.

49-1-165

America has need to remember that out of Asia and Africa, past and present, help can come for this land; Asia has produced a Gandhi who does not strut or wear Savile Row clothes; who will not kill -- and whom average Americans regard as a fool. But he is not. Africa has provided in the past group ownership of land, family cohesion, and a curious combination of beautiful art and useful industry. We have helped the world to despoil this land, enslave its people, decry its ability, and distort its history. For three centuries we have led in the the attempt to degrade Africa in the eyes of men. We owe it to Africa and ourselves to release Andromeda and place her free and beautiful among the stars of the sky.

If we refuse to do this; if we stubbornly cling to our race prejudices, what of the future of this civilization? The continuity of a social group, the continuity of a civilization is at best doubtful and precarious. Most of the civilizations of the world have lasted less than three centuries, save Egypt. Even Egypt is only an apparent exception since, being for centuries without effective rivals, it did not actually collapse; but it changed so radically from age to age as to become almost a new land and culture. So too India and China lasted longer in name than in real cultural continuity. The broader the basis of a culture, the wider and freer its conception, the better chance it has for the survival of its best elements. This is the basic hope of world democracy. No culture whose greatest effort must go to suppress some of the strongest contributions of mankind can have left in itself strength for survival. War which typifies suppression and death can never support a lasting culture. Peace and tolerance is the only path to eternal progress. Europe can never survive without Asia and Africa as free and interrelated civilizations in one world.

"I believe it is specifically the mission of African civilization to restore ethical principles to world civilization. Unless this attempt is made all civilization must come to an end. The African by virtue of his detachment, his direct vision, and his innate kindness, is qualified to bring humanitarianism to the technical and materialistic concepts of the Western World."

49-1-166

166 44 48

In the Union of South Africa three million white people are determined to be the asolute masters of eleven million colored people. This outrageous program of apartheid resulted in the exclusion of South Africa from the British Commonwealth, in the growing friend/ship of West Africa and in growing unrest and revolt. In North and South Rhodesia an attempt was made to establish a central African state including Nyasaland in which 220,000 Europeans would attempt to make 6,600,000 Africans their bond-servants. The ensuing struggle is being carried out with increasing bitterness.

With the independence of Morocco, Spain has practically faded from the African picture leaving the French Empire in North Africa and the Arab and Mohammedan domination in the east. Both Morocco and the Arabs have asserted their affinity with the mass of black Africans more firmly. Egypt, under Nasser, meets and cooperates with black Africa. Morocco has been a center for the meeting of all African states. Tunis, while not as closely allied, is in clear sympathy and Mohammedan Asia is being drawn in by strong religious ties.

49-1-167

BLACK FRENCH AFRICA

For a time France wavered. At first she declared dogmatically that Algeria was and would remain a part of France, and back of this were French settlers and French . Then with the growing revolt of the Algerians it was proposed that they should decide as to whether they would be French or not, but that meantime they were to stop armed resistance and consider the advantages of close ties with France. Today this is under consideration despite the revolt of the French army in Algiers and the resulting determination of the mass of workers in France to oppose them.

While decision on Algiers was being made there came the unavoidable question of the future of the rest of French Africa. French Africa had been the seat of long and intense exploitation of black labor by French agricultural and industrial organizations. They were now offered partial independence and industrial help from France but this help would have to come from the same kind of industrial corporations which had oppressed French Africa. The Black Africans hesitated.

One small country, Guinea, refused further alliance with France and demanded complete independence. Under great difficulties and with the help of socialist Europe she has finally managed the beginning of such independence. Meantime, other French colonies, Dahomey, Malagasy, Togo, Senegal, High Volta, the Ivory Coast, Niger, Chad, Gabon and the Federation of Mali have become independent states, but the exact nature of their future relation to France is still to be worked out.

Finally came the disaster of the Congo. 162 CONGO Western industry in the name of Belgium but backed by the United States, Great Britain and France strove to avoid the mistakes which had been made especially in British West Africa. They would train artisans. They would pay and protect the power of the chiefs, but they would allow no intelligentsia to be educated either in the Congo or in Europe, while they reaped increasing profit on copper and uranium. They allowed primary education for the children largely under the Catholic Church. Then, to their great surprise, came threat and failure. Patrice Lumumba became head of a party which demanded complete independence for a black Congo republic. The Belgians and their friends rallied and strove to stop this, but despite their efforts Lumumba, by vote of the parliament, became Prime Minister and the Belgians were hardly able to secure the election of Kasavubu, their stooge, as president. Thereupon Lumumba was murdered in cold blood and a number of his leading officials, and Belgium tried to make Kasavubu head of the state. This they were not able to force through and today Lumumba's legal heir to power holds a large part of the Congo territory.

A rump parliament hurriedly called in the recently freed colony of Madagascar tried to settle matters by allowing Tshombe secede with the copper-rich province of Katanga and to divide the rest of the Congo into helpless provinces. This has been halted. The Congo awaits re-unification under a parliament controlled by Kasavubu, or a newly-elected parliament presided over by Gizenga, the heir of Lumumba.

Here we are then, today, in the United Nations with 70 or more black and colored countries facing their former white masters of the world. Can Great Britain and

49-1-1-168

America persuade them still to yield leadership to the white world, or will they follow Cuba in the recognition of the vast socialist world led by the Soviet Union and China; and turn this union of the people of the world into communal directions?

Meantime, the white world 103 The United States can no longer present a united front. Great Britain is losing her grip in Asia and knows it. The United States is making vain gestures to maintain it and failing day by day. The United States itself represents a curious and menacing situation. Alonzo, "il Negro" piloted one of Columbus' ships. One-fifth of its population is of acknowledged African descent and a larger number are unacknowledged or unknown descendants from African slaves. Despite 3 centuries of struggle including a frightful civil war in which the slaves took a decisive part the mass of the Negroes and descendants of Africa are still second-rate citizens. In most of the former slave states they are not allowed to vote and suffer illegal, but customary, disabilities. In the whole nation almost without exception, they are regardd as inferior people liable to insult and discrimination. Despite this, despite limits on their education, legal and customary, and difficulty of getting decent well-paid employment, they have made remarkable progress. There is scarcely an area of human endeavor in which American Negroes have not distinguished themselves: in literature, music, art, in science and artisanship, ~~the~~ and hard labor. ~~Texxxxxxxxrack this xthexnationxisxtryingxtoxmak~~ The further they progress the more prejudice and discrimination yield, and yet this yielding is so slow that the pressure of prejudice is increasingly felt.

To counteract this the nation is trying to make concessions. It has even declared in 1954 that the chief legal forms of discrimination in education and travel are unconstitutional, but at the same time it has opnely admitted that the court decisions will not be enforced until the people cruelly affected permit them to be.

Thereupon the nation has resorted to bribery. Fearing especially the lure of socialism and communism they have made every effort to see that successful Negroes and Negroes of ability get special consideration and position provided of course, they attack communism and indulge in red-baiting. The universities have led in this effort.

49-1-169

169 TT

effort. The Department of State has paid Negroes expenses of travel abroad, so long as they testify to satisfactory conditions in the United States and

The Negro college on the one hand is threatened by loss of state income if they teach socialism or complain of their conditions. On the other hand, the outstanding students are offered jobs and preferment if they accept the present distinction without complaint.

103 PRESENT UNREST

The result is naturally complicated. The more successful leaders of the Negro people are losing their contact with the poorer and more ignored masses are seeking new leaders. Those offering leadership may resemble at first a

but below this is reason. Negroes, for instance, have long resented being called by a name which implies inferiority and contempt. They are beginning to reject the theoretical humility of Christianity as contrasted with the practical equality of Mohammedanism; and above all, and much more serious, they are beginning to say flatly, we do not want integration, we want separation and we are going to begin to call on our people to fight, kill, destroy; for even if we lose "how can man die better than by facing fearful odds, for the ashes of his fathers, and the temples of his gods!"

In the meantime the mass of the American people sit silent and do nothing. They will not allow Negroes to live beside them; they will not allow them to work beside them; they avoid as much as possible letting their children be educated with them of meet them on terms of equality; and they keep themselves respectable and secure by avoiding the "Negro" problem. How long will this last? How long can it last?

165 ~~104~~. West Indies, South America

Meantime south from the United States is a world of people, largely of Negro and Indian descent, mixed with poor Spaniards and Portuguese dominated for good or evil by the Catholic church. The first native Catholic bishop in America was Xavier de luna Victoria, son of a Negro charcoal burner. For centuries they have been ruthlessly exploited; that is, the work of the great mass of their labor has been used for the support and comfort of those strong enough to control them; and regardless of the health, happiness or desire of the people. Spain, Portugal, Germany, Britain and

49-1-170

170 ~~168~~ ~~170~~

and especially the United States have amassed wealth, power and luxury from these poor, ignorant, diseased peoples. Then, climbing on the backs of their unhappy fellows themselves, have risen rulers of their own blood to share the spoil.

After repeated and futile efforts to escape this slavery, at last in Cuba, a sizable group seems to be achieving freedom and self-rule; that the Cuban revolution will extend to South America is the hope of all good men and the fear of all the slave drivers.

49-1-171

171 - ~~215~~ = 169

Reader of dead words who would live deeds, this is the flowering of my logic: I dream of a world of infinite and invaluable variety; not in the laws of gravity or atomic weights, but in human variety in height and weight, color and skin, hair and nose and lip. But more especially and far above and beyond this, in a realm of true freedom; in thought and dream, fantasy and imagination; in gift, aptitude, and genius -- all possible manner of difference, topped with freedom of soul to do and be, and freedom of thought to give to a world and build into it, all wealth of inborn individuality. Each effort to stop this freedom of being is a blow at democracy -- that real democracy which is reservoir and opportunity and the fight against which is murdering civilization and promising a day when neither

... star nor sun shall waken,
Nor any change of light:
Nor sound of waters shaken
Nor any sound or sight;
Nor wintry leaves nor vernal,
Nor days nor things diurnal;
Only the sleep eternal
In an eternal night.

There can be no perfect democracy curtailed by color, race, or poverty. But with all we accomplish all, even Peace.

This is this book of mine and yours.

49 - 1 - 172

THIS AFRICA: HOW IT AROSE, WHITHER IT GOES

Draft manuscript

Incomplete

FOREWORD

40-3-3

Since the glory of the West Indian Sugar Empire and the rule of the Cotton Kingdome, there has been consistent effort to rationalize Negro slavery by omitting Africa from world history; so that today it is almost universally assumed that history can be written without particular reference to Negroid peoples. I believe this to be scientifically unsound and also dangerous for logical social conclusions. Therefore I am seeking in this book to remind readers in this crisis of civilization, of how critical a part Africa has played in human history, past and present, and how impossible it is to forget this and rightly explain the present plight of mankind.

I feel now as though I were addressing a crowd of friends and enemies, who ask a bit breathlessly, whose and when is the testimony on which I rely for something that even resembles Authority? To which I return two answers: I am challenging Authority -- even Maspero, Sayce, Reisner, Breasted, and hundreds of other men of highest respectability, who did not attack but studiously ignored the Negro on the Nile and in the world and talked as though black folk were nonexistent, unimportant. They are part of the herd of writers of modern history who declare with Guernier "Seule de tous les continents L'Afrique N'a pas d' histoire!"

In fine, I have done in this book the sort of thing at which every scholar shudders. With meager preparation and all too general background of learning, I have essayed a task, which, to be adequate and complete, should be based upon the research of a lifetime! But I am faced with the dilemma, that either I do this now or leave it for others who have not had the tragedy of life which I have, forcing me to face a task for which they may have small stomach and little encouragement from the world round about. If, out of my almost inevitable mistakes and inaccuracies and false conclusions, I shall have at least clearly stated my main issue -- that black Africans are men in the same sense as white European and yellow Asiatics, and that history can easily prove this -- then I shall rest satisfied even under the stigma of an incomplete and, to many, inconclusive work.

Indeed, I strongly suspect that more and more history instead of pretending to be exact science will be [redacted] careful guess, laudable wish and "lies agreed upon". Thus only in part will our knowledge of the past be admittedly based on sound scientific evidence.

40-3-84

The bulk of this work was published in 1946 under the title: The World and Africa. In this edition the contents have been rearranged, to some extend rewritten, and certain recent matter added.

10-3-57

Seers say that for full two thousand million years this world out of fiery mist has whirled about the sun in molten metal and viscous crusted ball. That crust, congealing and separating the solids from the liquids, rose and fell in bulging ridges above the boiling sea. Five times the mass of land called Africa emerged and disappeared beneath the oceans. At last, at least a thousand million years ago, a mass of rigid rock lifted its crystal back above the waters and remained. Primeval Africa stretched from the ramparts of Ethiopia to where the copper, diamonds, and gold of South Africa eventually were found. More land arose, and perhaps three hundred million years ago Africa was connected with South America, India, and Australia. As the ocean basins dropped, the eastern half of Africa was slowly raised into a broad, flat arch.

The eastern side of this arch gave way, forming the Indian Ocean, and when the roof of the arch fell in there appeared the great Rift valley. This enormous crack, extending six thousand miles from the Zambesi to Ethiopia and Syria, is said to be the only thing that Martians can descry as they look earthward of a starry night. All the great East African lakes lie in the main rift, and doubtless the Red Sea and the Sea of Galilee are also part of this vast phenomenon. Later, about ten million years ago, a second rift occurred, and rifting and tilting kept on until perhaps a hundred thousand years before our era.

Recurrent change came in geography and climate. Europe and Africa were united by land and separated. Lower Egypt was submerged, and the Mediterranean extended to Persia. Finally, what the geologists call the modern world emerged. In Egypt great rivers poured down the hills between the Red Sea, and the Nile found old and new valleys. The Sahara was crossed by a network of rivers, pouring into a vaster Lake Chad and uniting the Niger, the Congo, and the Nile.

40-3-58

Gondwanaland, the ancient united continent of Africa, South America, and Asia, was divided into three parts by the new changes which caused the rift valleys. The radioactivity of the inner earth made the crust break apart. We can see by the map how Africa broke from South America and Europe from North America. Changes in climate were caused by the sun, the earth's inner heat, and by two main glacial periods in Africa. The rainfall varied, bringing periods of flood between the glaciers.

The continent of Africa in its final modern form has been described as a question mark, as an inverted saucer, as the center of the world's continents. Including Madagascar, it is three times the size of Europe, four times the size of the United States; and the whole of Europe, India, China, and the United States could be held within its borders. In actual measurement it is nearly square: five thousand miles long by fourthousand six hundred miles wide. But its northern half is by far the larger, with the southern half tapering off. In the middle the equator cuts across Africa, and the whole continent lies mainly within the tropics.

Of the physical aspects of Africa, its relatively unbroken coastline has had the greatest effect upon its history. Although Africa is about three times larger than Europe in area, the coastline of Europe is four thousand miles longer than that of Africa. In other words, Africa has almost no peninsulas, deep bays, or natural harbors. Its low and narrow coast, almost level, rises rapidly to a central plateau with a depression in the center. Thus the great rivers fall suddenly to the ocean, and their navigation is impeded by rapids and falls.

Its five areas include the original Great Plateau with an average elevation of over thirty-five hundred feet, where mountains crowned with snow rise from thirteen to twenty thousand feet. Over these open spaces have always roamed herds of wild animals -- elephants, rhinoceroses, and buffaloes.

40-3-144

The second area is the Great Depression, the basin of the Congo River draining nearly a million and a half square miles. Its average altitude is a thousand feet and it is the bed of a former inland sea. As Stanley described it: "Imagine the whole of France and the Iberian peninsula closely packed with trees varying from twenty to a hundred and eighty feet in height, whose crowns of foliage interlace and prevent any view of sky and sun, and each tree from a few inches to four feet in diameter." In this area lies the Belgian Congo and French Equatorial Africa, Liberia and the British West African colonies.

The fourth area is the Sahara, extending from the Atlantic to the Red Sea. It covers three and a half million square miles and is divided into desert and fertile islands. In the past the Sahara was fertile and had a large population. Its surface today is often a hundred feet below sea level. In the east is Egypt and the Egyptian Sudan. North Africa lies on the Mediterranean with Algeria and Tunisia, Libya and Egypt. There are sense in which it is true that "Africa begins at the Pyrenees," and also that "Europe ends at the borders of the Sahara."

Sixty million years ago vast reptiles and dinosaurs wandered over this continent. It became, as the years passed, a zoological garden with wild animals of all sorts. Finally there came domesticated cattle, sheep, and goats, and a tremendous development of insects. As Sir Harry Johnston well remarks, WAfrica is the chief stronghold of the real Devil -- the reactionary forces of Nature hostile to the uprise of Humanity. Here Beelzebub, King of the Flies, marshals his vermiform and arthropod hosts -- insects, ticks, and nematode worms -- which more than in other continents (excepting Negroid Asia) convey to the skin, veins, intestines, and spinal marrow of men and other vertebrates the microorganisms which cause deadly, disfiguring, or debilitating diseases, or themselves create the morbid condition of the persecuted human being, beasts, bird, reptile, frog, or fish."

40-3-145

Africa is a beautiful land; not merely comely and pleasant, but haunted with swamp and jungle; sternly beautiful in its loveliness of terror, its depth of gloom, and fullness of color; its heaven-tearing peaks, its selver of endless sand, the might, width, and breadth of its rivers, depth of its lakes and height of its hot, blue heaven. There are myriads of living things, the voice of storm, the kiss of pestilence and pain, old and ever new, new and incredibly ancient.

The anthropoid ape with the great brain who walked erect and used his hands as tools developed upon earth not less than half a million years ago. Traces of him have been found in Africa, Asia, and Europe and in the islands of the sea. Many types which developed have doubtless been lost, but one species has survived, driven hither and yon by cold and hunger, segregated from time by earthquake and glacier and united for defense against hunger and wild beasts.

Groups of this species must have inbred and developed sub-types over periods of tens of thousands of years. Of the sub-species thus developed, scientists have usually distinguished at least three, all of which were fertile in their cross-breeding with one another. In course of time they have given rise to many transitional groups and intermediary types, so that less than two-thirds of the living peoples of today can be decisively allotted to one or the other of the definite subspecies. These subspecies include the long-headed dark people with more or less crinkled hair whom we know as Negroids; the broad-headed yellow people with straight and wiry hair whom we call Mongoloids; and a type between these, possibly formed by their union, with bleached skins and intermediate hair, known as the Caucasoids.

No sooner had these variant types appeared in Central Africa, on the steppes of Asia, and in Europe than they merged again. The importance of these

types was not so much their physical differences and likenesses as their cultural development. As Frobenius says: "With vast and growing weight there begins to emerge today out of the microscopic spectacles of blind eyes, a new conception among living men of the unity of human culture." Inquiring search has made clear "here Greek, there old Mexican spirituality; here European economic development, there pictures of the glacial age; here Negro sculpture, there shamanism; here philosophy, there machines; here fairy tale, there politics."

10-3-1416

Was Africa the cradle of the human race? Did it witness man's first evolution from the anthropoid ape to Homo sapiens? We do not know. Charles Darwin thought that "it is somewhat more probable that our early progenitors lived on the African continent than elsewhere." Sir G. E. Smith agrees with this and says that Africa "may have been the area of characterization, or, to use a more homely phrase, the cradle, both of the anthropoid apes and the human family." From Africa, Negroids may have entered Asia and Europe. On the other hand, the human race originating in Asia or even in Europe may have invaded Africa and become Negroid by long segregation in a tropical climate. But all this is conjecture. Of the origin of the Negro race or of other human races, we know nothing. But we do know that human beings inhabited Africa during the Pleistocene period, which may have been half a million years ago.

"There was once an 'uninterrupted belt' of Negro culture from Central Europe to South Africa. 'These people,' says Griffith Taylor, 'must have been quite abundant in Europe toward the close of the Paleolithic Age. Boule quotes their skeletons from Brittany, Switzerland, Liguria, Lombardy, Illyria, and Bulgaria. They are universal through Africa and through Melanesia, while the Botocudos and the Lagoa Santa skulls of East Brazil show where similar folk penetrated to the New World.' Massey says: 'The one sole race that can be traced among the aborigines all over the earth or below it is the dark race of a dwarf, Negrito type.'"

40-3-147

It seems reasonable to suppose that Negroids originating in Africa or Asia appeared first as Negrillos. The Sahara at that time was probably covered with rivers and verdure and North Africa was in close touch with Mediterranean Europe. There came upon the Negrillos a wave of Negroids who were hunters and fishermen and used stone implements. The remains of an African stone age are scattered over a wide area with amazing abundance, and there is such a resemblance between implements found in Africa and those in Europe that we can apply, with a few differences, the same names. The sequence in culture in Europe resembles the sequence in Africa although they may not have been contemporary.

The most primitive type of stone implement was found in Uganda and is known as the pebble tool. The same pebble industry extended to Tanganyika and the Transvaal. This gave way to the hand-ax culture, which extended over North Africa, the Sahara, Equatorial Africa, West and South Africa. Superb hand axes and other tools are the evidence. Then the middle Paleolithic flake-tool culture spread over wide areas of Africa and is shown by perfect implements in South Africa and other places. The remains indicate a cave-dwelling people with a great variety of tools as well as beads and pottery.

During the Pleistocene period came a new Stone Age, with agriculture, domestic animals, pottery, and the grinding and polishing of stone tools. Evidence of this culture is found in Egypt and North Africa, the Sahara in West Africa, East and South Africa.

The Neolithic culture is of great significance. In Egypt it is found five thousand years before Christ. A thousand years later it changed from flint to copper. The Predynastic Egyptians who represented this culture were settled folk; they hunted and fished, and cultivated grain; made clothes and baskets, used copper, and were distinctly Negroid in physique. Probably they came from the

south, from what is now Nubia. Later there came to Egypt other people of the type corresponding to the modern Beja, who lived in settled communities and used copper and gold. This brown Negroid people, like the modern Beja, Galla, and Somali, mixed increasingly with Asiatic blood, but their culture was African and extended by unbroken thread up the Nile and beyond the Somali peninsula.

10-3-1417

The first wave of Negroes were hunters and fishermen and used stone implements. They gradually became sedentary and cultivated the soil and must have developed early artistic aptitudes and strong religious feeling. They built the stone monuments discovered in Negro Africa and the raised stones and carved rocks of Gambia. They did not mix with the Negrillos nor did they dispossess them, but recognized their ancestral land rights and seized unoccupied land. Thousands of years after this first wave of Negro immigrants there came another Negroid migration. The newcomers pushed north and west, dispossessed the Negrillos, and drove them toward the central forests and the deserts. They mixed more with the Negrillos, developed agriculture, the use of cattle and domestic fowl. They invented the working of iron and the making of pottery. Also, those who advanced farthest toward the north mixed with the Mediterranean race in varying degrees, so that sometimes the resulting population seemed white mixed with Negro blood and in other cases blacks mixed with white blood. The languages were mixed in various ways. Thus we had the various Libyan and Egyptian populations. All this migration and mixture took place long before the epoch of the first Egyptian dynasty.

The name "Negro" originally embraced a clear conception of ethnology -- the African with dark skin, so-called "woolly" hair, thick lips and nose; but it is one of the achievements of modern science to confine this type to a small district even in Africa. Gallas, Nubians, Hottentots, the Congo races, and the Bantus are not "genuine" Negroes from this view, and thus we find that the continent of Africa is peopled by races other than the "geniune" Negro.

40-3-149

Nothing then remains for the Negro in the "pure" sense of the word save, as Waitz says, "a tract of country extending over not more than ten or twelve degrees of latitude, which may be traced from the mouth of the Senegal River to Timbuktu." If we ask what justifies so narrow a limitation, "we find that the hideous Negro-type, which the fancy of observers once saw all over Africa, but which, as Livingstone says, is really to be seen only as a sign in front of tobacco-shops, has on closer inspection evaporated from almost all parts of Africa, to settle no one knows how in just this region. If we understand that an extreme case may have been taken for the genuine and pure form, even so we do not comprehend the ground of its geographical limitation and location. We are here in presence of a refinement of science which to an unprejudiced eye will hardly hold water."

Palgrave says: "As to faces, the peculiarities of the Negro countenance are well known in caricature; but a truer pattern may be seen by those who wish to study it any day among the statues of the Egyptian rooms in the British Museum: the large gentle eye, the full but not overprotruding lips, the rounded contour, and the good-natured, easy, sensuous expression. This is the genuine African model; one not often to be met with in European or American thoroughfares, where the plastic African too readily acquires the careful look and even the irregularity of the features that surrounded him; but which is common enough in the villages and fields where he dwells after his own fashion among his own people; most common of all in the tranquil seclusion and congenial climate of Surinam plantation. There you may find, also, a type neither Asiatic nor European, but distinctly African; with much of independence and vigour in the male physiognomy and something that approaches, if it does not quite reach, beauty in the female. Rameses and his queen were cast in no other mould."

What are the peoples who from vague prehistory emerged as the Africans of today? The answer has been bedeviled by the assumption that there was in Africa a "true" Negro and that this pure aboriginal race was mixed with a mythical "Hamitic race"

40-3-150

which came apparently from neither Europe, Asia, nor Africa, but constituted itself as a "white element" in Negro Africa. We may dismiss this "Hamitic" race as a quite unnecessary assumption and describe the present African somewhat as follows:

At aperiod as early as three thousand years before Christ the people of the North African coastal plains were practically identical with the early Egyptians and present two types: long-headed Negroid people and broad-headed Asiatics. Among the Berber types today are tall and medium long-headed people with bread faces, swarthy skin, and dark eyes. They have many Negroid characteristics, especially toward the south. Beside these there are short, broad-headed people.

These Berbers are the ones who correspond to the ancient Egyptians and who have close relationship to the Neolithic inhabitants of France. Among them today the Negro element is widely represented. It is in every part of Mauritania, where the reigning family itself is clearly of Negro descent. A large strain of Negro blood may also be found in Algeria.

In East Africa we have the Massai, Nandi, Suk, and others, tall, slender, and longheaded. In the case of the Massai the nose is thinner and the color tinged with reddish-brown. The Bari people are tall and the Lutoko very tall. Then there are the Nilotics in the Nile valley, extending south of Khartoum to Lake Kioga. Physically, as in the case of the Shilluk and Dinka, they are tall, very black, long-headed people, often with well-shaped features, thin lips, and high-bridged noses. The Nuba, tall, long-headed men, live in the hills of Kordofan. East of Kordofan are the Fung, with many tribes and with much Asiatic blood; and also broad-headed tribes like the Bongo and the Asande, a mixed people of reddish color with long heads.

On the other side of Africa, the lower and middle portion of the Senegal River forms a dividing line between West African types of Negroes and the Negroes of the Sudan. South of the river are the Jelofs and the Serers. With these are the

40-3-151

Senegalese, including the Tukolor and Mandingo tribes. They are dolichocephalic with broad and narrow noses. They are rather tall, some of them very tall, and their skin is very dark. The Mandingo, or Mandi, are among the most important groups of French Senegal and live between the Atlantic and Upper Niger. They are tall and slender with fine features, beards, and rather lighter skin than that of neighboring Negroes.

Among the most interesting of the West African people south of the Sudan are the Fulani, stretching from the Upper Niger to the Senegal River. They are Negroids, perhaps with Asiatic blood. They are straight-haired, straight-nosed, thin-lipped and long-headed, with slender physiques and reddish-brown color. The Songhay are tall and long-headed with well-formed noses and coppery-brown color. The people of Kanem and the Bagirmi cluster around Lake Chad. They are broad-nosed and dolichocephalic and resemble the Negroes on the Nile. In the east and South Africa are the Wachagga and the Fang and especially the Swahili, mixed people whose language dominates East Africa. They have all possible degrees of physical characteristics from Arabic to Negro. In South Africa there are the Bushmen, short, yellow, with closely-curled hair. Beside them live the Hottentots, probably Bushmen with Bantu admixture and later with white Dutch admixture which gave rise to the so-called "coloured" people.

The Negroes in the neighborhood of the Gulf of Guinea can be differentiated at present chiefly by their languages, which have been called Sudanic. Three great stocks prevail: the Twi, Ga, and Ewe. Belonging to these are the Ashanti, moderately tall men, long-headed with some broad heads; the Dahomey, tall, long-headed, and black; the Yoruba, including the peoples of Benin and Ibo, dark brown or black, closely curled hair, moderate dolichocephaly, and broad-nosed. Their lips are thick and sometimes everted, and there is a considerable amount of prognathism. The Kru, hereditary sailors, are typically Negroid with fine physiques. The Haussa of the Central Sudan are very black and long-headed but not prognathic and with thin noses.

40-3-152

Finally there are the Bantu, who are a congeries of peoples, belonging predominantly to Central and South Africa in occupying the southern two-thirds of black Africa. The Bantu are defined on purely linguistic criteria. The term "Bantu" primarily implies that the tribes included speak languages characterized by a division of nouns into classes distinguished by their prefixes (usually twelve to fifteen), absence of sex-gender in the grammar, and the existence of alliterative concord, the prefix of each class (noun-class) being repeated in some form or another in all words agreeing with any noun of that class in the sentence. It is the reappearance of the prefix in every word in agreement with the noun that gives the alliterative effect.

The southern Bantu outnumber all other groups of South Africa and are about four times as numerous as the Whites. They are divided into a large number of tribal units, each with its own distinctive name. In social organization and religious system they show broad resemblances to one another, but in details of history there are a number of important differences which permit of their being classified into four groups:

1. The Shona peoples of Southern Rhodesia and of Portuguese East Africa.
2. The Zulu-Xosa, chiefly in the coastal region south and east of the Drakensberg Mountains.
3. The Suto-Chwana occupy the greater portion of the high plateau north of the Orange River.
4. The Herero-Ovambo, in the northern half of Southwest Africa and in southern Angola.

In skin color the range is from the black of the Amaswazi to the yellowish-brown of some of the Bechuana. The prevalent color is a dark chocolate, with a reddish ground tint. The hair is uniformly short and woolly. The head is generally low and broad with a well-formed bridge and narrow nostrils. The face is moderately prognathous, the forehead prominent, cheekbones high, lips fleshy. The Negro facial type predominates in all groups, but side by side with it in the Zulu and

40-3-153

the Thonga sections are relatively long, narrow faces, thin lips, and high noses.

The inhabitants of Natal and Zululand, divided originally into more than a hundred small separate tribes, are all now collectively known as "Zulus," a name derived from one of the tribes which, under the domination of Chaka, absorbed and conquered most of the others and so formed the Zulu nation which played so important a part in the political history of South Africa during the nineteenth century.

Tribes vary in size, some having from a few hundred to a couple of thousand members. Others are much larger, for example, the Bakwena, 11,000; the Batawana, 17,500; the Bamagwato, 60,000; the Ovandonga, 65,000; the Ovakwanyama, 55,000; the Amaswazi, again, number 110,000; while the Basuto, by far the largest of all and might be called a nation, number nearly half a million.

The area of the western Bantu includes the Cameroons (French), Rio Muni (Spanish), the Gaboon (French), French Equatoria, the Congo (Belgian), Angola (Portuguese), and Rhodesia, with the fraction of Portuguese East Africa north of Zambesi. This vast area is the true "Heart of Africa," the tropical rain forest of the Congo. Johnston enumerated over one hundred and fifty tribes in this area who spoke Bantu or semi-Bantu tongues. The southern limit of the western Bantu is vague; the formation of the Lunda empire, the Yagga raids, and the subsequent encroachments of the Bajokwe (Kioko) have played havoc with tribal organisation. The Bateke occupy a vast region on the right bank of the Congo which is now largely peopled by the Fang, who in their various expeditions and conquests have left their mark on most tribes north of the Ogowe River. Finally, in the midst of Africa are the Negrillos or pygmies, small men with reddish-brown or dark skin and brachicephalic heads.

pp. 98 - 114

40-3-154

Civilization has flowed down to man along the valley of great rivers where the soil was fertile and man need not fear hunger, and where the waters carried him to other peoples who were thinking of problems of human life and solving them in varied ways. Some say that human culture started in the valley of the Yangtze and of the Hoang Ho. Some say it came up from Black Africa; some that it came west from the Euphrates; but it had begun more than four thousand years before Christ.

The development in Mesopotamia in the valley of the Tigris-Euphrates, which flows into the Persian Gulf and thence to the Indian Ocean, is striking. Before the year four thousand B.C. there is evidence that Negroid Davidians and Mongoloid Sumerians ruled in southern Asia, in Asia Minor, and in the valley of the Tigris-Euphrates. Negroids followed them under Sargon, and Sargon boasted that "he commanded the black heads and ruled them."

But it was in the valley of the Nile that the most significant continuous human culture arose, significant not necessarily because it was absolutely the oldest or the best, but because it led to that European civilization of which the world boasts today and regards in many ways as the greatest and last word in human culture.

Despite this, it is one of the astonishing results of the written history of Africa, that almost unanimously in the nineteenth century Egypt was not regarded as part of Africa. Its history and culture was separated from that of the other inhabitants of Africa; it was even asserted that Egypt was in reality Asiatic, and indeed Arnold Toynbee's Study of History definitely regarded Egyptian civilization as "white," or European! The Egyptians, however, regarded themselves as African. The Greeks looked upon Egypt as part of Africa not only

40-3-155

geographically but culturally, and every fact of history and anthropology proves that the Egyptians were an African people varying no more from other African peoples than groups like the Scandinavians vary from other Europeans, or groups like the Japanese from other Asiatics. There can be but one adequate explanation of this vagary of nineteenth-century science: it was due to the slave trade and Negro slavery. It was due to the fact that the rise and support of capitalism called for rationalization based upon degrading and discrediting the Negroid peoples. It is especially significant that the science of Egyptology arose and flourished at the very time that the cotton kingdom reached its greatest power on the foundation of American Negro slavery. We may then without further ado ignore this verdict of history, widespread as it is, and treat Egyptian history as an integral part of African history.

The Negroids came as hunters and fishermen. Probably they came up from Nubia. They began to settle down and till the soil. They were the Tasians, five thousand and more years ago; the people of the Fayum and the Marimde, the Badarians, settled folk, who hunted and fished but also cultivated crops. They made cloth from flax and skins, wove baskets, fashioned pottery, and ground ax heads and vessels. They had copper and varied tools of flint capable of working timber. Ivory was used for tools.

The Nile valley may be said to have invented agriculture. It was so obvious a way to make an easy living under pleasant conditions. Fresh rich soil rolled in each year, and the waters that brought it kept it moist and fertile. Irrigation became a prime necessity, and flood control. The use of near-by building materials -- wood, brick, and stone -- became natural; fibers were woven into cloth; architecture followed in the attempt to honor the dead with buildings which the dry climate preserved.

Tools were invented. The first tools were stone, the eolith and the stone ax. Then came metals; copper, especially from Nubia, and then iron. Boats and ships

40-3-150

sailed the river and the seas. The list of things which Egypt learned and handed down to us from that far day is enormous: the art of shaving, the use of wigs, the wearing of kilts and sandals, the invention of musical instruments, chairs, beds, cushions, and jewelry. The burial customs discovered in Europe came without reasonable doubt from Africa, brought by African invaders. Later the improvements made by the Egyptians were imitated in Sicily and Italy. Egyptian culture was in this way the forerunner of Greece.

In the meantime, other people, Mongoloids, filtered in from Asia. As the years passed a fixed type of Egyptian began to develop. In Egypt were all the requirements for the first long experiement in civilisation in ancient times: a well-watered valley, deserts and mountains on the outskirts to keep back the enemy and the beast; a favorable warm climate and a chance for contact with foreigners which could be regulated so as to keep out the invader and trade with him in goods and ideas. The civilization of Egypt began with their invention of fixing a calendar, 4241 B.C.

The predynastic Egyptian was short, scarcely over sixty-four inches, dolichocephalic, with a nasal index of about 50, all characteristics of a group of people known as Beja, a black people who inhabit the eastern desert of Egypt, the Red Sea province of the Anglo-Egyptian Sudan, and extend through the Italian colony of Eritrea to Abyssinia. The Beja are divisible into four groups, one of which is the "Fuzzy-Wuzzy" of the British soldier. They are the least modified of the Beja tribes and are the modern representatives of the old predynastic Egyptian stock.

In Egypt there is evidence of a gradual modification in the population from the beginning of dynastic times, so that by the Pyramid period Egyptians were of heavier build, with broader skulls and faces and heavier jaws. These are the people portrayed in such magnificent works of art of the Pyramid period as the sphinxes of Gizeh and the Louvre, and they are no doubt representative of a considerable part of

40-3-157

the population of the Ancient Kingdom. They were the creators of the finest statuary, wall paintings, and sculptures in low relief to which Egypt attained, and the consciously archaistic Egyptians of the Twenty-sixth Dynasty endeavored to imitate their work as representing the highest development of national art. This applies to Upper Egypt. We have no knowledge of what was happening in the delta through dynastic and predynastic times; the remains are hidden under great masses of alluvial deposits.

The type described persisted and probably increased in number through dynastic times, and it is that of the fellahin of the present day. The modern Egyptian, with a stature of about sixty-six inches, shows no great variation between Upper and Lower Egypt. He is long-headed. Moreover, in passing southward, it has been pointed out that the eye and skin color darken, that the proportion of unusually broad noses increases, and spiral and crisp hair become more frequent.

The history of civilization which began in Egypt was not so much a matter of dynasties and dates. It was an attempt to settle certain problems of living together -- of government, defense, religion, family, property, science, and art. What we must remember is that in these seven lines of human endeavor, it was African Egypt that made the beginning and set the pace.

In some respects what they did has not been greatly improved upon even down to the twentieth century. In a primitive tribe, government was the family. But the valley of the Nile had to expand, rebuild, and implement this. It devised a ruler, a ruling family, and a ruling caste. It put them permanently upon a throne which became so old and stable that no man remembered when there was not an Egypt, and when there had been another world worth knowing. This government had to be built up from the family and clan, and this was accomplished through religion.

The Egyptian religion came naturally from the primitive animism of the African forest and progressed to the worship of Ra, the sun god, giver of life and beauty to the Nile valley which was the world. Opposite Ra was Osiris, god of waters and

40-3-158

fertility, and his sister and wife Isis, the black woman. Thus from earliest times women in Egypt had singular prominence and power. The gods reflected the physical facts of the valley. The Greeks called the Egyptians "the most religious of men." There developed an oligarchy of gods and a priesthood which became a center of scientific knowledge; the laws of nature were studied and mathematical formulas devised.

The work of the nation had to be organized, the toil of planting and reaping, irrigation, burden-bearing. Work was organized so that the great mass of the laborers toiled under the whip but toiled according to plan. From their toil arose the concept of property, of wealth to be used by king and priest and noble. Power became concentrated in the hands of the Pharaoh, who headed the clans and nomes. There was a long prehistoric period when many kings fought for supremacy in the valley, but at last there came concentration and unity which existed for an extraordinary length of time.

Egypt did not remain a tyranny; an oligarchy of priests and nobles eventually took power from the Pharaoh. Then in time a popular revolution emancipated the masses. The people of Egypt were not enslaved. They have been described as a "submissive lighthearted race content with little, singing at their toil, working with taste and patience." This was the result of an unusually favorable economic organization. There was no need of starvation, exposure, or want. There was plenty in the valley if the river flow was controlled.

The first duty of government was this control of the river, which led to the power of the king, to the science of the priest, to the independence of the laborer. Egypt under the Eighteenth Dynasty, 1500 B.C., has been called the first human example of state socialism, which was developed to an astonishing degree. Nor was the Egyptian formal and conventionalized. From a stiff traditional art in the earliest days, he developed individuality in expression. His spirit inquired into fresh

40-3-159

knowledge in this land hwere knowledge as "old as the world." The art of hieroglyphic writing was complete at the dawn of history, 3500 B.C., and it lasted three millenniums, until in the fourth century B.C., it was replaced by Coptic and Greek.

It would be interesting to know what the Egyptians, earliest of civilized men, thought of the matter of race and color. Of race in the modern sesne they seemed to have had no conception. On their monuments they depicted peoples by the color of their skin and their hair. The hair was treated in many ways: sometimes it was straight and Mongoloid; perhaps more often it was curled and Negroid. Now and then it was curly and hidden by wigs. The Egyptians painted themselves usually as brown, sometimes dark brown, sometimes reddish-brown. Other folk, both Egyptians and non-Egyptians, were painted as yellow. Often brown Egyptians were coupled with yellow women, either signifying less exposure to the sun or intermarriage with Mongoloids and whites. A few were painted as white, referring to some parts of North Africa and Europe.

Gradually, of course, the Egyptians became a separate inbred people with characteristics quite different from their neighbors. They were brown in color and painted themselves as such, but they recognized other colors and sorts of men. They were in continuous contact with the blacks to the south. Now and then they enslaved the blacks as they did the whites to the west and the yellow people to the east. But in the main their intercourse with the blacks consisted of trading and fighting with a people against whom they must defend themselves fiercely, but upon whom they depended for trade and for immigrants. Continually, black faces appear as Egyptian citizens. Herodotus in the fifth century B.C. described the Egyptians as black with curly hair. "The more we learn of Nubia and the Sudan," wrote Dr. D. Randall-MacIver, "the more evident does it appear that what was most characteristic in the predynastic culture of Egypt is due to intercourse with the interior of Africa and the immediate

40-3-160

influence of that permanent Negro element which has been present in the population of southern Egypt from remotest times to our own day."

Sir Flinders Petrie, in the same vein, wrote that it was remarkable how renewed vitality came to Egypt from the south.

For the period extending from the Sixth to the Eighteenth Dynasty, of the specimens studied about 20 percent of the males and 15 per cent of the females are grouped wiht the Negroes. For both periods there was a goodly per cent of specimens, the "intermediates," that show some Negroid traits, but in the "intermediates" the Negro features were not sufficiently numerous or distinct enough to warrant such skeletons being classed with the Negroes. In the United States all these would be legally Negroes.

Before the First Dynasty there must have been a long series of rulers who came out of the south, conquered the people, and consolidated their powers. Upper Egypt historically always had precedence over Lower Egypt, and the First Dynasty came from the direction of the heart of Africa. Eight kings are known in this dynasty, during which there was gradual advance in use of writing. Memphis was established as capital, and the eastern borders of the valley firmly conquered.

The First Dynasty appears to have moved up from Punt. The Third Dynasty, which led to the Fourth, shows a strongly Ethiopian face in Sa Nekht; the Twelfth Dynasty we can trace to a Galla origin; the Eighteenth Dynasty was Ethiopian paled by marriage; the Twenty-fifth Dynasty was from distant Meroe.

Among the Pharaohs of the earlier dynasties whose statues or recovered bones show them to have been deeply tinged with Negro blood are King Den of the First Dynasty, King Khasekhemui of the Second Dynasty.

In the Fourth Dynasty was erected the well-known statue of the Sphinx with the lion's body and Negro head entirely carved in native rock. It must have been carved

10-3-121

out of the rocky knoll of a hill. In this dynasty too there was the artistic attempt of man to rival nature. Vast buildings were placed before a background of hills or on a natural height. An artificial hill was built on which some great work of man was placed. Vast masses were used in construction. The sculptor sought to rival and even surpass nature. The painter used coloring and tints.

In the Fifth Dynasty the power of the priests was evidently growing, and religious foundations appear and with it a decline in the boldness of assertion of the earlier architecture. In the Sixth Dynasty came some of the great raids upon the Libyans to the east of Egypt. Tens of thousands of soldiers, Negroes particularly from the Sudan, beat this part of the land into subjection. Then the Pharaoh's army turned south and west and went through Nubia to force into subjection Negroes who were pressing northward upon the Egyptian state. Trading expeditions were sent to Punt. This was a time of active foreign conquest and exploration. One of the kings brought back to Egypt a dwarf from the Sudan.

The Seventh and Eighth Dynasties form an early intermediate period. The power of the kings at Memphis seems to have fallen into decay, perhaps through foreign invasion in the delta. During the Ninth and Tenth dynasties the invading race spread their rule over Upper Egypt. The Middle Kingdom began with the Eleventh Dynasty, when the Princes of Thebes became independent again. The ruler, Usertesen I, is pictured as triumphing over Asiatic and Negro. Evidently the defense of the kingdom from invaders became a serious problem when Egypt grew great and rich. A new vigor came into the administration with Amenemhat, who fought the Nubians and the Asiatics. The history of Sanehat (Sinuhi) is illustrative of the time. Because of the death of his father, he fled to Syria, where he became a ruler. "It gives a very curious view of the relation of Egypt to Syria at the beginning of the Twelfth Dynasty. A fugitive Egyptian was superior to the Syrians, and by his education and ability might rise to high power, much like some English adventurer in Central Africa at the present time."

40-3-120

One king of the Twelfth Dynasty, Usertesen III, was especially triumphant over the Negroes who were threatening Egypt from the south, and this Pharaoh set up a boundary across which the Nubians must not come. To celebrate this clash between the Negroid Egyptian and the Central African, we have the first specimen of Egyptian poetry extant...

From the Thirteenth to the Seventeenth Cynasties there comes a period which is obscure. During this time Egypt was conquered by the Hyksos kings, who were probably from the Arabian desert; but whether at the beginning or at the end of this period we are not certain. At the end of the kings of the Thirteenth Dynasty comes Ra-Nehesi, the king's eldest son, who is clearly called a Negro. This shows, of course, the development that had taken place in Egypt during two thousand years. There had grown up an Egyptian mulatto race differentiated in color and other physical characteristics from the Central Africans. So much so that the great triumph of Egypt was the conquest over these Africans.

The redemption of Egypt from the Hyksos came in the Eighteenth Dynasty through an Ethiopian power. The hyksos held Egypt perhaps five hundred years; then came Aahmes of the Thebaid. With Aahmes was associated the black Queen Nofritari, or Nefertari.

The stream of Egyptian history in the day of its proudest triumphs now merges into that of Ethiopia, the Land of the Blacks; in such wise that Ethiopian history is seen to be the main current of Negro culture, from the Mountains of the Moon to the Mediterranean, blossoming on the lower Nile, but never severed from the Great Lakes of Inner Africa.

40-3-162

pp. 115 - 147

In Greek legend, Ethiopia, "land of the burnt faces," lay either side of the Red Sea in Africa and Asia and was inhabited by black folk. Eventually the blacks mixed with yellow Asiatics. After the fifth and fourth centuries B.C. the term Ethiopia was used usually to designate regions in Africa corresponding to what we now know as Nubia or the Egyptian Sudan. The Sudan was known to the Egyptians and Hebrews as Kash or Cush. In Hebrew folklore the descendants of Ham "were Cush and Egypt."

If efforts have been made to separate the history of Egypt from Africa and the Negro race, a similar determination with regard to Ethiopia is even more contradictory. Science for years tried to separate men into great groups called races; at first the object was to explain human history by human differences. The scientific basis of race difference, however, appeared increasingly difficult as observation and measurement became more accurate. Three, five, twenty races were differentiated, until at last it was evident that mankind would not fit accurately into any scientific delimitation of racial categories; no matter what criteria were used, most men fell into intermediate classes or had individual peculiarities. The theory of absolutely definite racial groups was therefore abandoned, and "pure" racial types came to be regarded as merely theoretical abstractions which never or very rarely existed.

On the other hand, individual variations among men were extraordinary and intriguing; and group differences in physique and cultural habits were equally interesting. It would therefore be helpful to science if the broad hypothetical division of men into three or five great groups in accord with physique and culture were provisionally maintained to facilitate, but certainly not to obstruct, further study. This was the scientific status of the race theory early in the twentieth century, and in accord with this we spoke of three "races" -- Caucasoid, Negroid, and Mongoloid -- as comprising mankind, knowing well that no scientifically accurate definition of these races

40-3-163

could be made which would not leave most of mankind outside the limits.

There was, however, persistent exception to this general agreement; under Caucasoid were included men of widely different physique inhabiting Europe; the term Mongoloid was even more vague and indefinite and nearly fell into disuse. But the term "Negro," as a definite and scientific race designation, persisted, and its use was defended with bitter determination by men who otherwise ranked as leading scientists. Despite the fact that the number of human beings corresponding to the current definition of the word "Negro" was narrowed again and again in space and number to a small remnant even in Africa, nevertheless in the usage of many distinguished writers there really emerged from their thinking two groups of men: Human Beings and Negroes. And the thesis of this book is that this extraordinary result came from the African slave trade to America in the eighteenth century and the capitalistic industry built on it in the nineteenth. The facts referred to are illustrated by the treatment of Ethiopia in archaeology, anthropology, and history. The contradictions concerning this land and people would be ludicrous if the results were not so tragic.

If we follow inherent probability, ancient testimony, and legend, this would seem to have been the history of northeast Africa:

In Ethiopia the sunrise of human culture took place, spreading down into the Nile valley.

Ethiopia, land of the blacks, was thus the cradle of Egyptian civilisation.

Beyond Ethiopia, in Central and South Africa, lay the gold of Ophir and the rich trade of Punt on which the prosperity of Egypt largely depended.

Egypt brought slaves from black Africa as she did from Europe and Asia. But she also brought citizens and leaders from black Africa.

When Egypt conquered Asia, she used black soldiers to a wide extent.

When Asia overwhelmed Egypt, Egypt sought refuge in Ethiopia as a child returns to its mother, and Ethiopia then for centuries dominated Egypt and successfully invaded Asia.

40-3-164

Neither Greece, Rome, nor Islam succeeded in conquering Ethiopia, although they pushed her back and shut her up in East and Central Africa, and hindered all contact between her peoples and the world until the day of colonial imperialism.

But this interpretation of Negro history contradicts the theory of the natural and eternal inferiority of black folk, which rendered them natural slaves and a cheap labor force for nineteenth-century industry. Those who depended on slavery and colonialism for living and luxury naturally, and often without conscious intent, sought eagerly for a science and history which would deny this interpretation of African history. They came gradually to declare vehemently that Egypt began her culture in the delta region, and Ethiopia was a far-off frontier and slave mart; that Punt and Ophir were in extreme East Africa or Asia; that the Asiatic conquest of Egypt marked her decline and the feeble efforts of Ethiopia showed an era of decadence; that even if Ethiopia showed some imitative culture, this was not due to black folk, since the Ethiopians were not Negroes!

The attitude of scientists toward these questions has thus been colored almost entirely by their attitude toward modern Negro slavery. The Frenchman Volney called the civilisation of the Nile valley Negro after his visit. But such a barrage of denial from later men met him that he withdrew his earlier conclusions, not because of further investigation, but because of scientific public opinion in the nineteenth century. Reisner unearthed a civilisation of black folk in Ethiopia, but hastened to declare that they were not Negroes! Reisner was born in sight of Negro slavery in America and never forgot it. Flora Shaw wrote of the blackest men of the Sudan and their brilliant civilisation, but warned her readers that they were not Negroes!

So here in Ethiopia, "Land of the Blacks," country of the "Burnt Faces," we are continually faced with the silly paradox that these black folk were not Negroes. What then are Negroes? Who are Africans? Why has the whole history of Ethiopia been

40-3-165

neglected or ascribed to white "Hamites"? And why does every historian and encyclopedist, whenever he writes of the civilization of the upper Nile, feel compelled to reiterate that these black people were "not Negroes"?

Again, the mixture of blood among the three races is always referred to as an explanation of the advance among Negroes and the retrogression among whites. Is this scientific? A "white" or Asiatic aristocracy is repeatedly adduced as accounting for the rise of the Sudan, the government of Uganda, the industry of the Bushongo, and even the art of the Ashanti. Nothing is ever said of the influence of Negro blood in Europe and Asia, yet distinct Negroid features can be seen today all over Europe. When a black Jew boasts to his fellow religionists "I am black, but comely, O ye daughters of Jerusalem," he is supposed to be tanned; when Syria and Arabia show in hair and color their Negro blood, this is completely ignored and their culture called "white." When Buddha appears all over Asia portrayed as black and curly-haired, science makes little effort to investigate or explain.

There was and is wide mingling of the blood of all races in Africa, but this is consistent with the general thesis that Africa is predominantly the land of Negroes and Negroid peoples, just as Europe is a land of Caucasoids and Asia of Mongoloids. We may give up entirely, if we wish, the whole attempt to delimit races, but we cannot, if we are sane, divide the world into whites, yellows, and blacks, and then call blacks white.

As in the case of Egypt, I shall hereafter assume that the Ethiopians were Negroids and shall try to let the facts prove their contribution to civilization.

In the eyes of the Greeks a thousand years B.C. and even in the age of Pericles, black Africans were considered equal to though different from Greeks, and superior to European and Asiatic barbarians. Significant indeed was the attitude of the early Greeks toward Africa. It was to them a land of ideals. Here in legend their gods retired to rest and recuperate. In the dawn of Greek literature, in the Illiad, we

40-3-166

hear of the gods feasting among the "blameless Ethiopians."

According to mythology, the Greek people themselves came into being as the result of miscegenation. Zeus, the father of the Gods, mates with the [redacted] Greek maiden Io, and has a mulatto son, Epaphus, who is born in Egypt. Aeschylus says of this union, "And thou shall bring forth black Epaphus, thus named from the manner of Zeus' engendering. . . . Fifth in descent from him fifty maidens shall return to Argos [Greece], not of their choice but fleeing marriage with their cousin kin. Also, "Call this the work of Zeus, and that his race sprang from Epaphus, and thou shalt hit the truth."

Two of the most illustrious writers of Greece were called Negroes -- Aesop and Sappho. Planudes asserts this; Zundel, Champfleury, and others think that the woolly-haired Negro" on the coins of Delphos was Aesop. Ovid makes it clear that the ancients did not consider Sappho white. She is compared with Andromeda, daughter of Cepheus, black king of Ethiopia. Ovid says: "Andromede patriae fusca colore suae." In Epistle XV of the Heroides of Ovid (translated by Ridley), Sappho says to Phaon, "I am small of stature but I have a name that fills all lands. I myself have produced this extended renown for my name. If I am not fair, Andromeda, the daughter of Cepheus, was swarthy though the complexion of her country was pleasing to Perseus. White pigeons, too, are often mated with spotted ones and the black turtledove is often beloved by a bird that is green."

Paul Lacroix says of Sappho: "Although Plato graces her with the epithet of beautiful and although Athenaeus is persuaded of her beauty on the authority of Plato, it is more probable that Maximus of Tyre who paints her for us as little and black is in conformity with more authentic tradition."

Pope's translation of Ovid reads: "Brown as I am, an Ethiopian dame."

Another Negro is mentioned in the Homeric legends, Eurybiates. Homer speaks of his "woolly hair" and "sable skin" and compares him with Ulysses, greatest of the heroes.

> Eurybiates in whose large soul alone
> Ulysses viewed an image of his own.

40-3-167

The Ethiopian Tithonus of Greek legend has been identified with Dedun, the Negro god of the Second Cataract.

"Of all the classical countries Ethiopia was the most romantic and the most remote. It was situated, according to the Greeks, on the extreme limits of the world; its inhabitants were the most just of men, and Jupiter dined with them twice a year. They bathed in the waters of a violet-scented spring, which endowed them with long life, noble bodies, and glossy skins. They chained their prisoners with golden fetters; they had bows which none but themselves could bend. It is certain that Ethiopia took its place among the powers of the ancient world. It is mentioned in the Jewish records and in the Assyrian cuneiform inscriptions."

In Africa were great and powerful kingdoms. When Greek poets enumerated the kingdoms of the earth, it was not only natural but inevitable to mention Memnon, King of Ethiopia, as leader of one of the great armies that besieged Troy. When a writer like Herodotus, father of history, wanted to visit the world, he went as naturally to Egypt as Americans go to London and Paris. Nor was he surprised to find the Egyptians, as he described them, "black and curly-haired."

Herodotus says that the names of nearly all the Greek gods are derived from Egypt, and certainly the Greeks continually turned toward Egypt for cultural inspiration and scientific information. Homer openly borrowed from Egypt his story of Ulysses, and the islands of forgetfulness were based on Egyptian stories.

The Ethiopians are closely linked with the rising and setting of the sun. Memnon, the son of Eos, says Hesiod, is their king. Aeschylus describes the Ethiopians as dark and living near the springs of the sun. Arctinus of Melitus writes of Memnon celebrating his participation on the side of the Trojans and his victory over Antilochus, the son of Nestor, and his eventual death at the hands of Achilles. In a myth of the fifth century B.C., Andromeda was pictured as the black daughter of Cepheus and Cassiopeia, rulers of Ethiopia. She was bound to a rock and saved by Perseus on

40-3-168

his return from his battle with the Medusa. Both Sophocles and Euripides wrote plays Andromeda, and Perseus, Memnon, and Andromeda were worshiped as heroes in Africa and Ethiopia.

The culture of Egypt went out across the Mediterranean, lighting fires in Crete, inspiring Asia from southern Arabia to Syria and western Asia Minor. In Cretan art Negro heads appeared, and in the late Minoan Age, at the time of the expansion overseas, a black Minoan captain led Negro troops. Doubtless Minoans made use of black regiments in their final conquest of Greece, and from vases dated the latter part of the sixth century B.C. it seems clear that Ethiopians entered Greece even before the time of Xerxes. Herodotus tells that in the army of Xerxes there were Ethiopians clothed in leopard and lion skins and armed with bows and arrows. He distinguishes between oriental Ethiopians and western Ethiopians; both were black, but the hair of the former was straighter than the close curled-hair of the latter and they spoke different languages.

Herodotus reduced the races of Ethiopia to four: two native and two foreign; the native were the Ethiopians and the Libyans, and the foreign, the Phoenicians and the Greeks. Among the Libyans, Herodotus and the Egyptians distinguished between Negroids and the Mongoloids: the Negroids came from the south and the Mongoloids from the east. They had mingled in various ways so that one reads of black Getuli and white Ethiopians. The Periplus of Scilex records four Libyan populations, and Diodorus Siculus speaks of three Libyan tribes of which one is Negroid. Thus the Negroid peoples of Africa were represented in neighboring Asia and in North Africa, as well as in the valley of the Nile and Central and West Africa.

Greek culture affected Africa at an early period, and Africa in turn affected Europe. According to Frazer: "It is no longer possible to regard the rule of succession to the priesthood of Diana at Aricia as exceptional; it clearly exemplifies a widespread institution, of which the most numerous and the most similar cases have thus far been found in Africa. How far the facts point to an early influence of Africa

40-3-169

on Italy, or even to the existence of an African population in southern Europe, I do not presume to say."

It is admitted today that pre-Greek peoples assembled a considerable body of notable scientific knowledge. Individuals approached their problems with logical powers of deduction and methods of systematization. Two thousand years before Christ an Egyptian physician had made the heart the center of the human system, measured the pulse, and had written down his observations and advice.

In art no race was so interesting to the artists of Greece and Rome as the black man. Other races in the classical world were pictured far less often in Hellenistic and Roman times; the Negro was rendered with fidelity during the most idealistic period of Greek art and with full appreciation of his type of beauty. Appearing at the earliest time, the Negro type continued to be popular throughout the whole period of Greek classical art. The myths of Hercules and of Busirus are painted on a vase dating from the sixth century B.C. Hercules is represented as black and curly haired; the Egyptians of Busirus are represented as both black and yellow, and a bodyguard of five Ethiopians are marching to the defense of Busirus.

There was close and fairly frequent connection between Europe and Africa. In prehistoric times the continents were connected by land. They were separated by no obstacles which hinder migration. The large number of islands scattered through the Mediterranean served as bridges, and peninsulas stretched out from Europe toward Africa. African colonists passed over to Greece by way of the islands beginning with Crete. From Numidia they crossed into Sicily, Italy, and southern France; by Gibraltar into Spain. There is evidence of Negro blood in Asia Minor as far as the Black Sea and the Caucasus Mountains.

The history of early Egypt was that of a duel between Ethiopia and Egypt, that is, between the ancient African cultures of the Upper Nile and the settled Egyptian

40-3-170

culture entrenched in the Nile valley. Over this long stretch of Egyptian history, biological as well as cultural differences appeared. The Egyptians became a settled race-type, brown and yellow in color, with a splendidly developed civilization.

The Ethiopians, on the other hand, were more purely Negroid, brown and black of skin and curly-haired. They were divided into various kingdoms and tribes and were continually raiding Egypt or defending themselves from Egypt, chiefly for the advantages of trade. They eventually became traders and middlemen between Egypt and Central and South-central Africa, and indirectly between Egypt and India. Their own development was in a way changed and directed by the fact that their leaders of ambition and ability were continually drawn off into the Egyptian civilization and rose in many cases to be leaders in Egypt. As Egypt expanded the Ethiopians were pushed back from the First to the Second, Third, and Fourth Cataracts.

During the middle kingdom of Egypt an independent Ethiopian culture developed, centered at Napata and Meroe, which carried on widespread trade in gold, ivory, precious stones, wood, and handicrafts. When at the end of this time the Asiatic Hyksos overthrew Egypt, Ethiopia became a refuge for the conquered Egyptians both physically and culturally. Noble Egyptian families migrated to Ethiopia and intermarried, and one such family formed the great Eighteenth Dynasty which rescued Egypt, and the son of a Pharaoh took the title of Royal Son of Kush. When, however, the Libyans in the Twenty-first Dynasty overthrew Egypt, the Ethiopians organized independently, and from 750 B.C. to A.D. 355 there are records of seventy-six rulers of Ethiopia.

With the Eighteenth Dynasty came the New Empire, and we are on firm historical grounds as to dates. It came to power in 1580 B.C. and lasted until 1345. Its center of power was Thebes, three hundred miles from Memphis and four hundred miles south of the Mediterranean. It was less than one hundred miles from the First Cataract, the legendary southern boundary of Egypt. The power of Aahmes was probably reinforced by his marriage with an Ethiopian princess, Nefertari, or Nefritari, who was invariably

40-3-171

painted black in Egyptian art and yet who was, as Petrie says, "the most venerated figure of Egyptian history."

Her statue in the Turin Museum represents her as having black skin. She is also painted black standing before Amenothes in the Deir el Medineh tomb, now in the Berlin Museum. This queen with a black skin has therefore been regarded as a Negress, the daughter of an Ethiopian Pharaoh, or at any rate the daughter of a chief of some Nubian tribe; it was thought that Aahmes must have married her to secure the help of the Negro tribes in his wars, and that it was owing to this alliance that he succeeded in expelling the Hyksos.

Naturally the legend of this black queen has caused heart-failure among white Egyptologists; they have called her "Libyan"; and Libya was certainly partly Negroid in race; but since the Libyans have usually been counted "white," why was the Libyan Nofritari black?

Nofritari reigned for a time conjointed with Amenothes, and we know that her rule was a prosperous one and that she was revered by her subjects. The remembrance of Nofritari always remained distinct in their minds, and her cult spread until it became a kind of popular religion.

Aahmes reigned from 1580 B.C. to 1577 B.C., and his son, Amenophis I, from 1577 B.C. to 1536 B.C. Amenophis I finally conquered an Ethiopian Kingdom named Kerma, which had been threatening Egypt since the Twelfth Dynasty, or about 1785 B.C. Then came by marriage Tuthmosis I, the conqueror of Syria and the valley of the Euphrates, where the Egyptians probably for the first time in their history saw mountains covered with snow. Tuthmosis I pushed Egyptian domination beyond the Third Cataract. After Tuthmosis I came his son Tuthmosis II, who reigned conjointly with his half-sister Hatshepsut for two or three years, then associated upon the throne a son by a concubine, Tuthmosis III. After the death of Tuthmosis II, Hatshepsut assumed full power and was the acknowledged ruler of Egypt. The temple of Deir el Bahri, "Sublime of

40-3-172

the Sublime," designed by Tuthmosis II was completed by her in 1500 B.C., and it represented her expedition to Punt. The king and queen of Punt are represented as of the modern Hottentot type, and the queen with the characteristic steatopygia. After Hatshepsut's death Tuthmosis III came into full power.

His granite head in the British Museum has distinct Negro features. He extended Egyptian power east and south. He conquered Syria in seventeen campaigns and crossed the Euphrates. He fought in Libya and in Ethiopia. His reign was without doubt, as Petrie said, "one of the grandest and most eventful in Egyptian history." He repressed robbery and injustice, did much building and adorning of temples with the labor of his captives; and by taking the children of subdued kings in Asia as hostages to Egypt, established his empire on a sound basis perhaps for the first time in history. His empire extended from Napata to the Euphrates. The Assyrians and Babylonians sent their daughters to him in marriage, and the descendants of Syrian rulers, conquered by his father and educated in Egypt, rules as slaves of the Pharaoh. Tribute poured into Egypt. He reigned thirty-six years until the Hittites from the north and the Khabiri from the east began to press down upon Syria. His son Amenophis II, whom he had associated on his throne, reigned twenty-six years, leaving his throne to Tuthmosis IV.

This monarch married a black woman, Mutemua. Their son, Amenophis III, succeeded about 1400 B.C. He built the temple of Luxor at Karnak. He inherited his mother's Negroid features and married the brilliant Taia. It is possible that the Greeks derived the name of "Memnon, king of the Ethiopians," from this Pharaoh. J. G. Wilkinson says of Amenophis III: "The features of this monarch cannot fail to strike everyone who examines the portraits of Egyptian kings as having more in common with the Negro than those of any other Pharaoh." Anna Graves says: "Amenophis, or Amenhotep, III (1411-1375 B.C.) was evidently what, south of Mason and Dixon would be called a 'colored

40-3-173

many and his chief queen Taia must have had much more Negro blood than her husband. Indeed, judging from her portrait bust in the Berlin Gallery. . . she may have been very nearly pure Nubian. Their son, Amenophis, or Amenhotep, IV (1375-1358 B.C.), who later took the name Akhnaton, or Akhenaton, though less Negroid than his mother was more of the mulatto type than his father, and the portrait bust of his daughters show them all to be beautiful quadroons, though perhaps octoroons. And this mulatto Pharaoh, Akhenaton, was not only the most interesting Pharaoh in all the long lines of the many dynasties; but he was in many ways one of the most remarkable human beings who ever lived."

It was this ruler who brought profound revolution in the religion of Egypt, changed it to an imperial monotheism, and introduced a philosophical worship of the powers of nature.

The founder of the Nineteenth Dynasty, Rameses I, and his son, Seti I, became great builders of temples at Karnak and elsewhere. Then came the long reign of sixty-seven years of Rameses II, the Conqueror, who built monuments all over Egypt and Nubia and fought against the Libyans, Syrians, and Hittites. His conquests eventually exhausted the nation, which became prey to the Libyans and the peoples pressing down from the delta.

It was around 2500 B.C. that the Hebrew nation had begun to arise. It became enslaved in Egypt, perhaps in the times of Rameses I. Its history touched Ethiopia at many points, and Jews showed the blacks the highest respect.

The writer of the Song of Solomon defended the color of the Ethiopians:

I am black but comely, O ye daughters of Jerusalem;

Jewish writers pictured Ethiopia as one of the most powerful countries of their day, equal in strength to Egypt, Persia, Assyria, and Babylon:

In Rome the spread of the ~~xspreadxofxthe~~ plantation system after the Second Punic War led to the wide use of slaves, but these slaves were from Greece and from Spain.

There are legends of the visit of Alexander the Great to Candace, Queen of of Meroe. Fabulous perhaps, but they show her fame. It is said that Candace would not let Alexander enter Ethiopia and ~~wasnod~~ him not scorn her people because they were black, for they were whiter in soul than his white folk. "She sent him gold, maidens, parrots, sphinxes, and crowns of emeralds and pearls. She ruled eighty tribes, who were ready to punish those who attacked her." The Ptolemies were in contact with the Abyssinians. The earliest Ptolemies were white; but as time went on they changed more and more toward the Negroid. "The Negro strain in Alexander II is apparent, and still more so in Ptolemy XIII, the flute-playing father of the most celebrated of the Cleopatras. Ptolemy's mother was a slave. Cleopatra herself is known through tradition as having been of a tawny, or mulatto color."

46-3-140

14. EUROPE AND AFRICA

The duel between Europe and Africa came with the Punic Wars: the first from 264 to 241 B.C.; the second from 218 to 201 B.C.; and the final one from 149 to 146 B.C. These years started as efforts to defend Italy against migration and conquest from Africa, where Mongoloids and Negroids with some infiltrating of Europeans had built the city of Carthage. Within this city all races were represented, and Carthage secured a stronghold in Sicily which the first Punic War was fought to break.

40-3-161

The Second Punic War began with the invasion of Spain by Carthage and the eruption of the Carthaginian army into Italy. Hannibal and his African troops must have brought a strong Negro strain into the Roman population. For thirteen years they dominated the Italina penisula from Naples to the Alps. Quite possibly this was the first world fight across the color line although, naturally, the world was not then conscious of mere skin color and did not emphasize it.

Among the Carthaginian troops were the dark Numidians streaming down across the desert which then had only begun to separate Central from North Africa. Curiously enough, on at least some of the coins minted while Hannibal ruled in Italy, was the figure of what we call a full-blooded Negro king on the obverse and an African elephant on the reverse. Was this a picture of Hannibal himself which would be according to Roman custom, or was it a picture of the character of most of his troops? Do the dark features of modern Italy come from this and other infiltration of Negro blood? The mere fact that the color line is not specifically mentioned or emphasized in the history of the Punic Wars means nothing. The world did not then regard it of paramount importance as it does today.

pp. 176 - 200

dale

The connection between Asia and Africa has always been close. There was probably actual land connection in prehistoric times, and the black race appears in both continents in the earliest records, making it doubtful which continent is the point of origin. Certainly the Negroid people of Asia have played a leading part in her history. The blacks of Melanesia have secured the seas, and Charles Tatlber makes them inventors of one of the world's first written languages: thus "this greatest of all human inventions was made by aborigines whose descendants today rank among the lowest, the proto-Australians."

40-80-10

The ethnic history of India would seem to be first a pre-historic substratum of Negrillos or black dwarfs; then the pre-Dravidians, a taller, larger type of Negro; then the Dravidians, Negroes with some mixture of Mongoloid and later of Caucasoid stocks. The Dravidian Negroes laid the bases of Indian culture thousands of years before the Christian era. On these descended through Afghanistan an Asiatic or Eastern European element, usually called Aryan.

The culture of the black Dravidians underlies the whole culture of India, whose greatest religious leader is often limned as black and curly-haired. According to Massey: "It is certain that the Black Buddha of India was imaged in the Negroid type. In the black Negro God, whether called Buddha or SutMahsi, we have a datum. They carry their color in the proof of their origin. The people who first fashioned and worshipped the divine image in the Negroid mould of humanity must, according to all knowledge of human nature, have been Negroes themselves. For blackness is not merely mystical, the features and hair of Buddha belong to the black race and Mahsi is the Negro name. The genetrix represented as the Dea Multimammia, the Diana of Ephesus, is found as a black figure, nor is the hue mystical only, for the features are Negroid as were those of the black Isis in Egypt."

Of the thirty apostles who took Buddhism to China, ten are represented as yellow, ten brown, and ten black. The Indian blacks, mingling with the straight-haired yellow Mongolcids, tended to have straighter hair long with their dark color than Africans, although this was not true in the case of the island Negroes.

According to Balfour: "Ethnologists are of the opinion that Africa has had an important influence in the colonisation of Southern Asia, of India, and of the Easter Islands in time prior to authentic history or tradition. The marked African features of some of the people in the extreme south of the Peninsula of India, the Negro and Negrito races of the Andamans and Great Nicobar, the Semang, Bila, and Jakun of the Malay Peninsula, and the Negrito and Negro, Papuan and Malagasi races of the islands of the Indian Archipelago, Australia, and Polynesia, indicate the extent which characterizes their colonization.... The spiral-haired Negro race seem to have preceded the lank-haired brown race....When we consider the position if India between the two great Negro provinces, that on the west being still mainly Negro, even in most of its improved race, and that on the east preserving the ancient Negro basis in points so near Indi as the Andamans and Kedah, it becomes highly probable that the African element in the population of the Peninsula has been transmitted from an Arabian period before the Semitic, Turanian, and Iranian races entered India and when the Indian Ocean had Negro tribes along its northern as well as its eastern and western shores....Perhaps all the original population of southern Arabia, and even of the Semitic lands, gerrally was once African."

Widney has said: "They (the Negroes) once occupied a much wider territory and wielded a vastly greatly influence upon earth than they do now. They are found chiefly in Africa yet traces of them are to be found through the Islands of Malaysia, remnants, no doubt, of that more numerous black population which seems to have occupied tropical Asia before the days of the Semites, the Mongols, and the Brahminic Aryan. Back in the centuries which are scarcely historic, where history gives only vague hintings, are traces of a widespread, primitive civilization, crude, imperfect,

40-8-0-11

garish, barbaric, yet ruling the world from its seats of power in the valley of the Ganges, the Euphrates, and the Nile, and it was of the Black races. The first Babylon seems to have been of a Negroid race. It was in the days before the Semite was known in either land. The Black seems to have built up a great empire, such as it was, by the waters of the Ganges before Mongol or Aryan. Way down under the mud and slime of the beginnings.... is the Negroid contribution to the fair superstructure of modern civilisation."

21-08-04

The Asiatic and African blacks were strewn along a straight path between tropical Asia and tropical Africa, and there was much racial intermingling between Africa and western Asia. In Arabia particularly the Mongoloids and Negroids mingled from earliest times. The Mongoloids invaded North Africa in prehistoric times, and their union with the Negroids formed the Libyans. Later there was considerable commerce and contact between the Phoenicians of North Africa, especially Carthage, and the black peoples of the Sudan.

Speaking of the mixture that went on in this area between Elamite black and Aryan white, Dieulafoy has said: "The Greeks themselves seemed to have known these two Susian races, the Negroes of the plains and the scythian whites of the mountains. Have not their old poets given to the direct descendants of the Susian, Memnon, the legendary hero who perished under the walls of Troy, a Negro father, Tithon, and a white, mountain woman as mother -- Kissia? Do they not also say that Memnon commanded an army of black and white regiments? 'Memnon went to the succor of Priam with ten thousand Susians and ten thousand Ethiopians.'. . . I shall attempt to show to what distant antiquity belongs the establishment of the Negritos upon the left bank of the Tigris and the elements constituting the Susian monarchy. . . .Towards 2300 B.C., the plains of the Tigris and AnsanSusinka were ruled by a dynasty of Negro kings.

"The coming of this dynasty of Medes corresponded perhaps to the arrival in the south of an immense Scythian invasion. Pushed back by the black Susians after having

possession of the mountains, the whites poured into the plains of the Tigris and remained master of the country until the time when Kudur Nakhunta subdued Chaldea and founded AnsanSusinka. He added to the territory of the blacks -- Nime, Jussi, Habardip -- all the mountainous districts once inhabited by the whites of the Scythian race."

40-8U-13

Herodotus, who visited this region in the fifth century B. C., mentioned the dark skins of the people. He called them Ethiopians, but said their hair was straighter than those of the western Ethiopians, who had woolly hair. The Elamites, however, seemed rather to have belonged to the more Negroid stock of the west; their hair, as seen on the monuments, is short and woolly. " The Elamites," said Sir Harry Johnston, "appear to have been a Negroid people with kinky hair and to have transmitted this racial type to the Jews and Syrians. There is curliness of the hair, together with a Negro eye and full lips in the protraiture of Assyria which conveys the idea of an evident Negro element in Babylonia. Quite probably the very ancient Negro invasion of Mediterranean Europe (of which the skeletons of the Alpes Maritimes are vestiges) came from Syria and Asia Minor on its way to Central and Western Europe."

Professor Toynbee also says, "The primitive Arabs who were the ruling element of the Omayyad Caliphate called themselves 'the swarthy people' with a connotation of racial superiority, and their Persian and Turkish subjects, 'the ruddy people,' with a connotation of racial inferiority, that is to say, they drew the distinction that we draw between blonds and brunets but reversed the value."

Carthage especially traded with the Sudan for gold dust, ostrich feathers, and ivory in exchange for textiles, cloth, copper, and beads. Often the Carthaginians settled among the Negroes and the Negroes among them. As a result the horse became known in the Sudan, textiles were made from cotton, and gold was gathered and worked. The glass industry was born and spread. The Libyans, or Berbers, were descendants from the populations of North Africa which consisted of an Asiatic element that came in prehistoric times and mixed with the Negroids. From these mixed races came the Sudan stone houses and the cemented wells and the spread of cattle-raising and gardening.

The whole population becomes darker and darker toward the south, until it merges into the blacks of the Sudan. The divisions, especially the political units -- Tripoli, Tunisia, Algeria, and Morocco -- have no anthropological significance and do not correspond to any ethnic division. There are many striking groups: the Negroid Tuareg, or people of the Veil; the Tibu, or rock people, Negroids with mixed Mongoloid or Caucasoid blood; the dark Fulani, scattered all over North Africa from the Upper Niger to the Senegal and forming ften the dominant political pwer in the lands toward the coast.

Mohammedanism arose in the Arabian deserts, starting from Mecca which was in that part of the world which the Greeks called Ethiopia and regarded as part of the African Ethiopia. It must from earliest time have had a large population of Negroids.

The two greatest colored figures in the history of Islam are Bilal-Habesh (Bilal of Ethiopia) and Tarik-bin-Ziad: "Bilal-i-Habesh was Mohammed's liberated slave and closest friend to whom he gave precedense over himself in Paradise. The Prophet liberated all his slaves, and they were all well-known figures in the early Islamic history. He adopted as his own son another Negro, Zayd bin Harith, his third convert, who rose to be one of his greatest generals. Later, to show his regard for Zayd, he took one of Zayd's wives, the beautiful Zainab, as his own. But Bilal stands out in greatest relief. Apart from his services in the cause of Islam, it was through him that the Moslems decided to use the human voice instead of bells to call the Moslems to prayer. He had evidently a marvelous voice and was the first who called for prayers in Islam.

"Tarik-bin-Ziad also was a slave and became a great general in Islam and was the conqueror of Spain as the commander of the Moorish Army which invaded Spain. Jebel-u-Tarik (the mount of Tarik), that is Gibraltar, is named after him. One of the greatest Turkish classics is called 'Tarik-bin-Ziad' and has him as its hero. It was written by Abdul-Hak-Hamid, our greatest poet (alive though 84) and equals any tragedy of Corneille. I do hope that some time the biographies of these great figures will be written in English."

40-80-14

The Arabs brought the new religion of Mohammed into North Africa. During the seventh century they did not migrate in great numbers. Spain was conquered not by Arabs, but by armies of Berbers and Negroids led by Arabs. Later, in the eleventh century, another wave of Arabs came, but the number was never large and their prestige came from their religion and their language, which became a lingua franca for the peoples north and south of the Sahara. The total substitution of Arabian for Berber or Negro blood was small.

Anyone who has traveled in the Sudan knows that most of the "Arabs" he has met are dark-skinned, sometimes practically black, often have Negroid features, and hair that may be almost Negro in quality. It is then obvious that in Africa the term "Arab" is applied to any people professing Islam, however much race mixture has occurred, so that while the term has a cultural value it is of little ethnic significance and is often misleading.

The Arabs were too nearly akin to Negroes to draw an absolute color line. Antar, one of the great pre-Islamic poets of Arabia, was the son of a black woman; and one of the great poets at the court of Harun-al-Rashid was black. In the twelfth century a learned Negro poet resided at Seville.

The Mohammedans crossed the Pyrenees in A.D. 719 and met Charles Martel at Poitiers; repulsed, the invaders turned back and settled in Spain. The conflict for the control of the Mohammedan world eventually left Spain in anarchy. A prince of the Omayyads arrived in 758. This Abdurahman, after thirty years of fighting, founded an independent government which became the Caliphate of Cordova. His power was based on his army of Negro and white Christian slaves. He established a magnificent court and restored order, and his son gave protection to writers and thinkers.

Eventually rule passed into the hands of a mulatto, Almansor, who kept order with his army of Berbers and Negroes, making fifty invasions into Christian territory. He died in 1002, and in a few years the Caliphate declined and the Christians began to reconquer the country. The Mohammedans looked to Africa for refuge.

In the eleventh century there was quite a large Arab immigration. The Berbers and some Negroes by that time had adopted the Arab tongue and the Mohammedan religion, and Mohammedanism had spread slowly southward across the Sahara.

The invasions of the eleventh century were launched in 1048 by the Vizier of Egypt under the colored Caliph Mustansir. Each man was provided with a camel and given a gold piece, the only condition being that he must settle in the west. In two years they pillaged Cyrenaica and Tripoli and captured Kairwan. The invaders for the most part settled in Tripoli and Tunis, while their companions pressed on westward into Morocco. This exemplifieds the process of arabization in North Africa, and it was to a large extent a reflex from the infusion that had most to do with the arabisation of the Nile valley. It is thus responsible for much of the present-day distribution of the "Arab" tribes of the Sudan.

40-8-04-16

We know that in 850 four hundred black East Africans had been enrolled in the army of Abu'l Abbas, ruler of Bagdad, and that they rose in revolt with a Negro, called "Lord of the Blacks," at their head. In 869 the Persian adventurer, Al Kabith, summoned the black slaves to revolt, and they flocked to his side in tens of thousands. In 871 they captured Basra and for fourteen years dominated the Euphrates delta. When Masudi visited this country fourteen years later, he was told that this conquest by famine and sword had killed at least a million people.

40-3-51

The rebirth of civilisation in Europe began in the fifteenth century. At this time African and Asiatic civilisations far outstripped that of Europe. In the black Sudan nations, civilisations had risen and fallen even earlier. Melle, which flourished in the thirteenth and fourteenth centuries, fell before the empire of the Songhay, which in the fifteenth century became a vast, organised government two-thirds the size of the United States, with trade and commerce and cultural connections, through its University of Sankoré, with Spain, Italy, and the Eastern Roman Empire. The city-states and Atlantic culture of the West Coast of Africa had fought back triple pressure from the Sudan, the Arabs in the Nile valley, and the emigrating Bantu sweeping down on the kingdoms of the Congo.

It was here that the rape of Africa began and transformed the world. There can be little doubt but that in the fourteenth century the level of culture in black Africa south of the Sudan was equal to that of Europe and was so recognized. There is even less doubt but that Negroid influence in the valley of the Nile was a main influence in Egypt's development from 2100 to 1600 B.C.; while in East, South, and West Africa human culture had from 1600 B.C. to A.D. 1500 its monuments of a vigorous past and a growing future. What changed all this? What killed the Sudanese empires, brought anarchy into the valley of the Nile, decimated the thick populations of East and Central Africa, and pressed the culture of West Africa beneath the ruthless heel of the rising European culture?

In Europe during the thirteenth and fourteenth centuries there began to appear national integration of culture patterns, with no little inspiration from the East and from Africa. There followed in the fifteenth and sixteenth centuries increased freedom of thought and impatience with dogma; and in the seventeenth, came scientific inquiry and the beginning of a demand for democratic control of government.

40-3-52

But from 1400 to 1800 also came discovery, trade, and the beginnings of a new enslavement of labor. In the eighteenth century these developments leaped into opposition. The slavery of labor expanded enormously in the New World, concurrent with a new development of trade, industry, and wealth in the Old. These trends met head on with a revolutionary demand for democracy and social freedom in Europe. The clash of ideals was revealed in the nineteenth century by freedom for exploitation of slaves in America and a consequent reaction against the demands of European labor led by Napoleon and British Capital. Let us follow the details of this story.

The importance of the discovery of America was not the treasure of precious metals it provided, but the new and widening market and source of supply it offered European manufacturers by the exchange of tobacco, sugar, and cotton for manufactured goods. Its first effect was to raise the mercantile system to glory and splendor. World trade increased enormously. The seventeenth and eighteenth centuries were the centuries of trade, and eventually, by the rise of capitalism, the nineteenth century became the century of production.

During the Middle Ages there had been little direct commerce between Europe and West Africa. Arabs, Berbers, and eventually Negroids like the Mandingos became intermediaries for the trade between Europe and the Sudan. Rumors filtered through the Moroccan ports regarding the Kingdom of Ghana, the Niger, "the western Nile," and the black peoples round about. The Arabs bought gold from the Negroes and sold it to the Jewish merchants in Majorca.

The demand of Europe in the fifteenth century was for new and shorter paths to the East, to the spices, silks, and other luxurious articles of the East. In this quest Spain found silver in the New World, and Portugal triumphed when she found gold in Africa. The Portuguese trade monopoly with Africa and thence to India extended over half a century. She developed an empire of tremendous wealth.

40-3-97

The object of Prince Henry (1394-1460) of Portugal was mainly trade to India. At the same time he hoped by union with Prester John of Ethiopia to evangelise the Negroes of all Africa and make common cause against the Mohammedans. Henry heard of the gold for which the Carthaginians had bartered at Timbuktu. Having seized Ceuta, he began to explore, and after nineteen years his seamen rounded Cape Bojador.

In 1441 Goncalves brought to Lisbon the first cargo of slaves and gold. Very shortly a flourishing trade in gold, slaves, ostrich feathers, amber, and gum opened up between Portugal and black Africa. The Portuguese tried to conceal this trade from the rest of Europe. They did not actually find the black kingdom of Ghana, but they called the coast which did discover "Guinea," after mysterious Ghana. They heard of the empire of Melle at Timbuktu but did not actually reach it. They had commerce with the kingdom of the Jolofs and with other coast tribes. Eventually they reached the Gold Coast, or as they called it, "the Mine," where gold could be had in large quantities. They found that these Negroes were great traders who brought the gold from the interior when they could persuade the coast tribes who lived by fishing to let the gold bearers through. Eventually they came in contact with the kingdom of Benin and a mighty interior empire whose sovereign was the Ogani.

For fifty years, from 1480 to 1530, the Portuguese had a monopoly of the Guinea trade and reaped huge profits, seldom less than 50 per cent and sometimes as high as 800 per cent. Between 1450 and 1458 ten or twelve ships a year were sent to Guinea, and the amount of gold dust reached a value of over two million dollars a year, and after 1471 rapidly exceeded this.

Next to the trade in gold came the highly important importation of labor into Portugal. By the middle of the fifteenth century nearly a thousand blacks had been imported. A century later a vast majority of the inhabitants of the southernmost province were Negroids, and even up as far as Lisbon, Negroes outnumbered the whites. The two races intermingled, resulting in the Negroid characteristics of the Portuguese nation even today.

40-3-98

The Guinea trade was at first mainly in gold, pepper, and other commodities, with some trading in slaves which went to Europe. In the sixteenth century, however, it began to change, and slaves began to be sent to South America. This was not at first a large trade and did not compete with legitimate commerce; but it grew, and by 1540 reached ten thousand slaves a year. The reason for this was not far to seek. Between 1480 and 1578 the peoples of Guinea enjoyed a vigorous life with economic independence based on foreign trade. Gold, ivory, and pepper were valuable as exports before the discovery of America and continued long afterward. But by the middle of the sixteenth century there was trouble in West Africa. A vast migration of black people, the Limbas, moved slowly westward from Central Africa. They were a part of the migration of the Bantu moving down from the Mohammedan invasion of the Nile Valley and the empire-building of the black kingdoms of the Sudan. They destroyed villages, massacred the inhabitants, and were soon in fierce competition with the Sousas, who possessed the most formidable native army in West Africa at that time. Migration and native wars lasted for a generation. This meant that the cheap labor of captives became available on the West Coast and opened the way for the beginning of the American slave trade. With this slave trade came trouble, not simply among native tribes but also between the Portuguese and the natives.

After 1530 the Portuguese empire in Guinea was a vast commercial enterprise, but the overhead charges, caused by difficulties with the natives and the beginning of European competition, equaled and began to exceed production. The first threat to Portuguese dominance in Guinea came from the French. By the Treaty of Crespy in 1544 the right of Frenchmen to trade in the Indies, east and west, was proposed but not ratified. French trade began to multiply after 1555; relations between Portugal and France became strained on account of the French pirates and privateers. The monopoly of the Portuguese in West Africa practically ended in 1555. The French Huguenots forced themselves into the Guinea trade after 1571, under the inspiration of Admiral

Coligny. British merchants during the reign of Queen Mary became interested. Queen Elizabeth fought the monopoly claims of Portugal and Spain and herself participated in the Guinea trade.

40-3-99

Between 1559 and 1561 the British explorer, Martin Frobisher, took part in piracy and trade. From 1561 to 1571 the British trade increased over the French and there was direct traffic between England and Africa. "The first Englishman of note to engage in the traffic was the celebrated John Hawkins, afterwards knighted by Elizabeth and appointed Treasurer to the Navy. Froude calls him 'a peculiarly characteristic figure,' and he certainly presents that blending of piracy and piety, rascality and religion, so common in the days of Elizabeth and not altogether unknown in ours. Hawkins appears to have had his eye for a long time on the slave trade as a very lucrative business, and as the Spaniards claimed a practical monopoly, patriotic feeling -- the desire to bread down the Spanish claim -- went, as is again not unusual, with profit. At any rate, after a reconnoitering trip, Hawkins returned to England and fitted out an expedition of five vessels, to which were later added another three. In this venture, the Earl of Leicester, the Earl of Pembroke, and others took shares. So did Queen Elizabeth. She lent the ship Jesus, and Hawkins drew up rules for his men, the two first of which ran: 'Serve God daily,' and 'Love one another.' The piety of the expedition was beyond reproach. So was its practice, as we read that finding the natives of Cape Verde to be of 'a nature very gentle and loving,' and 'more civil than any others,' Hawkins prepared to kidnap a number of them. After sailing for some time, 'burning and spoiling,' he landed in the Spanish American settlements and compelled the colonists to purchase the slaves at his own price. Quite fittingly, Hawkins was granted a coat of arms consisting of 'a demi-Moor in his proper colours, bound and captive,' as a token of the new trade he had opened to Englishmen."

40-3-100

Meantime disaster overtook the Portuguese. King Sebastian attacked the Moors in North Africa and was killed. His death in 1578 changed the position of Guinea. Within two years Portugal had passed under the domination of Spain, and West Africa with some resistance submitted to Spain. Philip II of Spain (1527-1598) was able to defend to some extend his African empire, but eventually Spain was cut off from Africa by papal decree. Then came Portugal's annexation to Spain in 1581 and the loss of Spanish maritime power by the destruction of the Armada in 1588, which was a death blow to the commercial empire of Spain and Portugal.

The Protestants of England, the Huguenots of France, and the Calvinists of Holland started mortal struggle for Guinea. Eagerly the Dutch took over the Portuguese islands and settlements and formed in 1602 the East India Company.

With the seventeenth century the battle of commerce was on. The Dutch and the British fought to a finish in the Atlantic to dominate the Atlantic trade. The Portuguese, British, and Dutch fought in India. Between them they killed the trade of the German Hanseatic League and overthrew the economic dominance of Spain. Cromwell seized Jamaica as a center of British slavery and the slave trade. In Africa the kingdoms of the black Sudan moved east and displaced the Nilotic Negroes. From among these, peoples like those of the Fang and the Bambara kingdoms between the Nile and the West Coast pressed farther down upon the withdrawing Bantu.

In the seventeenth century the African slave trade to America expanded. It was not yet however a trade which made the word synonymous with Negro or black: during these years the Mohammedan rulers of Egypt were buying white slaves by the tens of thousands in Europe and Asia and bringing them to Syria, Palestine, and the Valley of the Nile. In the west, however, the character of world trade began subtly to change. While the theory of mercantilism still prevailed in academic circles and commerce continued to pour African gold into Europe, and while the Negroes and Arabs sent gold to India to bedeck the gorgeous moguls, in practical commerce the importation of gold from Africa and silver from Peru was losing its dominant attraction.

40-3-04

What was needed was human labor; labor to raise food in Spain and Portugal; labor to raise sugar and tobacco in the West Indies and North America.

The labor situation in Europe at the time made slave labor in America peculiarly profitable. The working population of Europe in the sixteenth and seventeenth centuries was limited. The devastation of the Thirty Years' War and the demand for labor and services on the feudal estates made any large-scale exportation of labor to America unthinkable. On the other hand, sugar, cotton, and tobacco were suitable to mass production on the plantations with conventional standards of work, simple tools, and comparatively small outlay for clothing and food. The organized slave gang was more profitable on the land than the peasant proprietor. The new capitalism as a method of production and trade began to supplant the farmer and merchant at home in Europe.

In 1660 the upheaval of Civil War in England was at an end, and England was ready to embark on the slave trade for the benefit of her sugar and tobacco colonies. The British increased the import of slaves to America, raised sugar, indigo, and cotton, and began to bring these goods to England for processing. They then exported some of these processed foods to Africa to buy more slaves. Trade began to change from a gambler's search for treasure to investment for permanent income; and this income consisted of goods for sale which were in practice found more valuable than treasure for hoarding. To perfect this arrangement slaves and more slaves must be had.

At the same time, the conscience of the world began to writhe. "Modern slavery was created by Christians, it was continued by Christians, it was in some respects more barbarous than anything the world had yet seen, and its worst features were to be witnessed in countries that were most ostentatious in their parade of Christianity. It is this that provides the final and unanswerable indictment of the Christian Church." There had been the splendor of the Catholic Church under Alexander VI and Leo X, and then the revolt led by Luther, the Reformation. Thus was the growing consciousness of

the dignity of the human soul brought face to face with slavery and a new slave trade. Gradually it was rationalized widely as a method of rescuing the heathen from perdition and saving his soul. However, this rationalization meant nothing when it conflicted with the profits of trade; and planters particularly, stoutly refused to release converts, and innumerable Christians often would not allow conversion. The profits of this new aspect of trade meant investment and the capitalist system.

40-3-60

Investment called for labor, and cheap labor, if the profit was to be high; but labor was beginning to be conscious and to revolt. This was the meaning of the Peasant War in Germany in the sixteenth century. But there was revolt and revolutionary thought not only in Europe; indeed it may be insisted that the revolt of labor against its modern degradation began in America rather than in Europe. This was the meaning of five slave revolts among the blacks in America and the beginning of the fateful dynasty of maroons, or free Negroes, hiding in organized rebellion in the mountains of Cuba, Jamaica, and Haiti, in Mexico and Brazil. In the seventeenth century, with the increased importation of slaves, there were nine revolts, leading to pitched war in Jamaica and Barbados and Haiti and to the independent state of Palmares in Brazil.

Nevertheless, England had the bit in her teeth. "Royal adventurers trading to Africa" in 1667 had among them members of the royal family, three dukes, eight earls, seven lords, and twenty-seven knights. With the end of the civil war in England, British merchants crowded upon the landholding aristocracy for an increased share in the profits of industry. While the British were fighting ostensibly for dynastic disputes in Europe, they were really, in the War of Spanish Succession and in the Seven Years' War, fighting for profit through world trade and especially the slave trade. In 1713 they gained, by the coveted Treaty of Asiento, the right to monopolize the slave trade from Africa to the Spanish colonies. In that century they beat

Holland to her knees and started her economic decline. They overthrew the Portuguese in India, and finally, by the middle of the century, overcame their last rival in India, the French. In the eighteenth century they raised the slave trade to the greatest single body of trade on earth.

40-3-61

The Royal African Company transported an average of five thousand slaves a year between 1680 and 1686; but the newly rich middle-class merchants were clamoring for free trade in human flesh. Eventually the Royal African Company was powerless against the competition of free merchant traders, and a new organization was established in 1750 called the "Company of Merchants trading to Africa."

In the first nine years of this "free trade," Bristol alone shipped 160,950 Negroes to the sugar plantations. In 1760, 146 ships sailed from British ports to Africa with a capacity of 36,000 slaves. In 1771 there were 190 ships and 47,000 slaves. The British colonies between 1680 and 1786 imported over two million slaves. By the middle of the eighteenth century Bristol owned 237 slave trade vessels, London, 147, and Liverpool, 89.

Liverpool's first slave vessel sailed for Africa in 1709. In 1730 it had 15 ships in the trade and in 1771, 105. The slave trade brought Liverpool in the late eighteenth century a clear profit of £300,000 a year. A fortunate slave trade voyage made a profit of £8,000, and even a poor cargo would make £5,000. It was not uncommon in Liverpool and Bristol for the slave traders to make 100 percent profit. The proportion of slave ships to the total shipping of England was one in one hundred in 1709 and one-third in 1771. The slave traders were strong in both the House of Lords and the House of Commons, and a British coin, the guinea, originated in the African trade of the eighteenth century.

The Loot of India

In the midst of this, a tremendous treasure from India poured into England. The Battle of Plassey gave India to the British Empire for plunder on a scale seldom seen

40-3-111

before or since. The enormous extent of robbery of the Indians by British civil servants has been abundantly proved. Hewitt referred to "the scenes and transactions in our great Indian empire -- that splendid empire which has poured out such floods of wealth into this country; in which such princely presents of diamonds and gold have been heaped on our adventurers; from the gleanings of which so many happy families in England 'live at home at ease' and in the enjoyment of every earthly luxury and refinement. For every palace built by returned Indian nabobs in England; for every investment by fortunate adventurers in India stocks; for every cup of wine and delicious viand tasted by the families of Indian growth amongst us, how many of these Indians themselves are now picking berries in the wild jungles, sweltering at the thankless plough only to suffer fresh extortions, or snatching with the bony fingers of famine, the bloated grains from the manure of the high-ways of their native country!"

The directors of the East India Company themselves admitted: "We have the strongest sense of the deplorable state to which our affairs were on the point of being reduced, from the corruption and rapacity of our servants, and the universal depravity of manners throughout the settlement. The general relaxation of all discipline and obedience, both military and civil, was hastily tending to a dissolution of all government. Our letter to the Select Committee expresses our sentiments of what has been obtained by way of donations; and to that we must add, that we think the vast fortunes acquired in the inland trade have been obtained by a scene of the most tyrannic and oppressive conduct that was ever known in any age or country!"

However this wealth was obtained and however pious the regret at the methods of its rape, there can be no doubt as to what became of it. Its owners in the main were not royal spendthrifts, nor aristocratic dilettantes; and even if some were, their financial advisers put their funds largely into the safe investment of West Indian slavery and the African slave trade. Thus an enormous amount of free capital seeking

safe investment and permanent income poured into the banks, companies, and new corporations. The powerful British institution of the stock exchange was born.

40-3-112

It was Karl Marx who made the great unanswerable charge of the sources of capitalism in African slavery: "The discovery of gold and silver in America, the extirpation, enslavement, and entombment in mines of the aboriginal population, the beginning of the conquest and looting of the East Indies, the turning of Africa into a warren for the commercial hunting of black-skins, signalised the rosy dawn of the era of capitalist production. These idyllic proceedings are the chief moments of primitive accumulation. On their heels treads the commercial war of the European nations, with the globe for a theatre. It begins with the revolt of the Netherlands from Spain, assumes giant dimensions in England's anti-Jacobin war, and is still going on in the opium wars against China. . . ."

"With the development of capitalist production during the manufacturing period, the public opinion of Europe had lost the last remnant of shame and conscience. The nations bragged cynically of every infamy that served them as a means of capitalistic accumulation. Read, e.g., the naive Annals of Commerce of the worthy A. Anderson. Here it is trumpeted forth as a triumph of English statecraft that at the peace of Utrecht, England extorted from the Spaniards by the Asiento Treaty the privilege of being allowed to ply the Negro trade, until then only carried on between Africa and the English West Indies, between Africa and Spanish America as well. England thereby acquired the right of supplying Spanish America until 1743 with four thousand eight hundred Negroes yearly. This threw, at the same time, an official cloak over British smuggling. Liverpool waxed fat on the slave trade. This was its method of primitive accumulation. And, even to the present day, Liverpool 'respectability' is the Pindar of the slave trade which . . . has coincided with that spirit of bold adventure which has characterised the trade of Liverpool and rapidly carried it to its present state of prosperity; has occasioned vast employ-

ment for shipping and sailors, and greatly augmented the demand for the manufactures of the country.' Liverpool employed in the slave trade, in 1730, 15 ships; in 1751, 53; in 1760, 74; in 1770, 96; and in 1792, 132."

40-3-113

"Tantae molis erat, to establish the 'eternal laws of Nature' of the capitalist mode of production, to complete the process of separation between labourers and conditions of labour, to transform at one pole the social means of production and subsistence into capital, at the opposite pole, the mass of the population into wage-labourers, into 'free labouring poor,' that artificial product of modern society. If money, according to Augier, 'comes into the world with a congenital blood-stain on one cheek,' capital comes dripping from head to foot, from every pore, with blood and dirt."

The method by which slavery and capital investment were developed by Great Britain can be clearly followed: the "triangular trade" flourished. It depended first mainly upon sugar and tobacco and later on cotton. The processing of these materials turned England into a manufacturing country, and the focusing of the attention of technicians upon methods of manufacture brought an astonishing series of inventions in the latter part of the eighteenth century. The Negroes were purchased with British manufactures and transported to the plantations. There they produced sugar, cotton, indigo, tobacco, and other products. The processing of these created new industries in England; while the needs of the Negroes and their owners provided a wider market for British industry. New England agriculture, and the Newfoundland fisheries.

By 1750 there was hardly a manufacturing town in England which was not connected with the colonial trade. The profits provided one of the main streams of that capital which financed the Industrial Revolution. The West Indian islands became the center of the British Empire and of immense importance to the grandeur of England. It was the Negro slaves who made these sugar colonies the most precious colonies ever re-

40-3-114

corded in the annals of imperialism. Experts called them "the fundamental prop and support" of the Empire. The British Empire was regarded as a "magnificent superstructure of American commerce and naval power on an African foundation."

William Wood said that the slave trade was the "spring and parent whence the others flow." Postlethwayt described the slave trade as "the first principle and foundation of all the rest, the mainspring of the machine which sets every wheel in motion."

The triangular trade made an enormous contribution to Britain's industrial development. The profits fertilised the productive system of the country. The slate industry in Wales was revolutionised by a plantation owner. The British West Indies interest was back of the vast railway development. Cotton responded to new inventions. Between 1709 and 1787 the tonnage of British shipping in foreign trade increased four-fold. The British nobility benefited largely from the West Indian trade. The Lascelles were from Barbados, and one of their descendants is now brother-in-law of the King of England. The Earl of Chatham considered the sugar colonies as "the landed interest of this kingdom." West Indian investors bought seats in Parliament. The poetry of both Browning and Barrett with all its depth and beauty grew straight out of West Indian slavery.

While a profit of seven shillings per head per annum was sufficient to enrich a country, it was declared that each white man in the colonies brought a profit of over seven pounds. Sir Dalby Thomas declared that every person employed on the sugar plantation was a hundred and thirty times more valuable to England than one at home. Professor Pitman has estimated that in 1775 British West Indies plantations represented a valuation of fifty million pounds sterling, and the sugar planters themselves put the figure at seventy millions in 1788. In 1798 Pitt assessed the annual income from West Indian plantations at four million pounds as compared with one million from the rest of the world. As Adam Smith wrote in Wealth of Nations:

"The profits of a sugar plantation in any of our West Indian colonies are generally much greater than those of any other cultivation that is known either in Europe or America." According to Davenant, "Britain's total trade at the end of the seventeenth century brought a profit of £2,000,000. The plantation trade accounted for £600,000; re-export of plantation goods, £120,000; European, African, and Levant trade, £600,000; East India trade £500,000; re-export of East India goods, £180,000."

The Napoleonic wars widened the trade empire of Great Britain and extended the market for her manufactures. After twenty-two years of fighting, British merchants surpassed in wealth the landed aristocracy, and the Reform Bill of 1832 reflected this economic fact.

We may pause here to enumerate a series of events which have been too often looked upon as separate and unconnected. They are as follows:

1500-1600: The revolt of slaves in the West Indies

1655-1738: War between the British and the Maroons

1750: British free trade in human flesh

1757: The loot of India begins

1774: American association against the slave trade

1775: The American Revolution

1789: The French Revolution

1791-1798: Revolt of Toussaint L'Ouverture

1792-1815: Reaction in France and the rise and fall of Napoleon

1800-1900: Capitalism and the factory system in England

1807: Abolition of the British slave trade

1830: The Cotton Kingdom

1833-1838: British abolition of slavery

1846: Repeal of the British Corn Laws; free trade

1863: Emancipation in America

1884: Imperial colonialism.

40-3-116

The slave revolts were the beginnings of the revolutionary struggle for the uplift of the laboring masses in the modern world. They have been minimised in extent because of the propaganda in favor of slavery and the feeling that the knowledge of slave revolt would hurt the system. In the eighteenth century there were fifteen such revolts: in Portuguese and Dutch South Africa, in the French colonies, in the British possessions, in Cuba and little islands like St. Lucia. There were pitched battles and treaties between the British and the black Maroons and finally there was a rebellion in Haiti which changed the face of the world and drove England out of the slave trade.

These revolts show that the docility of Negro slaves in America is a myth. They fall into two groups: those before the French Revolution and those after. The revolt of Maroons in Jamaica and Cuba and the Bush Negroes in South America and the repeated attempts in Haiti frightened the slaveholders and threatened the stability of the whole system. In Jamaica the Maroons "continued to distress the island for upwards of forty years, during which time forty-four acts of assembly were passed, and at least £240,000 expended for their suppression." The governor of Barbados wrote: "The public mind is ever tremblingly aware to the dangers of insurrection," and the statute books all over the slave territory testified to this fact.

The event that opposed the slave trade and slavery was the American Revolution. Not only did the colonists achieve their independence through the help of slaves and the promise of their freedom, and with the co-operation in money and men from Haiti, but they represented actual working classes rather than exploiters of labor. Finally, the French Revolution burst forth as a war against privilege based on birth and demanded freedom, especially economic freedom to trade and to enter industry without coercion.

The result was that the slave trade met distinct opposition based on humanitarian grounds; but this opposition would have been powerless to stop the trade if

40-3-117

it had not been evident that the trade itself as a source of profit was threatened. The revolt of America confirmed the superiority of the French sugar colonies. Between 1783 and 1789 the progress of San Domingo had been amazing. At the end of the eighteenth century the British sugar planters lost their supremacy to the French colonies. French colonial exports amounted to eight millions pounds while British colonial exports amounted to five million pounds.

When the American colonies won their independence, the Caribbean ceased to be a British sea and investments began to be transferred from the West to the East Indies. In 1783 Prime Minister William Pitt showed increased interest in India and encouraged Wilberforce to propose the abolition of the slave trade.

Then came the French Revolution and eventually the revolt of Haiti. The British made every effort to seize control of this famous French sugar colony. They tried both force of arms and bribery, but at last were compelled to recognize the independence of Toussaint L'Ouverture, whom they tried to divorce from allegiance to the French.

Nevertheless, with Haiti out of the world market, the British could have retained their hold upon the sugar industry had it not been for the increased cultivation of sugar in Spanish and Portuguese colonies. So long as these colonies could obtain cheap slaves, they threatened and even destroyed the investment in slave labor already made by British capital. Looked upon as machines or "real estate," as slaves legally were, the investment in Negro labor was being undermined so long as cheaper Negro labor could be had from Africa.

To keep the prices of slaves from falling, the slave trade had to be limited or stopped. Otherwise the whole slavery investment would totter, and that is what England faced after the revolution of Toussaint. Early in the nineteenth century, therefore, she began to change, and back of philanthropists like Sharpe and Wilberforce came the unexpected support of opportunist politicians like Pitt.

811-3-04

Moreover, capitalism was far enough developed to produce sufficient free finance capital to effect a transfer of investment from one field to another without such losses as would cripple the system. Losses there had to be, but they were part of the anarchy of business methods, which by large-scale gambling and periodic crises rushed blindly to newer and larger fields of profit. Eventually Negro slavery and the slave trade were abandoned in favor of colonial imperialism, and the England which in the eighteenth century established modern slavery in America on a vast scale, appeared in the nineteenth century as the official emancipator of slaves and founder of a method of control of human labor and material which proved more profitable than slavery.

For a long time the fiction of the slave trade as a method of conversion to Christianity had ceased to salve the conscience of honest-thinking men. Slavery and the slave trade were pouring such treasure into England, building her cities, railways, and manufactures, and making her so powerful a country that the defense of the system was fierce. England became mistress of the seas. The empire sang "Hail Britannia, Britannia Rules the Waves."

Before the American Revolution, English public opinion accepted the view of the slavetrader: "Tho' to traffic in human creatures, may at first sight appear barbarous, inhuman, and unnatural; yet the traders herein have as much to plead in their own excuse, as can be said for some other branches of trade. . . In a word, from this trade proceed benefits, far outweighing all, either real or pretended mischiefs and inconveniences."

The cruelty and inhumanity of the slave trade was a horrible fact. A committee of the House of Commons described the "Middle Passage": "The Negroes were chained to each other hand and foot, and stowed so close that they were not allowed above a foot and a half for each in breadth. Thus rammed together like herrings in a barrel, they contracted putrid and fatal disorders; so that they who came to inspect them in a

morning had occasionally to pick dead slaves out of their rows, and to unchain their carcasses from the bodies of their wretched fellow-sufferers to whom they had been fastened." "During the hearing of a case for insurance, the following facts were brought out. A slave-ship, with four hundred and forty-two slaves, was bound from Guinea to Jamaica. Sixty of the slaves died from overcrowding. The captain, being short of water, threw ninety-six more overboard. Afterwards, twenty-six more were drowned. Ten drowned themselves in despair. Yet the ship reached port before the water was exhausted."

10-3-86

The revolt against the Protestants began to appear amont the Methodists, Baptists, and Quakers. Methodism condoned slavery but was sensitive to and alarmed over the slave trade. The Baptists, beginning in England in 1600, developed into an extremely democratic organization which appealed to workers and even to slaves; and the general philosophical and economic enlightenment of the eighteenth century brought men of learning and artists into a distinct anti-slavery movement.

The slave trade was abolished by England in 1807, and England undertook to make the rest of the world outlaw it too. The United States, Portugal, and Spain gave only lip service to this program, and the slave trade continued up to the middle of the nineteenth century although to a lessening extent.

With the stopping of the slave trade it was evident that investment in labor was different from investment in land, material, and machines; that labor, no matter how much it was degraded, had initiative and made demands. Revolt of the working classes, following the incentive of Haiti, spread. The spectacular and astonishing triumph of revolution in Haiti threatened the whole slave system of the West Indies and even of continental America. It was this revolt more than any other single thing that spelled doom not only of the African slave trade but of slavery in America as a basis of an industrial system. The revolt encouraged the abolition movement in the United States and in Brasil; it flamed in practically every island of the West Indies.

Unless the slave worker could be pacified, income based on slave labor would be destroyed. The result was that in 1833 England abolished slavery.

The Napoleonic wars did not ruin England; together with the African slave trade, Negro slavery, and the loot of India, they made the British government the most powerful in the world; they ruined England's industrial rivals; they left her in control of the chief sources of raw materials by colonial ownership and with the ready cash to outbid rivals; her vast store of finance capital enabled her to manufacture machinery and wait a generation for repayment; British knowledge of science and technique enabled the country to make the best machines and tools and render the whole world creditor for their purchase; Britain ruled the seas and thus monopolised transport. Even when in the earlier mad rush for profit on the new capitalism, she reduced her own labor to slavery in the factory system and faced revolution, she proved the only land able eventually to raise wages and yet maintain high profit by shifting the burden of pauperized toil to the colonies and dominated peoples; and at the same time, although author and chief supporter of modern slavery, Great Britain could hold up her head and, by suppressing a slavery now becoming unprofitable, lead world philanthropy as the great emancipator of the slave.

But even as this role rejoiced her greater souls, the British Empire became the victim of the worst legacy of Negro slavery: the doctrine of race superiority and the color line, which in a later century made civilised man commit suicide in a mad attempt to hold the vast majority of the earth's peoples in thrall to the white race -- a goal to which they still cling today, hidden away behind nationalism and power politics.

This was not a rake's progress of malevolence; it was a bitter struggle between Good and Evil -- between fine and noble souls and conscienceless desire for luxury.

40-3-87

40-3-88

power, and indulgence. The forces of Evil were continually reinforced by the vast power which slavery and the exploitation of men put into the hands of the betrayers of labor, making them the envied of the earth, until nations became willing to destroy the earth in order to gain it. Suppose that at any point in this Descent to Hell, Right had received help and reinforcement? Suppose that a free America had welcomed a free Haiti into a world that insisted on freedom for Africa and Asia? But no; slavery dominated the "free" republic of the west for half a century, with the slave cotton kingdom as foundation stone for British manufactures, while Great Britain seized land and labor in all the dark world. Suppose that England had freed and educated Africa, emancipated India, and joined hands with Japan to uplift China, instead of making ignorance compulsory for the majority of men even in England, in order to build up the most "comfortable" and envied aristocracy on earth? Suppose the technique and science of the nineteenth century had been used to raise the many instead of to enrich the few?

A dream? Perhaps, but even an unrealized dream would be better than the present nightmare.

The new era of capitalism dawned, springing from Calvinism: thrift, industry, honesty as the best policy, along with interest and profit. Capitalism passed into high capitalism at different periods in different nations: In England in 1846, when English capitalism needed no protective tariff, it smashed the agriculturists in Parliament and forced the adoption of free trade; in the United States invested capital passed the value of the land about 1850. The Revolution of 1848 in France revealed the power of organized labor as well as the power of capitalism, which later triumphed. In Germany capitalism began its full sway after World War I.

In the British Parliament, after the passage of the Reform Bill in 1832, capitalism was paramount. The plantation trade had formerly meant everything; but

in the new capitalist system, plantation slavery had little place. Britain's mechanized might was still, however, making the whole world her footstool. She was clothing the world, exporting men and machines, and had become the world's banker. British capital, like British production, was thinking in world terms. "Between 1815 and 1830 at least fifty million pounds had been invested more or less permanently in the securities of the most stable European governments, more than twenty million had been invested in one form or another in Latin America, and five or six millions had very quietly found their way to the United States." But no new capital went to the West Indies.

This then was the history of the slave trade, of that extraordinary movement which made investment in human flesh the first experiment in organized modern capitalism; which indeed made capitalism possible. It accompanied the beginnings of democracy in the modern world, but that beginning was hindered and almost stopped by the result which black slavery had on Africa itself.

In Africa a new and supplementary means of control, developed by means of the Arab trade in ivory, led to exploration and eventual annexation under the pretense of attacking slavery. In this whole story of the so-called "Arab slave trade" the truth has been strangely twisted. Arab slave raiding was in the beginning, and largely to the end, a secondary result of the British and American slavery and slave trade and specifically was based on American demand for ivory. The Arabs had by the nineteenth century driven back the Portuguese opposite Zanzibar and had developed two profitable products of trade: ivory and slaves.

Ivory has a long history. Homer repeatedly mentions it. Ivory has been found in the ruins of Nineveh and in the days of Tuthmosis III; cargoes of ivory and ebony in addition to gold came down the Nile. In Kings and Chronicles we learn of the great throne of ivory which Solomon built and hear that once every three years ships

40-3-90

came to Israel with gold and silver, ivory, apes, and peacocks. Ezekiel laments the ruin of Tyre with its boxwood benches inlaid with ivory. In Greece the statue by Phidias of Jupiter Olympus, one of the seven wonders of the world, was made of ivory, marble, and gold. The seats of the Roman senators were made of ivory, and large quantities of ivory poured into Rome from Africa.

By the beginning of the Christian era the trade in ivory had decreased. The herds of elephants had disappeared, and there was no organised method of gathering the ivory or of brining it to market. Moreover, it was not until the Renaissance, in the fifteenth century, that renewed demand made search for it profitable. The Portuguese, both on the West Coast of Africa and in Mozambique, began to export it. They were so prodigal that the considerable store which the natives had collected was almost exhausted by the middle of the seventeenth century.

The Dutch began to collect ivory in South Africa, and there and in Central Africa a steady supply kept pace with the demand. By the middle of the nineteenth century, however, there came a new demand from the west. The ivory had long been carried by the slaves to the coast or down the Nile, and then instead of the bearers being returned, they were sold. Most of the ivory in the seventeenth, eighteenth, and the beginning of the nineteenth centuries went to Arabia, Persia, and India, and the slaves to the same parts of the world as soldiers and servants. The trade was small, and while the slave trade was a disrupting influence it did not transfer any large number of persons.

Ivory from about 1840 became increasingly valuable. Its gathering called for fire-arms and transport. Europe and America furnished the arms in vast quantity. Negro porters bore the white gold over vast distances on their heads, and the traders doubled their profit by selling these Negroes into slavery in the Middle East and America. The result was an industry with huge profits, which called to service the

most vicious elements of the Nile Valley with its social disintegration of centuries, aided by the efforts of Mohammed Ali, the ally of white colonial aggression.

40-3-91

It also called white soldiers of fortune like Selous and Lugard, who slaughtered the herds of half-human elephants in cold blood. It called the explorers who followed the hunters and slave traders. After the explorers came the missionaries. Both pointed out that the ivory-slave business was killing the goose that might lay even more golden eggs, if instead of killing valuable labor, this labor and materials were subject to political control of Europe and the abundant capital seeking investment. The missionaries like Livingstone saw in this not only a means of saving bodies and souls of human beings, but als thrift and good business, which in the folklore of early capitalism were the inevitable elements divinely conjoined for modern civilization.

The rising demand in England and America for the suppression of the slave trade in East Africa was not pure philanthropy. It was that "philanthropy and 5 per cent" which was the transition from the century of human slavery in America to the century of the transfer of capital from sugar plantations to colonial imperialism in Africa and Asia. The main end of both enterprises was profit to the owner and exploiter, mainly at the expense of poverty, ignorance, and pain for the slave and native subject.

About the middle third of the nineteenth century the situation changed abruptly. The demand for ivory increased. In America, ivory working was an early industry, especially in New England on the banks of the Connecticut, where ivory has been cut since 1820. It was processed for carving, for cutlery, billiard balls, and miniatures, and for piano keys. At Deep River and Ivoryton and Buffalo the keyboards for all the pianos in America, Canada, and Australia were made. Because of increased demand, European and American traders set up establishments for buying ivory in Zanzibar; in the thirties and forties prices increased. Arabs began to ask for

40-3-92

arms in order to shoot elephants and coerce the natives. Increased exports of ivory to Europe and America and of slaves to Arabia and the Persian Gulf, called for increased imports of weapons and ammunition. The Germans sent thirteen thousand muskets in one year. The British and Portuguese sent thousands of the old Sepoy guns from India. The French supplied a single-barrel light weapon. American blasting powder came in ten- and twenty-five-pound kegs. German cavalry sabers came and cases of percussion caps. Arabs borrowed from Indian usurers at 60 to 80 per cent, and set out for the haunts of elephants.

Curiously enough it was this ivory trade that stimulated and guided travel and discovery in Central Africa. Explorers followed the ivory traders, who were the true discoverers. Burton, Speke, Livingstone, Stanley, and Cameron started from the Arab capital of Zanzibar. They followed the lines of traffic set by the Arab ivory traders. Petherick, the British ivory trader, preceded Schweinfurth, and the countries he explored were opened up by the ivory trade. Livingstone found the ivory traders on the Upper Congo. Cameron left Zanzibar in 1873 and was the first European to cross Africa from east to west along the ivory traders' routes. Stanley made his second expedition, 1874-1877, and was helped by Tippoo-Tib, the great Negro slave trader who had also helped Livingstone. The last of the great expeditions was Stanley's, in 1887-1889, when he rescued Emin Pasha and his Negro wife.

It was in this way that knowledge of the technique of the slave trade and its meaning came to Europe at a time when the slave trade from Africa to America had been largely suppressed. We had a series of first-hand descriptions of this trade.

Ivory became in the last half of the nineteenth century the scourge of Central Africa. The complete story of bloodshed and cruelty will never be known. Thousands of miles of fertile country were turned into wilderness and ruin. Hundreds of thousands of elephants were slain and thousands of human beings. It has been estimated that not more than one in five of the captives bearing the ivory ever reached

the ocean. Starved and weakened by disease and the strain of marching, they lined the long paths with their dead.

40-3-93

"Picture, if you can, a territory nearly as large as the whole of our United States east of the Mississippi River and Illinois, terrorized and overrun in all directions with hundreds of roving bands of plundering murderers armed with invincible weapons of oppression, a land of blood and might, the nights filled with flame and destruction, the days weary with the marching of the coffles and the blood of the despairing, hopeless slaves. And this for years, for decades.

Henry M. Stanley wrote: "Every tusk, piece, and scrap in the possession of an Arab trader has been steeped and dyed in blood. Every pound weight has cost the life of a man, woman, or child, for every five pounds a hut has been burned, for every two tusks a whole village has been destroyed, every twenty tusks have been obtained at the price of a district with all its people, villages, and plantations. It is simply incredible that, because ivory is required . . . populations, tribes, and nations should be utterly destroyed."

Hamed bin Muhammed, a Negro, better known as Tippoo-Tib, was one of the greatest of slave traders. He eventually became sultan and overlord of the country of Kassongo in the very middle of Central Africa, which he made a center of ivory collecting and slave hunting. He had a thousand muzzle-loading guns. And it was not until 1905 that he died.

The credit for suppressing the slave-ivory trade must go to Livingstone who inspired it, to Kirk of East Africa who helped carry it through, and to Bargarsh, the Negroid Arab, who actually suppressed the Zanzibar trade. But these three men represent the curious interests involved: Livingstone was a humanitarian who thought that trade and commerce was the best and natural way to improve the condition of man. He would be horrified to see South Africa and Rhodesia today and realize the plight into which the natives have been forced by European trade and industrialism. Kirk

40-3-94

was a British imperialist who foresaw the colonial era. He was no philanthropist desirous of the development and rise of the blacks. What he wanted was to expand the power of England, and he believed that could be done best by suppressing the slave trade and slave labor under the Arabs and increasing colonial ownership and serf labor under Great Britain. The Arab sultan Bargarsh was persuaded that colonial alliance with Great Britain would protect his future power and income.

The effect upon Europe was curious. European and American commerce was stimulated. The missionaries, still believing in the expanding trade of the eighteenth century, coupled commerce with missionary effort and did not see the inherent contradiction between them. The result was that the missionary and the merchant worked side by side and hand in hand. It was Livingstone who declared that he was bringing commerce and missionary effort to the natives.

Commercial companies, like the African Lakes Company, exploited and administered territories and equipped the elephant hunters. They supplied the rifles and sent the hunters, reserving the right to buy the ivory at a set price. It was thus that Sir Alfred Sharp and Lord Lugard began life as professional ivory hunters. The coming of American, British, French, German and Portuguese traders in the middle of the nineteenth century furnished the artillery for the worst period in this ivory-slave trade under the Arabs. At its height thirty thousand slaves were exported annually through Zanzibar, leaving more than a hundred thousand who had died on the way to the sea.

Then that extraordinary transformation took place in British public policy. The stopping of the expansion of the Arab slave trade in East and Central Africa became a means of building up the British Empire. All that Britain had done in establishing the new modern slavery in America was forgotten in her effort to suppress the ivory-slave trade in Africa, and that effort was only the other side of her building up of a great African colonial territory which she proposed to exploit

40-3-25

by the use of cheap native labor, the sale of African raw materials, and the opening of markets for her merchandise. Slavery and the slave trade became transformed into anti-slavery and colonialism, and all with the same determination and demand to increase the profit of investment.

It all became a characteristic drama of capitalistic exploitation, where the right hand knew nothing of what the left hand did, but rhymed its grip with uncanny timeliness; where the investor neither knew, nor inquired, nor greatly cared about the sources of his profits; where the enslaved or dead or half-paid worker never saw nor dreamed of the value of his work (now owned by others); where neither the society darling nor the great artist saw blood on the piano keys; where the clubman, boasting of great game hunting, heard above the click of his smooth, lovely, resilient billiard balls no echo of the wild shrieks of pain from kindly, half-human beasts as fifty to seventy-five thousand each year were slaughtered in cold, cruel, lingering horror of living death; sending their teeth to adorn civilization on the bowed heads and chained feet of thirty thousand black slaves, leaving behind more than a hundred thousand corpses in broken, flaming homes.

Quite naturally all this ivory trade centered in London. In Mincing Lane the ivory of the world was bought and sold from the time of the eighteen twenties, when the slave cotton kingdom began to pour profit from American plantations into New York and Manchester. The annual imports of ivory into London rose as follows:

1788-1798: 100 tons a year

1827: 60 tons

1845-1849: 294 tons

1870-1874: 627 tons

1880-1884: 514 tons

This meant the death of seventy-five thousand elephants a year in the heyday of the trade. An enthusiastic elephant hunter described the death of one elephant. They had killed her child. "She turned with a shriek of rage and made a furious charge. She charged three or four times. She often stood still and covered with blood faced the men as she received fresh wounds. At last with a short struggle she staggered around and sank down kneeling and dead." Far away over miles and years, on lovely keys chipped from her curving tusks, men played the Moonlight Sonata. Neither for the keys nor the music was the death of the elephant actually necessary.

It was this London market that supplied raw material to be made into billiard balls and piano keys and lovely little ornaments to Ivoryton, Connecticut, and also contrived through the veiled, devious ways of high finance banking to supply Arab and Negro slave raiders with powder and guns and to buy their ivory at prices which were fabulous to them. Behind the slave raiders came the explorers, who pointed out the vast resources of Africa and the possibilities of African labor; behind the explorers came the missionaries, who cried out bitterly against slavery but said nothing and knew less of the white sources of their power in London and Buffalo.

Gradually the picture changed: the captains of industry saw new opportunity for capital. They could wrench the profits of ivory from the Arabs and Negroes; they could wheel England and world religion back of imperial seizure of Africa from the Cape of Good Hope to Cairo, with not only petty profit from ivory, but vaster profits from spices, gold, diamonds, and copper; they could replace wasteful slavery with local black labor paid at wages from one-half to nine-tenths cheaper than white labor in Europe and America and make white labor like it because all this could be done to the glory of God and the superiority of the white race. And it was done.

So colonial imperialism was born. And so some of its leaders illustrated in their own individual lives its development; there was Frederick C. Selous, who began

as an elephant hunter and then annexed the peoples and minerals of Mashonaland to the British Empire; there was Frederick D. Lugard, who first fought in India, Burma, and the Sudan; then as a big game hunter in East Africa, where, armed by the African Lakes Company, he murdered elephants in great numbers and became a part of the ivory-slave trade complex. Next he appeared in East Africa as a free-lance fighter against Arabs and Mohammedans and in defense of Christian missions; he reappeared as agent of the British East Africa Company and annexed Uganda to Britain. Thereupon he was recognized as a great champion of imperial England and went to West Africa to help subdue the falling remnants of Sudanese culture. Here he shrewdly realized that conquest of these peoples could most easily be accomplished if their tribal government were left undisturbed, while Britain controlled trade and foreign relations. Having thus invented "indirect rule," he became a British governor in West Africa. Eventually he retired, lived in England on a pension paid by black West Africa, was regarded as the greatest authority on Africa, and died in honor as a noble British lord.

What effect did all this have upon the dark natives of Africa? In the past we have dwelt upon physical suffering, the loss of live, and the devastation of the land, but we have not thought of the larger and deeper social disintegration. First of all, not only was the way opened from the Sahara to the Cape of Good Hope for marauding masses of Bantu warriors, but this great and long-continued movement became organized for aggression and conquest. We hear of the fierce onslaughts of wild tribes like the Yaggas, but we must also remember that there came a new sort of organization. Negro life could not settle down for political organization and empire building. It could not wait for the development of herdsmen and agriculture. It must hurry on to safer places and sheltered land and loot. "It was sorrowfully recognized that the degradation of the Negro peoples of the nearer African interior was the direct result

of European slave-dealing. The savagery of Dahomey and Benin was the survival of the ferocity by which native chiefs, a century earlier, had supplied the demands of English and Dutch traders for victims for the plantations."

40-354

This movement culminated in the magnificent and utterly ruthless army of a Chaka in the nineteenth century, which almost successfully battled machine guns with assagais. Then too on the West Coast came transformation: the city-states with their intricate social organization and carefully planned industry and beautiful art were pushed back and overwhelmed by newer, stronger military states, like that of Dahomey in the seventeenth century; and the Ashanti earlier had never gained in the line of peaceful industry and art as much as the new gains which they made as intermediaries of the slave traders.

The East African slave trade under Negroes like Tippoo-Tib became organized. The commercial ends and profits sought by Europe were subtly introduced into and shared by an Africa that had been foreign to this kind of life. The mild domestic slavery of the African tribes and of the Arabs and Persians, which did not preclude the sons of slave becoming a king, a statesman, or a poet, was changed into chattel slavery with hard labor and cruel tasks. The continued development of African civilization, forecast in the fourteenth and fifteenth centuries by that in the Sudan, was prevented and turned backward into chaos, flight, and death.

Decadence could be seen on the West Coast, in the shadow of fabled Atlantis, where there emerged in curious juxtaposition the blood sacrifice of the Benin juju together with the beautiful bronzes of the Benin sculptors. The great kingdoms and empires of the Sudan which fell at the battle of Tenkadibou not only suffered the incubus of a horde of Berber invaders as they moved east and became the Sudanese kingdoms of Kanem and Bornu and the realm of the Fung; they approached the valley of the Nile and came into fierce combat with some of the worst manifestations of Mohammedanism.

40-3-55

Pushing farther south, the Bantu herdsmen threw themselves upon the Congo and Zimbabwe. There came to Africa an end of industry, especially industry guided by taste and art. Cheap European goods pushed in and threw the native products out of competition. Rum and gin displaced the milder native drinks. The beautiful patterned cloth, brocades, and velvets disappeared before their cheap imitations in Manchester calicos. Methods of work were lost and forgotten.

With all this went the fall and disruption of the family, the deliberate attack upon the ancient African clan by missionaries. The invading investors who wanted cheap labor at the gold mines, the diamond mines, the copper and tin mines, the oil forests and cocoa fileds, followed the missionaries. The authority of the family was broken up; the authority and tradition of the clan disappeared; the power of the chief was transmuted into the rule of the white district commissioner. The old religion was held up to ridicule, the old culture and ethical standards were degraded or disappeared, and gradually all over Africa spread the inferiority complex, the fear of color, the worship of white skin, the imitation of white ways of doing and thinking, whether good, bad, or indifferent. By the end of the nineteenth century the degradation of Africa was as complete as organized human means could make it. Chieftains, representing a thousand years of striving human culture, were decked out in second-hand London top-hats, while Europe snickered.

Frobenius says in his Civilisation Africaine: "When they [the first European navigators of the end of the Middle Ages] arrived in the Gulf of Guinea and landed at Vaida, the captains were astonished to find streets well cared for, bordered for several leagues in length by two rows of trees; for many days they passed through a country of magnificent fields, a country inhabited by men clad in brilliant costumes, the stuff of which they had woven themselves! More to the South in the Kingdom of Congo, a swarming crowd dressed in silk and velvet; great states well

ordered, and even to the smallest details, powerful sovereigns, rich industries -- civilised to the marrow of their bones. And the condition of the countries on the eastern coast -- Mozambique, for example -- was quite the same.

40-3-56

"What was revealed by the navigators of the fifteenth to the seventeenth centuries furnishes an absolute proof that Negro Africa, which extended south of the desert zone of the Sahara, was in full efflorescence, in all the splendour of harmonious and well-formed civilisations, an efflorescence which the European conquistadors annihilated as far as they progressed. For the new country of America needed slaves, and Africa had them to offer, hundreds, thousands, whole cargoes of slaves. However, the slave trade was never an affair which meant a perfectly easy conscience, and it exacted a justification; hence one made of the Negro a half-animal, an article of merchandise. And in the same way the notion of fetish (Portuguese feticeiro) was invented as a symbol of African religion. As for me, I have seen in no part of Africa the Negroes worship a fetish. The idea of the 'barbarous Negro' is a European invention which has consequently prevailed in Europe until the beginning of this century."

92 = 1

pp. ~~160 — 165~~ The Self Worship of Europe

It has long been the belief of modern men that the history of Europe covers the essential history of civilisation, with unimportant exceptions; that the progress of the white race has been along the one natural, normal path to the highest possible human culture. Even in its collapse today, the dominant opinion is that this is but an unfortunate halting on the way; the same march must and will be resumed after a breathing space for recovery.

40-3-47

On the other hand, we know that the history of modern Europe is very short; scarcely a moment of time as compared with that of eternal Egypt. The British Empire is not more than two hundred and fifty years old; France in her present stature dates back three hundred years; the United States was born only a hundred and seventy years ago; and Germany less than one hundred years. When, therefore, we compare modern Europe with the great empires which have died, it is not far different in length of days from the empires of Persia, Assyria, the Hittites, and Babylon. Ethiopia led the world longer than England has.

It is surely a wider world of infinitely more peoples that Europe has ruled; but does this reveal eternal length of rule and inherent superiority in European manhood, or merely the temporary possession of a miraculously greater brute force? Mechanical power, not deep human emotion nor creative genius nor ethical concepts of justice, has made Europe ruler of the world. Man for man, the modern world marks no advance over the ancient; but man for gun, hand for electricity, muscle for atomic fission, these show what our culture means and how the machine has conquered and holds modern mankind in thrall. What in our civilisation is distinctly British or American? Nothing. Science was built on Africa and Religion on Asia.

Was there no other way for the advance of mankind? Were there no other cultural patterns, ways of action, goals of progress, which might and may lead man to something finer and higher? Africa saw the stars of God; Asia saw the soul of man; Europe saw and sees only man's body, which it feeds and polishes until it is fat, gross, and cruel.

40-3-22

Let us turn to West Africa, where man tried a different way for a thousand years. First we face the query: how do we know what man did in West Africa, since black Africa has no written history? This brings the curious assumption that lack of written record means lack of matter and deed worth recording. The deeds of men that have been clearly and accurately written down are as pinpoints to the oceans of human experience. To recall that experience we must rely on written record, varying from direct narrative to indirect allusion and confirmation; we must rely also on memory -- the memory of contemporary onlookers, of those who heard their word, of those who over a lapse of years interpreted it and handed it on; we must rely on the mute but powerful testimony of habits, customs, and ideals, which echo and reflect vast stretches of past time. Finally, we agree upon as true history and actual fact any interpretation of past action which we today believe and want to belive is true. The relation of this last historical truth to real truth may vary from fact to falsehood.

Climate, with sun and ice, gave Europe opportunity to expand vastly the Asiatic and African invention of written records. Heat and rain made written record in West Africa almost impossible, and forced that land to rely on the memories of men, developed over the centuries to a marvelous system of folklore and tradition. But back of both methods lay real human history recorded in cultural patterns, industry, religion, and art.

One of the extraordinary developments of civilization in Africa was on the West Coast around the great Gulf of Guinea. Frobenius has fancifully called this "Atlantis" and regards it as possibly a development of the culture of that fabled island in the Atlantic. Whatever its origin, there grew up on the West Coast of Africa a peculiarly African state. How far back its development extends, no man knows. We have a fairly authentic history from the seventeenth century on, creditable but discontinuous reports in the sixteenth and fifteenth, and before that only customs, tradition, and legend.

40-3-37

On a coast protected from inland by mountain, forest, and desert, and on the west by the ocean, there grew up an agricultural culture centering in the village. On this was developed in time, industry and art. Industry discovered division of labor between cities; each town had its own peculiar industry and then traded its surplus with the other towns. The towns were united in a loose confederacy with councils and chiefs.

Six hundred years before Christ, Phoenicians traded on the West Coast of Africa and a century later the Carthaginians. From prehistoric times this coast was peopled by the black West African type of Negro. The center of their culture lay above the Bight of Benin, along the slave coast, and reached east and north. It can be traced in stone monuments, architecture, works of art, and especially patterns of culture.

The fabrication of cloth and tools was widespread and leisurely, as befitted a tropical sun. For there was here the fierce fight with the mosquito, just as in the Congo, and east there was the duel with the tsetse fly; and this battle with malaria, sleeping-sickness, and a dozen enemies of man was as much a part of the struggle for life and happiness as any of man's activities. Despite this, not only the making of cloth, the fashioning of garments, and the welding of iron reached a high development but there grew up also art, primitive but of exceptional power, which has influenced the modern world and deserves to be called one of the three or four original art forms of this earth. Agriculture and fishing, manufacturing and pottery, the welding and processing of metal, the development of painting and art, characterize this Negro culture.

In Ashanti weaving was done with simple tools, calling for great skill, and resulted in cloth artistically beautiful. There was wood-carving, divided into many separate branches; carvers made fetishes and drums and figures which were individual and original. "Regarded in the light of certain modern aesthetic tendencies, they possess an individuality and peculiar merit which astonish many people who see them

40-3-38

for the first time. Love and appreciation of what is artistic and beautiful are attributes which cannot be said to be the prerogative of all of us. In Ashanti, however, such traits seem to be possessed by what we should call 'the uneducated masses.' There is hardly any object capable of artistic treatment which is not made the medium for some ornamental design which gives aesthetic delight to the African's mind and eye; such as stools, spoons, combs, wooden plates, calabashes, doors, sticks, staves of office, canoes, mari boards, knives, mortars, drums, ivory tusks, pots, pipes, weights and scales, metal work of every description, walls of temples and dwellings, and textiles of every kind. Even the tools and appliances used to obtain these effects, the forge itself, the shuttle, the mesher used for making nets, are ornamental, being decorated with artistic effects, which, however crude, are never vulgar and inartistic."

The true West African showed great skill in plastic art; he carved ivory and wood, and the bronzes of Benin are among the most noteworthy remains of artistic effort in the world. When the state was seized by the British in 1897, they found carved elephant tusks, bronzes cast by the cire-perdue process, including the well-known bronze head of a Negress, now in the British Museum, a masterpiece of art.

A bronze head was discovered by Frobenius in Nigeria in 1910-1912. In this remarkable figure we have what is perhaps the finest known example of African achievement in the realm of the plastic arts. In the words of its discoverer, "the setting of the lips, the shape of the ears, the contour of the face, all prove, if separately examined, the perfection of a work of true art which the whole of it obviously is.... It is cast in what we call the 'cire perdue', or the hollow cast, and is very finely chased, indeed like the best Roman examples."

Considerations growing out of the study of this and terra-cotta specimens, supplemented by many other findings reported by previous investigators, led Frobenius to the daring conclusion that this art belongs to the old order of Central African civilization whose beginnings go back perhaps to the second millennium before Christ.

He was also of the opinion that there is sufficient evidence to warrant the assumption that there were important links between this ancient culture and some of those famous and widely heralded civilisations which flourished along the banks of the Nile and in the Mediterranean Basin in the Classical and pre-Classical Ages.

40-3-39

The oldest art is that of pottery, of which there are endless remains in West Africa. Traces of pottery-making go back certainly five hundred years and possibly a thousand years on the West Coast. It is done chiefly by women and is a hereditary craft handed down from mother to daughter.

It may well be that the West Coast Negroes first gave to civilisation the art of welding iron which spread over all Africa and then eventually into Europe and Asia. It is of course possible that iron welding was discovered on other continents independently of Africa, but no continent had so wide a use of iron in earliest times.

According to Boas: "It seems likely that at times when the European was still satisfied with rude stone tools, the African had invented or adopted the art of smelting iron. Consider for a moment what this invention has meant for the advance of the human race. As long as the hammer, knife, drill, the spade, and the hoe had to be chipped out of stone, or had to be made of shell or hard wood, effective industrial work was not impossible, but difficult. A great progress was made when copper found in large nuggets was hammered out into tools and later on shaped by melting; and when Bronze was introduced; but the true advancement of industrial life did not begin until the hard iron was discovered. It seems not unlikely that the people who made the marvelous discovery of reducing iron ores by smelting were the African Negroes. Neither ancient Europe, nor ancient western Asia, nor ancient China knew iron, and everything points to its introduction from Africa. At the time of the great African discoveries toward the end of the past century, blacksmiths were found all over Africa from north to south and from east to west. With his simple bellows and a charcoal fire he reduced

the ore that is found in many parts of the continent and forged implements of great usefulness and beauty."

40-3-40

Terday [redacted] argued: "I feel convinced by certain arguments that seem to prove to my satisfaction that we are indebted to the Negro for the very keystone of our modern civilization and that we owe him the discovery of iron." Togoland is perhaps the oldest and most famous iron-working area in Africa.

According to Reclus, "The smelting and working of iron, most useful of all metallurgic discoveries, has been attributed to the Negroes as well as to the Chalybes of Asia Minor; and the Bongos of the White Nile, as well as some other African tribes, have constructed furnaces of a very ingenious type. Their smelters and forgers are, for the most part, satisfied with rude and primitive implements, in the use of which they, however, display marvellous skill. The Fangs of the Ogowe basin produce excellent iron, whose quality is scarcely equalled by Europeans themselves. In most of the native tribes the smiths constitute a special caste, much respected and even dreaded for their reputed knowledge of the magic arts."

Concerning West African art in general, Sir Michael Sadler said: "West Africa has made its own characteristic contribution to the artistic treasures of the world." Sir William Rothenstein added: "I know nothing of the culture which produced these noble pieces, nor what influences, native or alien, inspired them. I know only that they are superb works of art, worthy to be set beside the best examples of sculpture of any period." According to J.J. Sweeney, the American critic: "As a sculptural tradition, African art has had no rival."

Professor Roger Fry, distinguished British art critic, said: "We have the habit of thinking that the power to create expressive plastic form is one of the greatest of human achievements, and the names of great sculptures are handed down from generation to generation, so that it seems unfair to be forced to admit that certain nameless

savages have possessed this power not only in a higher degree than we at this moment, but than we as a nation have ever possessed it. And yet that is where I find myself. I have to admit that some of these things are great sculpture, greater, I think, than anything we produced even in the Middle Ages. Certainly they have the special qualities of sculpture in a higher degree. They have indeed complete plastic freedom; that is to say, these African artists really conceive form in three dimensions. Now this is rare in sculpture."

40-3-41

In drum and strings African music reached a high degree of originality and perfection. The development of the drum language by intricate rhythms enabled the natives not only to lead in dance and ceremony, but to telegraph all over the continent with a swiftness and precision hardly rivaled by the electric telegraph. Von Hornbostel said of African music, particularly in Togo: "The African Negroes are uncommonly gifted for music, probably, on an average, more so than the white race. This is clear not only from the high development of African music, especially as regards polyphony and rhythm, but a very curious fact, unparalleled, perhaps, in history, makes it even more evident; namely, the fact that Negro slaves in America and their descendants, abandoning their original music style, have adapted themselves to that of their white masters and produced a new kind of folk music in that style. Presumably no other people would have accomplished this. In fact, the plantation songs and spirituals and also the blues and ragtimes which have launched or helped to launch our modern dance music, are the only remarkable kinds of music brought forth in America by immigrants."

Professor von Luschan considered the craftsmanship of Benin workers equal to the best that was ever produced by Cellini. Yet at the time they were creating, "in 1550, not a single peasant's house in Scandinavia had a window; and as late as 1773 Dr. Johnson and Boswell entered during their tour of the Hebrides, hovel which 'for a window had only a small hole, which was stopped with a piece of turf, that was taken

40-3-6

out occasionally to let in light.' In Berlin at the time of the Great Elector (1681), many houses in the capital had pigsties immediately below the front windows."

Frobenius wrote of West African cultures: "What these old captains recounted, these chiefs of expeditions -- Delbes, Marchais, Pigafetta, and all the others, what they recounted is true. It can be verified. In the old Royal Kunstkammer of Dresden, in the Weydemann collection of Ulm, in many another 'cabinet of curiosities' of Europe, we still find West African collections dating from this epoch. Marvellous plush velvets of an extreme softness, made of the tenderest leaves of a certain kind of banana plant; stuffs soft and supple, brilliant and delicate, like silks, woven with the fibre of a raffia, well prepared; powerful javelins with points encrusted with copper in the most elegant fashion; bows so graceful in form and so beautifully ornamented that they would do honor to any museum of arms whatsoever; calabashes decorated with the greatest taste; sculpture in ivory and wood of which the work shows a very great deal of application and style.

"And all that came from the countries of the African periphery, delivered over after that to slave merchants. . . .

"But when the pioneers of the last century pierced this zone of 'European civilization' and the wall of protection which had, for the time being raised behind it -- the wall of protection of the Negro still 'intact' -- they found everywhere the same marvels which the captains had found on the coast.

"In 1906 when I penetrated into the territory of Kassai-Sankuru, I found still, villages of which the principal streets were bordered on each side, for leagues with rows of palm trees, and of which the houses, decorated each one in charming fashion, were works of art as well.

"No man who did not carry sumptuous arms of iron ore or of copper, with inlaid blades and handles covered with serpent skin. Everywhere velvets and silken stuffs.

Each cup, each pipe, each spoon was an object of art perfectly worthy to be compared to the creations of the Roman European style. But all this was only the particularly tender and iridescent bloom which adorns a ripe and marvellous fruit; the gestures, the manners, the moral code of the entire people, from the little child to the old man, although they remained within absolutely natural limits, were imprinted with dignity and grace, in the families of the princes and the rich as in the vassals and slaves. I know of no northern people who can be compared with these primitives for unity of civilisation. Alas these last 'Happy Isles'! They, also, were submerged by the tidal wave of European civilisation. And the peaceful beauty was carried away by the floods.

45-3-7

"But many men had this experience: the explorers who life the savage and warrior plateau of the East and the South and the North to descend into the plains of the Congo, of Lake Victoria, of the Ubangi: men such as Speke and Grant, Livingstone, Cameron, Stanley, Schweinfurth, Junker, de Brazza -- all of them -- made the same statements: they came from countries dominated by the rigid laws of the African Ares, and from then on they penetrated into the countries where peace reigned, and joy in adornment and beauty; countries of old civilisations, of ancient styles, of harmonious styles."

All this industry in West Africa was developed around the Africans' ideas of religion: the worship of souls of trees and plants of animals; the use of the fetish; the belief in fairies and monsters. Along with this went training for medicine men and chiefs, and careful rules for birth, marriages, and funerals.

Of religion Frobenius said: "There is, among the deities possessed by all the other dark-skinned African nations combined, not one who can equal Shango, the West African Yoruban God of Thunder, in significance. This country's first royal ruler sprang, as its people believe, from his loins. His posterity still have the right to give the country its kings.

40-3-9

"Myth relates that Shango was born of the All-Mother, Yemaya. Powerful, warlike, and mighty, he was as great a God as was ever created in the minds of a nation striving for self-expression. He was the Hurler of Thunderbolts, Lord of the Storm; a God who burns down cities and rends trees. He is cruel and savage, yet splendid and beneficent.

"The floods which he pours give life to the soil and gladden the fields. Mankind fears him, yet loves him. Terrified by his wrath, they pray for his presence. They picture him riding a ram. They represent him with his hands full of thunderbolts, surrounded by his wives, the Lakes and the Rivers. He lives in a palace of brass, which is dazzlingly bright, and whence lightning shoots forth. He has a mighty 'medicine' which he takes through his mouth, and fire comes out when he opens it."

The architecture of the West Coast was strikingly integrated with climate, physiography, and culture. The lovely buildings of Benin and Ashanti have been described. A traveler in 1855 described the palace of a chief in Togoland: "Glele's palace was enormous -- it had housed in its time more than two thousand people -- but the greater part is falling into ruins. . . . This palace is by far the largest and most elaborate piece of Negro architecture I have seen; it was with that of Great Benin I imagine the most important in West Africa."

In 1787 the Chevalier de Boufflers, writing to the Comtesse de Sabran, spoke of his enthusiastic admiration of the beauty and cleanness of the townships in the Senegal.

The climate and physical surroundings conditioned much of this human development. There was lacking here the stone and dry climate which made it easy to preserve records in the Nile valley. Material on the West Coast disappeared before the dampness and the hosts of insects. This made the art of memory recording, of tradition handed down, of unusual importance, and here it was developed to an astonishing extent. The population invented systems of writing of which at least two on the Guinea Coast and the Cameroons have come down to our day. There were probably others. Thus alphabets which were never invented in Europe came to the world through Asia and Africa.

40-3-11

The whole culture complex of the African West Coast is native and original. It is a picture of the development of human institutions unique in the history of mankind, and we can only lament that we know so little of it and have studied it so imperfectly. This body of culture grew up strong and self-contained upon the West Coast and met in time the sudden impact of two outer forces: Islam from the north and Christianity from the west.

"West Africans are still today in the period of integral collectivism, known to our ancestors before the Middle Ages, while we have arrived at individualism. The question which presents itself is to know whether indeed we have made definitive progress in this line, since many of our thinkers, of the so-called advance guard, demand, as a benefit, the return to collectivism, although of a somewhat different form. This proves that the peoples of Negro Africa have not marched at the same rate of speed as the peoples of Europe, but in nowise proves that the former are inferior to the latter. Who knows, indeed, whether the latter have not gone too fast?"

Among the groups which showed striking intellectual development were the Abron, whose state dates from the fifteenth century; the Akan people, including the Ashanti, whose known history goes back beyond 1600. In addition there were the Ewe, Yoruba, people of Benin, Dahomey, and Nubia. Benin was among the oldest of the states and has a legendary history going back to A.D. 880 or perhaps earlier. It was a carefully organized state with a remarkable native culture. It was with Benin that the Portuguese made contact in the fifteenth century and traded in slaves and other produce. The people of Yoruba, with a notable culture, moved westward as the kingdoms of the Sudan began to expand, and attacked Dahomey.

Dahomey has a known history that dates from before the sixteenth century; it had a well-organized state with farmers and artisans, but they became middlemen in the slave trade. In the nineteenth century they made a treaty with the French, but finally war broke out and the country became a French protectorate.

46-3-12

The Ashanti played a notable part in West Africa. They conquered the Fanti people and fought six wars with England between 1803 and 1874; they were finally subdued in 1894. Their king, Osai Tutu Quamina, was a man of intelligense and character who would have made advantageous contact between whites and Negroes if he had been treated fairly. But the English during these days were wavering between two ideas: between the suppression of the slave trade to America and emancipation of the slaves in the West Indies, and the newer idea of reducing West Africa to colonial status. For a time they hesitated, even setting up the Negro state of Sierra Leone to be ruled by free slaves, and co-operating with the similar American experiment in Liberia. Finally, however, when the clear meaning of colonial imperialism began to be understood, they turned to definite conquest. The Fanti people who had helped the English conquer the Ashanti attempted to organize their relation to England by a federation, but the constitution that they adopted was regarded as treasonable and those who drafted it were put in jail, although afterward released by the Home Secretary.

The whole European situation was changing in the late nineteenth century. The Franco-Prussian war had been fought, Germany was a great power, and England was consolidating a wide colonial empire. The native culture on the West Coast underwent various consecutive changes. The powerful states of earlier days had been pressed back by the developments in the Sudan and even in the Nile valley. They found prosperity and encouragement in the new trade to the West, which developed and degenerated into man-hunting; most of the black kingdoms on the coast became intermediaries. The slaves and prisoners captured during the internal wars became no longer incidents of these wars, but the wars became deliberate efforts to gather slaves for trade and export.

The character of culture on the slave coasts slowly changed; an element of cruelty crept into states like Benin and Dahomey, although other states, like that

48-3-14

of the Yoruba, seem to have resisted to some extent. But the ancient culture of the Atlantic coast was ruined by the trade in slaves, by the importation of gin, and by the European trade; European goods drove out native art and artistic industry.

Of all this West African cultural development our knowledge is fragmentary and incomplete, jumbled up with the African slave trade. There has been no systematic, general study of the history of humanity on this coast. Nearly all has disappeared in the frantic effort to paint Negroes as apes fit only for slavery and then to forget the whole discreditable episode, wipe it out of history, and emphasise the glory and philanthropy of Europe. The invaluable art treasure which Britain stole from Benin has never been properly classified or exhibited, but lies in the British Museum.

Yet on the West Coast was perhaps the greatest attempt in human history before the twentieth century to build a culture based on peace and beauty, to establish a communism of industry and of distribution of goods and services according to human need. It was crucified by greed, and its very memory blasphemed by the modern historical method.

There can be no doubt but that the level of culture among the masses of Negroes in West Africa in the fifteenth century was higher than that of northern Europe, by any standard of measurement -- homes, clothes, artistic creation and appreciation, political organization and religious consistency. "Throughout the whole of the Middle Ages, West Africa had a more solid politico-social organization, attained a greater degree of internal cohesion and was more conscious of the social function of science than Europe." What stopped and degraded this development? The slave trade; that modern change from regarding wealth as being for the benefit of human beings, to that of regarding human beings as wealth. This utter reversal of attitude which marked the day of a new barter in human flesh did not die with the slave, but persists and dominates the thought of Europe today and during the fatal era when Europe by force ruled mankind.

40-3-27

There were a few startling incidents. I remember with what puzzled attention we heard Felix von Luschan, the great anthropologist of the University of Berlin, annihilate the thesis of race inferiority and then in the same breath end his paper with these words: "Nations will come and go, but racial and national antagonism will remain; and this is well, for mankind would become like a herd of sheep if we were to lose our national ambition and cease to look with pride and delight, not only on our industries and science, but also on our splendid soldiers and our glorious ironclads. Let small-minded people whine about the horrid cost of dreadnoughts; as long as every nation in Europe spends, year after year, much more money on wine, beer, and brandy than on her army and navy, there is no reason to dread our impoverishment by militarism. Si vis pacem, para bellum; and in reality there is no doubt that we shall be the better able to avoid war, the better we care for our armor. A nation is free only in so far as her own internal affairs are concerned. She has to respect the right of other nations as well as to defend her own, and her vital interests she will, if necessary, defend with blood and iron."

We were aghast. Did German science defend war? We were hardly reassured when in printing this speech the editor appended the following note: "To prevent the last few paragraphs from being misinterpreted, Professor von Luschan authorizes us to state that he regards the desire for a war between Germany and England as 'insane or dastardly.'

But it was in vain. In 1914 came World War I; in 1929 came the depression; in 1939 came World War II. The cost of these wars and crises in property and human life is almost beyond belief; the cost in the destruction of youth and of faith in the world and mankind is incalculable. Why did these things happen?

We may begin with the fact that in 1888 there came to the throne of Germany a young, vigorous German emperor of British descent. Wilhelm II had utter faith in the future of Germany. As a student I used to see him often on the Unter den Linden.

40-3-28

Time and again we students swung to the curb, and through the central arch of the Brandenburg Gate came the tossing of plumes and the prancing of horses, and splendid with shining armor and blare of trumpet there rode Wilhelm, by the Grace of God, King of Prussia and German Emperor.

Back of Wilhelm's faith in Germany lay deep envy of the power of Britain. In his soul strove unceasingly the ambition of Bismarck of Prussia and the aristocratic imperialism of his mother, a daughter of Queen Victoria. The French-British Entente Cordiale of the new century was faced by a German demand for "a place in the sun," a right to extract from colonial and semicolonial areas a share of the wealth which was going to Britain. When Germany invaded Belgium, and with that invasion brought war with England, it must be remembered that by that same token Germany was invading the Belgian Congo and laying claim to the ownership of Central Africa.

World War I then was a war over spheres of influence in Asia and colonies in Africa, and in that war, curiously enough, both Asia and Africa were called upon to support Europe. Senegalese troops, for example, saved France and Europe from the first armed German onslaught. They were the shock troops brought to be slaughtered in thousands by the climate and cannon of Europe. The man who brought the African troops to the succor of France was Blaise Diagne. He was a tall, thin Negro, nervous with energy, more patriotic in his devotion to France than many of the French. He was deputy from Senegal in the French Parliament and had been selected as the man to whom the chiefs of French West Africa would render implicit obedience. Raised to cabinet rank, he was made the official representative of the French in West Africa. The white governor who found himself subordinated to this Negro resigned in disgust, but Diagne went down the West Coast in triumph and sent a hundred thousand black soldiers to France at this critical time.

One must not forget that incident on the fields of Flanders which has been so quickly forgotten. Against the banked artillery of the magnificent German Army were sent untrained and poorly armed Senegalese. They marched at command in unwavering

40-3-29

ranks, raising the war cry in a dozen different Sudanese tongues. When the artillery belched they shivered, but never faltered. They marched straight into death; the war cries became fainter and fainter and dropped into silence as not a single black man was left living on that field.

I was in Paris just after the armistice in 1918, and it was to Diagne that I went to ask for the privilege of calling a Pan-African Congress in Paris during the Versailles Peace Conference.

The idea of one Africa to unite the thought and ideals of all native peoples of the dark continent belongs to the twentieth century and stems naturally from the West Indies and the United States. Here various groups of Africans, quite separate in origin, became so united in experience and so exposed to the impact of new cultures that they began to think of Africa as one idea and one land. Thus late in the eighteenth century when a separate Negro Church was formed in Philadelphia it called itself "African"; and there were various "African" societies in many parts of the United States.

It was not however, until 1900 that a black West Indian barrister, practicing in London, called together a Pan-African Conference. This meeting attracted attention, put the word "Pan-African" in the dictionaries for the first time, and has some thirty delegates, mainly from England and the West Indies, with a few colored North Americans. The conference was welcomed by the Lord Bishop of London and a promise was obtained from Queen Victoria, through Joseph Chamberlain, not to "overlook the interests and welfare of the native races."

This meeting had no deep roots in Africa itself, and the movement and the idea died for a generation. Then came World War I, and among North American Negroes at its close there was determined agitation for the rights of Negroes throughout the world, and particularly in Africa. Meetings were held and a petition was sent to President Wilson. By indirection I secured passage on the Creel press boat, the

40-3-30

Orizaba, and landed in France in December 1918. I went with the idea of calling a Pan-African Congress, and to try to impress upon the members of the Peace Conference sitting at Versailles the importance of Africa in the future world. I was without credentials or influence. I tried to get a conference with President Wilson but got only as far as Colonel House, who was sympathetic, but noncommittal. The Chicago Tribune of January 19, 1919, in a dispatch from Paris dated December 30, 1918, said:

> An Ethiopian Utopia, to be fashioned out of the German colonies, is the latest dream of leaders of the Negro race who are here at the invitation of the United States government as part of the extensive entourage of the American peace delegation. ...
>
> The Negro leaders are not agreed upon any definite plan, but Dr. DuBois has mapped out a scheme which he has presented in the form of a memorandum to President Wilson. It is quite Utopian, and it has less than a Chinaman's chance of getting anywhere in the Peace Conference, but it is nevertheless interesting. As "self-determination" is one of the words to conjure with in Paris nowadays, the Negro leaders are seeking to have it applied, if possible, in a measure to their race in Africa.
>
> Dr. DuBois sets forth that while the principle of self-determination cannot be applied to uncivilized peoples, yet the educated blacks should have some voice in the disposition of the German colonies. He maintains that in settling what is to be done with the German colonies the Peace Conference might consider the wishes of the intelligent Negroes in the colonies themselves, the Negroes of the United States, and South Africa, and the West Indies, the Negro governments of Abyssinia, Liberia, and Haiti, the educated Negroes in French West Africa and Equatorial Africa and in British Uganda, Nigeria, Basutoland, Swaziland, Sierra Leone, Gold Coast, Gambia, and Bechuanaland, and in the Union of South Africa.

40-3-31

Dr. DuBois' dream is that the Peace Conference could form an internationalised Africa, to have as its basis the former German colonies, with their 1,000,000 square miles and 12,500,000 population.

"To this," his plan reads, "could be added by negotiation the 800,000 square miles and 9,000,000 inhabitants of Portuguese Africa. It is not impossible that Belgium could be persuaded to add to such a state the 900,000 square miles and 9,000,000 natives of the Congo, making an international Africa with over 2,500,000 square miles of land and over 20,000,000 people.

"This Africa for the Africans could be under the guidance of international organisation. The governing international commission should represent not simply governments, but modern culture, science, commerce, social reform, and religious philanthropy. It must represent not simply the white world, but the civilised Negro world.

"We can, if we will, inaugurate on the dark continent a last great crusade for humanity. With Africa redeemed, Asia would be safe and Europe indeed triumphant."

Members of the American delegation and associated experts assured me that no congress on this matter could be held in Paris because France was still under martial law; but the ace that I had up my sleeve was Blaise Diagne, the black deputy from Senegal and Commissaire-Général in charge of recruiting native African troops. I went to Diagne and sold him the idea of a Pan-African Congress. He consulted Clemenceau, and the matter was held up two wet, discouraging months. Finally we received permission to hold the Congress in Paris. "Don't advertise it," said Clemenceau, "but go ahead." Walter Lippmann wrote me in his crabbed hand, February 20, 1919: "I am very much interested in your organization of the Pan-African conference, and glad that Clemenceau has made it possible. Will you send me whatever reports you may have on the work?"

40-3-32

American newspaper correspondents wrote home: "Officials here are puzzled by the news from Paris that plans are going forward there for a Pan-African conference. Acting Secretary Polk said today the State Department had been officially advised by the French government that no such conference would be held. It was announced recently that no passports would be issued for American delegates desiring to attend the meeting." But at the very time that Polk was assuring American Negroes that no Congress would be held, the Congress actually assembled in Paris.

This Congress represented Africa partially. Of the fifty-seven delegates from fifteen countries, nine were African countries with twelve delegates. Of the remaining delegates, sixteen were from the United States, and twenty-one from the West Indies. Most of these delegates did not come to France for this meeting but happened to be residing there, mainly for reasons connected with the war. America and the colonial powers had refused to issue special visas.

The Congress influenced the Peace Conference. The New York Evening Globe of February 22, 1919, described it as "the first assembly of the kind in history, and has for its object the drafting of an appeal to the Peace Conference to give the Negro race of Africa a chance to develop unhindered by other races. Seated at long green tables in the council room today, were Negroes in the trim uniform of American Army officers, other American colored men in frock coats or business suits, polished French Negroes who hold public office, Senegalese who sit in the French Chamber of Deputies. . . ."

The Congress specifically asked that the German colonies be turned over to an international organization instead of being handled by the various colonial powers. Out of this idea came the Mandates Commission.

The resolutions of the Congress asked in part:

A. That the Allied and Associated Powers establish a code of law for the international protection of the natives of Africa, similar to the proposed international code for labor.

40-3-33

B. That the League of Nations establish a permanent Bureau charged with the special duty of overseeing the application of these laws to the political, social, and economic welfare of the natives.

C. The Negroes of the world demand that hereafter the natives of Africa and the peoples of African descent be governed according to the following principles:

1. The land: the land and its natural resources shall be held in trust for the natives and at all times they shall have effective ownership of as much land as they can profitably develop.

2. Capital: the investment of capital and granting of concessions shall be so regulated as to prevent the exploitation of the natives and the exhaustion of the natural wealth of the country. Concessions shall always be limited in time and subject to State control. The growing social needs of the natives must be regarded and the profits taxed for social and material benefit of the natives.

3. Labor: slavery and corporal punishment shall be abolished and forced labor except in punishment for crime; and the general conditions of labor shall be prescribed and regulated by the State.

4. Education: it shall be the right of every native child to learn to read and write his own language, and the language of the trustee nation, at public expense, and to be given technical instruction in some branch of industry. The State shall also educate as large a number of natives as possible in higher technical and cultural training and maintain a corps of native teachers.

5. The State: the natives of Africa must have the right to participate in the government as fast as their development permits, in conformity with the principle that the government exists for the natives, and not the natives for the government. They shall at once be allowed to participate in local and tribal government, according to ancient usage, and this

40-3-34

> participation shall gradually extend, as education and experience proceed, to the higher offices of State; to the end that, in time, Africa be ruled by consent of the Africans. . . .Whenever it is proven that African natives are not receiving just treatment at the hands of any State or that any State deliberately excludes its civilized citizens or subjects of Negro descent from its body politic and cultural, it shall be the duty of the League of Nations to bring the matter to the notice of the civilized World.

The New York Herald of February 24, 1919, said: "There is nothing unreasonable in the program drafted at the Pan-African Congress which was held in Paris last week. It calls upon the Allied and Associated Powers to draw up an international code of law for the protection of the nations of Africa, and to create, as a section of the League of Nations, a permanent bureau to insure observance of such laws and thus further the racial, political, and economic interests of the natives."

We were, of course, but weak and ineffective amateurs chipping at a hard conglomeration of problems about to explode in chaos. At least we were groping for light.

Not only Africa but Asia took active part in World War I on the side of the Allies. India saw for the first time a prospect of autonomy within the British Empire. Japan wanted to be recognized as the equal of white European nations, and the Chinese Republic started on its new path to modern civilization. Peace dawned, and the war came to be known as "the War to End War." But in vain, for this war had not ended the idea of European world domination. Rather it had loosened the seams of imperialism.

In Africa, Negro troops had conquered German colonies, and now British West Africa demanded a share in government. In the very midst of war came labor revolt in Russia, which Europe and North America tried to repress, but they did not succeed.

40-3-67

The First Pan-African Congress stirred the Africans. Especially the intelligentsia of West Africa began to organise and state their demands. They did not want to appear as a part of the Pan-African Congress or even as following up what it had done. Nevertheless, their inspiration came from the meeting. A national congress of British West Africa met in 1920 and made a statement of democratic aims which deserves wider knowledge than it had has. I quote parts of the statement:

MEMORANDUM of the case of the National Congress of British West Africa for a Memorial based upon the Resolutions to be presented to His Majesty the King Emperor in Council through the Right Honourable the Secretary of State for the Colonies, March 1920.

"In presenting the case for the franchise for the different colonies composing British West Africa, namely, the Gambia, Sierra Leone, the Gold Coast, and Nigeria, it is important to remember that each of these colonies is at present governed under the Crown Colony System. By that is meant that the power of selecting members for the legislative councils is in the Governor of each colony and not dependable upon the will of the people through an elective system.

"For a long time in the history of each of these colonies the anomaly of the nomination of members of the legislative council by the Governors and not by the people electing their own representatives has struck the inhabitants of each community, and now and again representations have been made with a view to remedying the disability... Before the rise of the Conference it resolved itself into the National Congress of British West Africa as a permanent official body for the purpose of representing constitutionally British West African need, political and otherwise. At each of the sessions an opportunity was given for the full discussion of the particular subjects under consideration, and upon the same being fully debated, resolutions arising out of the discussions were passes...

"The first submission with respect to this particular resolution is that in the demand for the franchise by the people of British West Africa it is not to be supposed that they are asking to be allowed to copy a foreign institution. On the contrary, it is important to notice that the principle of electing representatives to local councils

and bodies is inherent in all the systems of British West Africa. According to African institutions, every member of a community belongs to a given family with its duly accredited head, who represents that family in the village council, naturally composed of of the heads of the several families. Similarly, in a district council the different representatives of each village or town would be appointed by the different villages and towns, and so with the Provincial Council until, by the same process, we arrive at the Supreme Council, namely, the State Council, presided over by the Paramount Chief.

40-3-68

"Again, according to the African System no Headman, Chief, or Paramount Ruler has any inherent right to exercise jurisdiction unless he is duly elected by the people to so represent them. This, coupled with the facts in the preceding paragraph stated, makes the African system essentially a democratic one, and the appointment to political office depends entirely upon the election and the will of the people.

From the foregoing it is obvious that a system by which the Governor of a Crown Colony nominates whm he thinks proper to represent the people is considered by them as a great anomaly and constitutes a grievance and a disability which they now request should be remedied. Hence the constitutiona' agitation in the past, as in the present, for a change in the constitution of British West Africa so as to enable the people in the future to elect their own representatives to the Legislative Councils of the different colonies...

"...Legislation to be effectual, must be with the Chiefs in a representative legislative assembly. Any important measure affecting the people must be passed with the consent and the direct co-operation of the Chiefs themselves.

If the policy of the Government had been based upon this principle there would be no need today for this work. What the country requires most urgently today is a National Assembly wherein all sections of the community will be adequately represented. That is the fundamental element of progress, the reform at which all right-thinking men must directly aim."...

Britain after delay yielded to this demand in characteristic fashion: it gave

Negroes partial elective representation in the governor, who retained large power of legislation. British industry sat directly on the Council and in England continued to name West African governors and dictate colonial policies.

40-3-69

40-3-36

nation with visions of vengeance to be achieved through a new state ruled by German supermen. Simultaneously, Japan, having been rebuffed by England and America in her plea for racial equality before the League of Nations, saw an opportunity in this new order to displace Europe in the control of Asia.

Then came rumblings of World War II. The Axis wooed first England and France and then Russia. Britain made every offer of appeasement. Ethiopia was thrown to the dogs of a new Italian imperialism in Africa. Everything was offered to Hitler but the balance of power in Europe and the surrender of colonies. America, hesitating, was ready to fight for private industry against Nazism and to defend Anglo-American investment in colonies and quasi-colonial areas.

Hitler would not be appeased. So war began. Hell broke loose. Six million Jews were murdered in Germany through a propaganda which tied the small shopkeepers back of Hitler and placed unreasoning race prejudice back of war. France feared to trust colonial Africa. De Gaulle and the black Governor Eboué, with co-operation from England and France, could have established a new black France in Africa and shortened the war; but France yielded to Germany. England resisted doggedly. Russia yielded and joined hands with Germany, but not for long.

The real battle then began; the battle of the Nazi-Fascist oligarchy against the dictatorship of the proletariat. Germany determined first to crush Russia and then with Russian resources to destroy the British Empire. Japan aroused Asia, and by attacking America thus furnished the one reason, based on race prejudice, which brought America immediately into the war. India protested, China starved and struggled, the horrible world war with uncounted cost in property, life, and youth came to an end, and with it came the discovery of the use of atomic energy.

It was significant that the man who invented the phrase "White Man's Burden" and who was its most persistent propagandist, also wrote its epitaph:

40-3-13

In such a case, what we need above all is calm appraisal of the situation, the application of cold common sense. What in reality is the nature of the catastrophe? To what pattern of human culture does it apply? And, finally, why did it happen? In this search for reasons we must seek not simply current facts or facts within the memory of living men, but we must also, and especially in this case, seek lessons from history. It is perhaps the greatest indictment that can be brought against history as a science and against its teachers that we are usually indisposed to refer to history for the settlement of pressing problems. We realize that history is too often what we want it to be and what we are determined men shall believe rather than a grim record of what has taken place in the past.

Manifestly the present plight of the world is a direct outgrowth of the past, and I have made bold to add to the many books on the subject of our present problems because I believe that certain suppressions in the historical record current in our day will lead to a tragic failure in assessing causes. More particularly, I believe that the habit, long fostered, of forgetting and detracting from the thought and acts of the people of Africa, is not only a direct cause of our present plight, but will continue to cause trouble until we face the facts. I shall try not to exaggerate this thread of African history in the world development, but I shall insist equally that it be not ignored.

At the beginning of the twentieth century, when I was but ten years out of college, I visited the Paris Exposition of 1900. It was one of the finest, perhaps the very finest, of world expositions, and it typified what the European world wanted to think of itself and its future. Wealth and Science were the outstanding matters of emphasis: there was the new and splendid Pont Alexandre crossing the Seine, named for the Czar of Russia; there was an amazing exhibit of Russian industry at Jaroslav; and I had brought with me, as excuse for coming, a little display

duction of criminal practices which struck the chiefs of the people dumb with horror -- in a word, a veritable avalanche of filth and immorality overwhelmed the Congo tribes."

The moral humiliation forced on proud black people was illustrated in the British conquest of Ashanti. The reigning Asantahene had never been conquered. His armies had repeatedly driven back the British, but the British finally triumphed after five wars by breaking their word and overwhelming him by numbers and superior weapons. They promised him peace and honor, but they demanded a public act of submission.

40-3-59

"The scene was a most striking one. The heavy masses of foliage, that solid square of red coats and glistening bayonets, the artillery drawn up ready for any emergency, the black bodies of the Native Levies, resting on their long guns in the background, while inside the square the Ashantis sat as if turned to stone, as Mother and Son, whose word was a matter of life and death, and whose slightest move constituted a command which all obeyed, were thus forced to humble themselves in sight of the assembled thousands."

Perhaps the worst thing about the colonial system was the contradiction which arose and had to arise in Europe with regard to the whole situation. Extreme poverty in colonies was a main cause of wealth and luxury in Europe. The results of this poverty were disease, ignorance, and crime. Yet these had to be represented as natural characteristics of backward peoples. Education for colonial people must inevitably mean unrest and revolt; education, therefore, had to be limited and used to inculcate obedience and servility lest the whole colonial system be overthrown.

Ability, self-assertion, resentment, among colonial peoples must be represented as irrational efforts of "agitators" -- folk trying to attain that for which they were not by nature fitted. To prove the unfitness of most human beings for self-rule and self-expression, every device of science was used: evolution was made to prove that Negroes and Asiatics were less developed human beings than whites; history was so written as to make all civilization the development of white people; economics

was so taught as to make all wealth due mainly to the technical accomplishment of white folks supplemented only by the brute toil of colored peoples; brain weights and intelligence tests were used and distorted to prove the superiority of white folk. The result was complete domination of the world by Europe and North America and a culmination and tempo of civilization singularly satisfactory to the majority of writers and thinkers at the beginning of the twentieth century. But it was a result that was hollow, contradictory, and fatal, as the next few years quickly showed.

40-3-48

The proof of this came first from the colonial peoples themselves. Almost unnoticed, certainly unlistened to, there came from the colonial world reiterated protest, prayers, and appeals against the suppression of human beings, against the exclusion of the majority of mankind from the vaunted progress of the world. The world knows of such protests from the National Congress of India, but little has been written of the protests of Africa. For instance, on the Gold Coast, British West Africa, in 1871, some of the kings and chiefs and a number of educated natives met at Mankesim and drew up a constitution for self-government.

This was the so-called Fanti Federation, and in punishment for daring to propose such a movement for the government of an African British colony, the participants were promptly thrown in jail and charged with treason.

This attitude toward native rights and initiative has continued right down to our day. In 1945 the colored people of South Africa, speaking for eight million Negroes, Indians, and mixed groups, sent out this declaration to the proposed United Nations:

The non-European is debarred from education. He is denied access to the professions and skilled trades; he is denied the right to buy land and property; he is denied the right to trade or to serve in the army -- except as a stretcher-bearer or servant; he is prohibited from entering places of entertainment and culture. But still more, he is not allowed to live in the towns. And if it was a crime in Nazi Germany for an "Aryan" to mix with or marry a non-Aryan, it is equally a criminal offence in South Africa for a member of the Herrenvolk to mix with or marry with the slave race

. . . . In the majority of instances there is a separate law for Europeans and a separate law for non-Europeans; in those rare cases where one Act legislates for both, there are separate clauses discriminating against the non-Europeans. While it is true that there are no Buchenwald concentration camps in South Africa, it is equally true that the prisons of South Africa are full to overflowing with non-Europeans whose criminality lies solely in the fact that they are unable to pay the poll-tax, a special, racial tax imposed upon them. But this law does not apply to the Aryan; for him there is a different law which makes the nonpayment of taxes not a criminal, but a civil, offense for which he cannot be imprisoned.

XD-3-49

This does not say that all European civilization is oppression, theft, and hypocrisy; there has been evidence of selfless religious faith; of philanthropic effort for social uplift; of individual honesty and sacrifice. But this, far from answering the indictment I have made, shows even more clearly the moral plight of present European culture and what capitalistic investment and imperialism have done to it.

Because of the stretch in time and space between the deed and the result, between the work and the product, it is not only usually impossible for the worker to know the consumer; or the investor, the source of his profit, but also it is often made impossible by law to inquire into the facts. Moral judgment of the industrial process is therefore difficult, and the crime is more often a matter of ignorance rather than of deliberate murder and theft; but ignorance is a colossal crime in itself. When a culture consents to any economic result, no matter how monstrous its cause, rather than demand the facts concerning work, wages, and the conditions of life whose results make the life of the consumer comfortable, pleasant, and even luxurious, it is an indication of a collapsing civilization.

. . . . In the majority of instances there is a separate law for Europeans and a separate law for non-Europeans; in those rare cases where one Act legislates for both, there are separate clauses discriminating against the non-Europeans. While it is true that there are no Buchenwald concentration camps in South Africa, it is equally true that the prisons of South Africa are full to overflowing with non-Europeans whose criminality lies solely in the fact that they are unable to pay the poll-tax, a special, racial tax imposed upon them. When a culture consents to any economic result, no matter how monstrous its cause, rather than demand the facts concerning work, wages, and the conditions of life whose results make the life of the consumer comfortable, pleasant, and even luxurious, it is an indication of a collapsing civilization.

In 1945 Jan Smuts, Prime Minister of South Africa, who had once declared that every white man in South Africa believes in the suppression of the Negro except those who are "mad, quite mad," stood before the assembled peoples of the world and pleaded for an article on "human rights" in the United Nations Charter. Nothing so vividly illustrates the twisted contradiction of thought in the minds of white men. What brought it about? What caused this paradox? I believe that the trade in human beings between Africa and America, which flourished between the Renaissance and the American Civil War, is the prime and effective cause of the contradictions in European civilization and the illogic in modern thought and the collapse of human culture.

40-3-50

pp. 226 - 280

In Greek mythology Andromeda was the black daughter of Cepheus, King of Ethiopa and of Cassiopeia.

> That starr'd Ethiop Queen that strove
> To set her beauty's praise
> Above the sea nymphs and their powers offended.

It is said that Poseidon, angry at this black woman's affront to the Nereids, threatened to flood the land and send a sea monster. The Egyptian oracle of Ammon foretold that only the sacrifice of Andromeda to the monster could stay destruction. Thus Andromeda was chained and exposed on a headland facing the sea; Perseus, forefather of the Asiatic Persians of Iran, returning from the slaying of Gorgon, freed Andromeda and married her. After her death she reigned among the stars, her arms extended and chained, together with Cassiopeia and Perseus; and anyone may see them shining upon a beautiful night.

It might be asked what he this or any fairy tale to do with a world stricken, starving, and half-insane; or with the relations of Africa to Europe and America? Very little perhaps; and yet we must remember that this folk tale was part of the culture complex of the Mediterranean area where there was no color bar and no name for race; and where, at least in theory, the world was a fight between civilization and barbarism. Perhaps then in some way this legend may guide us in the present and the future. What in truth is going to be the future of black folk? Are they going to die out gradually, with only traces ot their blood to remind the world of their former existence? Are they going to be permanently segregated from the world in [redacted] or elsewhere, leaving the white world free of its fear and repulsion? Or in some slow or fast intermingling of peoples will all colors of mankind merge into some indistinguishable unity? None of these solutions seems practicable or imminent for many a long day. And, after all, none would really solve the basic problem of the relations of peoples; for even if extremes of human differences vanish, there will always remain differences, and around them the problems of human living-together.

40-3-71

Facing then the present problem, may we not frankly ask: Does the world need Africa? What has Africa to offer Europe, Asia, and America? Does Africa need the world? Certainly in the past the world has needed and used the Negro race: in Egypt and Ethiopia, and even in Asia; in the first building of the Christian Church and in the encouragement and transmission of thought and science from the East to the West that is known as the Renaissance; and especially in the sixteenth, seventeenth, eighteenth, and nineteenth centuries, the Negro race has been the foundation upon which the capitalist system has been reared, the Industrial Revolution carried through, and imperial colonialism established.

If we confine ourselves to America we cannot forget that America was built on Africa. From being a mere stopping place between Europe and Asia or a chance treasure house of gold, America became through African labor the center of the sugar empire and the cotton kingdom and an integral part of that world industry and trade which caused the Industrial Revolution and the reign of capitalism.

Through the nineteenth century America, on the strength of its black labor as well as white, grew in wealth and importance. It became the greatest experiment in modern democracy, seeking to embrace eventually not simply the white but the black worker. Today not only is the Negro an important part of the world of labor and art in all the Americas, but beyond this the trade of America is built in large degree upon the products raised by Africans and their children the world over.

But beyond America and in the main states of the modern world the cold economic fact is that Africa, its labor and products, are of prime importance. Of the typical products of Africa, cotton, one of the oldest there, is still valuable, and cotton cloth was exported from Africa long before it was woven in England. Sisal, hemp, and other fiber plants and flax are indigenous to Africa. The vast demand for vegetable oil has resulted in the oil industry, especially in West Africa. Palm oil is used for margarine, soap, lubrication, "olive oil," and for other industrial purposes. Thus the oil palm of West Africa is a valuable product and supplies palm kernels which are

exported from the whole West Coast. The ground nut and cocoa-nut also produce oils. The coconut palm is found all over the continent north of the Tropic of Capricorn and also south of the date-palm line.

40-3-72

The shea-nut tree grows where the oil palm does not, and its fat is used for food, soap-making, and butter. The cocoa industry of West Africa now supplies two-thirds of the cocoa of the world. Kola nuts are also exported. In the Mediterranean area practically all grains cultivated in Europe can be grown. Coffee is native to Africa and is named after the province of Kaffa, Abyssinia. It grows also in Liberia. The greater part of tropical Africa produces some kind of rubber. Nearly all the cloves are gotten from Zanzibar and Pemba. Fruits are grown and exported from nearly every part of Africa, from the bananas and mangoes in the tropics to the wine grapes of the north and south. The date palm flourishes throughout North Africa. Large areas of the continent are suitable for cattle and sheep raising, although flies and diseases keep them out of other districts.

Gold is widely distributed in Africa and has been worked from prehistoric ages on the West Coast, the Nubian desert, Central and South Africa. A third of the world's supply of gold in the world today is mined on the Witwatersrand. Diamonds are found in three districts of South Africa and in the Belgian Congo. They are of immense value. There are coal-bearing areas in South Africa. Iron has been worked from an early age, and on the Gold Coast, manganese is being developed.

There are four great copper-producing areas, principally in Rhodesia and the Belgian Congo, and also in the Northern Transvaal. Lead, graphite, and zinc are widely distributed. Phosphates occur in the North. Mineral oil has been discovered in Egypt near the Red Sea. Soda is largely an African product. Maize is cultivated in many regions. Tobacco is a crop of South Africa. Sugar is grown in Egypt, Mozambique, and Natal. And there is much valuable timber all over the continent.

40-3-73

Besides supplying these materials Africa is one of the largest reservoirs of human labor, not only of common labor, but of semi-skilled and increasing numbers of skilled laborers. For the most part these laborers are unorganized and without political power, and consequently they form the cheapest labor available, save in Asia.

On account of this wealth of labor and material, not only in the past but between the two world wars, capital has poured into Africa. In addition to primary sources of wealth -- mining, agriculture, timber -- industrialization has begun, and in the post-war period larger and larger investments of the accumulated profits of industry will seek new investments in this industrial paradise, where there are few laws to limit labor, even of women or children, and where profits are lightly taxed.

It has been argued with regard to this matter of profit in colonial regions that the profit has not been large and therefore is not the main object of colonial enterprise. This is especially the carefully worked out thesis of Lord Hailey's "African Survey." The survey follows an old pattern of British imperialism. A colonial official with the facts of the situation under his control writes a history of the condition and past of his region. It is usually done judiciously, and with much historical research, but it is, and in the nature of the case, has to be, a special plea for the defense of imperialism. And it omits consistently the point of view of the native and any body of fact which weighs against European aggression. Sometimes, as in Claridge's History of Ashanti, frank criticism of Great Britain creeps in; but for the most part, as in the works by Johnston, Lugard, and others the story is heavily weighted on the side of the imperialists.

It is of especial importance that the assertion of huge profits from cheap and half-slave labor and low price of materials should be answered. Consequently, Lord Hailey's co-workers point out that the "average" rate of profit from investment in Africa during the last century has amounted to little more than 4 per cent. Why is it, one asks on reading this, that profits are always reckoned as a percentage of some fixed sum while wages and salaries are counted in bulk?

10-3-44

It is, of course, as all men know, because the rate of income depends entirely upon the capital sum fixed as its base, and the fixing of the estimated amount of this capital sum is practically always in the hands and the control of the investors. Practically, then, the investors can fix their rate of profit at any sum simply by estimating at their own figure the amount of capital invested.

What is "investment" and how can we measure it? If ten dollars' worth of poisonous synthetic gin is exported to Africa, as it has been by the tens of thousands of gallons, and if there it buys labor and materials, which, when processed, are worth a hundred dollars, what is the value of the investment on which the rate of profit is based? If in the days of Cecil Rhodes lands stolen from the natives were mined with cheap half-slave labor and brought gold and diamonds worth a million dollars to London, at figure should this mine be "capitalized"? At the figure paid for its acquisition and cost of carrying on, or the figure the shares sold for in the stock market? In the great centers of capital investment, the legal right to determine the value of capital is today to some extent limited, but it was not limited in the wild gambling which accompanied the development of gold and diamond mining in South Africa, nor in the returns to trade in West Africa during the seventeenth, eighteenth, and nineteenth centuries. No matter, then, how vast a profit is made in Africa, and that it has been vast there cannot be the slightest doubt; it can be always made to look modest by watering the actual investment or putting a high estimate on good will. The only reason back of colonial imperialism is a rate of profit which the spread of democracy and trade unions has curtailed in Europe and North America.

The actual value of capital goods at the time of their investment in Africa, as compared with the realised value of the labor and material taken from Africa by investors and other claimants, legal and illegal, would if known, without shadow of doubt prove the enormous theft which Europe has perpetrated on peoples deliberately made helpless before greed and aggression. In the face of fact, statements like that of Lord Hailey as to the meager profits of African exploitation must be reinterpreted.

40-3-24

We went to work in 1921 to assemble a more authentic Pan-African Congress and movement. We corresponded with Negroes in all parts of Africa and in other parts of the world and finally arranged for a congress to meet in London, Brussels, and Paris in August and September. Of the one hundred and thirteen delegates to this Congress, forty-one were from Africa, thirty-five from the United States, twenty-four represented Negroes living in Europe, and seven were from the West Indies. They came for the most part, but not in all cases, as individuals and more seldom as the representatives of organizations or groups.

The Pan-African movement thus began to represent a growth and development; but it immediately ran into difficulties. First of all, there was the natural reaction to war and the determination on the part of certain elements in England, Belgium, and elsewhere, to recoup their war losses by intensified colonial exploitation. They were suspicious of native movements of any sort.

Then, too, there came simultaneously another movement, stemming from the West Indies. This was a peoples' movement rather than a movement of the intellectuals. It was led by Marcus Garvey and it represented a poorly conceived but intensely earnest determination to unite the Negroes of the world, especially in commercial enterprise. It used all of the nationalist and racial paraphernalia of popular agitation, and its strength lay in its backing by the masses of West Indians and by increasing numbers of American Negroes. Its weakness lay in its demagogic leadership, poor finance, intemperate propaganda, and the natural apprehension it aroused among the colonial powers.

The London meetings of the Congress of 1921 were preceded by a conference with the International Department of the English Labor party, where the question of the relation of white and colored labor was discussed. Beatrice Webb, Leonard Woolf, Mr. Gillies, Norman Leyes, and others were present. Otlet and La Fontaine, the Belgian leaders of internationalism, welcomed the Congress warmly to Belgium, but strong opposition was encountered. The movement was confounded by the press and others as a part of, if

40-3-80

not the real "Garvey Movement." The Brussels Neptune wrote June 14:

> Announcement has been made ...of a Pan-African Congress organized at the instigation of the National Association for the Advancement of Colored People of New York. It is interesting to note that this association is directed by personages who it is said in the United States have received remuneration from Moscow (Bolsheviks). The association has already organized its propaganda in the lower Congo, and we must not be astonished if some day it causes grave difficulties in the Negro village of Kinshasa composed of all the ne'er-do-wells of the various tribes of the Colony aside from some hundreds of laborers.

Nevertheless, meetings of interest and enthusiasm were held. The Congress assembled in the marvelous Palais Mondial. There were many more white than colored people, and it was not long before we realised that their interest was deeper, more immediately significant than that of the white people we had found elsewhere. Many of Belgium's economic and material interests center in Africa in the Belgian Congo. Any interference with the natives might result in an interference with the sources from which so many Belgian capitalists draw their prosperity.

Resolutions passed without dissent at the meeting in London contained a statement concerning Belgium, criticising her colonial regime, although giving her credit for plans of reform for the future. This aroused bitter opposition in Brussels, and an attempt was made to substitute an innocuous statement concerning good will and investigation, which Diagne of France, as the presiding officer, declared adopted in the face of a clear majority in opposition.

At the Paris meeting the original London resolutions, with some minor corrections, were adopted. They were in part:

To the World: The absolute equality of races, physical, political and social is the founding stone of world and human advancement. No one denies great differences of

gift, capacity and attainment among individuals of all races, but the voice of Science, Religion, and practical Politics is one in denying the God-appointed existence of super-races or of races naturally and inevitably and eternally inferior.

That in the vast range of time, one group should in its industrial technique, or social organization, or spiritual vision, lag a few hundred years behind another, or forge fitfully ahead, or come to differ decidedly in thought, deed, and ideal, is proof of the essential richness and variety of human nature, rather than proof of the co-existence of demi-gods and apes in human form. The doctrine of racial equality does not interfere with individual liberty; rather it fulfills it. And of all the various criteria of which masses of men have in the past been prejudged and classified, that of the color of the skin and texture of the hair, is surely the most adventitious and idiotic....

The beginning of wisdom in interracial contact is the establishment of political institutions among suppressed peoples. The habit of democracy must be made to encircle the earth. Despite the attempts to prove that its practice is the secret and divine gift of the few, no habit is more natural or more widely spread among primitive people, or more easily capable of development among masses. Local self-government with a minimum of help and oversight can be established tomorrow in Asia, in Africa, America, and the isles of the sea. It will in many instances need general control and guidance, but it will fail only when that guidance seeks ignorantly and consciously its own selfish ends and not the people's liberty and good.

Surely in the twentieth century of the Prince of Peace, in the millennium of Mohammed, and in the mightiest Age of Human Reason, there can be found in the civilized world enough of altruism, learning, and benevolence to develop native institutions, whose one aim is not profit and power for the few....

What then do those demand who see these evils of the color line and racial discrimination, and who believe in the divine right of suppressed and backward people to

learn and aspire and be free? The Negro race through their thinking intelligentsia demands:

I. The recognition of civilized men as civilized despite their race or color.

II. Local self-government for backward groups, deliberately rising as experience and knowledge grow to complete self-government under the limitation of a self-governed world.

III. Education in self-knowledge, in scientific truth, and in industrial technique, undivorced from the art of beauty.

IV. Freedom in their own religion and social customs and with the right to be different and nonconformist.

V. Co-operation with the rest of the world in government, industry, and art on the bases of Justice, Freedom, and Peace.

VI. The return to Negroes of their land and its natural fruits and defense against the unrestrained greed of invested capital.

VII. The establishment under the League of Nations of an international institution for study of the Negro problems.

VIII. The establishment of an international section of the Labor Bureau of the League of Nations, charged with the protection of native labor. . . .

In some such words and thoughts as these we seek to express our will and ideal, and the end of our untiring effort. To our aid we call all men of the earth who love justice and mercy. Out of the depths we have cried unto the deaf and dumb masters of the world. Out of the depths we cry to our own sleeping souls. The answer is written in the stars.

The whole press of Europe took notice of these meetings and more especially of the ideas behind the meeting. Gradually they began to distinguish between the Pan-African Movement and the Garvey agitation. They praised and criticised. Sir Harry Johnston wrote: "This is the weakness of all the otherwise grand efforts

of the Coloured People in the United States to pass on their own elevation and education and political significance to the Coloured Peoples of Africa: they know so little about real Africa."

4/0-3-83

Even Punch gibed good-naturedly: " 'A PAN-AFRICAN MANIFESTO' 'NO ETERNALLY INFERIOR RACES' (headlines in The Times) No, but in the opinion of our coloured brothers, some infernally superior ones!"

The Second Pan-African Congress sent me with a committee to interview the officials of the League of Nations in Geneva. I talked with Lappard who headed the Mandates Commission; I saw the first meeting of the Assembly, and I had an interview

40-3-65

THE WAR OF AFRICAN LIBERATION

The Second World War miraculously brought the darker world to life. First, in order to settle the rivalry as to who was to own and rule the darker peoples. Great Britain, France, the United States and the Soviet Union were fighting against Germany and Italy. There was at first apparently no question, certainly in Great Britain and the United States, but that dark labor in the future as in the past was to be used for the benefit of white folk from the simple fact that the dark people had no other reason for being. But the darker peoples themselves had to be brought in to settle the question, and subtly the basic reasoning changed. India, after a long struggle that began before the war became a free and independent country and this broke the back of the British Empire. Africa was sued by the Allies: in the attack on North Africa; in conquering and retaining German Africa; in cooperation for the holding of West Africa; and in the use of African troops in Asia. Especially in the case of the Soviet Union the war was fought on a tremendous scale which never for a moment conceived its end to be the use or domination of colored labor.

There met in Paris in 1945 the World Federation of Trade Unions, and at this meeting for the first time the colored unions of Africa came face to face with the white union members of western Europe. There was immediately voiced an unexpected demand for equality which took the West by surprise. The British unions had always spoken for the African unions and regarded the African unions as under their control. Indeed they knew that the relatively high British wage depended on low African wage and on general African submission and white control. The American unions, in large part, had excluded Negroes from membership, and highly skilled Americans shared in the profits of exploited black serfs. Now black unions from Africa and from the West Indies especially, spoke up independently and even truculently for themselves.

BLACK AFRICAN UNIONS

A battle ensued which with the help and insistence of the socialist unions of the Soviet Union and eastern Europe recognized the independence of the black union leaders, and immediately the ground was laid for the great division of the unions of the world into the socialist labor unions and the capitalist labor unions.

40-3-66

Meantime the African and West Indian unions united in a call to reassemble the Pan-African Congresses. The fourth Congress had been held in London and in Lisbon in 1924. The second world war prevented any further meetings. Now at the request of colored men in London, Lanchasire, Liverpool and Manchester, there came a spontaneous call for the assembling of another Pan-African Congress in 1945 when the World Federation of Trade Unions would hold their meeting in Paris.

After consultation and correspondence with trade union, co-operative, and other progressive organizations in the West Indies, West Africa, South and East Africa, a formal invitation for the conference was issued. Most of these bodies not only approved and endorsed the agenda, but pledged themselves to send delegates. In cases where either the time was too short or the difficulties of transport too great to be overcome at such short notice, the organizations gave mandates to the natives of the territories concerned who were traveling to Paris to attend the World Trade Union Conference. George Padmore invited Dr. Du Bois to summon a fifth Pan-African Congress. It was hard to find a time or place for meeting in Paris or London, but finally a group of colored men including Africans, and with the cooperation of the city government, invited the fifth Pan-African Congress to meet in Manchester, England, in 1945.

FIFTH PAN-AFRICAN CONGRESS

The Fifth Pan-African Congress met October 15 to 21 in Manchester, England, with some two hundred delegates representing East and South Africa and the West Indies. Its significance lay in the fact that it took a step toward a broader movement and a real effort of the peoples of Africa and the descendants of Africa the world over to start a great march toward democracy for black folk.

This meeting proved of world-wide importance. George Padmore organized it; its secretaries were Kwame Nkrumah and Jomo Kenyatta, and in attendance were Wallace Johnson from Liberia and some 200 labor union leaders from Africa; and even Asiatics like Subasinghe of Ceylon. Here a new Africa was born.

THIS AFRICA: HOW IT AROSE, WHITHER IT GOES

Fragments

FOREWORD

Since the glory of the West Indian Sugar Empire and the rule of the Cotton Kingdom, there has been consistent effort to rationalize Negro slavery by omitting Africa from world history, so that today it is almost universally assumed that history can be ~~truly~~ written without reference to Negroid peoples. I believe this to be scientifically unsound and also dangerous for logical social conclusions. Therefore I am seeking in this book to remind readers in this crisis of civilization, of how critical a part Africa has played in human history, past and present, and how impossible it is to forget this and rightly explain the present plight of mankind.

I feel now as though I were ~~approaching~~ addressing a crowd of friends and enemies, who ask a bit breathlessly, whose and whence is the testimony on which I rely for something that even resembles Authority? To which I return two answers: I am challenging Authority -- even Maspero, Sayce, Reisner, Breasted, and hundreds of other men of highest respectability, who did not attack but studiously ignored the Negro on the Nile and in the world and talked as though black folk were nonexistent and unimportant. They are part of the herd of writers of modern history who ~~never heard of Africa or~~ declare with Guernier "Seule de tous les continents l'Afrique n'a pas d' histoire!"

In fine, I have done in this book the sort of thing at which every scholar shudders. With meager preparation and all too general background of learning, I have essayed a task, which, to be adequate and complete, should be based upon the research of a lifetime! But I am faced with the dilemma, that either I do this now or leave it for others who have not had the tragedy of life which I have, forcing me to face a task for which they may have small stomach and little encouragement from the world round about. If, out of my almost inevitable mistakes and inaccuracies and false conclusions, I shall have at least clearly stated my main issue -- that black Africans are men in the same sense as white European and yellow Asiatics, and that history can easily prove this -- then I shall rest satisfied even under the stigma of an incomplete and, to many, inconclusive work.

The bulk of this work was published in 1946 under the title: The World and Africa. In this edition the contents have been rearranged, to some extent rewritten, and certain recent matter added.

40-3-85

Here we are then, today, in the United Nations with 70 or more black and colored countries facing their former white masters of the world. Can Great Britain and America persuade them still to yield leadership to the white world or to follow Cuba in its recognition of the vast Communist world of the Soviet Union and China, and turn this union of the people of the world into new directions? Meantime, the white world because of their disunity, can no longer present a united front. Great Britain is losing her grip in Asia and knows it. The United States is making vain gestures to maintain it and is failing day by day. In the midst of the United States, a tenth of its citizens of African descent are demanding with increasing insistence their full rights as American citizens and while the southern South is fighting a barbaric and bloody battle agasint this they are slowly failing day by day. Even granting American Negroes civil rights can only temporarily bribe them to desert the rightful demands of their African brethen.

The bulk of the this work was published in 1946 under the title: The World and Africa. In this edition the contents have been rearranged, to some extent rewritten, and certain recent matter added.

MEMORANDUM of the case of the National Congress of British West Africa for a Memorial based upon the Resolutions to be presented to His Majesty the King Emperor in Council through the Right Honourable the Secretary of State for the Colonies, March 1920.

40-3-124 A

139

3

40-3-125

"In presenting the case for the franchise for the different colonies composing British West Africa, namely, The Gambia, Sierra Leone, the Gold Coast, and Nigeria, it is important to remember that each of these colonies is at present governed under the Crown Colony System. By that is meant that the power of selecting members for the legislative councils is in the Governor of each colony and not dependable upon the will of the people through an elective system.

"For a long time in the history of each of these colonies the anomaly of the nomination of members of the legislative council by the Governors and not by the people electing their own representatives has struck the inhabitants of each community, and now and again representations have been made with a view to remedying the disability...

"Up to the beginning of the present year (1920), there had been no improvement in the situation, with the result that in March 1920 a Conference of Africans of British West Africa was held at Accra, the Capital of the Gold Coast Colony, at which were present the representatives of each of the four colonies composing British West Africa. . . . A reference to the programme of the subjects discussed will show the various topics of importance that came under the consideration of the Congress. Before the rise of the Conference it resolved itself into the National Congress of British West Africa as a permanent official body for the purpose of representing constitutionally British West African need, political and otherwise. At each of the sessions an opportunity was given for the full discussion of the particular subjects under consideration, and upon the same being fully debated, resolutions arising out of the discussions were passed. . . . It will be noticed that the first resolutions deal with legislative (including municipal) reforms and the granting of the franchise and administrative reforms with particular reference to equal rights and opportunities....

"The first submission with respect to this particular resolution is that in the demand for the franchise by the people of British West Africa it is not to be supposed that they are asking to be allowed to copy a foreign institution. On the con-

40-3-126

D

trary, it is important to notice that the principle of electing representatives to local councils and bodies is inherent in all the systems of British West Africa. According to African institutions, every member of a community belongs to a given family with its duly accredited head, who represents that family in the village council, naturally composed of the heads of the several families. Similarly, in a district council the different representatives of each village or town would be appointed by the different villages and towns, and so with the Provincial Council until, by the same process, we arrive at the Supreme Council, namely, the State Council, presided over by the Paramount Chief.

"Again, according to the African System no Headman, Chief, or Paramount Ruler has any inherent right to exercise jurisdiction unless he is duly elected by the people to so represent them. This, coupled with the facts in the preceding paragraph stated, makes the African system essentially a democratic one, and the appointment to political office depends entirely upon the election and the will of the people.

From the foregoing ti is obvious that a system by which the Governor of a Crown Colony nominates whom he thinks proper to represent the people is considered by them as a great anomaly and constitutes a grievance and a disability which they now request should be remedied. Hence the constitutional agitation in the past, as in the present, for a change in the constitution of British West Africa so as to enable the people in the future to elect their own representatives to the Legislative Councils of the different colonies.

"It will be observed in paragraph 2 of the resolutions under consideration that it is not proposed to disturb the Executive Council as at present composed. As regards the Legislative Council, however, a radical change is desired so that one-half of its members shall be nominated by the Crown and the other half elected by the people to deal with legislation generally. A further radical reform is the institution of a

House of Assembly, composed of the members of the Legislative Council together with six other financial representatives elected by the people, who shall have the power of imposing taxes and discussing freely and without reserve the items on the Annual Estimates of revenue and expenditure prepared by the Governor in the Executive Council and of approving them. The unofficial elective reform herein proposed includes both European and African representation.

"Before leaving the point under consideration, attention may be drawn to what is stated in Gold Coast Native Institutions on page 164:

> Legislation to be effectual, must be with the Chiefs in a representative legislative assembly. Any important measure affecting the people must be passed with the consent and the direct co-operation of the Chiefs themselves.

If the policy of the Government had been based upon this principle there would be no need today for this work. What the country requires most urgently today is a National Assembly wherein all sections of the community will be adequately represented. That is the fundamental element of progress, the reform at which all right-thinking men must directly aim." This was written more than seventeen years ago; and as has been explained above, by the African system of representation even the Chiefs are the mere representatives of the people in a democratic system.

Britain after delay yielded to this demand in characteristic fashion: it gave Negroes partial elective representation in the governor, who retained large power of legislation. British industry sat directly on the Council and in England continued to name West African governors and dictate colonial policies.

403-75

For these reasons there is ferment in Africa today to which the world must pay more and more attention. Only yesterday a general strike in Nigeria affected nearly forty thousand workers. But this hardly makes headlines in the news, and few people who read daily about Argentina realize that Nigeria is twice as populous.

The effort to make peace in the world today finds one of its stumbling blocks in Italy's former African colonies -- Eritrea, Libya, and Somaliland. Two of these are claimed by Ethiopia, whose conquest was one cause of World War II, and whose reconstruction is attracting capital from America. Native congresses in South and East Africa recently appealed to the world for the application of the Atlantic Charter to them. Their voices fell on silent cables, but they were strong enough and passionate in logic. At the recent Trades Union meeting in Paris black African unions were for the first time in history represented by a dozen delegates, telling the world that black labor is labor. Egypt is straining at British control, and the Pan-Arab League is demanding Libya. In Kenya has arisen the problem of forced labor, and all over Africa, the plight of returning black soldiers who fought in Asia and the South Seas. Political change looms in Rhodesia and Southwest Africa, while the Belgian Congo simmers in uneasy consciousness of the anomaly of being fourteen times the size of Belgium istelf with none of that democracy for which Belgium fought. Africa is quiet today, but may not be tomorrow.

Perhaps one of the most striking protests against conditions that has come out of Africa is that of the National Congress of British West Africa which met in 1920. As a statement of democratic aims it deserves wider circulation than it has had. I venture to quote parts of it.

MEMORANDUM <u>of the case of the National Congress of British West Africa for a Memorial based upon the Resolutions to be presented to His Majesty the King Emperor in Council through the Right Honourable the Secretary of State for the Colonies, March 1920.</u>

40-3-76

"In presenting the case for the franchise for the different colonies composing British West Africa, namely, The Gambia, Sierra Leone, the Gold Coast, and Nigeria, it is important to remember that each of these colonies is at present governed under the Crown Colony System. By that is meant that the power of selecting members for the legislative councils is in the Governor of each colony and not dependable upon the will of the people through an elective system.

"For a long time in the history of each of these colonies the anomaly of the nomination of members of the legislative council by the Governors and not by the people electing their own representatives has struck the inhabitants of each community, and now and again representations have been made with a view to remedying the disability.

"Up to the beginning of the present year (1920), there had been no improvement in the situation, with the result that in March 1920 a Conference of Africans of British West Africa was held at Accra, the Capital of the Gold Coast Colony, at which were present the representatives of each of the four colonies composing British West Africa. . . . A further radical reform is the institution of a

House of Assembly, composed of the members of the Legislative Council together with six other financial representatives elected by the people, who shall have the power of imposing taxes and discussing freely and without reserve the items on the Annual Estimates of revenue and expenditure prepared by the Governor in the Executive Council and of approving them. The unofficial elective reform herein proposed includes both European and African representation.

"Before leaving the point under consideration, attention may be drawn to what is stated in Gold Coast Native Institutions on page 164:

> Legislation to be effectual, must be with the Chiefs in a representative legislative assembly. Any important measure affecting the people must be passed with the consent and the direct co-operation of the Chiefs themselves.

If the policy of the Government had been based upon this principle there would be no need today for this work. What the country requires most urgently today is a National Assembly wherein all sections of the community will be adequately represented. That is the fundamental element of progress, the reform at which all right-thinking men must directly aim." This was written more than seventeen years ago; and as has been explained above, by the African system of representation even the Chiefs are the mere representatives of the people in a democratic system.

Britain after delay yielded to this demand in characteristic fashion: it gave Negroes partial elective representation in the governor, who retained large power of legislation. British industry sat directly on the Council and in England continued to name West African governors and dictate colonial policies.

In the first chapter I have told of the Pan-African Congress which met in Paris after World War I. Similar efforts of Africans and peoples of African descent to unite in mutual exchange of culture and co-operation for social betterment have been made since the idea was established in 1919.

George Padmore, Dr. Du Bois [illegible] to summon a fifth Pan-African Congress. It was hard to find a time or place for meeting in Paris or London, but finally a group of colored men including Africans, and with the cooperation of the city government, invited the fifth Pan-African Congress to meet in Manchester, England, in 1945.

621-E-94 FIFTH PAN-AFRICAN CONGRESS

40-3-130

The Fifth Pan-African Congress met October 15 to 21 in Manchester, England, with some two hundred delegates representing East and South Africa and the West Indies. Its significane lay in the fact that it took a step toward a broader movement and a real effort of the peoples of Africa and the descendants of Africa the world over to start a great march toward democracy for black folk.

40-3-131

167

and immediately the ground was laid for the great division of the unions of the world into the socialist labor unions and the capitalist labor unions.

Meantime the African and West Indian unions united in a call to reassemble the Pan-African Congresses. The fourth Congress had been held in London and in Lisbon in 1924. The second world war prevented any further meetings. Now, at the request of

40-3-132

-14- 110

There came from the colonies in Africa and Asia insistent demand for freedom and democracy. It was in 1920 that the Congress of West Africa appealed to Great Britain in these words:

In the demand for the franchise by the people of British West Africa, it is not to be supposed that they are asking to be allowed to copy a foreign institution. On the contrary, it is important to notice that the principle of electing representatives to local councils and bodies is inherent in all the systems of British West Africa.

For these reasons there is ferment in Africa today to which the world must pay more and more attention. Only yesterday a general strike in Nigeria affected nearly forty thousand workers. But this hardly makes headlines in the news, and few people who read daily about Argentina realize that Nigeria is twice as populous.

The effort to make peace in the world today finds one of its stumbling blocks in Italy's former African colonies -- Eritrea, Libya, and Somaliland. Two of these are claimed by Ethiopia, whose conquest was one cause of World War II, and whose reconstruction is attracting capital from America. Native congresses in South and East Africa recently appealed to the world for the application of the Atlantic Charter to them. Their voices fell on silent cables, but they were strong enough and passionate in logic. At the recent Trades Union meeting in Paris black African unions were for the first time in history represented by a dozen delegates, telling the world that black labor is labor. Egypt is straining at British control, and the Pan-Arab League is demanding Libya. In Kenya has arisen the problem of forced labor, and all over Africa, the plight of returning black soldiers who fought in Asia and the South Seas. Political change looms in Rhodesia and Southwest Africa, while the Belgian Congo simmers in uneasy consciousness of the anomaly of being fourteen times the size of Belgium istelf with none of that democracy for which Belgium fought. Africa is quiet today, but may not be tomorrow.

40-3-135

81. SECOND PAN-AFRICAN CONGRESS - 81

139

In the first chapter I have told of the Pan-African Congress which met in Paris after World War I. Similar efforts of Africans and peoples of African descent to unite in mutual exchange of culture and co-operation for social betterment have been made since the idea was established in 1919.

40-3-139

Lanchashire, Liverpool, and Manchester, there came a spontaneous call for the assembling of another Pan-African Congress in 1945 when the World Federation of Trade Unions would hold their meeting in Paris.

After consultation and correspondence with trade union, cooperative, and other progressive organizations in the West Indies, West Africa, South and East Africa, a formal invitation for the conference was issued. Most of these bodies not only approved and endorsed the agenda, but pledged themselves to send delegates. In cases where either the time was too short or the difficulties of transport too great to be overcome at such short notice, the organizations gave madates to the natives of the territories concerned who were traveling to Paris to attend the World Trade Union Conference.

40-2-1

AFRICA CHANGES

40-3-137

All Africa began to change. In Uganda fundamental changes began revolving about the question as to whether the leading state of Buganda, under its kings and chiefs, should be the sole power or whether the whole state should be independent under a new constitution under bourgeois rule. In Kenya, where the best land had been monopolized by the British under outrageous conditions and the mass of the people crowded into swamps, a bloody revolution under the Mau-Mau organization was started and suppressed with wide imprisonment and executions. Jomo Kenyatta was arrested as being its chief instigator. Today the slow but sure political triumph of the Negro population is developing under Tom Mboya and other leaders.

Nkrumah returned to Africa, where, after repudiation at the hands of leaders of his own people and imprisonment by the British, he became in 1948 the recognized head of an independent province of the British Commonwealth. The British, seeing the inevitable, soon admitted Nigeria as a province of the Commonwealth and under terms which left them a chance to wield great influence in this the largest colony of the British Empire.

40-3-138

THE WAR OF AFRICAN LIBERATION

The Second World War miraculously brought the darker world to life. First, in order to settle the rivalry as to who was to own and rule the darker peoples. Great Britain, France, the United States and the Soviet Union were fighting against Germany and Italy. There was at first apparently no question, certainly in Great Britain and the United States but that dark labor in the future as in the past was to be used for the benefit of white folk from the simple fact that the dark people had no other reason for being. But the darker peoples themselves had to be brought in to settle the question, and subtly the basic reasoning changed. India, after a long struggle that began before the war became a free and independent country and this broke the back of the British Empire. Africa was sued by the Allies; in the attack on North Africa; in conquering and retaining German Africa; in cooperation for the holding of West Africa; and in the use of African troops in Asia. Especially in the case of the Soviet Union the war was fought on a tremendous scale which never for a moment conceived its end to be the use or domination of colored labor.

40-3-133

40-3-134

Then the war ended there met in Paris in 1945 the World Federation of Trade Unions, and at this meeting for the first time the colored unions of Africa came face to face with the white union members of western Europe. There was immediately voiced an unexpected demand for equality which took the West by surprise. The British unions had always spoken for the African unions and regarded the African unions as under their control. Indeed they knew that the relatively high British wage depended on low African wage and on general African submission and white control. The American unions, in large part, had excluded Negroes from membership, and highly skilled American shared in the profits of exploited black serfs. Now black unions from Africa and from the West Indies especially, spoke up independently and even truculently for themselves.

BLACK AFRICAN UNIONS

A battle ensued which with the help and insistence of the socialist unions of the Soviet Union and eastern Europe recognized the independence of the black union leaders,

If, drunk with sight of power, we loose
Wild tongues that have not Thee in awe.
Such boastings as the Gentiles use,
Or lesser breeds without the Law --

. . .

For heathen heart that puts her trust
In reeking tube and iron shard,
All valiant dust that builds on dust,
And, guarding, calls not Thee to guard,
For frantic boast and foolish word --
Thy Mercy on Thy People, Lord!

40-3-136

THE WAR OF AFRICAN LIBERATION

The Second World War miraculously brought the darker world to life. First, in order to settle the rivalry as to who was to own and rule the darker peoples. Great Britain, France, the United States and the Soviet Union were fighting against Germany and Italy. There was at first apparently no question, certainly in Great Britain and the United States but that dark labor in the future as in the past was to be used for the benefit of white folk from the simple fact that the dark people had no other reason for being. But the darker peoples themselves had to be brought in to settle the question, and subtly the basic reasoning changed. India, after a long struggle that began before the war became a free and independent country and this broke the back of the British Empire. Africa was sued by the Allies; in the attack on North Africa; in conquering and retaining German Africa; in cooperation for the holding of West Africa; and in the use of African troops in Asia. Especially in the case of the Soviet Union the war was fought on a tremendous scale which never for a moment conceived its end to be the use or domination of colored labor.

40-3-43

Then the war ended there met in Paris in 1945 the World Federation of Trade Unions, and at this meeting for the first time the colored unions of Africa came face to face with the white union members of western Europe. There was immediately voiced an unexpected demand for equality which took the West by surprise. The British unions had always spoken for the African unions and regarded the African unions as under their control. Indeed they knew that the relatively high British wage depended on low African wage and on general African submission and white control. The American unions, in large part, had excluded Negroes from membership, and highly skilled American shared in the profits of exploited black serfs. Now black unions from Africa and from the West Indies especially, spoke up independently and even truculently for themselves.

BLACK AFRICAN UNIONS

A battle ensued which with the help and insistence of the socialist unions of the Soviet Union and eastern Europe recognized the independence of the black union leaders

and immediately the ground was laid for the great division of the unions of the world into the socialist labor unions and the capitalist labor unions.

Meantime the African and West Indian unions united in a call to reassemble the Pan-African Congresses. The fourth Congress had been held in London and in Lisbon in 1924. The second world war prevented any further meetings. Now, at the request of George Padmore, Dr. Du Bois was asked to summon a fifth Pan-African Congress. It was hard to find a time or place for meeting in Paris or London, but finally a group of colored men including Africans, and with the cooperation of the city government, invited the fifth Pan-African Congress to meet in Manchester, England, in 1945.

40-3-142

FIFTH PAN-AFRICAN CONGRESS

This meeting proved of world-wide importance. George Padmore organized it; its secretaries were Kwame Nkrumah and Jomo Kenyatta, and in attendance were Wallace Johnson from Liberia and some 200 labor union leaders from Africa; and even Asiatics like Subasinghe of Ceylon. Here a new Africa was born. Nkrumah returned to Africa, where, after repudiation at the hands of leaders of his own people and imprisonment by the British, he became in 1948 the recognized head of an independent province of the British Commonwealth. The British, seeing the inevitable, soon admitted Nigeria as a province of the Commonwealth and under terms which left them a chance to wield great influence in this the largest colony of the British Empire.

AFRICA CHANGES

All Africa began to change. In Uganda fundamental changes began revolving about the question as to whether the leading state of Buganda, under its kings and chiefs, should be the sole power or whether the whole state should be independent under a new constitution rulerule. In Kenya, where the best land had been monopolized by the British under outrageous conditions and the mass of the people crowded into swamps, a bloody revolution under the Mau-Mau organization was started and suppressed with wide imprisonment and executions. Jomo Kenyatta was arrested as being its chief instigator. Today the slow but sure political triumph of the Negro population is developing under Tom Mboya and other leaders.

40-3-110

The Second World War miraculously brought the dark world to life. First, in order to settle the question as to who was to own and rule the darker peoples, these peoples themselves had to be drawn into the fight. There was at first no question but that dark labor was to be used for the benefit of white labor simply because the darker peoples had no other reason for being. But when the darker peoples themselves were brought in to settle the question, India became a free and independent country which broke the back of the British Empire, and Africa arose to its feet which suddenly astonished the world. First came a meeting of trade unions in Paris in 1945 where the African members of trade unions appeared and asserted their right to speak not as appendages of the white British and American unions, but as independent organizations. They won this fight to the disgust of the white trade unionists and then they demanded a meeting of the Pan-African Congress. On account of the war no meeting of this Congress had been held since 1924 in Lisbon. It was hard now to find a time and place for it in Paris or London but a group of colored men including Africans invited the fifth Pan-African Congress to meet in Manchester, England. At the meeting were Kwame Nkrumah, as secretary, George Padmore, as organizer, Komo Kenyatta from Kenya, Central Africa, Wallace Johnson from Liberia, and even Asiatics like Subasinghe of Ceylon. There, singularly enough, the new Africa was born. Nkrumah returned to Africa, where, after he had endured repudiation at the hands of his own people and a period in jail by the British, in 1948 he became the recognized head of an independent province of the British Empire. The British recognized the change of fate and admitted Nigeria as a province of the British Commonwealth under terms which left them a chance to wield great influence in the largest of British colonies. Revolution began in Uganda and Kenya; where in Uganda the country was divided against itself and has not yet decided what it wants but eventual independence is certain; in Kenya where shameless land monopoly was followed by the start of bloody revolution and then [illegible] with slow but sure political triumph with the Negro in growing control. In the Union of South Africa

and the Rhodesias the vast and inevitable change has just begun heralded by the unexpected exclusion of South Africa from the British Commonwealth and their determination to make three million white people the absolute masters of eleven million colored people, an utterly unthinkable possiblity which means surrender or revolution. The Rhodesia, South and North, are endeavoring to force Nyasaland along the same path and are due for the same failure despite their economic power. With the independence of Morocco Spain has practically faded from the African picture, leaving the French empire in North Africa and the Arab domination in the east. The Arabs have made their affinity with the mass of Africans clear. Egypt meets and works with the Africans. Morocco is African. Tunis is in clear sympathy. Arabia is being drawn in by strong religious ties. France hesitated, declaring dogmatically that Algeria was French, then yielding to say that Algeria might decide as to whether it would be French or not, but which she was deciding with armed resistance, when there came the unanswerable question of the state of the rest of French Africa. Suddenly there arose in French Africa the independent state of Guinea which refused to negotiate with France, then independent Senegal, High Volta, Ivory Coast, Niger, Chad, Gabon, and the Federation of Mali. These states have been granted semi-independence by France with the promise of help and economic privilege which would assure their prosperity. But meantime, can France, without being able to exercise in these countries the economic tyranny which formerly was the basis of her wealth, secure the funds by which she can rescue their futures. On the other hand, can Ghana and Guinea persuade the new French territories that the increasing socialism will not be best for French Africa as it is proving for British Africa. Then, too, there comes the disaster of the Congo. Belgium, backed by the United States, Great Britain and France was going to avoid the mistakes made in British West Africa. They were going to train no intelligentsia, while they reaped vast profit on uranium and copper. They failed. Patrice Lumumba demanded complete independence. They murdered him in cold blood but he arose from the dead and his spirit still fights for an independent black Congo.

40-3-123

40-3-104

The Second World War miraculously brought the darker world to life. First, in order to settle the rivalry as to who was to own and rule the darker peoples, Great Britain, France, the United States and the Soviet Union were fighting against Germany and Italy. There was at first apparently no question, certainly in Great Britain and the United States but that dark labor in the future as in the past was to be used for the benefit of white folk from the simple fact that the dark people had no other reason for being. But the darker peoples themselves had to be brought in to settle the question, and subtly the basic reasoning changed. India, after a long struggle that began before the war became a free and independent country and this broke the back of the British Empire. Africa was used by the Allies: in the attack on North Africa; in conquering and retaining German Africa; in cooperation for the holding of West Africa; and in the use of African troops in Asia. Especially in the case of the Soviet Union the war fought on a tremendous scale which never for a moment conceived its end to be the use or domination of colored labor.

When the war ended there was called in Paris a World Conference of Trade Unions and for the first time the colored unions of Africa came face to face with the white union members of western Europe. There was immediately voiced an unexpected demand for equality which took the West by surprise. The British unions had always spoken for the African unions and regarded the African unions as under their control. The American unions, in large part, had excluded Negroes from membership. Now black unions from Africa and from the West Indies especially spoke up independently and even truculently for themselves. A battle ensued which with the help and insistence of the Socialist unions of the Soviet Union and eastern Europe recognized the independence of the black union leaders and immediately the ground was laid for the great division of the unions of the world into the socialist labor unions and the capitalist labor unions. Meantime the African and West Indian unions united in a call to reassemble the Pan-African Congresses. The fourth Congress had been held in Lisbon in 1924. The second world war prevented any further meetings. Now, at the request of George Padmore, Dr. Du Bois was

asked to summon a fifth Pan-African Congress. It was hard to find a time or place for meeting in Paris or London, but finally a group of colored men including Africans, and with the cooperation of the city government, invited the fifth Pan-African Congress to meet in Manchester, England.

This meeting proved of world-wide importance. George Padmore organized it, its secretaries were Kwame Nkrumah and Komo Kenyatta, and in attendance were Wallace Johnson from Liberia and some 200 labor union leaders from Africa, and even Asiatics like Subasinghe of Ceylon. Here a new Africa was born. Nkrumah returned to Africa where, after repudiation at the hands of leaders of his own people and imprisonment by the British, he became in 1948 the recognized head of an independent province of the British Commonwealth. The British, seeing the inevitable, soon admitted Nigeria as a province of the Commonwealth and under terms which left them a chance to wield great influence in this the largest colony of the British Empire.

In Uganda fundamental changes began revolving about the question as to whether the leading state of Buganda should be the sole power or whether the whole ~~government~~ state should be independent under a new constitution. In Kenya, where the best land had been monopolized under outrageous conditions and the mass of the people crowded into swamps, a bloody revolution under the Mau-Mau organization was started and suppressed with imprisonment and executions. Komo Kenyatta was arrested as being its chief instigator. ~~Finally~~ Today the slow but sure political triumph of the Negro population can be foreseen.

In the Union of South Africa three million white people determined to be the absolute masters of eleven million colored people. This outrageous program of apartheid resulted ~~first~~ in the exclusion of South Africa from the British Commonwealth, and ~~now~~ in growing unrest and revolt. In North and South Rhodesia an attempt was made to establish a central African state including Nyasaland in which 220,000 Europeans would attempt to make 6,600,000 Africans their bond-servants. The ensuing struggle is being carried out with increasing bitterness.

With the independence of Morocco, Spain has practically faded from the African picture leaving the French Empire in North Africa and the Arab and Mohammedan domination in the east. Both Morocco and the Arabs have assured their affinity with the mass of black Africans firmer ~~and clearer~~. Egypt, under Nasser, meets and cooperates with Black Africa. Morocco has been a center for the meeting of all African states. Tunis, while not as closely allied, is in clear sympathy and Mohammedan Asia is being drawn in by strong religious ties.

~~Black French Africa~~ Black French Africa

For a time France wavered. At first she declared dogmatically that Algeria was and would remain a part of France. Then with the growing revolt of the Algerians it was proposed that they should decide as to whether would be French or not, but that meantime they were to stop armed resistance and consider the advantages of close ties with France. This today is under consideration despite the revolt of the French army in Algiers and the resulting determination of the mass of ~~French~~ workers in France to oppose them.

While decision on Algiers was being made there came the unavoidable question of the future of the rest of French Africa. French Africa had been the seat of long and intense exploitation of black labor by French agricultural and industrial organizations. They were now offered partial independence and industrial help from France but this help would have to come from the same kind of industrial corporations which had oppressed French Africa. The black Africans hesitated. One small country, Guinea, refused further alliance with France and demanded complete independence. Under great difficulties and with the help of socialist Europe she has finally managed the beginning of such independence. Meantime, other French colonies, Senegal, High Volta, the Ivory Coast, Niger, Chad, Gabon and the Federation of Mali have become independent states, but the exact nature of their future relation to France is still to be worked out.

Finally came the disaster of the Congo. Western industry in the name of Belgium but backed by the United States, Great Britain and France strove to avoid the mistakes which had been made especially in British West Africa. They would train artisans. They would pay and protect the power of the chiefs, but they would allow no intelligentsia to be educated either in the Congo or in Europe, while they reaped increasing profit on copper and uranium. They allowed primary education for the children largely

40-3-107

under the Catholic Church. Then, to their great surprise, came threat and failure. Patrice Lumumba became head of a party which demanded complete independence for a black Congo republic. The Belgians and their friends rallied and strove to stop this, but despite their efforts Lumumba became Prime Minister and the Belgians were hardly able to secure the election of Kasavubu as president. Thereupon ~~the mood shifted.~~ They murdered Lumumba in cold blood and a number of his leading officials, and tried to make Kasavubu head of the state. This they were not able to force through and today Lumumba's legal heir to power holds a larger part of the Congo territory. A parliament hurriedly called in the recently freed colony of Madagascar tried to settle matters by allowing Tshombe to secede with the copper-rich province of Katanga and to divide the rest of the Congo into helpless provinces. This has been halted ~~today~~. The Congo awaits re-unification under a ~~new~~ parliament controlled by Kasavubu, or a newly-elected parliament presided over by Gizenga, the heir of Lumumba.

Here we are then, today, in the United Nations with 70 or more black and colored countries facing their former white masters of the world. Can Great Britain and America persuade them still to yield leadership to the white world or to follow Cuba in ~~its~~ recognition of the vast ~~Communist~~ world ~~of~~ the Soviet Union and China, and turn this union of the people of the world into ~~drastically new~~ directions? Meantime, the white world can no longer present a united front. Great Britain is losing her grip in Asia and knows it. The United States is making vain gestures to maintain it and is failing day by day.

The United States itself represents a curious and menacing ~~condition~~. One-fifth of its population is of acknowledged African descent and a larger number of unacknowledged or unknown descendants from African slaves. Despite 3 centuries of struggle including a frightful civil war in which the slaves took a decisive part the mass of the Negroes and descendants of Africa are still second-rate citizens. In most of the former slave states they are not allowed to vote and suffer illegal, but customary, disabilities. In the whole nation, almost without exception, they are regarded as inferior people liable to insult and discrimination. Despite this, despite limits on their education, legal and customary, and difficulty of getting decent well-paid

work, they have made remarkable progress. There is scarcely a part of human endeavor in which American Negros have not distinguished themselves. The further they progress the more prejudice and discrimination yield, and yet this yielding is so slow that the pressure of prejudice is increasingly felt. To counteract this the nation is trying to make concessions. It has even declared in 1954 that the chief legal forms of discrimination are unconstitutional but at the same time it has openly admitted that the court decisions will not be enforced until the people affected permit them to be. Thereupon the nation has resorted to bribery. Fearing especially the lure of socialism and communism they have made every effort to see that successful Negroes and Negroes of ability get special consideration and position provided of course, they attack communism and indulge in red-baiting. The Department of State has paid Negroes expenses of travel so long as they testify vehemently to satisfactory conditions in the United States. The Negro college on the one hand is threatened by loss of state income if they teach socialism or complain of their conditions. On the other hand, the State Department offers outstanding students jobs and preferment if they accept the kind of position which they are being offered.

The result is naturally curious and complicated. The natural leaders of the Negro people are losing their contact with the suffering masses and the masses are turning to that lunatic fringe, which is all the more dangerous because it is based on reason. Negroes have long refused to be called by a name which implies inferiority and contempt. They are beginning to reject the theoretical humility of Christianity as contrasted with the practical equality of Mohammedanism, and above all, and much more serious, they are beginning to say flatly, we do not want integration, we want separation and we are going to going to begin to call on people to fight, kill, destroy, even if we lose "how can man die better than by facing fearful odds for the ashes of his fathers and the temples of his gods!"

In the meantime the mass of the American people sit silent and do nothing. They will not allow Negroes to live beside them; they will not allow them to work beside them; they avoid as much as possible letting their children be educated with them

or meet them on terms of equality; and they keep themselves respectable and secure by avoiding the "Negro" problem. How long will this last? How long can it last?

40-3-109

Meantime south from the United States is a world of people, argely of Negro and Indian descent, mixed with poor Spaniards and Portuguese dominated for good or evil by the Catholic church. For centuries they ha have been ruthlessly exploited; that is the work of the great mass of their labor has been used for the support and comfort of those strong enough to control them; and regardless of the health, happiness or des ire of the people. Spain, Portugal, Germany, Britain and especially the United States have amassed wealth, power and luxury from these poor, i ignorant, diseased peoples, and then climbing on the backs of their unha ppy fellows, have risen rulers of their own blood to share the spoil.

After repeaded and futile effort to escape this slavery, today at last in Cuba, a sizable group seems to be achieving freedom and self-rule; That the Cuban revolution will extend to South America is the hope of all good men and the fear of the slave drivers

40-3-174

Reader of dead words who would live deeds, this is the flowering of my logic: I dream of a world of infinite and invaluable variety; not in the laws of gravity or atomic weights, but in human variety in height and weight, color and skin, hair and nose and lip. But more especially and far above and beyond this, in a realm of true freedom; in thought and dream, fantasy and imagination; in gift, aptitude, and genius -- all possible manner of difference, topped with freedom of soul to do and be, and freedom of thought to give to a world and build into it, all wealth of inborn individuality. Each effort to stop this freedom of being is a blow at democracy -- that real democracy which is reservoir and opportunity and the fight against which is murdering civilization and promising a day when neither

... star nor sun shall waken,
Nor any change of light:
Nor sound of waters shaken
Nor any sound or sight;
Nor wintry leaves nor vernal,
Nor days nor things diurnal;
Only the sleep eternal
In an eternal night.

There can be no perfect democracy curtailed by color, race, or poverty. But with all we accomplish all, even Peace.

This is this book of mine and yours.

In the Union of South Africa three million white people are determined to be the asolute masters of eleven million colored people. This outrageous program of apartheid resulted in the exclusion of South Africa from the British Commonwealth, in the growing friend/ship of West Africa and in growing unrest and revolt. In [illegible] and South Rhodesia an attempt was made to establish a central African state including Nyasaland in which 220,000 Europeans would attempt to make 6,600,000 Africans their bond-servants. The ensuing struggle is being carried out with increasing bitterness.

40-3-141

With the independence of Morocco, Spain has practically faded from the African picture leaving the French Empire in North Africa and the Arab and Mohammedan domination in the east. Both Morocco and the Arabs have asserted their affinity with the mass of black Africans [illegible] firmly. Egypt, under Nasser, meets and cooperates with black Africa. Morocco has been a center for the meeting of all African states. Tunis, while not as closely allied, is in clear sympathy and Mohammedan Asia is being drawn in by strong religious ties.

BLACK FRENCH AFRICA

For a time France wavered. At first she declared dogmatically that Algeria was and would remain a part of France, and back of this were French settlers and French . Then with the growing revolt of the Algerians it was proposed that they should decide as to whether they would be French or not, but that meantime they were to stop armed resistance and consider the advantages of close ties with France. Today this is under consideration despite the revolt of the French army in Algiers and the resulting determination of the mass of workers in France to oppose them.

While decision on Algiers was being made there came the unavoidable question of the future of the rest of French Africa. French Africa had been the seat of long and intense exploitation of black labor by French agricultural and industrial organizations. They were now offered partial independence and industrial help from France but this help would have to come from the same kind of industrial corporations which had oppressed French Africa. The Black Africans hesitated.

America persuade them still to yield leadership to the white world, or will they follow Cuba in the recognition of the vast socialist world led by the Soviet Union and China and turn this union of the people of the world into communal directions?

40-3-64

Meantime, the white world can no longer present a united front. Great Britain is losing her grip in Asia and knows it. The United States is making vain gestures to maintain it and failing day by day. The United States itself represents a curious and menacing situation. Alonzo, "il Negro" piloted one of Columbus' ships. One-fifth of its population is of acknowledged African descent and a larger number are unacknowledged or unknown descendants from African slaves. Despite 3 centuries of struggle including a frightful civil war in which the slaves took a decisive part the mass of the Negroes and descendants of Africa are still second-rate citizens. In most of the former slave states they are not allowed to vote and suffer illegal, but customary, disabilities. In the whole nation almost without exception, they are regarded as inferior people liable to insult and discrimination. Despite this, despite limits on their education, legal and customary, and difficulty of getting decent well-paid employment, they have made remarkable progress. There is scarcely an area of human endeavor in which American Negroes have not distinguished themselves: in literature, music, art, in science and artisanship, the and hard labor. The further they progress the more prejudice and discrimination yield, and yet this yielding is so slow that the pressure of prejudice is increasingly felt.

To counteract this the nation is trying to make concessions. It has even declared in 1954 that the chief legal forms of discrimination in education and travel are unconstitutional, but at the same time it has openly admitted that the court decisions will not be enforced until the people cruelly affected permit them to be.

Thereupon the nation has resorted to bribery. Fearing especially the lure of socialism and communism they have made every effort to see that successful Negroes and Negroes of ability get special consideration and position provided of course, they attack communism and indulge in red-baiting. The universities have led in this effort.

effort. The Department of State has paid Negroes expenses of travel abroad, so long as they testify to satisfactory conditions in the United States and

The Negro college on the one hand is threatened by loss of state income if they teach socialism or complain of their conditions. On the other hand, the outstanding students are offered jobs and preferment if they accept the present without complaint.

40-3-62

PRESENT UNREST

The result is naturally complicated. The more successful leaders of the Negro people are losing their contact with the poorer and more ignored masses are seeking new leaders. Those offering leadership may resemble at first a

but below this is reason. Negroes, for instance, have long resented being called by a name which implies inferiority and contempt. They are beginning to reject the theoretical humility of Christianity as contrasted with the practical equality of Mohammedanism; and above all, and much more serious, they are beginning to say flatly, we do not want integration, we want separation and we are going to begin to call on our people to fight, kill, destroy; for even if we lose "how can man die better than by facing fearful odds, for the ashes of his fathers, and the temples of his gods!"

In the meantime the mass of the American people sit silent and do nothing. They will not allow Negroes to live beside them; they will not allow them to work beside them; they avoid as much as possible letting their children be educated with them or meet them on terms of equality; and they keep themselves respectable and secure by avoiding the "Negro" problem. How long will this last? How long can it last?

Meantime south from the United States is a world of people, largely of Negro and Indian descent, mixed with poor Spaniards and Portuguese dominated for good or evil by the Catholic church. The first native Catholic bishop in America was Xavier de luna Victoria, son of a Negro charcoal burner. For centuries they have been ruthlessly exploited; that is, the work of the great mass of their labor has been used for the support and comfort of those strong enough to control them; and regardless of the health, happiness or desire of the people. Spain, Portugal, Germany, Britain and

and especially the United States have amassed wealth, power and luxury from these poor, ignorant, diseased peoples. Then, climbing on the backs of their unhappy fellows themselves, have risen rulers of their own blood to share the spoil.

40-3-63

After repeated and futile efforts to escape this slavery, at last in Cuba, a sizable group seems to be achieving freedom and self-rule; that the Cuban revolution will extend to South America is the hope of all good men and the fear of all the slave drivers.

40-3-24

showing the development of Negroes in the United States, which gained a Grand Prize. All about me was an extraordinary display of wealth, luxury, and industrial technique, striking evidence of a Europe triumphant over the world and the center of science and art, power and human freedom.

It was easy to see what the great countries of Europe thought of themselves: France stood pre-eminently for art, for taste in building, technique, and pure expression; Germany stood for science and government; England for wealth and power with a high level of comfort; and America for freedom of human initiative.

There was even in this French exposition a certain dominance of the British Empire idea. The British paper promise-to-pay was actually worth more to the traveler than gold. British industry was unrivaled in efficient technique. British investments were the safest; and Great Britain was the widest and most successful administrator of colonies. Every kind of tribute was paid to her; she was the acknowledged leader in such various things as men's cloth and clothing, public manners, the rate of public expenditure -- and all this showed in the deference a British subject could demand everywhere throughout the world.

Then came five crashing events in quick succession. First, in 1905, at Saint Petersburg, the shooting down in cold blood of Russian workingmen in the first organized attempt of the twentieth century to achieve relief; and by that murderous volley the Czar killed the faith of working Russia in the Little White Father. He revealed that Russian industry was paying 50 per cent and more in profits to Germans and other investors, while the workers starved. The Czar himself thus sowed the seeds of revolution.

Second, in 1911 a German warship sailed into Agadir, North Africa, and demanded in the name of the Emperor that the German Reich be consulted concerning the future of Morocco. I remember how the incident startled London. I was there at the time, attending the First Races Congress. It is a meeting now forgotten,

40-3-26

but it might have been of world significance. Its advice might have changed the course of history had not World War I followed so fast. Meeting at the University of London was probably the largest representation of the groups of the world known as races and subraces; they were consulting together under the leadership of science and ethics for a future world which would be peaceful, without race prejudice; and which would be cooperative, especially in the social sciences. Among the speakers were world leaders -- Giuseppe Sergi, Franz Boas, John A. Hobson, Felix Adler, Sir Sidney Olivier, and Wu Ting-fang. A hymn to the peoples was read:

So sit we all as one
So, gloomed in tall and stone-swathed groves,
The Buddha walks with Christ;
And Al-Koran and Bible both be holy!

Almighty Word!
In this Thine awful sanctuary,
First and flame-haunted City of the Widened World,
Assoil us, Lord of Lands and Seas!

We are but weak and wayward men,
Distraught alike with hatred and vainglory;
Prone to despise the Soul that breathes within --
High-visioned hordes that lie and steal and kill,
Sinning the sin each separate heart disclaims,
Clambering upon our riven, writhing selves,
Besieging Heaven by trampling men to Hell!

We be blood-guilty! Lo, our hands be red!
Let no man blame the other in this sin!
But here - here in the white Silence of the Dawn,
Before the Womb of Time,
With bowed hearts all flame and shame,
We face the birth-pangs of a world:
We hear the stifled cry of Nations all but born --
The wail of women ravished of their stunted brood!
We see the nakedness of Toil, the poverty of Wealth,
We know the Anarchy of Empire, and doleful Death of Life!
And hearing, seeing, knowing all, we cry:

Save us, World-Spirit, from our lesser selves!
Grant us that war and hatred cease,
Reveal our souls in every race and hue!
Help us, O Human God, in this Thy Truce,
To make Humanity divine!

40-3-35

There came from the colonies in Africa and Asia insistent demand for freedom and democracy. It was in 1920 that the Congress of West Africa appealed to Great Britain in these words:

> In the demand for the franchise by the people of British West Africa, it is not to be supposed that they are asking to be allowed to copy a foreign institution. On the contrary, it is important to notice that the principle of electing representatives to local councils and bodies is inherent in all the systems of British West Africa.

In the interval between World War I and World War II, India's determined opposition to British rule increased under the leadership of Gandhi, who sought to substitute peaceful non-co-operation for war. The answer was the massacre of Amritsar. In America organized industry rose in its might to realize fantastic profits through domination of world industry. It fought labor unions and tried to nullify democracy by the power of wealth and capital. In the very midst of this, the magnificent structure of capitalistic industry collapsed in every part of the world. Make no mistake, war did not cause the Great Depression; it was the reasons behind the depression that caused war and will cause it again.

The world tried to meet depression and unemployment and to compose differences between capital and labor. Faced by the threat of Russian Communism, Italy, which with Spain was the most poverty-stricken country in Western Europe, seized control of the nation and of industry with the object of ruling it through an oligarchy, eliminating all democratic control. This was the answer of capitalists to the growing and threatening political power of the workers. Hitler followed, opposing the Socialist state of Weimar, with its unemployment and political chaos, with a new state and a new nationalism. The industrial leaders surrendered their power into his hands; the army followed suit; unemployment disappeared, and Hitler diverted the

If, drunk with sight of power, we loose
  Wild tongues that have not Thee in awe,
Such boastings as the Gentiles use,
  Or lesser breeds without the Law --

. . .

For heathen heart that puts her trust
  In reeking tube and iron shard,
All valiant dust that builds on dust,
  And, guarding, calls not Thee to guard,
For frantic boast and foolish word --
  Thy Mercy on Thy People, Lord!
